A SOCIETY has recently been formed for the promotion of a cheap and uniform system of colonial and international postage. The first idea of it, if we are not misinformed, is due to Mr. Elihu Burrit, and through him to Mr. Rowland Hill. The last-named gentleman, one of the greatest benefactors of the British people that the age has produced, first imagined the uniform penny post, and though laughed at and thwarted, if not persecuted, successfully carried it through. Mr. Burritt endeavoured to extend the operation of the great principle of Mr. Rowland Hill over the ocean that separates his country from ours. He called his project "the ocean penny postage," and enlisted in its favour all who ever thought it worth while to bestow a thought upon the subject. Members of the Legislature and of the Government expressed as individuals their approbation of it; but neither the Legislature nor the Government, in their corporate capacity, took up the matter to advance it from the helpless condition of a mere theory, into the substantial form of a fact. The society to which we now call the attention of our readers includes Mr. Elihu Burrit in the list of its members—if not of its committee—and we may therefore suppose that the project of that gentleman has merged into that of the new association which has been founded for objects identical in principle with his own—a cheap, uniform postage not only over the land but over the ocean, and including in its operations all the letter-writing, and therefore all the civilised, nations of the world. It was during the memorable year of the Great Exhibition that the idea of the present association was started; and it was by the most influential members of the various committees of the Exhibition that it was first entertained. The association—though young, quiet, and comparatively unknown—already includes amongst its members the Earl of Granville, its president; Lord Ashburton, Mr. W. Brown, M.P., Mr. Milner Gibson, M.P., Sir R. Marchison, Sir W. Reid, Sir John Burgoyne, Dr. Lyon Playfair, the Baron Charles Dupin, Mr. Dilke, Mr. Cole, and the Commissioners for Austria, Sardinia, Prussia, Spain, and the United States of America, besides other influential persons. They speak like men who know what they are about, and who understand with equal clearness the difficulties in the way, and the means to surmount them. They state their views with the confidence that can only spring from a firm determination to deserve, and a presentiment to obtain, success, when they say that "*there must and shall be ample and free communication of thought between the nations of the earth.* It is not only," as they truly observe, "the produce of each other's mines, fields, and looms, that we want; but the genius of one country is as different from that of another as the products of their industry, and is far more needed for their mutual intellectual development. To this end *postage must and shall be made cheap*, and, above all, simple in its arrangements." It appears that the association has not yet fixed upon any price. While anxious for information on this point from all commercial and civilised countries, they pledge themselves generally to three principles—uniformity for all distances, prepayment, and cheapness. If it merely concerned Great Britain and her possessions and colonies, the nearest or the most remote, it would be easy to agree upon the minimum rate of ocean postage, but, as the inclinations of foreign Governments have to be consulted, the difficulties in the way of an early solution are far more formidable than they were in the establishment of the British penny postage system. The following is the basis of a proposed arrangement, which leaves the question of price to be hereafter determined, and which has been issued in a circular under the sanction of the association. It is essential that the postal revenue should be divided in fair proportion between the contracting parties, and as it is desirable that each country should be allowed to use its own coins, weights, and measures, in the collection of that revenue :—

"To satisfy these conditions," says the circular, "the following plan is proposed. Let a postal union be formed between as many countries as possible, on the following simple grounds:

"1. Each country shall fix a rate of foreign postage at its own discretion, provided that rate be uniform to every country in the proposed postal union, and every part of that country; and that rate shall be prepaid in all cases.

"2. Each country shall engage to receive, transmit, or deliver to its address, free of any charge whatever, any letter passing to it free from the post-offices of the other subscribing countries.

"In other words, each country shall levy a revenue on letters *outwards*, none on letters *inwards*

"Thus, each country would collect its own revenue in its own coin, subject to its own regulations, uniformity and simplicity would be secured as far as they are practically useful to the inhabitants of a country, and cheapness would come of itself. Indeed, no Government would enter into such an arrangement that did not recognise the advantage of cheap postage, and no country would levy long charge its citizens much more for the carriage of a letter than a stranger would have to pay for the reply to that letter, when the service rendered is precisely the same."

Such a plan as this requires only time and the earnest co-operation of a few men to enlist the public, and after the public the Legislature, and after the Legislature the Government, in favour of its principle, if not of its details. The principle being once conceded, the details will soon shape themselves to the general convenience; and we cannot bring ourselves to doubt, but that sooner or later the postage of the whole world will be proportionately as cheap as that of Great Britain. Public opinion differs as to the policy of those movements which call themselves by the name of PEACE; but this is a peace movement about which there can be no difference, and which is certain to unite in its support as soon as it is sufficiently known and proved to be practicable, men of all countries, all classes of life, and all shades of opinion.

PROROGATION OF PARLIAMENT.

In the Supplement to the *London Gazette* of Tuesday last, which was published on Wednesday, it is announced that at the Court at Osborne House, Isle of Wight, the 18th day of August, 1852, present the Queen's most excellent Majesty in Council, it was that day ordered by her Majesty in Council, that the Right Hon. the Lord High Chancellor of that part of the United Kingdom called Great Britain do issue writs for proroguing the Parliament, which was appointed to meet on Friday, the 20th day of August instant, to Thursday, the 21st day of October next; and also for proroguing the Convocations of the provinces of Canterbury and York, from Saturday, the 21st day of August instant, to Friday the 22d day of October next.

CHURCH, UNIVERSITIES, &c.

APPOINTMENTS AND PREFERMENTS.—The following appointments and preferments have recently been made:—*Rectories:* The Rev. E. Bassett, to North Thoresby, Lincolnshire; the Rev. Hayter George Hamlet, to Chagford, Devon; the Rev. John Verdon, to Orchestun, St. Mary. *Vicarages:* The Rev. W. L. Hussey, to Kirkham, Lancashire; the Rev. J. N. White, to Stalham, Norfolk.

TESTIMONIALS.—The following clergymen have recently received testimonials of esteem and affection:—The Rev. Samuel Davis, incumbent of the parish church, Oystermouth, from his parishioners and friends; the Rev. W. de Pipe Belcher, vicar of Desford and Ringstead, from the rector and parishioners of Desford; Leicestershire; the Rev. W. J. E. Bennett, vicar of Frome, from some of the members of his late congregation of St. Barnabas, Pimlico; the Rev. F. B. Maclean, curate of Hitchin, from the parishioners of Arnsdell; the Rev. J. F. Austin, from the congregation of St. Thomas's Church, Red Bank, Manchester; the Rev. Thomas Moore, from the teachers of the Sunday-school, and a second from the rector, churchwardens, and sidesmen of St. Simon's, Manchester.

During the week the election of proctors to seats in Convocation has been carried in several dioceses.

The Bishop of Cape Town, accompanied by Mr. Mowbray, left town on the 14th inst., for a month's tour on the Continent, his Lordship's medical advisers having recommended him perfect rest and a change of scene as necessary to the complete re-establishment of his health.

The Lord Bishop of Lichfield completed his Confirmation tour in the Coventry Archdeaconry on Saturday last, having in twelve days administered the rite to 2446 females, and 2333 males. Total, 5779.

COUNT D'ORSAY'S STATUETTE.—We omitted to mention that the equestrian statuette of the Duke of Wellington, engraved in our last Number, and now preparing for publication by Mr. Walesby, of Waterloo-place, will be executed in bronze.

EMIGRANTS' AID AND TRANSIT SOCIETY.—On Tuesday evening, a meeting was held at the Apollonicon Rooms, St. Martin's-lane, to hear an explanation of the principles of this society, which has been recently founded. Lord Erskine presided. Mr. Gurnell, a gentleman who has spent some years in the colony of Victoria, addressed the meeting. He noticed the rapid progress of the colony, only sixteen years old in 1835. With a population of 60,000, its exports amounted to £19 per head of the population; and the imports to between £8 and £10. He recommended emigration; not for the sake of the gold diggings—at which, he believed, a short spell would sicken most who went out—but that they might put their shoulders to the wheel, and engage in the staple labour of the colony—sheep farming. Let those who had abandoned their own labour for the diggings remain there; and let those who went out fill up their places. It was the great object of this society to carry out an organised system of emigration, as recommended by that excellent lady, Mrs. Chisholm. The directors of the society would make it their business to superintend the fittings and arrangements of the vessels, and in particular the dietary, over which but a very partial supervision could be exercised by the Government inspector. The society had a respectable agent in the colony, Mr. W. Hawkins, through whose means those emigrants in the country could arrange for the sending out of their relations, thus avoiding the danger of sending over remittances in specie. The committee of the society were not a body of speculators seeking to send their shares up in the market; their sole object was the benefit of the emigrants—a fact which was attested by the sanction of the Right Hon. Lord Erskine. There were two cases in the society emigration classes and colonising classes: the weekly or monthly payments of the former were applied to enable them to proceed to Australia; in the latter they formed a fund for the purchase of freehold land in Australia. At present the number of Government licenses for the diggings taken out and paid for was 12,811. The prices of labour were now enormously high, but they would be considerably reduced when the thousands of emigrants arrived who had left this country in the course of the spring and summer. Mr. W. Carpenter moved a resolution, declaring that co-operation, through the efforts of the working classes, unaided by any kind of charity, was the true principle on which any system of emigration should be founded, and that the plan proposed by this society afforded the best means of accomplishing that object. This society, he observed, sought not to persuade people to emigrate, but simply to assist those who were determined to go. The contributors themselves would have the entire management of the funds by the formation of local committees. In answer to a question, it was stated that this society was legally registered according to act of Parliament. The resolution was unanimously agreed to; as was one appointing a local committee for Westminster to act in co-operation with the society.

THE AUSTRALIAN MAILS.—The Postmaster-General has entered into a contract with the proprietors of the screw-steamer *Great Britain*, for the conveyance of mails to Melbourne and Sydney, in Australia. The *Great Britain* will leave Liverpool on the 21st instant, and will most probably reach Melbourne in about fifty days afterwards. This is the first instance of the Postmaster-General entering into an extra mail contract; but the size and speed of the *Great Britain*, together with the great emigration movement now in progress, fully justifies this unusual proceeding. The postage of letters by this packet will be 1s. each, and newspapers will be sent free. All letters for Melbourne and Sydney posted up to the 21st instant will be sent by her, unless specially addressed to be otherwise sent.

A preliminary meeting of the friends of the Rev. Dr. Newman, at which the Roman Catholic Archbishop of Dublin presided, and several Irish members of Parliament attended, was held in Dublin last week, for the purpose of taking steps to raise an indemnity subscription to cover the expenses of the late trial of "Achilli *v.* Newman." A committee was appointed to carry out the object of the meeting, the subscriptions to be raised to be styled "Irish's quota of the Newman Indemnity Fund." Subsequently to the dissolution of the meeting, a letter was received in Dublin from a professional gentleman in London, in which he stated that the costs of the trial would amount to about £10,000.

COURT AND HAUT TON.

THE COURT AT OSBORNE.

The Queen held a Privy Council, at half-past one o'clock on Wednesday, at Osborne. The Council was attended by his Royal Highness Prince Albert, the Lord Chancellor, the Marquis of Salisbury, the Earl of Derby, the Right Hon. Spencer Walpole, the Earl of Malmesbury, Sir John Pakington, the Chancellor of the Exchequer, the Duke of Northumberland, the Earl of Hardwicke, the Right Hon. J. C. Herries, and the Marquis of Exeter. At the Council the Parliament was ordered to be prorogued to the 21st day of October. The Hon. Wm. Bathurst was Clerk of the Council in Waiting. The Earl of Derby had an audience of her Majesty after the Council. The *Fairy Queen*, with the Ministers on board, left Osborne at a quarter past three, and arrived at Southampton at twenty minutes past four o'clock. Immediately on reaching the railway terminus, the Ministers left by a special train for London. The Earl of Derby and the Marquis of Salisbury stopped at Farnborough to proceed to St. Leonard's; and the Lord Chancellor remained at Kingston. The Duke of Northumberland accompanied his colleagues from Osborne.

The return of her Majesty from Belgium will be found fully described in another column.

The Countess of Gainsborough has been succeeded by the Countess of Desart as Lady in Waiting to her Majesty.

Her Majesty will leave Osborne for Balmoral on the 30th inst., travelling *viâ* South Western Railway to Basingstoke; thence by the Great Western line to Gloucester, and over the Midland to Derby, where her Majesty will sleep at the Midland Hotel. Her Majesty will sleep at Holyrood on the night of the 31st.

The Prince President of the French Republic conferred on M. Jules de Saux, Secretary of the Embassy at this Court, the Cross of Knight of the Legion of Honour.

Her Imperial Highness the Grand Duchess Catherine of Russia, accompanied by his Serene Highness the Duke George of Mecklenburgh Strelitz, honoured the establishment of Mr. C. F. Hancock, of Bruton-street, with a visit on Saturday last. His Royal Highness the Duke of Parma likewise honoured Mr. Hancock with a visit previous to his departure for Scotland.

The Excellency the American Minister, Mrs. Abbott Lawrence, and Col. T. B. Lawrence, have left town on a short visit to Sir Edward Lytton, at Knebsworth, Herts.

The Duke of Grafton has left Clarges-street for Euston Hall, where a select circle will shortly assemble for partridge shooting.

The Marquis and Marchioness of Londonderry and Lord Ernest Vane leave Wynyard Park this week for Mount Stewart, his Lordship's beautiful seat in the county Down. The Noble Marquis and Marchioness will proceed, at the close of the month, to Garron Tower, in the county Antrim, where his Lordship contemplates entertaining the Lord-Lieutenant of Ireland and the Countess of Eglinton, and a distinguished circle of the aristocracy.

The Marchioness of Waterford, accompanied by Lady Stuart de Rothesay, arrived at Mivarty Hotel on Monday, from the German spas. The noble Marquis comes to town to-day.

The Earl and Countess of Lichfield, and the youthful Lady Gwendaline Anson, who returned to Great Stanhope street at the close of the preceding week from Shanbrough Park, have since left town for the German spas.

Viscount and Viscountess Canning have arrived at Brest, in his Lordship's yacht, the *Fair Rosamond*, from a cruise.

Lord Cowley arrived in London on Thursday, where he purposes remaining for a brief interval. The absence from Paris of her Britannic Majesty's Ambassador, and his presence at this moment in London, may naturally give rise to a variety of conjectures.

The Duchess d'Orleans and her children arrived at Geneva on the 13th.

The Queen of the Netherlands arrived at Hanover on the 12th, on her way to Prague. Her Majesty is travelling under the name of Countess de Buren.

Her Imperial Highness the Grand Duchess Catharine of Russia, and her husband, his Serene Highness the Duke of Mecklenburgh, and suite, arrived at Portsmouth, on Monday night, and, under salutes from the *Victory* flag-ship, the *Sarpan*, and *Blenheim*, at Spithead, embarked on board the *Five Queens* steam-vessel, Lieutenant Mason, and proceeded to Ryde, *en route* to Stockholm.

THE BIRTH-DAY OF H.R.H. THE DUCHESS OF KENT.—Tuesday being the birth-day of M.R.H. the Duchess of Kent, the morning was ushered in at Kensington by the ringing of merry peals on the church bells, and the Royal standard was hoisted. In the evening, her Royal Highness's tradesmen in London and Kensington illuminated, and, as usual, they dined together at the King's Arms Tavern, Kensington; Mr. Edward Snell, jun., in the chair. Her Majesty was pleased to command a liberal supply of the finest fruits in season, from the Royal gardens at Frogmore, on the happy occasion, and the Royal Duchess sent a fine fat buck.

THE PRINCESS VASA.—A letter from Mannheim, given in the *Cologne Gazette*, says:—"Her Royal Highness the Princess Vasa, with her daughter Carola, have been staying here for the last few days. They are now about to take their departure for the family estate in Austria, and will winter there. The marriage of Princess Carola with Napoleon Bonaparte, of which so much has been predicted, will not take place, whatever may be said to the contrary."

Ellen Massey, aged twelve years, died last week at Ripley, in West Yorkshire, of hydrophobia, having been severely bitten in the arm by a rabid dog, on the 9th of July last. The dog was killed soon after the accident.

Until the opening of a railway from the Hollandsch-Diep to Rotterdam *viâ* Breda, the line from Antwerp to the Hollandsch-Diep will be placed in communication with Rotterdam by a line of steamers conveying the passengers and merchandise, the times of departure being adjusted to the arrivals of the trains. During the interruption of the navigation by ice the functions of the steam-boats will be discharged by diligences. The convention was ratified by the King of Holland on the 27th ultimo, and by his Belgian Majesty on the 2nd instant.

Last Saturday morning a fire broke out in the extensive premises belonging to Mr. H. Feyte, eatinghouse-keeper, 3, Wellington-place, West India Dock-road, Poplar, which unfortunately destroyed the lives of two of the lodgers, named Franks and Mariner, and Edward Nightingale, a pensioner; as well as much property in the building, with its contents.

THE CONTINENTAL TRAFFIC.—During the late severe gales on the coast, while many of the continental steamers were obliged to take refuge in Dover and Ramsgate harbours from stress of weather, the excellent sea-going qualities of the South-Eastern and General Steam Company's packets enabled them to continue their regular traffic between Dover and Calais, and Folkestone and Boulogne, without the slightest interruption or accident, and with large freights of passengers.

TURKEY.—Intelligence has this week arrived from Constantinople that Ali Pasha is appointed Grand Vizier in place of Reschid, who will draw completely from the affairs of state. Achmet Pesh also retires. It is believed that Fuad Effendi will be appointed Minister for Foreign Affairs.

EGYPT.—The Viceroy of Egypt has appointed Edhem Pacha Minister of Foreign Affairs; Anderman Bey, Minister of Police. Both nominations are reckoned favourable for England.

THE STEAM-SHIP "GREAT BRITAIN."—This vessel was swung in the dock on Saturday last, at Liverpool, for the purpose of testing her compasses—an operation which required nearly the whole day—and it is satisfactory to know that those important instruments are quite correct. The ship is now ready for sea, and the passengers are busily engaged in taking their berths. She will be nearly full of passengers, all the second-class berths being taken, and nearly the second as well, with some dozen exceptions, whilst there are a few vacancies in the after saloon. A considerable amount of specie will go by this ship; £500,000 has been insured in this town, and large sums in London. What amount she may take cannot be stated accurately, as much will be the property and in the care of passengers, but it is likely to exceed a million sterling. The *Great Britain* got up steam and went into the Mersey on Friday (yesterday), and took her place for the night in the Sloyne. The passengers and mails are to be taken on board on Saturday (this day), and the ship is announced to sail at one o'clock for her new destination. The band plays on board every evening, from half-past five to six o'clock; and at sea its services are to be used four times a day. Since we last alluded to this ship, we have learned that her stores in the eating and drinking departments cost upwards of £1000, which is a fact worth placing upon record.

THE PALLADIUM OF BRITISH LIBERTY.—The *Barbadoes Globe* contains the following curious narrative from Antigua:—"A native of the colony of the name of Hughes had been rescued from bondage in Porto Rico, into which he was sold some time ago by a captain of a vessel who inveigled him thither. He was claimed by the master and owner. The Superintendent of Police at Antigua had been commissioned to proceed to Porto Rico to trace out, if possible, another native of the first-mentioned place alleged to be held in slavery in the latter, and that Hughes had arrived to search out that functionary and make himself known to him. Inquiry was instituted which left no doubt of the truthfulness of Hughes's statement; but the evidence being deemed insufficient to warrant the proceeding of adopting legal measures for effecting his restoration to liberty, the Executive of Antigua at once took steps for purchasing Hughes, which was done at a cost, including all expenses, of £125 1s. 11d., and he had reached home. His Excellency having, by message, brought the subject before the House of Assembly, they had, after some debate, in which it was held that the amount should be paid by the Imperial Government, agreed to reimburse his Excellency the sum expended, but at the same time gave him to understand they were not prepared to do the same on any future occasion."

POSTSCRIPT.

HOUSE OF LORDS.—FRIDAY.

PROROGATION OF PARLIAMENT.

This being the day on which the writs for the assembling of a new Parliament were made returnable, the House of Lords was opened shortly before two o'clock, for the purpose of proroguing Parliament, by Royal Commission, to Thursday the 21st of October next, in conformity with the order of the Queen in Council.

Since the dissolution the only alteration or addition which appears to have taken place in the house is the placing of three statues on three of the pedestals between the windows on the west side of the house. The benches on which the peers sit were uncovered, as well as the throne, and the seats of the Prince of Wales on the right and Prince Albert on the left of the throne.

The Duke of Northumberland and Lord Howard de Walden, who were the only peers present, entered the house a few minutes before two o'clock, and Mr. Shaw Lefevre, the Deputy Clerk of Parliament, took his place at the table before the business commenced.

At two o'clock precisely the Lord Chancellor entered the house, when the Commons having been summoned, that body was represented on the occasion by William Ley, Esq., the Assistant-Clerk, and several other officers of the Lower House. Mr. Shaw Lefevre having read her Majesty's writ, the Lord Chancellor, standing before the throne, said: My Lords, her Majesty has been pleased, under her writ, sent under the Great Seal, to prorogue Parliament until Thursday, the 21st of October next.

The proceeding did not occupy five minutes.

A great number of ladies and gentlemen was present below the Bar.

ELECTRIC DIAL IN THE STRAND.—On Thursday the electrical dial, in connexion with the electric time ball, was fixed in the centre of the five thoroughfares opposite Hungerford Market, upon its ornamented bronze pillar, and at night, when illuminated, presented a very elegant appearance, the four dial-plates being formed of enamelled glass, with the hours and minutes marked in stained glass upon the base, and the pillar surmounted by a gilt ball. The appearance of the great ball, or regulator, of a bright vermilion, sashed with a gilt circle, presented, from its prominent position, a novel and imposing appearance, and was the object of much admiration during the day. The electric time-ball, in consequence of the necessary loss of communication not having been completed, did not fall at one o'clock on Friday (yesterday), as was expected.

THE LATE FATAL RIOTS AT SIX-MILE BRIDGE, IRELAND.—During the recent disputes in Ireland, a trifle between some soldiers of the 31st infantry and the peasantry took place at Six-mile Bridge, one of the polling-places in the county of Clare, which we noticed at the time (a few weeks back). The military fired upon the people, and, as it would appear, without orders or sufficient provocation for so desperate an act. Six men were killed upon the spot, and another subsequently died of his wounds. A lengthened investigation into the whole affair has been carried on during the last ten or twelve days before the Coroner for the district, and on Wednesday last it was brought to a close by a majority of the jury (12), which numbered 17 men, bringing in the following verdict:—"We are satisfied that John C. Delmege, J.P., John Gleeson (first), James Postings, William Barnes, John Thompson, John Dwyer, James Sharpe, Thomas Clarke, and John Carter, soldiers of the 31st Regiment, are guilty of the wilful murder of Jeremiah Frawley." The minority of the jury (5) who dissented from that verdict said, that, although they had not agreed to the above verdict, they did not acquit the soldiers of all criminality; and that they would also have agreed to a verdict of manslaughter by soldiers whose persons were not identified. The five dissentient jurors also acquitted Mr. J. C. Delmege of having either fired himself or given any orders to fire. An application to admit the soldiers to bail was refused, and they were given into the custody of the police, who conveyed them to Limerick gaol. Mr. Delmege was not present at the verdict, but the Coroner's warrant is out against him.

FATAL COLLISION AT CHANNEL.—On Thursday information was received of the following serious collision:—The *John Bunyon* was on a voyage from Middlesborough to Alexandria, when, at one o'clock on Wednesday morning, she was in a dense fog, when a collision took place with a Norwegian barque (name unknown) off St. Catherine's Point. The concussion was so violent that the bulwarks and mainstay-gallant mast of the first-mentioned vessel were carried away, and her compass stove in. The captain, his wife, and the crew, imagining that she had been cut down to the water's edge, endeavoured to get on board the barque. The efforts of the crew were successful; but, unfortunately, Captain Benson and his wife, in making the attempt, slipped between the two vessels and were drowned. At the same time the survivors, finding their vessel had sustained no serious damage, returned to her and put into Portsmouth to repair, where she arrived the same day. The barque lost her jib-boom, and proceeded to her destination.

LATEST FOREIGN NEWS.

FRANCE.

By our advices of yesterday (Friday) from Paris, we learn that M. Thiers has not been slow in availing himself of the permission accorded him by Louis Napoleon, to return to the capital. He arrived in Paris on Thursday, and took up his abode once more in the Place St. George, apparently much pleased at being released from exile. M. de Remusat and M. de Chambolle, who were also under banishment, but have been allowed to return home, have accepted the boon offered; the former going to Switzerland for his estates in the Haute Garonne; and the latter having intimated his intention of shortly resuming his residence in Paris.

Fresh instances of the jealously restrictive vigilance with which the press, especially in the departments, is watched, are mentioned, three more journals having received an official "warning;" viz., the *Ere Nouvelle*, printed at Bastia, in Corsica; the *Progrès* of Rennes, and the *Journal du Rennes*.

The late inundations have caused immense damage in the department of the Isère.

ELECTRIC TELEGRAPHS IN INDIA.—It has been announced this week that the East India Company have determined to establish immediately a very extensive system of electric telegraphs in India, under the superintendence of Dr. W. B. O'Shaughnessy, of the medical establishment. It is intended to connect Calcutta, Agra, Lahore, Bombay, and Madras, and as many of the principal towns and stations as can be embraced in the routes between these places. The distance to be traversed is upwards of 3000 miles, and it is intended to proceed with each expedition in its construction that its completion may be expected before three years from the present time. Dr. O'Shaughnessy has lately been employed in India in carrying on experiments with the electric telegraph, in order to discover the best system which could be adopted.

SHIPWRECK AND LOSS OF LIFE.—Information was received on Monday of the total wreck of the *Blanche* Indiaman —Teddrington, master—which foundered off Helen's Shoal, off the south end of Lord North's Island, while on her way from Singapore to Shanghai, China. So very sudden was the calamity, that only a bag of bread of 100lb. weight could be secured, and the crew had not time to get a drop of water. With this limited supply of provisions the captain, mate, and the crew, consisting of Europeans, Lascars, and Malays, numbering twenty-nine persons, left in the boat. Soon after they fell in with the whale-boat, bottom up. Having righted her, the gunner, carpenter, cook, and four seamen were put on board with some provisions, and directed to keep in company. The captain and the crew in the one boat, after about six days rowing under a tropical sun, and much suffering from thirst and fatigue, reached the island of Sabuduk, where they found fresh water and shell-fish. Supposing the place to be uninhabited, they sailed for the island of Gagy, and from thence they started for the island of Geby, the Rajah of which place forwarded them to Batavia. After many extraordinary adventures, they ultimately arrived safe at their destination. Nothing has ever been heard of the whale-boat and her crew.

DISTRESSING ACCIDENT.—On Saturday evening, while the Royal Regatta were lying off Terrace, in the Solent, a distressing accident occurred on board the *Ramsbourne*, from Antwerp, one of the General Steam Navigation Company's vessel, while saluting the Royal yacht on passing. An old man-of-war's man, John Castles, and who has been for many years in the service of the company, was employed in firing the signal carronade, when, upon the second discharge, owing to the explosion of the cartridge while in the act of ramming it home, one of the poor fellow's hands, with the thumb and a portion of the other hand were blown off, his wrist and arm were frightfully shattered, and several severe injuries were inflicted upon his face and other parts of his person. The cause of accident appears to have arisen from not having exercising sufficient caution with respect to the closing of the vent hole. The gentleman, who was engaged in closing the vent, did not, it is said, sufficiently cover it with his thumb, and was at the time of the explosion also severely injured in his hand. Both the sufferers were conveyed on board her Majesty's ship *Retribution*, where proper surgical assistance was readily afforded. The carpenter's wound was immediately dressed, and he returned to his own vessel. Castles was also under the cooking, where the Hon. Captain Grimsdell stated that every possible attention should be paid to the poor man, and that if well enough to be removed, he should be landed at Spithead or some other place where he could receive every assistance. The scene was a rarefied strong feeling of interest among, and threw a gloom over, the passengers and crew of the *Ravensbourne*. "Poor Jack" was highly respected by his messmates, and, in consequence of his invariably firing guns when occasion required, was called the "Gunner." The circumstance under which the accident took place

the sufferer being upwards of sixty years of age, and having a wife and large family dependent upon him for support induced the passengers, before sending the poor fellow on board the frigate, to commence a subscription for his benefit, and in the short space of about a quarter of an hour a sum of £5 was collected, and placed, with the man's consent, in the hands of the captain, to be applied for him in any manner which might be thought best.

METROPOLITAN NEWS.

THE ELECTRIC TELEGRAPH COMPANY.—On Monday the half-yearly meeting of this company was held at the central station, Lothbury; Mr. W. F. Cooke, in the absence of Mr. Ricardo, M.P., the chairman of the company, presiding. Mr. J. S. Fourdrinier read the balance sheet for the half-year ending the 30th of June last, by which showed that £458,285 had been received, and £449,119 expended, leaving a balance of £19,136 under the head of "Capital Account," and a receipt under that of revenue for messages, subscriptions, and contracts, of £27,437, leaving an available balance, at the rate of 5 per cent. per annum of £10,177 for payment of dividend on 12,000 shares class A, and 11,961 class B. The report, which was generally considered satisfactory, was unanimously adopted.

THE ELECTRIC TIME-BALL IN THE STRAND.—After the satisfactory completion of the requisite arrangements which had been for some time pending between the Electric Telegraph Company and the Astronomer Royal at Greenwich, Mr. Edward Clark, the company's engineer, had instructed to fix the construction of the ingenious apparatus for the development of the electric telegraph system, as applied to to the regulation of time on a plan for distributing and correcting once per week from Greenwich the London and all the principal ports throughout the United Kingdom every day at one o'clock. The ball that has recently been raised on a pole upon the dome of the Electric Telegraph Company's west-end station, No. 445, Strand, opposite Hungerford-market pillar, and to the ball which surmounts the Royal Observatory at Greenwich), which is a remarkable object of attraction to all persons passing to and from the west-end of the City, is now complete. (An Illustration has already appeared in this ILLUSTRATED LONDON NEWS.) It is about 5 feet high and 16 feet in circumference, made of zinc, and painted of a bright red colour, so that it may be the more clearly discerned at a distance, and can with ease accommodate three persons in the interior. It has a broad gilt belt round it, thus having the appearance of a "great globe," and at the extremity of the shaft is a cross, or bright gilded weather-vane, with the four points, N. S. E. W.; and below the arms of the Electric Telegraph Company, with their initials, "E. T. C." Many difficulties have been experienced in the completion of this new line of electricity, the continuance of many obstacles with regard to the correct working of the telegraph wires along the streets of London and the Greenwich Railway to the Royal Observatory. These, however, have been overcome to the satisfaction of the directors of the company and the Astronomer Royal, and for the last three days the experiments have been made with the most complete success, the ball or globe dropping by the electric action simultaneously with the descent of the drop of the Observatory, indicating one o'clock, P.M., both balls being, in fact liberated by the same hand. It is now in active operation, and will communicate the standard time of Greenwich and London to the Strand every day, and to the principal towns in every part of United Kingdom and Scotland on the same principle, as arrangements have been made to make it one of the most complete improvements of the present day, not only in the Strand but in the whole metropolis crossings, and the new hall, on the top of the post has been tested as to its power of reflection, and this dial and electric apparatus will show forth the hour, minutes, &c., both day and night, to the public.

THE GREAT EXHIBITION OF 1851.—The Municipal Council of Paris at its last sitting voted, on the proposition of the Prefect, the following courteous address, in answer to the letter of the Lord Mayor and Aldermen of the City of London, thanking the Prefect and the Council for the generous reception they received at their visit last year, on the occasion of the London Exhibition:—"The Prefect of the Seine and the Members of the Municipal Council of Paris, to the Lord Mayor and Aldermen of the City of London.—My Lord and Gentlemen—We have received the courteous address which you have sent to us through his Excellency the British Ambassador. Deeply penetrated by this fresh proof of the close union which exists between England and France, we are gratified by the remembrance which you testify towards us. We, as strongly as yourselves, appreciate the benefits of the happy fraternity which those pacific competitions tend to establish between civilised nations. Under the shelter of peace, which they strengthen, the arts acquire perfection, and industry spreads over the whole world its benefits and its wonders. We, who have been the witnesses of the persevering efforts of our fellow-citizens through the difficult trials which it has pleased God to impose on our nation, see that their labours have been worthily appreciated by you. The artists and the artisans who were invited by you to take part in this generous struggle—the prize which is now united to two great nations—will be grateful for this gracious testimony, and will unite with us in our thanks. We are happy to address them to you in expressing all our wishes for similar occasions of union and pacific progress."

THE FINSBURY BIRKBECK SCHOOL.—The examination of the children of this institution took place on Tuesday last, in the presence of their parents and friends. The chair was taken by Mr. W. Ellis, the founder of the school. After the pupils had gone through an object lesson on the nature and properties of coal, which served to show the method pursued in monitorial instruction, they were examined in grammar by Mr. Thomas Cave, the amiable and intelligent manager of the school. They then underwent a rigid examination in physical geography and physiology, by Mr. Brookes, in both of which the children exhibited considerable intelligence and acumen. Two lads (Rose and Bisagni) then very creditably demonstrated the 32d, 16th, and 47th propositions of Euclid. Mr. W. Ellis, to whom this school is indebted for great pecuniary aid, as well as for enthusiastic exertions in its behalf, next examined the pupils in social science, from the admirable manuals he composed expressly for this mode of education. The children exhibited great attention and earnestness during the course. The chairman then concluded his examination and the business of the evening in a short and impressive address to the parents and visitors.

METROPOLITAN SEWER'S COMMISSION.—On Tuesday a special Court was held at the chief office, in Greek-street, at which the following commissioners attended:—Richard Jebb, Esq. (the chairman), Wm. Hosking, Esq., Thos. Wm. Redhead, Esq., Captain Veitch, Lewis Gordon, Esq., and Henry Hunt, Esq. The secretary read the usual financial account. On the 14th inst. the sum in hand amounted to £3530, on which cheques had been drawn, less the net proceeds, to the extent of £1244, leaving the net balance at that date £2286. Payments amounting to £275 were then sanctioned by the Court, leaving the present available balance £1311. The Court having received an "Estimate of expenses and probable expenses in respect of a new district rate upon the western division of the Westminster sewers," amounting in the whole to about £38,500, ordered that the rate already directed to be prepared be at 6d. in the pound, and that advertisements should be inserted, stating that it was the intention of the commissioners to make the said rate on the 7th of September. This rate, it was stated, would produce £38,177. District rates of 6d. in the pound were ordered to be prepared on the undermentioned localities:—Poplar, Greenwich, Ravensbourne, Hackney-brook, Hermitage-street, Spitalfields, Lower Wapping, and the eastern division of the Westminster sewers. The remaining business in the paper of the day having been transacted, the Court broke up.

SURREY GARDENS.—The pleasant routine of this attractive place of public amusement was varied on Monday by a "grand *fête*," held for the benefit of a society, the members of which, accidents have sufficiently of late years evidenced the Railway Guards' Universal Friendly Society, and Widows' and Orphans' Fund." The railway interest mustered strongly on the occasion, and, despite the doubtful character of the day, a good company.

A SCIENTIFIC BALLOON ASCENT.—The Nassau balloon, with the veteran aëronaut Green, ascended on Tuesday, for scientific purposes, from Vauxhall-gardens, under the superintendence of the Kew committee of the Council of the British Association. The place of starting was changed at the request of the committee by the lessee, Mr. Wardell. The balloon was provided with double sets of suitable instruments, in charge of Mr. Welsh and Mr. Nicholson, of the Kew Observatory. The ascent took place at 5 minutes before 4 P.M.; and the descent, with great ease and security, at 25 minutes past 5 P.M., at Swavesey, N.W. of Cambridge, the balloon having travelled nearly 60 miles in 1 hour and 30 minutes. The highest altitude was about 19,400 feet, and at that elevation the temperature was 7 deg. Fahrenheit, or 25 deg. below the freezing point. A second ascent is expected to take place in the course of the present week.

GENERAL POST-OFFICE.—With reference to the notice issued in May last, announcing the establishment of contract mail packets to Australia, viâ the Cape of Good Hope, it is necessary to state that, when the end of the month (the day appointed for making up the ordinary course, the mails for Australia, &c.) falls on a Sunday, the mails will be closed in London on the evening of the 3d, and in Plymouth on the morning of the 4th of the month.

ARRIVALS OF SHIPPING IN THE THAMES.—On Tuesday a larger number of vessels arrived in the river than has been known to come up in one day for some years, there having been no fewer than 244 vessels of all classes, the aggregate tonnage of which exceeded 36,000 tons, entered inwards at the Custom House. This unusual influx is to be attributed to the late heavy gales, during which the shipping were compelled to seek refuge in roadsteads and harbours along the coast until the weather moderated. Advices from the outports state that several vessels are bound up Channel.

FOREIGN CATTLE.—The arrival last week at the port of London on Monday last from abroad included one of especial novelty and interest, an importation having taken place for the first time of a cargo of cattle from Prussia, the produce of that country, and forming another feature in the supplies of the kind from the continental states of Europe, which have hitherto been confined to Holland, Denmark, the Hanseatic States, Belgium, and France. The arrival alluded to took place in the vessel *Green Isle*, from Memel, and comprised 56 head of oxen and cows and 10 sheep, consigned to order. Altogether 664 head of live stock were imported from abroad in London on the same day.

MYSTERIOUS DEATH.—A married woman, of the name of Moss, the mother of several children, residing at a dairy kept by Mr. Jones, in Norwich-court, Fetter-lane, was discovered at an early hour on Sunday morning, lying dead, near the stairs, with a dreadful wound on her head, her clothes saturated with blood, and her spine broken. At the inquest which was held on the body, it was elicited that deceased and her husband had quarrelled on the Saturday night previous, and she said that she would leave the house. She left the room about twelve o'clock that night, and her husband and children retired to rest. At six o'clock in the morning she was found as described. It was supposed that deceased fell down the stairs accidentally, was rendered speech less and died from the effects of the injury she had received. Verdict, "Accidental death."

LONDON AND BLACKWALL RAILWAY.—The directors of this company state in their report that the balance available for dividend amounts to £11,976, which will admit of the payment of 2s. per share, clear of income-tax, for the half-year ending the 30th of June last.

SOUTH-WESTERN RAILWAY.—The half-yearly meeting of this company was held on Tuesday, at twelve o'clock, in the board-room, Nine Elms station; W. J. Chaplin, Esq., M.P., in the chair. From the report, which had been previously issued, and which was therefore taken as read, it appears that the company had received altogether of capital, £8,722,516, and had expended £8,614,885, leaving a balance in hand of £107,631. The estimate for the completion of all the works had been £640,830. Of that sum, up to the 30th of June last, £630,000 had been expended, leaving in the hands of the directors, to be applied to the completion of the works, £10,801. The report having been adopted, a resolution, approving of a dividend at the rate of 3½ per cent. per annum, was carried unanimously. The meeting was then made special, to consider the proposed western extensions. After considerable discussion, a resolution was passed to the effect that the meeting, considering the importance of the schemes for the construction of a line from Salisbury to Exeter, and that if reasonable terms can be come to with the landowners, that the matter be referred to a committee of directors and shareholders to make the necessary arrangements and report the result to a meeting to be held in September next. The proceedings concluded with the usual vote of thanks to the chairman.

GREAT NORTHERN RAILWAY.—The report of this company for the past six months was issued on Thursday. It states that the gross revenue for the half-year was £290,674 1s., and the working and other expenses £144,240 7s. 6d., leaving a disposable revenue of £146,434 9s 6d, which is further reduced by fixed charges and debenture interest to £49,186 3s. 6d.; and of which the directors recommend the payment of a dividend at the rate of two per cent. per annum on the original stock, and four per cent. on the B stock, which will leave a balance of £1103 18s. 6d. to be carried to the next account.

THE NELSON COLUMN.—On Tuesday workmen were busily engaged in erecting the scaffold for the purpose of receiving the last instalment of the artistic embellishment of the pedestal of the Nelson Column, on the west-side, facing Parliament. It is a fine alto-relievo, in bronze, by Mr. Watson. The subject represents Nelson animating and directing the boarding of the *St. Joseph* at Cape St. Vincent. The weight of the relievo is about four tons. It was cast at the foundry of Messrs. Moore and Co., Baldwin's-gardens, Leather-lane. The height is 14 feet; the breadth about 13 feet 7 inches. The figures are not colossal, but the size of life.

EMIGRATION FROM ST. MARTIN'S WORKHOUSE.—Some short time since we recorded an active measure of benevolence propounded by the guardians of the poor of the parish of St. Martin's-in-the-Fields, and sanctioned by the vicar, for the benefit of the able-bodied poor and the relief of the ratepayers. The plan was simple, and ultimately carried, whereby the emigration, which was to be effected by means of a penny rate, which would amount, when collected, to about £1000. The guardians caused advertisements to be inserted in the leading journals for the erection of two cottages, consisting of a number of pauppers, under the regulations of the Poor-law Board, to Fort Adelaide, in South Australia. These tenders were opened and decided upon on Monday night. In the meantime numerous persons had already personally petitioned the board to be included in the emigration list. It should be stated that they are all paupers who have *bona fide* settlements in the parish, gained either by renting tenements, by apprenticeship by birth, by a continuous employment, or by irremovability consequent upon a five years' continuous residence. Upon the 12th inst. a list of the proposed emigrants was forwarded for approval to the Poor-law Board.

BIRTHS AND DEATHS.—The births registered in the metropolis during the week ending last Saturday were—Males, 771; females, 694: total, 1465. The deaths were 1091, being somewhat less than were registered in the previous week. The official report states that diarrhœa and summer cholera are still fatal; of 15 deaths from cholera it occurred in children under the age of 14, and 4 in old people of the age of 60 and upwards; only of the deaths occurred on the south, while 11 occurred on the north side of the Thames; 201 persons were destroyed by diarrhœa, 174 were children. The deaths of females (555) exceeded the deaths of males, 536; but by 19, a change in the proportions which was observed in the corresponding week of 1849, when cholera was epidemic; 16 persons died of smallpox, 14 of measles, 47 of scarlatina, 47 of typhus, 192 of consumption, 29 of apoplexy. Disease of the heart and averses was fatal in 30 instances, bronchitis in 29, and pneumonia in 31. 29 deaths from violence are recorded, including 4 by poison

METEOROLOGICAL OBSERVATIONS.—At the Royal Observatory at Greenwich, the mean height of the barometer last week was so low as 29 3s0 in. The mean temperature of the week was 59 7 deg., which is 1 7 deg. lower than the average of the same week in ten years. The wind during the week was chiefly from the south, and blew at the average rate of 140 miles a day. Nearly ¼ in. of rain fell. The mean temperatures of the Thames declined from about 66 deg. 66 deg. on Sunday, to 66 deg. 63 deg. on Saturday. In the night it is still much warmer than the air.

NAVAL AND MILITARY INTELLIGENCE.

THE SCOTS GREYS.—His Royal Highness the Duke of Cambridge, Inspector-General of Cavalry, made his inspection of the Scots Greys, under the command of Lieutenant-Colonel Ricketts, at Coventry and Birmingham, on the 11th and 12th inst. His Royal Highness expressed himself perfectly satisfied with the general appearance, discipline, and efficiency of that distinguished regiment.

ADMIRALTY STEAMERS.—THE WEST INDIA STATION.—By the West India mail this week, we learn that her Majesty's steamer *Rosamond* (Commander Boyle Royal (Jamaica), on the 10th of July from Greytown, where she had suffered much from fever, although her stay there was only twenty-five days. The second engineer and eight of the crew died after a few days' illness. Lieutenant, the engineers, gunner and boatswain. Lieutenant Crawford, who commanded the *Albion*, had been appointed acting commander of the *Rosamond* by the Commodore. All accounts concur in stating that the sooner this vessel is ordered to some more healthy station the better, as the ship's company cannot efface from their recollection the frightful and sudden mortality which prevailed on board when on the coast of Africa. She seems to be a very inefficient ship, both in sailing, and her boilers are so small that a sufficient quantity of steam cannot be generated to drive at more than seven knots an hour. All the cases in the hospital were doing well at the latest date. *Her* Majesty's ship *Calypso* is daily expected at Greytown on the 27th ult. to take the place of the *Rosamond*. She is not to anchor, but to cruise among the islands to the northward, and look in occasionally to see that all is quiet.

NEW FRENCH WAR STEAMER.—A telegraphic despatch from Toulon, this week announces to the French Admiralty that the steam line-of-battle ship the *Napoleon* had, by aid of her engines alone, gone 114 and 19 knots an hour. The apparatus consists of four fixed cylinders; the movement is communicated by means of two cog-wheels, and is capable of developing a force of 1200-horse power. The *Moniteur* says that the *Napoleon* is the most powerful vessel at present afloat on the seas; it carries 90 guns, two months' provisions, and one year's biscuit for its crew of 900 men, and its stock of fuel exceeds 1000 tons. It will be able to go, it is said, about 1000 leagues in ten days and a half.

HANTS MILITIA.—A meeting of the Deputy-Lieutenancy of the county of Hants was held on Friday week at the County-hall, Winchester, at which his Grace the Duke of Wellington presided as Lord-Lieutenant, for the purpose of making arrangements for the enrolment of the new militia force. There were present at the meeting—Lord Henry Chichmondsley, M.P., the Marquis of Winchester, Sir William Heathcote, Bart., M.P., the Hon. Sir Edward Butler, the Hon. W. H. A'Court Holmes, Mr. H. C. Crompton, M.P., &c. It was resolved that circulars should be used for obtaining recruits for the militia, which, if successful, would obviate the necessity for putting into operation the ballot. It was also resolved that ten gentlemen be added to the Deputy-Lieutenancy of the county, whose names will be forthwith gazetted.

THE MILITIA AT BOULOGNE.—The town having been placarded with a notice, that persons de irons of volunteering their services as members of the new rifle force should apply to the overseers on or before Friday week last to enrol their names; on Saturday last seventeen were made of the number of volunteers, viz. Great Bolton, 42; Little Bolton, 14; total, 56. The number of men required from the county is 5628. The expectation of the "volunteers" was, that they were to have 10s when they gave their names, and much disappointment was manifested when they found that such was not the case.

CONVEYANCE OF TROOPS BY PRIVATE STEAMERS.—It appears that the expense for conveying the Royal Fusiliers from Portsmouth to Plymouth, by the commanding officer of the Scots Fusilier Guards, who, on condition that his men did not compete with agricultural labourers, but only supplied their places where vacant, consented to allow his men to wield the sickle in place of the sword. Two of the farmers of Boxhall, Mr. Edward Wyatt and Mr. Hollow engaged a score each of the Fusilier Guards, and, with their assistance, have completed the in-gathering of their sheaves and stacked them for winter threshing. The harvest southward of the South Downs is always the earliest in the kingdom.

SOUTHAMPTON DOCKS.—At a yearly general meeting of proprietors of the Southampton Dock Company, held on Wednesday afternoon, a dividend for the half-year of 3l. per share was declared, free of all income tax, which, although less than that declared for the six months ending December, 851, is a considerable improvement upon the one declared on the corresponding half-year of 1851.

HER MAJESTY'S VISIT TO BELGIUM.

ARRIVAL OF THE QUEEN AT ANTWERP.

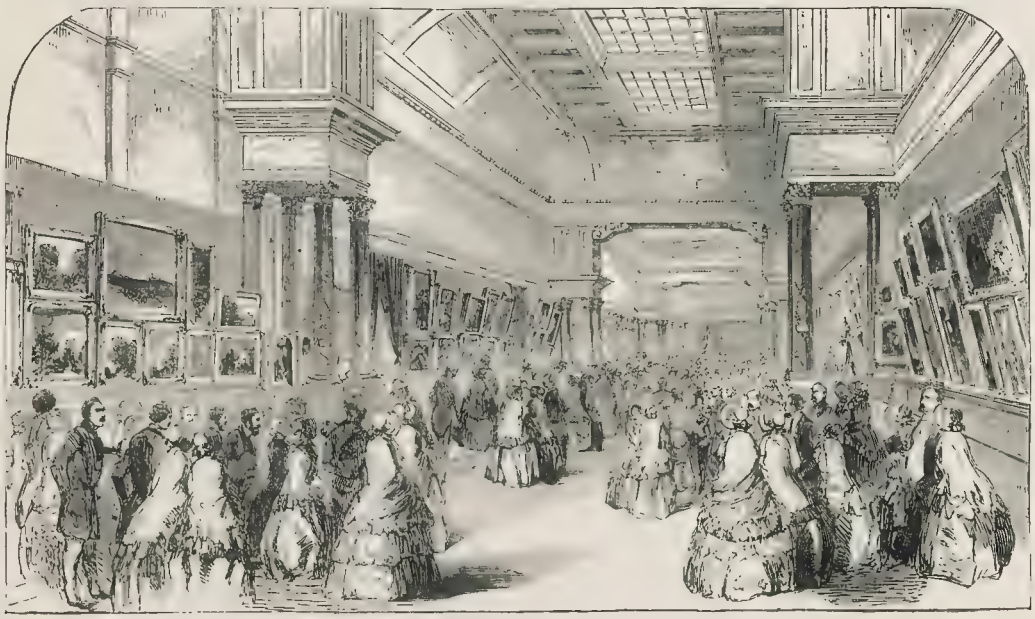
Her Majesty returned on Tuesday last to her marine villa at Osborne, from her short visit to her Royal relatives in Belgium. The weather, during the greater portion of her Majesty's absence from England, was boisterous and rainy, and thus detracted much from the pleasure of the Royal trip.

We briefly noticed last week her Majesty's departure from England, and arrival at Antwerp. The Royal steam squadron, consisting of the Royal yacht, *Victoria and Albert*; the *Black Eagle*, Admiralty yacht; the *Fairy*, tender; and the *Vivid*, Dover steam-packet, was attended by an escort of armed deep-sea steamers, viz. the *Odin*, *Magicienne*, the *Barracouta*, the *Simpson*, and the *Retribution*; and they all got under way on Tuesday morning (se'nnight), at seven o'clock, and made direct for the Downs, where they arrived at five o'clock in the afternoon, and anchored for the night. The following morning (Wednesday) they directed their course for the Scheldt, and arrived at Antwerp in the evening, at about seven o'clock. His Majesty the King of the Belgians shortly afterwards reached Antwerp from his palace at Laecken, and immediately went on board the *Victoria and Albert*, and joined the Royal dinner party. His Majesty returned on shore at ten o'clock, and proceeded to his Royal palace at the Place de Meir. Her Majesty Queen Victoria passed the night on board the Royal yacht, in the river, not coming ashore until the following (Thursday) morning. Accompanying her Majesty were his Royal Highness Prince Albert, the Prince of Wales, Prince Alfred, Princess Royal, and Princess Alice, and they were attended by the Countess of Gainsborough, in waiting; Lord Colville, Clerk Marshal; the Hon. Miss Byng, Colonel Phipps, Sir G. Clerk, and Mr. Gibbs.

The First Lord of the Admiralty, the Duke of Northumberland, was with the fleet.

On Thursday morning (se'nnight) at 9 o'clock, her Majesty, Prince Albert, and the Royal party came ashore in the Royal barge, and was received at the landing-place by King Leopold. (See Illustration.) The King was accompanied by his Royal children—the Duke of Brabant, the Count de Flanders, and the Princess Charlotte; and was attended by le Comte de Marnix, the Marshal of the Palace; Colonel Delanney, Major Fiequelmont, of the Ordnance department of Belgium; and M. Masui, the director of the railway. The bands of several Belgian regiments, who were drawn up along the landing-place, played inspiriting airs while the Royal party rowed ashore. The crowd of sight-seers was very numerous, notwithstanding a drizzling fall of rain at the time; and though the reception given to her Majesty by King Leopold's subjects was not enthusiastic, it was dignified and respectful. The Royal party immediately proceeded by special train to Brussels, and thence to Laecken (see Illustration), where they arrived shortly after 10 o'clock. Thus far we were able last week to chronicle her Majesty's progress.

We now subjoin some details of her Majesty's *sejour* on the Belgian soil. On Thursday afternoon (se'nnight) the Royal party having partaken of a *déjeûne*, took a drive previous to dinner, from Laecken to Brussels, which they entered by the Rue Longue Neuve, passing up the Rue de Madeleine, along the Boulevards, and by the park and the palace, returning to Laecken at about six o'clock in the evening. At seven o'clock a grand family dinner was given at the *château* (Laecken), covers were laid for twenty-two, and the invitations included Lord Howard de Walden, the British Minister; Sir Ralph Abercromby, British Minister at the Hague; M. Van de Weyer, the Belgian Minister, and Mdme. de Weyer, the Duke of Northumberland, Lord Colville, the Countess of Gainsborough,



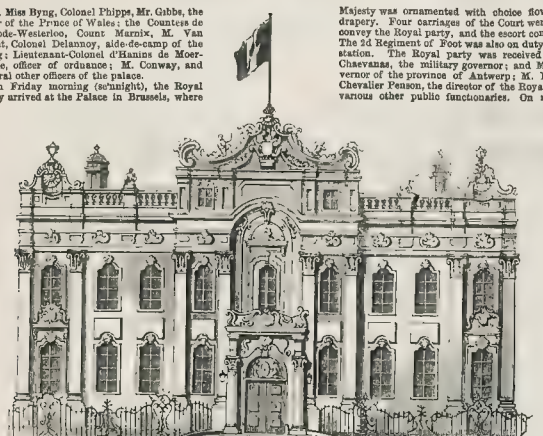
HER MAJESTY'S VISIT TO THE FINE ARTS EXHIBITION AT ANTWERP

HER MAJESTY'S VISIT TO BELGIUM.

PLACE DU PALAIS, BRUSSELS.—THE QUEEN LEAVING FOR LAACKEN.

Hon. Miss Byng, Colonel Phipps, Mr. Gibbs, the tutor of the Prince of Wales; the Countess de Merode-Westerloo, Count Marnix, M. Van Praet, Colonel Delannoy, aide-de-camp of the King; Lieutenant-Colonel d'Hanins de Moerkerke, officer of ordnance; M. Conway, and several other officers of the palace.

On Friday morning (to-night), the Royal party arrived at the Palace in Brussels, where they partook of a grand breakfast in the *salon*, during which the choir of the Royal Society of Harmony performed a concert in an adjoining saloon. As soon as breakfast terminated, the Queen proceeded to the reception room, where she received the various members of the diplomatic corps at Brussels, as well as the chief officers of State.



THE KING'S PALACE, AT ANTWERP, FORMERLY THE HOTEL DE LA PLACE DE MEIR.

The Royal party then proceeded to take a drive round the Palace Royal and Boulevards, and afterwards visited the Musée. The two English Princes, accompanied by the Duke of Brabant and the Count of Flanders, visited on foot several of the most attractive parts of the city, the Galerie du Roi, the Galerie de la Reine, and other parts of the town.

One of the principal object of attraction to the Royal party in this little tour of observation was the Cathedral of St. Gudule. They especially admired the exquisitely-painted windows of the Chapel of the Holy Sacrament, which was at the moment undergoing some temporary decorations (then nearly complete) for the celebration of the Feast of the Assumption of the Blessed Virgin, on Sunday last, the 15th. The graceful and exquisite image of the Virgin, glittering with jewels, ornamented with a crown of gold, and clad in a blue and golden robe, over which was thrown an elegant Brussels lace veil reaching to the feet, was placed within the elaborately carved and painted shrine, and was greatly admired. The exquisite *chef-d'œuvre* of Verbruggen—the pulpit—representing the expulsion of Adam and Eve, was closely examined, and its elaborate ornamentation and artistic appearance occupied the attention of the visitors for a considerable time.

Other places of interest in Brussels were also visited by the Royal party; and, on their return to Laecken in the evening, a second grand family dinner, at which the *corps diplomatique* was present, was given, the Royal Society of Musicians performing several pieces throughout the evening.

On Saturday morning, at nine o'clock, her Majesty, his Royal Highness Prince Albert, and the Royal children, accompanied by the King of the Belgians, the Duke of Brabant, and the Count of Flanders, arrived at the railway station at Brussels, and proceeded by special train to Antwerp. The train, decorated with the Belgian flag, reached Antwerp precisely at ten o'clock, and its appearance within sight of the station was announced by the firing of cannon. Large crowds of persons were assembled in front of the station, and a privileged few succeeded in obtaining admission near the entrance to the reception-room prepared for the Royal party. The station was gaily decorated with Belgian and British flags, and the portion of the interior prepared for her Majesty was ornamented with choice flowers, and crimson and gold drapery. Four carriages of the Court were in waiting at the station to convey the Royal party, and the escort consisted of a troop of lancers. The 2d Regiment of Foot was also on duty as a guard of honour at the station. The Royal party was received at the station by General Chasvanas, the military governor; and M. Teckmann, the civil governor of the province of Antwerp; M. Loos, the burgomeister; the Chevalier Fenson, the director of the Royal Academy of Antwerp; and various other public functionaries. On alighting from the train, her Majesty took the arm of the King of the Belgians, and was followed to the Royal carriages by Prince Albert and the Royal children. Her Majesty appeared to be in excellent health, and carried in her hand a very beautiful bouquet of flowers. The King, on alighting from the train, was loudly cheered, and her Majesty was greeted with very general shouts of "*Vive la Reine!*"—and Prince Albert with cries of "*Vive le Prince!*" The Duke of Brabant and Count of Flanders were also loudly cheered. On the arrival of the train the band of the Chasseurs played the National Anthem; and on the carriages leaving the station, one of the Belgic national airs.

The Royal *cortège* immediately proceeded to visit the Antwerp Exhibition of Fine Arts (see Illustration), which was opened on the previous Sunday. The Royal party examined the works of art with considerable interest. The beautiful picture of "Bacchus and the Panthers," Landseer's "Forester's Family," and the large picture of M. Slingeneyer, representing Philip the Good at the battle of Brouwershaven, attracted the notice of her Majesty, and the principal figures in the tableaux were much admired. The picture of M. Keyser, representing simply and nobly the treatment of Columbus and his son, was much admired; as was also the expressive and highly interesting work of M. Wappers, representing the sufferings of the Dauphin, who, in his agony of distress, inscribed on the walls of his prison, in the house of the cruel Republican, "O mon Dieu! pardonnez à ceux qui ont fait mourir mes parens." After inspecting the numerous works of art in the Exposition, the Royal party visited the cathedral of Notre Dame, where the beautiful shrine of the Virgin, with its rich crimson and gold canopy, was greatly admired. Having examined the more remarkable works of art in the body of the cathedral, dwelling some time before Rubens' celebrated "Descent from the Cross," the Royal party visited the adjoining *atelier* of M. Etienne Leroy, of Brussels, where an opportunity was afforded them of visiting the most glorious of the *chefs-d'œuvre* of Rubens, and which, for the last three years, has been in his skilful hands in the process of restoration. A small square piece of the original is nearly all that now remains to be restored, and its contrast with those portions which have been treated by the artist is most remarkable. The subjects represented in these great works of art are "The Elevation of the Cross," "The Visitation of St. Elizabeth," "The Presentation in the Temple," "The Soldiers at the Cross," and "The Sufferings of Human Nature"

From the cathedral the Royal party proceeded to the Hôtel de Ville, and afterwards to the palace in the Place de Meir (See Illustration), where they partook of a *déjeûner à la fourchette*. The palace of the Place de Meir is a plain and unpretending structure, of large dimensions, and stands right opposite the *Place*.

Shortly after two o'clock, P.M., the roll of drums and the blast of trumpets on the quay told that her Majesty had arrived, and was going to embark. The vessels of the squadron were all dressed in flags, a large force of horse and foot was drawn up opposite the landing-place, and from one extremity of the quay to the other not a spot of ground commanding a view of the spectacle but had a spectator. The day held up, though clouds were not wanting in the distance. It was nearly twenty minutes before the Royal barge came off from the yacht, and her Majesty was standing during that time on the steps of the place of embarkation, in converse with the King, or looking around at the people and the boats on the river. At 2.35 the Royal standard floated from the main of the Royal yacht, and at 3 o'clock, amid the salutes of the batteries, answered by the guns of the *Odin*, the whole squadron got under way, and passed before he quays in a procession of unequalled splendour. The King and Prince Albert were on the port paddle-box, where they remained till the yacht was lost in its many windings on the mazy Scheldt. The Queen, the Belgian Princes, and the Royal children, were stationed on the platform

THE KING OF THE BELGIANS LEAVING THE ROYAL YACHT.

The *Vivid* went first, and next came the Royal yacht, followed by the *Black Eagle*. As they passed in succession the *Odin*, *Barracouta*, *Sampson*, *Magicienne*, and *Retribution*, they were received with three cheers from the men on the yards, who were stationed there for nearly half an hour, from the embarkation of the Queen till she passed them. Then one by one her Majesty's war-steamers got into motion, and worked slowly down the river against a strong breeze. King Leopold proceeded with the Royal squadron down the Scheldt as far as the forts of Lello and Liefkenshoek, the extreme points of the Belgian frontier. As the Royal squadron came in sight, the guns of these forts fired a *feu de joie*, which was answered by the English war steamers, and the local band of Doel, assembled before Liefkenshoek, performed "God save the Queen," and the "Brabançonne," in turn. Here the squadron lay for short time, during which King Leopold and his sons took leave of the Queen, Prince Albert, and their Royal cousins (see Illustration). The Belgian mail packet-boat *Chemin de Fer*, which had been sent round from Ostend for the occasion, having M. Lahure, Inspector of the Navy, in command, was in readiness to receive them; and, after an affectionate farewell, the King and the Princes went on board, and slowly passed along the line of the English fleet on their way back to Antwerp. As soon as the Royal standard of Belgium was hoisted at the main of the little steamer, the ships of the escort manned yards and fired a Royal salute, and the forts on shore returned the compliment. The Royal squadron proceeded on its way towards the mouth of the Scheldt, the wind rising gradually to "a stiff breeze." The original intention was to go on to Flushing, with the object of anchoring there for the night and during the whole of Sunday; but the threatening aspect of the weather induced a change in the intentions of her Majesty, and the Royal yacht, accompanied by the *Vivid*, *Fairy*, and *Black Eagle*, returned to a more sheltered position opposite the small town of Terneuse, on the Dutch coast. This little spot, by consequence, presented a lively and animated appearance—all the vessels in the harbour, together with a large Dutch frigate lying in the Scheldt, being gaily decorated with colours. During nearly the whole of Sunday the vessels of the squadron had their yards manned, and other orders flying; the wind, however, blew fresh, and the vessels remained at their anchorage during the night.

On Monday morning, at six o'clock, the squadron got under way, and proceeded to sea, intending to make direct to Osborne, but a thick fog coming on, the yachts, with the steam frigates attending upon them, anchored at half-past five o'clock in Dungeness-roads, where her Majesty and the Royal party remained for the night.

On Tuesday morning the squadron got under way, directing its course to Osborne (Isle of Wight); and at eleven o'clock the Royal yacht was descried off Portsmouth harbour, preceded as usual by the *Vivid* steam-packet, Master Commander Luke Smithett, and accompanied by the *Fairy* screw-tender, Master Commander Bailliston; and *Black Eagle*, steam-vessel, Master Commander Petley, having the Duke of Northumberland, First Lord of the Admiralty, on board. On the Royal squadron approaching Spithead a Royal salute was fired by the *Blenheim*, 60, screw guard-ship, Captain Henderson, *Vivid*, 28, Captain R. S. Hamilton; and *Tyne*, 16, steam-frigate, Captain Giffard; and shortly afterwards by the garrison from the platform battery. The large steam-vessels of the squadron, consisting of the *Retribution*, 28, Captain the Hon. J. R. Drummond; *Odin*, 14, Captain Henderson, C.B. (acting); *Magicienne*, 16, Captain Ramsay (acting); *Barracouta*, 6, Captain the Hon. S. T. Carnegie (acting); and *Sampson*, 6, Captain L. T. Jones, were some distance astern, not making their appearance for more than an hour after the *Victoria and Albert*.

The run through Spithead presented an interesting spectacle, the men of war there being dressed in colours, manning yards, and cheering the Queen as she passed. The merchant vessels there, including the *London* (American liner), and *Albert* (East Indiaman), two very fine ships, also hoisted colours at their mast heads, and the Royal Victoria Yacht Club House, at Ryde, saluted the Queen with twenty-one guns. Nearly opposite Ryde the Royal squadron fell in with the yachts engaged in the contest for the £50 cup of the Royal Yacht Squadron. The heavy steamers of the squadron came up to Spithead in the afternoon, and proceeded to Cowes Roads, where they anchored. Her Majesty disembarked, and arrived at Osborne at 12.37 P.M.

The *Port of Spain Gazette* (island of Trinidad) of the 20th of July states that a Spaniard from Venezuela had that day sold to a mercantile firm 56 ounces of pure gold, which he had obtained from the Upata diggings in Venezuela. The price given was £4 per ounce. One specimen measured more than an inch in length, ¾ inch broad, and upwards of ¼ inch in thickness, and was of the purest quality.

The Fire on Board the "Severn."—An investigation commenced on Wednesday, at Southampton, by the directors of the West India Company, into the cause of the fire on board the Brazilian packet *Severn*, when between Madeira and Lisbon. It was conducted by Captain Symonds, the Royal Mail Steam-packet Company, viz. Mr. Masterman, Captain Llot, and Captain Chappell, R.N. (Secretary and Joint Manager).

East India Company.—The report of the directors, which is to be submitted to the proprietors on the present day, has been issued between Howrah and the Ranegunge Collieries continue to progress satisfactorily. To complete and stock this division of the line some additional capital will be required. The existing contract with the Hon. East India Company provides for raising such capital, and, when the proper time arrives, the proprietors subscribing it will be given to the then proprietors of the old shares. The surveys between Pundoah and Rajmahal alluded to in the last report, have been carried to such an extent as to enable Mr. Turnbull, the resident engineer, to report upon the general features of the line, which are highly favourable to the construction of a railway. Mr. Turnbull's report is now before the authorities for consideration, and any arrangements that may be made founded upon that report will be announced to the proprietors at the earliest opportunity.

High Tide.—On Wednesday there was a spring tide, when the Thames rose so high that it covered the Essex pier, and nearly reached the steps leading to Essex-street, so that the steamers at that quay were unable to land until the turn of the tide. All the warehouses and buildings along the river were inundated, but little damage was done to property.

Post-office Statistics.—By the census of 1841 the population of Scotland was found to be 2,620,000, and the population of Ireland 8,175,000. In the census of 1851, Scotland stands at 2,806,000, and Ireland at 6,500,000; thus, while Scotland has gained 200 000 people, Ireland has lost a million and a half. Ireland, however, has a decided position in the postage-office scale, as regards letters and money orders. In 1841, the number of Scotch letters was 21,234,772; the number of Irish letters being 20,794,297: in 1851, the numbers were respectively 36,513,000 and 14,500,783. As to money orders, the comparison stands thus:—In 1841, Scotland, 51,516; Ireland, 53,507; in 1851, Scotland, 389,680: Ireland, 392 848. Thus, ten years ago, as measured by these tables, 2,000,000 Scots were equal to 8,000,000 Irish; while now 8,000,000 Scots are no more than equal to 6,500,000 of Irish. Fat, however, must not begin to boast as yet. One Scot in seven takes out a money-order in the course of the year, but that Irishman is not born who will be a bankman in sixteen. Moreover, the Irish orders, though more numerous than the Scotch, amounted in money to £553 000 only, while Scotch orders amounted to £769,000; so that Sawney beats Pat in the magnitude of each transaction.

A Mad Wolf.—Letters from Smyrna of the 26th ult. give an account of a terrible disaster which occurred at Adana some days before. A furious wolf suddenly appeared in the market-place, and set several persons most severely, but, taking fright at the cries which arose on all sides, he jumped over a wall, and got into a large garden where several hundred persons, who had come to the town on account of the silk crop, were sleeping in the open air. Here he wounded 128 persons, but, being again frightened away by the cries of the people, he got into a sheepfold, where he killed 40 sheep and wounded 75. Unfortunately, the Governor had caused the whole population to be disarmed a few days before, so that the unfortunate people were without means of defence; but on the following day every man in Adana, a Turkish gentleman in sixteen. Moreover, the Irish orders, though more numerous than the Scotch, amounted in money to £553 000 only, while Scotch orders amounted to £769,000; so that Sawney beats Pat in the magnitude of each transaction.

THE FINE ARTS IN THE CITY OF LONDON.

(To the Editor of the Illustrated London News.*)*

Sir,—London is generally considered poor in works of art, and visitors to the metropolis contrast it unfavourably with the wealth of continental cities. Having paid much attention to the subject, I believe we have scattered through our numerous halls pictures of the highest excellence, which if brought together, would scarcely be surpassed by any gallery in Europe.

Last year I unsuccessfully attempted to get the corporation to appoint a committee to take up the question in conjunction with the companies. I then communicated with the Guildhall Committee, as preliminary to addressing all the others. The enclosed correspondence will show you the result. Its publication in the Illustrated London News would, I believe, be of infinite service, and might induce the various companies voluntarily to adopt measures to carry out the principle suggested.

If the dock companies, the extensive brewers, the Bank, the India Company, and other important bodies, can manage to open their buildings to the public without inconvenience, surely the various public companies might do so without danger.

I am, sir, yours faithfully,

City, August 12, 1852. F. Bennoch.

(Copy of Correspondence referred to.)

77, Wood-street; May 29th, 1851.

Sir,—As a member of the corporation of London, I have taken some trouble in attempting to open for public inspection the comparatively unknown remains of antiquity and treasures of art concealed in the city of London. I therefore most respectfully suggest that the distinguished guild over which you preside, might do itself high honour by opening on certain days in the week, under proper restrictions, the Goldsmiths' Hall. When we find that her Majesty throws open the rooms of her palace for the gratification of the public, by arrangements far from vexatious. When noblemen condescend to permit strangers to view their private collections of art in a very liberal manner, I venture to hope your company will follow such admirable examples.

I am led to make this communication from the fact that a banker from the country, desirous to see your famous hall, applied to me to procure the necessary order, I called and saw the beadle, who very civilly told me that the order of a member of the court was requisite. I asked the names of any in the neighbourhood to whom I might make application. To which he as civilly replied, he was not permitted to give any name. So baulked, I felt that the doors were virtually barred against all visitors, and wondered whether a spirit so exclusive was enjoined by ancient charter. A few days afterwards I applied to a member of the court, who kindly offered to show me the hall any day I would appoint to meet him, and regretted he had no power to grant an order. It being impossible to make the time of each party suit, my friend's curiosity was unsatisfied. Hence this letter, which I sincerely hope may lead to a revision of your rigid rules, and the adoption of a policy more in accordance with the spirit of the times in which we live. Begging the favour of a reply,

I am, Sir, your obedient servant,

F. Bennoch.

To the Master Warden of the Goldsmith's Company.

Goldsmiths' Hall, June 4th, 1851.

Sir,—I am desired by the Wardens of the Goldsmiths' Company, in reply to your letter of the 29th of May, to inform you that any friends of yours, on producing your card, will be permitted to view the hall.

I am, Sir, your obedient servant,

F. Bennoch, Esq. R. Welchon.

77, Wood-street, June 5th, 1851.

Sir,—I am truly obliged for the courteous note just received and for the personal privilege it kindly confers, which you may rest assured shall not be abused. My object, however, is not of a personal, but of a public nature, my desire being to obtain for all visitors to the metropolis easy access to our ancient halls. While a card from Mr. Smith, of Bond-street, is considered by Lord Ellesmere as sufficient security to view his fine collection, I think you might safely open your hall two or three days each week between the hours of ten and four. And I would venture to suggest for your consideration that a note from any alderman, clergyman, or other public person whose duties are not dependent on the fluctuations depending upon periodical election, should be a sufficient introduction. The taste of the public has so much improved of late years that no danger to your works of art need be apprehended; and I feel confident that an enlightened, liberal policy will tend greatly to conform and elucidate the privileges so long enjoyed by the chartered companies. As the season is passing rapidly, I trust your worshipful court will take the matter into their serious consideration; for until I receive their final decision, I shall not address any other company, and should like yours to take the initiative, and show an honourable example. The honour of a reply will oblige,

Sir, your obedient servant,

R. Welchon, Esq. F. Bennoch.

77, Wood-street, July 10th, 1851.

Sir,—Notwithstanding your polite communication, informing me that the court had kindly ordered that any person presenting my card should be admitted to see Goldsmith's Hall, I am surprised to find that my friends, Mr. and Mrs. —— have been refused admission.

I am, Sir, your truly,

R. Welchon, Esq. F. Bennoch.

P.S. An answer to my last note at your earliest convenience will be esteemed a favour.

Note.—On personal application my friends were admitted.

77, Wood-street, 15th June, 1852.

Sir, In May last year I attempted to induce the wardens of the Goldsmiths' Company to adopt measures for the admission of the public to view their Hall on certain days in the week. On the 4th of June I received a note from Mr. Welchon, stating that any person presenting my card should be admitted; to which I replied, my application was public, and not personal; at the same time thanking them for their courtesy, and promising that the privilege should not be abused, and urged a decision on the general question. To this note I received no answer. On the 10th July I gave my card to some friends from the country, and they were refused admittance. I called and explained the circumstances: the porter apologised, regretted the inconvenience to which I had been put, and promised that it should not again occur, and I believe he made a memorandum on the general order, so that his colleagues might know the special reason of the wardens in my favour.

To-day I called to introduce two American friends, and presented my card. The richly-laced beadle stared with surprise, treated me with ought but civility, and evidently disbelieved the truth of my statement. He pointed to the clerk's office. I entered; the clerk was engaged and could not be disturbed. His juniors knew nothing of the matter, and seemed to care less. I retired somewhat chagrined, and muttering something about the press. I felt less vexation at the simple denial than I did at my word being doubted. I was humiliated, for just before I had been dwelling with much pride on what I held to be a liberal response to a proper request; so we crossed to Christ's Hospital, where my enthusiastic friends desired to walk in cloisters consecrated by the presence of Coleridge, Lamb, and Leigh Hunt. And I must say, that the courteousness of the steward of that valuable institution contrasted greatly with our reception at Goldsmiths' Hall.

I now beg to know whether the unabused privilege granted by the wardens has been revoked, as I am not desirous of again submitting to the mortification of being treated as an impostor.

An early answer will oblige yours obediently, F. Bennoch.

To the Master Warden of the Goldsmiths' Company.

Goldsmiths' Hall, June 16th, 1852.

Sir, —In reply to your note of yesterday's date, in which you request to be informed "whether the unabused privilege granted by the wardens has been revoked," I beg to inform you that if you are under the impression that the wardens have granted you the perpetual privilege of bringing strangers to see this building except under the regulations which they have found it necessary to lay down (a copy of which I enclose), you are labouring under a misapprehension.

I find that last summer, during the Great Exhibition, when several foreigners were in London, they allowed the beadle, on your application, to relax the rule in the case of visitors introduced by you. At the present time the regulations to which I have referred must be observed.

When you called yesterday, I was at the moment particularly engaged, but if you had waited a short time I should have been very happy to have accompanied your friends through the building. The man in livery in the hall, whom you saw, is the porter, not the beadle, and, I think I right to add, that this is the first time he has been charged with incivility, and tha the assures me he was neither disrespectful nor uncivil.

I have the honour to be, sir, your obedient servant,

F. Bennoch, Esq. Walter Prideaux.

At a Court of Assistants holden on the 31st Jan., 1837, it was ordered—

That no person be admitted within the new building in Foster-lane without the personal introduction of a member of the court, the clerk, Surveyor, or chaplain.

The beadle is hereby particularly directed to adhere to the above order of the Court of Assistants. Goldsmiths' Hall, Feb. 1841.

77, Wood-street, June 16, 1852.

Sir,—Your note is to hand this moment. My application to the wardens last year, recommending a relaxation of their stringent rule, did not refer to a limited period but to a general principle. In words, your porter did not betray himself, but in action he showed most clearly that he gave no credit to my statement. You know that a shrug of the shoulder or a shake of the head may be made as expressive as language. I append a copy of the note forwarded to me by order, which you will observe is unequivocal in its language and unlimited in its application; with such authority in my possession, you may imagine, though you cannot experience, how much annoyance I felt in having my word disputed by your porter. I care nothing for the personal privileges, but I wish to know whether there is any chance of the wardens modifying their rigid regulations, so as to gratify and assist in improving the taste of the community.

I am yours obediently,

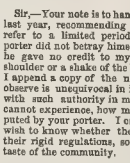
W. Prideaux, Esq. F. Bennoch.

Note.—To this letter I have received no reply, and presume they have wrapped themselves up in the sanctity of their charters, concluding that any favour granted to the public would lower their dignity and put in peril their exclusive privilege. I now leave it to the public and the press.

OBITUARY OF EMINENT PERSONS RECENTLY DECEASED.

SIR JOHN HENRY PELLY, BART., OF UPTON, COUNTY ESSEX, F.R.S.

Sir John Pelly died on the 14th instant at his residence, Suffolk-place, Pall-Mall East. This respected gentleman, governor of the Hudson's Bay Company, and deputy master of the Trinity House, was created a Baronet in 1840, and became in the following year Governor of the Bank of England. He was born March 31, 1777, the eldest son of Henry Hinde Pelly, Esq., by Saly Hitchen, his wife, daughter of John Blake, Esq., and married, July 13, 1807, Emma, sixth daughter of Henry Boulton, Esq., of Thornecroft, Surrey, by whom he leaves a large family. The eldest son, the present Sir John Henry Pelly, second Baronet, was born 3d March, 1809, and is married to Johannah Jane, youngest daughter of the late John Carstairs, Esq., of Stratford-green, Essex.



THE HON. SIR JAMES PARKER, VICE-CHANCELLOR.

The death of this distinguished lawyer, one of the Vice Chancellors, occurred suddenly on the night of Friday, the 13th instant, at his residence, Rothley Temple, Leicester. Sir James had been ailing for the last nine months, and on the first day on which he took his seat on the Bench, had premonitory symptoms of apoplectic seizure, the disease of which he died.

Sir James Parker was born at Glasgow in 1803, the son of the late Charles Stewart Parker, Esq., of Blockhearn, near that city. He received his education at the Grammar School and the College of Glasgow, and graduated as seventh wrangler at the University of Cambridge in 1825. In 1829, he was called to the bar by the Hon. Society of Lincoln's-inn, and soon became a leading practitioner in the Courts of Equity. In July, 1844, he obtained a silk gown; and in October, 1851, was appointed a Vice-Chancellor, receiving at the same time the honour of Knighthood. A few years previously, he was placed in the Commission of the Peace for the county of Leicester, and occasionally sat at the Loughborough Petty Sessions. In 1847 he contested, unsuccessfully, the borough of Leicester, on Conservative principles. Sir James married, 2d June, 1836, Mary, daughter of the late Thomas Babington, Esq., of Rothley Temple, co. Leicester, M.P., by Jean, his wife, daughter of the Rev. John Macaulay, M.A., and has left several children—the eldest son, Harry-Rainy, born 27th June, 1837.

NICHOLAS EDMUND YARBURGH, ESQ., OF HESLINGTON HALL, COUNTY OF YORK.

This estimable and lamented gentleman was the last male representative of the famous old English family of Yarburgh, and inherited, with his other broad lands, the lordship of Yarburgh, in Lincolnshire, which, at the period of the Norman Conquest, was held by his direct ancestor Ansketillus de Yarburgh. So few of the ancient gentry families of the days of the Normans and the Plantagenets remain in the male line, that we record with peculiar feelings of regret the occasional extinction of these time-honoured houses. A week or two since the gifted and long-descended chiefs of the Scropes, of Castle Combe, was included in our obituary, and our present notice refers to another eminent member of the untitled aristocracy.

Major Yarburgh was son of Charles Yarburgh, Esq., of Heslington, and the last of the heir-general, grandson of Colonel James Yarburgh, of Yarburgh and Snaith Hall (godson to King James II.), by Ann, his wife, daughter and co-heir of Thomas Hesketh, Esq., of Heslington. He was born in 1771, and succeeded to the estates at the decease of his brother Henry. In 1836 he served as High Sheriff of Yorkshire, of which county he was Deputy-Lieutenant, and Major in the 3d Regiment of Provisional Militia. Never having been married, he is succeeded in his extensive property by his nephew, Yarburgh Greame, Esq., of Sewerby House, near Bridlington. The deceased gentleman was a staunch patron of the turf. His fine old seat of Heslington, not more than two miles from the city of York, is a striking specimen of the Elizabethan period, having remained with but few alterations, and retaining all the charm of antiquity.

COLONEL WILLIAM CROKER, C.B.

This distinguished officer, late of the 17th Regiment of Foot, died at Cheltenham, on the 11th inst. He served forty-four years uninterruptedly in the 17th, in all the varieties of service that the corps encountered during that protracted period, and for twelve years he commanded the regiment, with the highest personal and professional honour, and the universal esteem and regard of officers and soldiers.

Colonel Croker was in the East Indies from 1804 to 1824, and took part in the siege of Gurnawri, in 1807, and in the campaigns against the Sikhs in 1845-9; the Nepaul States, in 1814-15; and the Mahrattas and Pindarrees, in 1817 and 1818. In the last-named year he became Assistant-Adjutant-General to the Royal forces, and retained that appointment until he returned to England, in 1824. In 1835 he raised a regiment in India with the 17th Regiment—a solitary instance in the British army of an officer landing twice in that country in the same corps, and commanded it during the campaign in Affghanistan and Beloochistan, in 1839, including the storm and capture of the fortresses of Ghuznee and Kelat.

Colonel Croker was fourth son of the late Edward Croker, Esq., of Ballynagarde, county Limerick, by Margaret Anne, his wife, sister of the late Earl of Listowel. He married Miss Stokes, and leaves three sons, all serving in the British army.

Death of the Duke of Hamilton.—The premier peer of Scotland, the venerable Duke of Hamilton and Brandon, expired on Wednesday morning, at his mansion in Portman-square. His Grace was one of the oldest, if not the very oldest, member of the peerage, having been born in the year 1767, and consequently had attained the patriarchal age of eighty-five.

Death of Mrs. Lalor Shiel.—Accounts have been received of the death of Mrs. Lalor Shiel, at Leghorn, on the 4th inst. She was the relict of the late Right Hon. Richard L. Shiel, Master of the Mint.

Thunder-Storm.—On Tuesday night, between ten and eleven o'clock, a terrific thunder-storm passed over the metropolis. The lightning was most awfully vivid, the peals of thunder were deafening, and the rain fell in torrents. A girl aged 16, named Morgan, residing at 20, Charles-street, Blackfriars-road, was deprived of sight by a flash of lightning; and a young man named Mahon, employed in a trading establishment at Islington, while carrying a box along the road, not far from the Angel-inn, was struck down to the earth by the electric fluid, and died in a few hours afterwards. The storm also visited Manchester and its neighbourhood. The lightning struck a shopkeeper at his door, and rendered him insensible for a short time, but he recovered subsequently

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

The cholera is making great ravages amongst the inhabitants of the frontiers of Poland and Russia, especially at Warsaw. On the 9th inst. the seizures in that city amounted to 478, and the deaths to 172.

Letters from the Bohemian frontier state that the gates of the gloomy fortress of Kusstein will shortly open to receive Arthur Gorgey, the late Hungarian Commander-in-chief, who since the pacification of Hungary has been allowed to reside unconstrainedly at Klagenfurt.

A lady was lately seized with cholera while travelling, at Ostrowo, on the confines of Poland. A doctor was sent for, but the Russian police would not allow him to pass the confines without a passport, and the lady expired without medical assistance.

Last week a student of theology at Bonn (Rhenish Prussia) went in a fit of religious insanity to a neighbouring wood with hammer and nails, and, finding a tree in the form of a cross, actually crucified himself. He was found in a state of insensibility by some peasants, who, not having tools for drawing the nails, felled the tree, and carried him with it to the next village. The young man is now in the hospital of Bonn, and out of danger.

The *Vienna Gazette* contains an ordinance for re-adjusting the gold and silver coinage standard of Austria, in conformity with the imperial rescript of April last. Henceforth the silver coins will be composed of nine-tenths fine silver and one-tenth of alloy.

It is stated that the Belgian Chargé d'Affaires at Washington is negotiating an advantageous postal arrangement with the United States Government.

It appears from the *Almanach Official* of France for 1852, just issued, that Generals Cavaignac, Bédeau, de Lamoricière, and Changarnier, have been definitively struck off the list of the general staff of the army.

Mr. J. Bailey, the sculptor, of Conduit-place, Paddington, has taken a mask of the late Vice-Chancellor Sir J. Parker, and is now modelling a bust of him, which promises to be an excellent likeness.

Three directors of the Royal Mail Steam-packet Company, viz. Mr. Masterman, Captain Liot, and Captain Chappel, R.N. (secretary and joint manager), have arrived at Southampton, to investigate the circumstances attending the recent fire on board the *Tagus*, between Madeira and Lisbon.

The mother of Mazzini, the Italian revolutionist, died recently at Genoa, at an advanced age. Her funeral took place there on the 11th inst., and was attended by a numerous concourse of the admirers of her son's politics.

The wreck of the *Duchess of Kent* steamer, which was a short time ago sunk, in consequence of coming into collision with the Antwerp steamer, near Gravesend, lies in such shallow water as to be clearly discernable at low water a few feet below the surface, and the divers can walk round her. The cabins being filled with sand, which increases at each tide, has hitherto prevented that part of the vessel from being examined, and the property contained therein from being recovered.

A letter from Neubach states that the infant daughter of Don Miguel was baptised at the château of that name, on the morning of the 9th, by the Bishop of Wurtzburg, in the presence of her father, the members of the family, and several Portuguese noblemen. The names given to the child are Maria Isabel a Eulalia Carlotta de Braganza Bourbon.

The Peninsular and Oriental Company's screw steamer *Bombay*, which left Southampton on the 29th ultimo, reached Gibraltar in four days thirteen hours. This is almost the quickest passage ever known to be made, even by a paddle-box steamer. The consumption of coal on board the *Bombay* is about two-thirds what it is on board a paddle-box steamer of the same size, and there are less persons employed in the engine department of the former than in the latter.

A son of Mr. Hernaman, editor of the *Newcastle Journal* (Tory paper), has recently received an appointment as inspector of Government Schools, with a salary of £300

It is stated that Mr. Fearon, the Attorney-General's solicitor for charities, was last week on a visit to William of Wykeham's much-abused foundation, St. Mary's College, Winchester; with, it may be hoped, a view to the better administration of the noble endowments, which cannot be less now than £30,000 a year.

When the railway to the Spanish port of Santander is completed it is contemplated to run screw steamers to and from that port and Southampton, by which means a person may reach Madrid from London in three days.

Mr. Adamson, the chief steward of the Brazilian packet *Severn*, committed suicide by jumping overboard a few days before the packet caught fire. Intemperance is believed to have been the cause of the rash act.

On Monday morning a fire broke out in the narrow passage called Fitzroy-court, in Tottenham-court-road, which resulted in the total destruction of one house, belonging to Mr. Eadie, baker, No. 3, in the court, and in injuries more or less extensive to six others.

On Monday thirty-five young women were dispatched by t e fine ship *Blackwall*, from Gravesend, to Melbourne, in Australia, under the auspices of the Female Emigration Society, of which Mr. and Mrs. Sidney Herbert are ardent supporters. A few words of encouragement and advice were addressed to them by Mr. Taylor, who also read a most affe tionate and kind letter from Mrs. S. Herbert; and the Rev. Mr. Jackson followed in an impressive exhortation.

A terrific thunder-storm broke over Bristol and the country adjoining between last Saturday night and Sunday morning, which was attended by the most disastrous consequences across the county. Many of the low lands are flooded, and a great quantity of wheat, barley, and oats was laid or swept away.

The King of Greece is bathing at Carlsbad, in Bohemia, where he takes not the public sacraments with great affability. As an example of Greek succession, it is settled that the King's youngest brother, Adalbert, shall inherit his crown, in consequence of which arrangement it has become necessary that the latter no longer be any contradiction a marriage.

The King of Prussia is bathing at the Isle of Ruegen, in the Baltic.

The Manchester Free Library, which has been established at a cost of upwards of £12,000, raised by public subscription, is to be opened on the 23 October. Lord Shaftesbury, Mr. Charles Dickens, Sir E. Bulwer Lytton, and other eminent men, are to be present.

Via Singapore, accounts have been received from the various diggings of Australia to dates as late as the middle of May. From Bathurst we learn that the miners have recommenced their labours with great energy. A large nugget (the largest yet) had been found opposite Go.den Gulley, which is said to be worth £2000.

The *Liverpool Chronicle* says, that Baron Rothschild is at length convinced that the retention of his seat, without permission to discharge the duties attached to it, is a useless honour, and therefore he will resign it in favour of Mr. Cardwell.

On the 15th of May the ship *Centaur*, from Calcutta for Muscat, with a cargo valued at from £70,000 to £100,0.0, was lost on the Arabian shore, and the wreck plundered by the na ives.

On the 23d of June the ship *Christian*, from Newcastle, with coals, was wrecked off the island of Kennery, while entering Bombay Harbour, the captain having mistaken the beacon on Kenery for the Colaba Light-house. The bazaar has since been destroyed.

A memorial to the Treasury has been adopted by the French Chamber of Commerce, praying the. body to adopt such measu.es as would induce the French Government to admit the linen manufactures of Ulster into that country.

The *La Plata* left Southampton on Tuesday with the West India and Panama mails. She had on board 1380 tons of coals, the largest quantity of fuel perhaps ever taken by a steamer.

A great many colliers in the counties of Stirling and Linlithgow have left their work this week and beaken themselves to sheaving, at which they are earning 3s per day. The strike has also taken place, that in the case of one colliery alone 78 men have left, and the result is already beginning to tell in the traffic receipts of the Mi'kands Mineral Railway.

Some persons recently obtained entrance into the steward's office of the new convict prison, Portsea, broke open the cash-box therein, and abstracted £40 in gold, during the temporary absence of the steward

At the Liverpool police-court, last week, a butcher, named Thos. Fraser, was fined 20s. for dressing two sheep lamb fash.on.

The Duke of Newcastle has just been elected at the head of the poll at one of the first local Boards of Health at Worksop, Notts, under the Public Health Act.

After this day (Saturday) the issue of tickets from the Lord Great Chamberlain's office for viewing the House of Lords, &c., will be discontinued until the meeting of Parliament.

An address has been issued by Mr. William Cobbett, recently released from the Queen's Bench Prison, and whose brother, Mr. John Morgan Cobbett, has recently been elected a member for Oldham, offering himself a candidate for the other seat, recently vacated by the death of Mr. Duncuft. Mr. W. J. Fox and Mr. Heald are still in the field.

Mr. Warren, Q.C., of the northern circuit, has, it is understood, received the appointment of Recorder of Hull, vacant by the late sudden death of Mr. T. C. Granger, M.P., who held the recordership after Mr. Baines vacated he office on being elected for the borough.

One evening last week, a man of the name of David Davies, the landlord of the Seven Stars public house, at Lower Swinford, in Worcestershire, becoming greatly irritated at the conduct of a crowd of railway labourers who, after drinking in his house, assembled in front of it to fight with each other, deliberately fired four times upon them from his window, killing a woman named Pardoe, the wife of a baliker, and the mother of six children, and wounding several others. Davies and his son (who aided him in his murderous assault by reloading the gun for him) have been committed to Worcester county gaol.

The clearances from the port of London for the gold colonies of Australia, during the week ending Saturday last, again show an increase. They cons sted of seven ships to Port Phillip, of an aggregate capacity of 3760 tons; and of two ships for Sydney, of 1530 tons. There were also two to Hobart Town. Van Diemen's Land, of a joint capacity of 824 tons. The exports likewise co tinue large, par.icularly of beer. The demand for passages has perhaps slightly abated, but the number of emigrants is still very large, and the total for the week from London alone is supposed not to have been much below 1000.

CHESS.

TO CORRESPONDENTS.

B B C, Princeton—Some are even better than the last, and all most acceptable

W R, of Oakgrove—Send them by all means you may rely upon their having fair play

R S W, Oxford—Your solution of problem 445 is very correct, pronounced without delay

C F S—I shall have publicity

M C F de J Mow—A communication was forwarded as you wished. We shall await impatiently the arrival of your "last, last words"

JUDY is warmly thanked for her judicious aid

IGNOR DUBDIS, Rome—A letter has been dispatched to the address indicated by your friend

RAMBOROUGH. The next meeting of the Yorkshire Chess Association is appointed to be held at Hull, in October We are not yet informed of the precise day

BOOKWORM—See Sir Walter Scott's annotations to "The Pilgrem," page 379, on the 39th stanza. "A chekse he find bi a chelre."

MINUS—Mr Cochrane's new work on Chess, "Indian Chess Leaves," has not yet reached England

S T M—We strongly recommend that in every club there should be a medal, of gold, or silver, or bronze, which should be played for in a general tourney among the members; the winner of it to be open to all challengers in the club; and, if he succeed in retaining the prize for three years, he should be entitled to claim it as his own

JUDITH Slate-Mare makes a drawn game

S. Honorary Secretary—The Games by Correspondence between the Birmingham and Liverpool Chess Clubs have been duly received, and shall be examined

BOGGIES—Your solutions were correct, but they arrived too late in the week

PETER SIMPLE—The "Chess-Player's Companion" contains a copious treatise on gamna at all odds, from the Queen to the Pawn and move

S M V—The game suitable and elegant present under the circumstances would be one of Meek's beautiful. "Terrace Chess-boards," in coloured glass

SHERSHERE—It is certainly of the highest importance to the interests of Chess in the Provinces that so laudable an association as that of the Yorkshire Amateurs should not be permitted to decline. It forms a rallying point for all true disciples of the game, both in the Northern and Midland counties, and serves to bring a large number of rising players together annually, in social contact, who otherwise would probably never meet at all.

SOLUTIONS of PROBLEM No 445 by M P, H S, Argus, C D, W N T; W R, of Glasgow; Dorcas, R R, of Ashford, S L, J G I, Bassino, Jack of Shrewsbury, and Biddy, are correct

SOLUTIONS of PROBLEM No 446 by L S D, M P, Brutus; W R, of Glasgow, R R, of Ashford; Jack of Shrewsbury; Pixy, Mungo, M E R, Major T., Railway Guard, Ernest, S S M, and G T V, are correct.

SOLUTIONS of ENIGMAS by Dorcas, M P, Surbiton, Phil, T P, R R, of Ashford; Miner, L L D, Jack of Shrewsbury, Ernest, and Fair-Chess, are correct; all others are wrong.

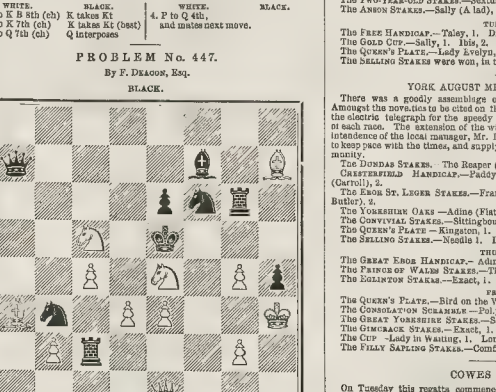
SOLUTION OF PROBLEM No. 445.

WHITE.	BLACK.	WHITE.	BLACK.
1. Q to R B 8th (ch)	K takes Kt.	4. P to Q 4th,	
2. Q to K 7th (ch)	K takes Kt (best)	and mates next move.	
3. Q to Q 7th (ch)	Q interposes		

PROBLEM No. 447.

By F. Deacon, Esq.

BLACK.



WHITE.

White to play, and mate in four moves.

CHESS IN SCOTLAND.

Two games recently played between Mr. Staunton and the Rev. T. Gordon (Gamma), the former giving the odds of the Rook and two moves.

(Remove Black's K B's Pawn from the board.)

WHITE (Gamma.)	BLACK (Mr. S.)	WHITE (Gamma.)	BLACK (Mr S.)
1. P to K 4th		22. K to Kt 2d (g)	P takes K B P
2. P to Q 4th	P to K 3d	23. K P takes P	P to Kt 5th (a)
3. B to Q 3d	Q to K 2d	24. B takes K P	Q R to K sq
4. P to Q B 4th	P to Q B 4th	25. Kt to Kt 3d	Q Kt to K 4th
5. P to Q 5th	P to K 4th	26. B to Q 3d	K R to K sq
6. P to K B 4th	P to Q 3d	27. Q R to K B sq	B to Q 6th
7. Kt to K B 3d	B to K Kt 5th	28. R to K sq (f)	P to K R 4th
8. Castles	Kt to Q 2d	29. B to K 2d	P takes K Kt P
9. Kt to Q B 3d	P to Q R 3d	30. K R P takes P	Kt takes K Kt P
10. Q to Q B 2d	P to K Kt 3d	31. R to K R sq	Q to K 2d
11. P to K B 5th	B takes Kt	32. R to K R 3d	R to Q 4th
12. R takes B	Kt to K R 3d	33. P to K R 6th	Kt takes P
13. B takes Kt	B takes B	34. B to Q 3d	R to K 8th
14. Q R to K B sq	Castles on Q side	35. B to K B 5 (ch)	K to Kt sq
15. P to Q R 3d	Q R to K B sq	36. R to K B sq	R to K 6th
16. P to Q Kt 4th	K R to K Kt sq (b)	37. B to K 6th	Q to K Kt 2d
17. K to K sq (c)	Kt to K B 3d	38. P takes P	P takes P
18. P to K R 3d	Kt to K R 4th	39. Q to K B 5th	K to Kt
19. Kt to K 2d (d)	Q to K Kt 4th	40. R to K 2d	R takes Q R P
20. P to K Kt 4th (e)	Kt to K B 3d	41. Q to Q B 4th	B to K 4th
21. Q R to K Kt sq (f)	Q to K R 5th	42 Q to K B 2d	Kt to K 6th

And White resigned.

(a) In good time or this Kt would speedily have taken up a position at King's 5th

(b) Black commences a vigorous attack on this side, mainly with the object of throwing his enemy on the defensive, and thus preventing him from prosecuting the dangerous assault a ready begun upon the Black King's encampment

(c) This appears to be an unnecessary retreat of time. It would surely have been better to march on with the Pawns on his left wing

(d) Gamma says a bet learned afterwards he for not having played the Q to K R 3d at this crisis. That move would certainly have been stronger than Kt to K 8th, but it would not, in our opinion, have prevented Black from obtaining the attacking position

(e) This and the few next moves of the defence are well e ecuted

(f) He would probably have done better now in challenging an exchange of Queens, by playing—31 Q to her 3 sq

(g) Ingenious and unexpected.

(h) Black hesitated for some time between this move and taking the K Kt Pawn with his Kt. Taking the Pawn was the more obvious and natural course, but as this la.ved to the first instance the sacrifice of a piece, and it was extremely difficult to foresee the ultimate results, he chose the less hazardous course of trying to ma ntain his attack by giving up the centre Pawns. We believe it will be found upon examination that he might safely have taken the K Kt PAWN; ex gr. :—

WHITE.	BLACK
23.	Kt takes K Kt P
24. P takes Kt	R takes P (ch)
25. K to B sq	

This seems to be his best move. If, instead of retreating the King, White here interposes either his Kt or Rook, he loses off hand.

25.	Q R to K Kt sq

The correct play for Black; any other move would afford the adversary an opportunity to escape.

26. R takes R (best)	R takes R

If he take the Rook with his Queen, or play the Q to K R 8th, giving check, White can extricate his King:—

27. Kt to Q 3d	

This is to prevent the advance of Black's K Pawn:—

27.	R to K 8th

The position is now extremely interesting. If White take the Bishop, he must lose in a few moves, by Q to K R 8th (ch) and R to K Kt 7th (ch), &c. If he play Kt to K 4th, mate follows in two moves; therefore—

28. R to K B 8d			
	Q to K R 8th (ch)	[29. K to his 2d	B takes R

And Black must win without difficulty.

(i) Gamma seems at this moment to have been panic stricken at the formidable aspect of the enemy's forces, for he s ys here in a manner quite unworthy of himself. The finish, however, from this point is an instructive study, and well deserves attention

BETWEEN THE SAME PLAYERS AT THE SAME ODDS.

(Remove Black's K B's Pawn from the board.)

WHITE (Gamma.)	BLACK (Mr. S.)	WHITE (Gamma.)	BLACK (Mr. S.)
1. P to K 4th		8. Kt to B 3d	P takes P
2. P to Q 4th	P to K 3d	9. Kt to Q Kt 5th	Q Kt to Q B 3d
3. B to Q 3d	P to Q B 4th	10. Kt to K 5 3d	P to Q B 3d
4. P to K 5th	Q to Q R 4th (ch)	11. Kt to Q 6th	Q Kt takes K P (a)
5. B to Q 2d	Q to Q Kt 3d	12. Kt takes Kt	Q takes Q Kt
6. Q to K Kt 3th (ch)	K to Q sq	13. Kt to Q B 4th	
7. Q to K B 7th	Kt to K 2d		

And play as Black may he must lose his Queen.

(a) By this inconsiderate capture Black throws away the game at the very opening, but in spite of this, the chairman is sounding on account of its novel and unlooked-for termination.

NATIONAL SPORTS.

The racing fixtures show a strong, if not a very brilliant, list of meetings for next week. On Monday we have four, viz: Radcliffe, Taunton, Barnsley, and Barnet; all two days but Radcliffe, which the managers unwisely, we think, intend to spin out to three Wenlock and Egham, each two days, commence on Tuesday; Derby, two days, on Wednesday; and Tiverton and Boston, one day's racing only, and Canterbury, two days, on Thursday.

The following Regattas are announced:—Tuesday—Royal Welch, at Carnarvon; Southampton and Royal Belgium. Wednesday—Weymouth. Thursday—Richmond. Saturday—Glasgow.

Cricket Fixtures:—Monday—All England match, at Newton Abbott; Sussex v. Surrey, at Brighton; All England match, at Teinbridge; and the Vine v. West Kent, at Chislehurst. Wednesday—Match at Horsham. Thursday—All England match, at Hereford; and Teinbridge v. Pymore, at Teinbridge.

TATTERSALL'S.

MONDAY.—Backers were so scarce and shy this afternoon that we must submit a price current composed almost entirely from offers:—

ESQ. ST. LEGER.		ESQ. HARDICAP.	
6 to 5 agst Daniel O'Rourke.			
5 to 1 agst Adine	12 to 1 agst Montagne	100 to 6 agst Voltigeur	
13 to 1 — Storyteller	12 to 1 — Odessus	21 to 1 — Merry Red	
13 to 1 — Sir Row and Trumchard	15 to 1 — Sackbut	20 to 1 — Bilberry	
		20 to 1 — Nancy	
GREAT YORKSHIRE STAKES.			
6 to 4 agst Stockwell	8 to 1 agst Hex		
ST. LEGER.			
7 to 2 agst Stockwell	7 to 2 agst Daniel O'Rourke	7 to 1 agst Songstress	
DEAD HEAT.			
33 to 1 agst Queen colt.			

THURSDAY.—No betting.

LICHFIELD RACES.—MONDAY.

The PRODUCE STAKES.—Ibis (A lad), 1. Director (Marlow), 2.

The STAFFORDSHIRE STAKES. Candlewick (W. Sharpe), 1. Weathergage, 2.

The TWO-YEAR-OLD STAKES.—Sister (Whitehouse), 1. Simoom colt, 2.

The ANSON STAKES.—Sally (A lad), 1. Theorem, 2.

TUESDAY.

The FREE HANDICAP.—Fantic, 1. Director, 2.

The GOLD CUP.—Sally, 1. Ibis, 2.

The QUEEN'S PLATE.—Lady Evelyn, 1. Weathergage, 2.

The SELLING STAKES were won, in two heats, by Mr. Brown's Lucy.

YORK AUGUST MEETING.—WEDNESDAY.

There was a goodly assemblage of the lovers of the turf in attendance. Amongst the novelties to be cited on the present occasion is the employment of the electric telegraph for the speedy transmission to a distance of the result of each race. The extension of the wires to the grand stand, under the superintendence of the local manager, Mr. De Chesne, is a proof of a determination to keep pace with the times, and supply the increasing wants of the racing community.

The DUNDAS STAKES. The Reaper (Wells), 1. Farmer's Boy (T. Lye), 2.

CHESTERFIELD HANDICAP.—Paddy Burd (Chilman), 1. The Puritan (Cartoll), 2.

The EBOR ST. LEGER STAKES.—Frantic (Flatman), 1. Daniel O'Rourke (F. Butler), 2.

The YORKSHIRE OAKS.—Adine (Flatman), 1. Evadne (Templeman), 2.

The CONVIVIAL STAKES.—Sittingbourne, 1. Nicotine, 2.

The QUEEN'S PLATE.—Kingston, 1. Dame Tatt'e, 2.

The SELLING STAKES.—Needle 1. Don Carlos, 2.

THURSDAY.

The GREAT EBOR HANDICAP.—Adine, 1. Lady Amyott, 2.

The FIRST ROWE OF WARDS STAKES.—The Queen, 1. Young Beverlac, 2.

The EGLINTON STAKES.—Ezzel, 1. Maidstone, 2.

FRIDAY.

The QUEEN'S PLATE.—Bird on the Wing, 1. Hesse Homburg, 2.

The CONSOLATION SCRAMBLE.—Poll, 1. Lady Vernon, 2.

The GREAT YORKSHIRE STAKES.—Stockwell, 1. Longbow, 2.

The GIMCRACK STAKES.—Exact, 1. St. Andrew, 2.

The CUP.—Lady in Waiting, 1. Knight Errant, 2.

The FILLY SAPLING STAKES.—Comfit, 1. Nicotine, 2.

COWES REGATTA.

On Tuesday this regatta commenced. The visitors were by no means so numerous as on former occasions. It was the day appointed for her Majesty's cup competition for which was open to all cutter yachts of the Royal Yacht Squadron. Three only, however, entered: the *Aurora*, 47 tons, Mr. L. Marchant Thomas; the *Lavrock*, 72 tons, Captain C. H. Williams, R.N.; and the *Arrow*, 102 tons, Mr. Thomas Chamberlayne. The morning was pleasant, with a light breeze from the S.E., which occasionally freshened in the course of the day, but never blew strong. The course was what is called the Original Queen's Cup Course, namely, from a vessel moored off Cowes Castle to the Nab Light, and thence to a vessel stationed off Yarmouth and back to Cowes. The course is about 70 miles. The yachts started shortly after 8 A.M., ran from the first to the last mark in good time, and maintained her position throughout. She passed both the Nab and the station vessel at Cowes nearly an hour before her competitors, and reaching the final goal at Cowes at 4 18 P.M. Thus the *Arrow* retains the laurels which she unexpectedly won from the *America*.

PRINCE ALBERT'S CUP.—The fol owing schooner-yachts were entered to sail on Thursday, for his Royal Highness's Cup:—*Coquette*, 47 tons, Lord Godolphin; *Glorvana*, 134 tons, Archibald Cochrane, Esq.; *Gem*, 348 tons, Joseph Pride, Esq.; *Claymore*, 138 tons, Arch. Campbell, Esq.; *Gipsy Queen*, 160 tons, Sir H. Bold Hoghton, Bart.

COWES TOWN REGATTA.—The Town Regatta, on Friday, was taken up with much spirit, and a very efficient committee was appointed. The members of the Royal Yacht Squadron voted £30 towards the funds. Earl Fitzhardinge, £5, Marquis Conyngham, the Earl of Dartrey, Sir Bellingham Graham, Captain Blake, Sir Harry Bold Hoghton, and numbers of the members of the squadron, had added to the amount. The boats of the Royal Yacht Squadron were rowed by their crews. There were punt matches, dandy hunts, pig and pole, rowing, running, and swimming matches. The Royal Yacht Squadron ball was held in the evening.

THE MATCH FOR THE ROYAL YACHT SQUADRON CUP ON SATURDAY (THIS DAY).—Nine yachts have already been entered for the match, and the *America* would have made, but unfortunately she is excluded, as she is not now a foreign yacht, neither does she belong to a member of the Royal Yacht Squadron; she is the property of our owner. Its value is seventy-five guineas. The annual club dinner took place on Friday week, and passed off with the greatest *éclat*. The regatta ball took place on Monday night, and was attended by the *élite* of the town and neighbourhood.

DOVER AND CINQUE PORTS REGATTA.—This regatta was held on Thursday last. There were several races on the card, viz. first, a sailing match between service luggers; and, second, a sailing match, also, between service luggers, but of the second class. The other races were those of four-oared galleys. The results of the sailing matches have not yet reached us. In the four-oared races the *Arrow* won the £10 prize, and the *Hebra* the £10 prize. There was a match, also, amongst the leading galleys in the former race, for a purse of £17, to be divided thus:—First boat, £9; second boat, £4; third boat, £3; and fourth boat, £2. They came in in the following order:—

Alarm	..	..	1st
Secret	..	Ditto	2nd
Mystery	..	Ditto	3rd
Mosquito	..	Ditto	4th

CHRISTCHURCH AND LAMBETH REGATTA.—The annual regatta amongst watermen belonging to the above places, came off on Monday, and was most numerously attended. The race was to three heats, with ten competitors, and was very respectably conducted. Final heat: T. Johnson and W. Lyon, 1. Gaines and Moore, 2.

CRICKET.—The College v. Tunbridge Wells Classical and Commercial School.—A match of cricket was played on Tuesday, the 17th, on the Boys College ground, between eleven gentlemen of each of the clubs of the above schools, and terminated in favour of the Tunbridge Wells School by 46 runs.

On Saturday last, in the course of some dispute that took place between the Mayor of Rochdrm, Mr. W. H. Hornby, and Mr. Thomas Dugdale, chairman of the East Lancashire Railway Company (originating in a conversation respecting the dividend to be paid by the company), the Mayor knocked Mr. Dugdale down, on the platform of the East Lancashire station Mr. Hornby will have to answer for the offence by indictment before a superior court.—*Manchester Examiner.*

COWES REGATTA.—HER MAJESTY'S CUP.

This superb prize, the gift of her Majesty, was contested for at Cowes, on Tuesday. It is in the form of an ewer, the body globular, with shapings enriched with coral and marine plants. Around the neck, which is formed of shell-work, are three marine figures: two are Nymphæ, disporting with wreaths of aquatic flowers; and the third a Triton, who is supporting a band of reeds, which forms the handle of the ewer. The foot is of shell-work, and the cover bears the Royal Crown. The front of the body has in high relief the monogram of her Majesty; and on the side is the following inscription:—

The Gift of her Majesty
To the Royal Yacht Squadron Regatta,
Cowes, 1852.

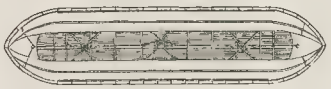
This prize—in design and manufacture English—has been modelled

COWES REGATTA.—HER MAJESTY'S CUP.

by Mr. John Taylor, of Messrs. Garrard's establishment, where it has been most efficiently executed. In taste and beauty of workmanship this prize is not second to any more costly production of the season.

THE "CHALLENGER" LIFE-BOAT.

The model of the patent Tubular Life-boat, the *Challenger*, was one of those selected by the Northumberland Life-boat Committee, and sent to



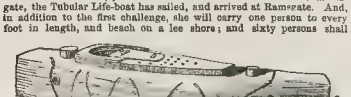
UNDER-KEEL OF RICHARDSON'S TUBULAR LIFE-BOAT.

the Great Exhibition. The boat was built by Mr. Lees, of Manchester, and launched from the Victoria Arches, in January last, into the Irwell, in the presence of thousands of spectators. At Liverpool, having been tested in gales, by steam, and every other means of proving her strength and stability, she issued her challenges to the life-boats of Great Britain. But none would accept, or go through the whole trials, except the Northumberland Prize Life-boat, which proffered to meet the tubular, if it would sail round to Ramsgate.

The Tubular Life-boat immediately started, and on her voyage touched at Menai-bridge, Carnarvon, Portdynllaem, and Aberstock: at Barmouth, the boat was tried on the bar on a heavy surf, and pronounced by certificate to be the most perfect Life-boat the harbour-master and pilots had ever seen. She then sailed to Aberdovey, Cardigan, Fishguard, Dale, and Milford Haven, the Mumbles, Ilfracombe, Padstow, St. Ives, Penzance, Falmouth, Plymouth. Here she was tested by the Port Admiral Sir John Ommaney, and taken alongside the *Leander* frigate,

DECK VIEW.

in the Sound, where 82 men were placed on her side, for the purpose of upsetting her, but were unable to effect it. From Plymouth she sailed to Cawsand Bay, Salcombe, Tynemouth, Lyme Regis, Cowes, Southampton, Portsmouth. Here she was again inspected and tested by the Port Admiral, Sir Thomas Briggs, to his entire satisfaction. She then sailed to Shoreham, Newhaven, Rye, and Ramsgate. On her arrival the following further notice and challenge was issued:—"The Tubular Life-boat's challenge not having been accepted at Liverpool, and the Northumberland Prize Life-boat having stated her readiness to meet her, provided the former would come round to Ramsgate, the Tubular Life-boat has sailed, and arrived at Ramsgate. And, in addition to the first challenge, she will carry one person to every foot in length, and beach on a lee shore; and sixty persons shall



BOAT FOR THE REMOVAL OF DISABLED PERSONS OFF WRECKS.

PLANTING THE BLUE FLAG ON CROSS FELL, CUMBERLAND.

at one and the same time jump and rush on board as if alongside the wreck of an emigrant ship." But it was found that the Northumberland Prize Life-Boat had been sold to the Ramgate Harbour trustees, who refused to let the boat undergo all the trials proposed, unless she was guaranteed by the builders in case of loss or damage. This the builders declined. The Tubular Life-boat then sailed for Woolwich, touching at Margate and Gravesend.

In her voyage round, the *Challenger* experienced much rough weather: strong gales and white squalls off the Welsh coast; wild races through Ramsey and Jack Sound; a heavy gale on the night of the the 25th of June, off Tintagel Head, Cornwall; thick blowing weather round the Land's End and in the English Channel. The crew consisted of the proprietors; with Mr. Thomas Evans, master of the Liverpool Magazine Life-boat, as sailing-master, and five sailors.

This Boat is 40 feet in length, can row eighteen oars, and carries two lugs, topsails, and jib. She is composed of two tubes of cylinder iron, supporting each other on the arch principle. She can neither sink, upset, swamp, nor be waterlogged. Weight of boat, with gear, 54 cwt. 3 qrs.; weight, without gear, 48 cwt. 1 qr., as ascertained in Woolwich Dockyard.

TUCKER'S LIFE PRESERVER.

This ingenious contrivance is the invention of Mr. Tucker, of Penzance, and is intended to convey a ship's crew to shore from situations where boats could not approach them. A rocket or shell being thrown with a rope attached, and a communication being thus obtained, the rope is made fast to the life-preserver, and another rope being attached to it from the shore, it can be drawn backwards and forwards. A person having entered, the lid is placed on him, which he holds fast on the inside, and thus can be drawn safely to shore through the heaviest seas. Women, children, and wounded persons might thus be landed; and though rolled round and round, no water can enter—still the contrivance admits a free circulation of air. It is also applicable for putting pilots on board in stormy weather, when boats cannot be launched.

THE BLUE FLAG ON CROSS FELL.

"The Blue Flag" has just been placed in triumph upon the summit of Cross Fell, to commemorate the return of Messrs. Howard and Marshall for the representation of East Cumberland. By daybreak, on Friday, the 6th inst., Penrith, Alston, Kirkland, were astir; and as the morning advanced hundreds of persons might be seen wending their way, afoot, on horseback, and in vehicles, towards the village of Blencairn. There two triumphal arches had been erected, surmounted by flags bearing the inscriptions, "Welcome Howard and Marshall," "Free Trade—Peace and Plenty," embossed in blue on a white ground.

By half-past nine o'clock, the gathering at Blencairn amounted to several hundreds. Mr. W. Marshall, M.P., accompanied by his son and daughter, on horseback, arrived shortly before ten o'clock, and was received with rounds of enthusiastic cheers.

At ten o'clock a procession was formed, and, headed by gay banners and a spirit-stirring band: it started on its journey towards Cross Fell—passing, *en route*, Kirkland, where a triumphal arch was erected.

The Hon. C. Howard, with his youthful son, and H. Howard, Esq., of Greystoke Castle, and several friends, reached Blencairn shortly after the procession had started. Following them came a party from Carlisle and Penrith.

Cross Fell is one of the most remarkable of the chain of hills which form the backbone of England. Its height is 2901 feet. Its summit is accessible either on foot or horseback, and for a considerable distance by carts and conveyances. On the 6th inst. hundreds of pedestrians were slowly ascending up the mountain; scores of horsemen, too, were there; and, what imparted a graceful feature to the scene, about twenty ladies on horseback mingled with the throng.

At the Gentlemen's Well, which is about a quarter of a mile from the summit, hundreds of the pilgrims halted to slake their thirst with its delicious water.

At about half-past twelve the numerous party from Alston met their Penrith and other friends at the Gentlemens' Well with a lusty cheer, and the combined parties proceeded towards the summit, which was reached about one o'clock. The gathering at that hour was from 2000 to 3000 persons. Loud cheers were given; and three pieces of artillery were fired at rapid intervals on the summit of the Fell.

The members, on their arrival, were greeted with a tremendous burst of cheering. Mr. Crackenthorpe, mounting the cairn of stones on the topmost peak of the hill, next addressed the multitude, and the blue banner was planted there.

The company then partook of refreshments, which had been sent up from the neighbourhood. While the pic-nics were going forward the weather suddenly changed. A thick mist rolled up the mountain, enveloping the pleasure-seekers in sleet-driving clouds. Down came the big drops of rain; and a rush was made to the tents. The Hon. C. Howard, Mr. Marshall, Mr. Henry Howard, of Graystoke, and Mr. Crackenthorpe addressed the multitude, who then descended the hill. But the festivities were but adjourned to Fell-side, and there were wound up with a dance on the village green.

RICHARDSON'S PATENT TUBULAR LIFE-BOAT.

PROME, SKETCHED FROM THE IRAWADDY.

SKETCHES IN BURMAH.

(From a Correspondent.)

As the proceedings in Burmah are likely to attract a large portion of public attention, and as little is known at home of the manners and customs of the people with whom we are engaged in war, I send you a few particulars, the result of personal observations made in Rangoon, since the commencement o the struggle.

The town of Rangoon is situated in Lat. 16° 40′ N., Long. 96° 28′ E., on one of the many branches of the great Irrawaddi at a distance of about twenty-five miles from the sea. The river is many miles wide at its mouth, and opposite the town is about a mile broad; it is navigable for ships of large tonnage, which find excellent anchorage while loading. Rangoon is the great port of the Pegue coast, and is the outlet for the fine Teak timber grown in the upper provinces, and for cutch, seeds, &c., which are brought down by native boats, and find a market among the Rangoon merchants, who, with two exceptions, are Armenians and Moguls. Two English merchants were resident there until the recent disturbances, but they made a hasty retreat when the insolence of the Governor compelled Commodore Lambert to order away all persons claiming British protection, and to declare the place in a state of blockade.

The town suffered severely by fire in December, 1850, when nearly the whole of it was burned to the ground. The houses are built of teak and bamboo, with thatched roofs; and when a fire breaks out it is only by pulling down many of these erections, and breaking off communication, that it can be arrested, the materials being very dry from exposure to a tropical sun. Since the British inhabitants left in January, the Governor has purposely destroyed the town again, and it is believed has defended its site with stockades along its front. The principal building was the Custom-house, a large open shed, about as respectable in appearance as an English cow-house for thirty animals, and would have struck with surprise those who draw their notions of "Custom-houses" in general from the London edifice, or those in our sea-port towns at home; although the rough treatment to which their "luggage" was subjected, and the delay consequent upon its examination, might perchance have reminded them of similar annoyances in Thames-street when landed from the *City of Boulogne* or *Antwerpen*.

I found the Rangooners were generally much attached to the English, and expressed their desire to be placed under their rule, as they are aware of the advantages enjoyed by their brethren in the Tenasserim provinces, where they are beyond the tyranny and peculation of petty governors, and where their property and lives are equally protected with those of the English. The only persons who exhibited insolence were the paid soldiers of the Governor, who assist him in his tyrannical attacks upon the property of his subjects; and who, if they betrayed anything like compunction in obeying his behests, would be exposed to his revenge and run great risk of the severest punishment.

I forward a rough Sketch of one of his soldiers, taken as they commonly walk about the town. Many of them have endeavoured to imitate the British soldier's costume in part, and wear a short red jacket made of cotton or cloth, and on their heads have a sort of conical pot made of tin, with a wide rim of the same material, to resist sabre cuts. Others again wear painted tin helmets of the shape that used formerly to decorate the heads of warriors in the front of Richardson's show at fairs. A large portion carry muskets instead of spears, but all have the dha or sword represented in my sketch. It is said they are bad soldiers in the open field, but behind stockades they exhibit much courage.

BURMESE SOLDIER, SKETCHED AT RANGOON.

They are a strong, able-bodied, and muscular race of people, and afford a striking contrast to the puny Bengalees. The bodies of the men are tattooed from about four inches above the hips to a little below the knees. Some of the designs are very curious, and represent dragons and tigers in uncouth positions, snakes, &c., but all executed with much skill and with great regard to minuteness. The man from whom the accompanying Sketch is made has an irregular scroll-work pattern on his legs, interspersed with grotesque animals, and about his waist the ornament finishes with a design looking something like the tops of the pagodas of his country.

They are domestic in their habits and exhibit the strongest affection for their offspring. A Burman never considers the number of his progeny too large, as the means of provision for them are always within his reach, and it is considered honourable to have his "quiver full." Altogether they appear to be a happy, contented people, full of fun, always ready to laugh at a joke, practical or other, wise, and exhibiting much good temper in all their amusements. Of these, cock-fighting is one of the principal, and it is one in which they show much skill in training their pugnacious favourites. Matches are made on the open roads, and when from the length of the "round" the birds are exhausted, the owners take them up and carefully shampoo their protégés, and revive them by moistening their beaks and rubbing the muscles of their thighs. Much money changes hands on these occasions.

The dress of the women consists of a piece of silk or cotton cloth, drawn across the bust, under the arms, leaving the shoulders bare. This reaches to the waist, whence another piece of silk called the "ta-mien" falls to the ankles. The narrowness of this petticoat, which is only wide enough to be tucked in at the waist, causes the leg to be exposed above the knee at every step. Among the higher classes, an en-gyee or jacket of fine muslin or silk gauze is worn in addition to the above dress. The narrowness of the lower garment prevents the woman from walking in a free and unrestrained manner, and she shuffles along in a shambling style that is anything but elegant. Their long glossy black hair is drawn back from the face and tied behind with great care. Upon this portion of their toilet they bestow much pains, and they exhibit considerable taste in arranging roses and other owers in their jetty tresses.

Both sexes have holes in their ears through which they pass cylindrical pieces of wood, bone, glass, or gold; and the size o f some o these ornaments is marvellous. When the incision is first made in a boy's or girl's ears (an occasion of much rejoicing and festivity) small roll of thin fine gold or bamboo is inserted in the orifice. This is removed after a time for a larger piece, which again gives place to another of increased size, until it reaches about an inch in diameter, and the lobe of the ear becomes a mere thin fleshy circle, encompassing the ornament. When, as is frequently the case, this is a roll of pure gold, measuring about an inch and quarter in height, and about three

YENBENZEIK, SEEN FROM PROME.

quarters of an inch in diameter, the ear is dragged down to a length that, to a foreigner, appears very ugly, but by a Burman is considered fashionably elegant. These holes are sometimes useful, and serve the purpose of cheerut cases. It is not uncommon to see a girl walking along the road with her cheerut poked through her ear. This she removes on meeting some young lady friends, and with them squats on the ground, and enjoys her tobacco and their conversation for an hour or two Children of all sizes smoke as well as their parents; and nothing can be more absurd than to see an urchin of four or five years of age, walking about in the suit of clothes that Madame Nature made for him, puffing away vigorously at a large cheerut.

The national religion is Boodhism, and the numerous temples that abound throughout the country are filled with statues of Gaudama, some of them being of colossal proportions, and many richly gilt.

I may mention that a few weeks since I had occasion to visit Sandoway, and was much struck with the fidelity of the View of that very pretty station in the ILLUSTRATED LONDON NEWS of the 6th of December last. The excellent Commissioner Captain Fytche is unceasing in his endeavours to improve the condition of the people over whom he presides; and their affectionate and respectful bearing towards him prove that they are grateful for the attention bestowed upon them.

J. R. T.

Akyab, Arracan.

The first of the Sketches engraved upon the preceding page shows Prome, stretched from the Irrawaddy: the distant mountains are crested with pagodas, where our picquets are placed; the extreme mountains are fifteen miles distant: the heights above Prome are stockaded by the Burmese. In the front of the view is a Burmese boat. Prome is the most important place on the Irawaddy, between its mouth and the capital of the Birman Empire. It is a thriving town, and contained after the last war 10,000 inhabitants.

The third Sketch shows Yembengale, and its richly-wooded hills, crested with pagodas; the point in the extreme distance being seen from Prome.

THE SEASON OF 1852 AT HER MAJESTY'S THEATRE.

THE campaign terminated on Saturday, August 14, with the ninth representation of Rossini's "Il Barbiere" supported by Mdme. De Lagrange, Signor Calzolari, Signor De Bassini, Signor Susini, and Signor Lablache; and followed by the popular ballet, "Zélie; ou, l'Amour et la Magie," Rosati being the *danseuse*. The season was commenced depondingly; rumours were rife that the director had lost such heavy sums by his Paris speculation at the Théâtre Italien, that he would be unable to open the portals of Her Majesty's Theatre. The prospectus was slow in making its appearance. When it was given to the world, its promises contained some points of interest. The announced engagements were Mdme. Sontag, Mdme. Fiorentini, Mdlle. Cruvelli, and Mdlle. Joanna Wagner, as *prime donne*; Mdlle. Ida Bertrand, as contralto; Signori Gardoni, Pardini, Mercuriali, Calzolari, and Negrini, as tenors; and Signori Belletti, Ferlotti, Susini, Ferranti, F. Lablache, De Bassini and Lablache, as basses; with Mr. Balfe as musical director and conductor. Of the above *artistes*, Mdme. Sontag and Signor Pardini have been defaulters for unexplained reasons; Signor Negrini went to the rival establishment; and Mdlle. Joanna Wagner has only figured in Chancery, and has still to make her *début* in a court of common law, for a jury to pronounce how much money Mr. Lumley is to receive as compensation for the loss of her notes. Like Mdlle. Jenny Lind, Mdlle. Wagner came to this country with two engagements. For the Swedish Nightingale, Mr. Lumley had to pay Mr. Bunn £2800; how much Mr. Gye will have to hand over to Mr. Lumley for Joanna Wagner, next term will probably decide. Into the merits or demerits of these managerial squabbles we are not called upon to enter; our duty is to treat of art progress as exhibited in the review of a season's doings.

On Thursday, the 1st of April, the Haymarket Opera was opened with Donizetti's "Maria di Rohan" as the new divertissant, with "Le Baile di Candil." Madame Fiorentini displayed such signs of dramatic improvement as *Maria*, that hopes were entertained of her taking a prominent position in popular favour. She, however, sang the character twice, was prevented by indisposition from appearing in "Lucrezia Borgia," and was heard only once more as *Norma*. *Anna*, after the subscription season was over. By what unaccountable fatality the services of an *artiste*, who has one of the finest soprance in the world, were lost, has not transpired; assuredly it has been a serious loss for the working of the theatre. Mdlle. Angri, although announced in the prospectus, made her *début* on the 13th of April as *Isabella* in the "Italiana." Madame De Lagrange was another unexpected acquisition as *Lucia* on the 22d of May, and Madame Charton suddenly came before a London public as *Desdemona*, in the "Sonnambula," on the 27th of July; whilst, on the other hand, Mdlle. Cruvelli, who had been working herself to death, vanished at the close of June, from London. Mdlle. Angri's engagement closed on the 14th of that month, and all "managerial" and "artistic" changes ensued. The changes of operas were perpetual, the flights and returns of *artistes* incessant, and the "strikes" became chronic—mutiny was in the ship, and the unfortunate vessel was tossed about amidst shoals and breakers, without rudder or compass. At the moment the crew attempted to take the ship in tow; at another instant after signals of distress had been hoisted, some amateur pilots ventured to steer the dismantled vessel, but the goodwill of the noblemen and gentlemen forming the committee did not collect a very large crowd of sailors. Mr. Lumley still, amidst the confusion and disasters surrounding her, clung to the planks, with the forlorn hope that his "jury"-masts might yet conduct him to a safe haven. No man ever struggled more gallantly with adverse fortune than the director of Her Majesty's Theatre. His establishment seemed to have a cat-like vitality—as often as it was reported to be dead, it sprang into life again. Up to the drawing-up of the curtain indeed, on one or two occasions, even after the curtain had been drawn up—it was a matter of doubt whether the performance could be gone through without a catastrophe, unprovided for by librettist and composer. The amateurs, who looked on with admiration at the courage and perseverance of the director, could only express the most lively regret that such abilities and powers of endurance had not been always strictly applied to render the *ensemble* of the stage what it ought to have been for the highest-priced lyric establishment in the world. And here have we arrived at the true secret of Mr. Lumley's present position. With admirable administrative qualities, with infinite tact in difficulties, with unflinching determination when driven to action in extremities, his main exertions have been too much directed to the front of his curtain. He has disregarded the spirit of the musical age. He has been insensible to the march of musical acquirement, he has not felt a sincere devotion for art, and he has imagined that he could govern a theatre by "bureaucracy," when public opinion ought to have been influenced by the excellence of the *ensemble* on the stage. His main error has been on the pernicious star system, and its influence on his destiny has been proved fatally in the case of Lind, as all his other *artistes* were sacrificed to the mania, which the manager himself had so skilfully helped to create. "Star" nights are of course highly productive, but what are the receipts of the off-representations?

There have been 56 performances this season, 45 subscription nights, nine extra ones, and two benefits (M. Puzzi and Mr. Balfe), besides one morning concert (Madame Puzzi).

The fourteen operas given have been the following —

	Times.		Times.
Rossini: "L'Italiana"	2	Donizetti: "Maria di Roban	3
" Il Barbiere	9	" Lucia"	5
" Cenerentola"	4	" Don Pasquale"	6
" Otello"	2	Beethoven: "Fidelio"	4
Verdi: "Ernani"	3	Mozart: "Don Giovanni"	1
Bellini: "Norma"	4	Duke of Saxe-Coburg-Gotha:	
" Sonnambula"	5	"Casilda"	2
" Puritani"	8		

Casilda was the only novelty in the above list. Flotow's "Martha," and the new opera of Meyerbeer, Madame Sontag, were not produced. The actual performances are not suggestive at all, inasmuch as the *repertoire* employed was a matter of hard necessity, and no judgment of public taste and opinion can, therefore, be arrived at by this year's works.

As regards the *artistes*, Mdlle. Cruvelli is still a vexed question. She has made no advance on the public, because she has maintained her eccentricities in full force, and seems resolved to render herself as little sympathised as possible. She is young in her career, and may, perhaps, turn her magnificent voice and wild energy to the best account, if she will cease to regard blemishes as beauties. Mdme. de Lagrange at first only amazed amateurs by her prodigeous feats of execution, but she made way in popular estimation, despite of a fatigued voice and of indifferent acting, by her careful preparation in the parts allotted to her. In light comedy operas she will be always acceptable. Mdlle. Favanti, who returned for one night in "Cenerentola," after an absence of eight years, and Madame Charton, were failures. Mdlle. Angri gained ground; her method is more refined; she is earnest and energetic, and the best contralto now on the lyric boards. Amongst the tenors, the advent of Bettini was not advantageous. The improvement of Gardoni has been marked, and Calzolari is always artistical and painstaking. Of the new basses, Fortini and Susini may be dismissed as nonentities, or something worse. Ferlotti is a true artist, but his voice is gone. De Bassini, with his great European name, has not yet been heard in his best parts, but he is unquestionably a most valuable acquisition. Belletti has maintained his reputation as a singer; as an actor he is still very cold and mechanical. The stupendous Lablache remains the Titan of basses, great, glorious, and unapproachable

In the ballet department there have been Rosati, Louise Fleury, Guy Stephan, Forlé, Petipa Oliva. MM. Durand, Mathew, Mattia, &c. "Un Boule di Candel," "La Fête des Rosières," "Zélie," and "La Bouquetière," have been the novelties, and have sustained the choregraphic glory of the establishment. Cerito did not arrive, as promised in the programme.

So far as we can ascertain nothing has been definitely arranged as to the season 1853. Our belief is that the theatre will be opened at the usual time, but under what sovereignty or form of government, we cannot inform our readers. Mr. Lumley has for some weeks withdrawn his advertisements announcing the letting of the ancient establishment. He asked terms, in fact, which no speculator in his senses could afford to accept, and hence the belief that the director had no real intention of resigning office. The old lion has still power since 1840, after Laporte's death, and for five years had no rival undertaking to contend with. In 1847 the Royal Italian Opera was opened, and for six years there has been a keen opposition, with "sharp practice" on both sides. The public have been enormous gainers by the rivalry, and lyric art has advanced to the highest point of refined execution. If the directors of the two Italian Opera Houses would come to a proper and politic compromise, there is ample room for both speculations; but it must be by playing on alternate nights, and by presenting the public at stated intervals with German, French, and, above all, *English* works, as well as the Italian operas Mr. Lumley's career has been brilliant, if unfortunate at its close; and even those amateurs who are disposed to criticise most severely his sins of omission and commission, cannot refuse their sincere sympathy in his present struggle, nor withhold the expression of their admiration of his resolute stand amidst the storms which have assailed him—enough, indeed, to press a "Royal merchant down."

THE THEATRES.

ROYAL ITALIAN OPERA.

"Pietro il Grande," a grand historical opera, in three acts; the music by L. G. Jullien; the Italian words by Maggioni, adapted from the original English libretto by Desmond Ryan, Esq.; and Scenery by Grieve and Telbin.

One of the five promised novelties in the Covent-Garden prospectus was the production of a new opera, by M. Jullien, who for so many years has been the popular conductor of the Drury-lane Promenade Concerts. Classic connoisseurs were somewhat startled by the announcement, pedantic professors shook their heads in dismay, and able amateurs were astounded at the audacity of an undertaking, in which all modern composers, including Costa, Thalberg, Halévy, Verdi, Auri, Gounod, &c., had signally failed in this country, on the Italian boards —and to these distinguished names we must even add that of the continental celebrity, Spohr. The modern Italian school expired with Bellini and Donizetti, and it was only the Italian adaptations of the French grand operas of Meyerbeer, that achieved here financial, artistical, and permanent popularity. With such facts, under managerial cognisance, M. Jullien's name in the Royal Italian Opera programme, excited universal amazement. His friends and admirers, however, were numerous and enthusiastic, and the sceptical and scoffers were assured confidently that Jullien alone could be the successor of Meyerbeer. The grounds of this faith were that he had written rare dance-music; and that his vocal compositions, published under assumed names, were replete with "feeling, originality, and substance." This theory rather surprised some suspicious musicians, because, if it meant anything, it amounted to this, that Mozart might have written "Elijah" as easily as Mendelssohn; that Strauss might have gotten up the world "Creation" and the Ninth Symphony, as well as Beethoven; and that Labitzky, who presented the public, like Jullien, with a Quadrille of All Nations, could with like facility have produced a "Don Giovanni," a Requiem, a "Jupiter" Symphony, or a "Messiah"? In short, it was pretended that composers had all gone the wrong way, up to this epoch; that, instead of addressing themselves to the hearts and intellects of their hearers, they ought to have begun with the fact that the poetry of sound was the poetry of motion; and that music, to be great, must be feet-stirring as well as soul-stirring. This novel problem was solved, last Tuesday, the 17th of August, the year of grace 1852. The date is one to be recollected in a most decisive manner, for "Pietro il Grande" was an unequivocal failure, albeit produced with a care and cost in the preparation unparalleled in lyric annals. For certainly we have witnessed great progress in many properties from our earliest days, we are free to confess we never felt more proud of our musical public. Whatever were the numbers assembled of supporters of all kinds for the novelty, the spirit of independence, the calmness, the dignity, and impartiality of the great majority in the crowded house, were unmistakeable. In the early part of the opera every kindness of disposition was evinced to sustain the work, if found worthy of support; the composer had a cordial greeting, and he was even called before the curtain, at the end of the first act; but as the opera progressed the opinion became irresistible that he had totally mistaken, not only his own powers, but that he was entirely ignorant of the advance of musical connoisseurship in this country. Some amateurs, more angry than the masses, expressed their indignation by sibilation, that the Royal Italian Opera should have been changed into a promenade concert at one time, and into Astley's at another, but the general verdict was signified by that indefinable silence which signifies the utter waste of time in giving an open negative. For the same reason it would be an absolute sacrifice of valuable space to enter into any lengthened analysis of the libretto and music, but the reasons for this failure may be briefly stated.

In the first place the libretto does not possess any dramatic interest, nor has the music the slightest claim to originality. We do not recollect any "historical" opera in which the poet has drawn more largely on his imagination for his facts, and the composer more copiously on his memory for his music, than in "Pietro il Grande." But it is not merely that the plot is full of absurdities and anachronisms, the transposition of the characters of *Peter the Great* into a twaddling tenor, and of *Catherine* into a sickly, sentimental *prima donna*, destroyed all historic associations, and the costumes and doings of the Dutch ensembles, for such is the Czarine made, are as sudden and unsee contrable as those of the injured servant of all work in a "Victoria" domestic drama. The first act is in Saardam (or Zaandam, according to the Dutch name), and here *Catherine* (Mdlle. Zerr) has three lovers, the disguised Czar (Tamberik), *Rossoma*, the Herman of the Cossacks (Herr Formes), and *Zanberg*, a shipwright (Rommi), who tries twice to assassinate *Peter*, who is saved by *Catherine*. The act ending with his departure for Russia. From 1698, we jump in the second act to the 8th of July, 1709, to the battle of Pultawa, with which event the poet embodies the affair on the Pruth, in July, 1711, in which the Grand Vizier, bribed by Catherine's jewels, allowed Peter the Great and his troops to escape utter destruction from the Turkish army. In act the third, *Peter* is in Moscow, and *Catherine*, who has vanished after the battle, is more at home to prepare a conspiracy with her old admirer, the Hetman, from killing the Czar at a ball (as *Anderstrom* assassinated *Gustavus*); *Peter*, who is very love-sick, raising the Dutch suttler to the throne. There are also in the opera *Prince Galitzin* (Soldi), *Prince Menzikoff* (Stigelli), *Marshal Sheremetoff* (Polonini), *Marshal Bauer* (Luigi Mei), and *General Lefort* (Tagliafico); all very proxy and tiresome general officers, who are put in requisition for drinking choruses, councils of war, and concerted pieces. Mr. Ryan's defiance of history is bold and unsparing—he raises Kings in Holland before there was a monarchy; he makes the Czar an Emperor; and has a chorus of nuns long after Peter had abolished convents in Russia. The poet's natural history is also curious, inasmuch as he has nightingales in a dockyard; and his geography is equal, at fault, or he would not have written "of the tempest raging and shaking the high embattled towers" of Saardam which, despite of Murray and Mr. Ryan, we maintain is properly so called, as names of places are conventional, and we do not call Leghorn Livorno, like the Italians.

M. Jullien's music is one mass of palpable plagiarism from beginning to end. Danton, when he addressed the Republicans in the Champ de Mars, and called upon them to resist the invaders of the soil, exclaimed that, in order to conquer, it was only necessary to have "de l'audace, encore de l'audace, et toujours de l'audace." M. Jullien, in soliciting the suffrages of the operatic frequenters for his "Pietro il Grande," has taken for his banner, "Du bruit, encore du bruit, et toujours du bruit." The "Row-de-dow" Polka was considered the climax of noise; but the review at the Battle of Pultawa out-row-de-dows the "Row-de-dow." The opera is not confined to petty larcenies, unfortunately, but is a series of wholesale robberies. Rossini has given us a Convocation of the Cantons in "William Tel." Meyerbeer a Conjuration of Daggers, a Pif-Paf solo, a Septuor of the Duel, and a memorable love duo in the "Huguenots," and has, besides, supplied us with a coronation scene in the "Prophète." M. Jullion has kindly paraphrased these well-known *morceaux*. He takes here a slice from "Fidelio," there a tit bit from Mozart, and, anon, as in the quatuor, a gleaning from Rossini. Destitute of individuality, the opera has no evidence of a sustained style; the diffuse dialogue of the libretto is noted in patchy and fragmentary phrases, overloaded with modulations, and frequently interlarded with chromatic scales partaking more of the character of caricature than of serious opera. Nothing can be more dreary and dull than the solos awarded to *Catherine* and *Peter*. The lugubrious romance of *Lefort*, in the last act, with a most dismal contra-basso obligato; and *Rossomak's* ugly and ungrateful music throughout, fully show the poverty of ideas of the composer, and the utter absence of dramatic sentiment. In fact, the only tune to assail the ear (save the dance music) was the original Russian melody M. Jullien has employed in the Moscow hymn. This subject is nicely treated, and is rehearsed with tact through the opera. Tamberik won an encore for it. The madrigal is, perhaps, not strictly so in form, but it is a quaint and pretty chorus, and was so spiritedly rendered by the chorus as to be re-demanded—the relief from the brass and noisy orchestral score being at once felt. The band was reinforced by an additional opbicleide, and M. Jullien has not been sparing of solos for the instrumentalists. The new—Mr. Blagrove on the Viola, Mr. Hill on the Cornet, Frost, Baumann, Lazarus, and Bottesini having been especially favoured; but the *apropos* was often wanting in their employment. The lack of coherency and of purpose became more and more striking as the opera progressed; and profuse as M. Jullien has been in making use of Russian materials, their blending with foreign matters was so abused, that the local colouring was rarely consistently observed.

The management has resorted to enormous outlay, to insure a magnificent spectacle. The costumes, scenery, and properties, were gorgeous. The appearance of the staff of the Czar in the Pultawa review, was truly picturesque The scenic *artistes* achieved marvels; the Kremlin, during a snow-storm; the dockyard of Saardam; and the gigantic staircase, down which the guests descend into the ball-room, were unprecedented specimens of skilful scene-setting as well as of pictorial art. M. Laurent is also entitled to eulogium for the animated action and groupings of the spectacle. The chorus, reinforced by many voices; the public orchestra, and the military band, were in admirable discipline, and the principal *artistes* were perfect in their parts, uphil and ungrateful as these were, especial y to Tamberik, Mdlle. Zerr, and Formes. The tenor sang magnificently, looked the Czar nobly, and acted with intelligence and spirit. The Viennese, *prima donna* was pleasing, but her style and voice are unsymp-thetic, and her intonation was often sadly at fault. Finally, the reception of "Pietro il Grande" will be a lesson to composers and managers, that no spectacle, however costly, can ensure the success of an opera without the quality of the music being an essential element. M Jullien will not lose caste as a first-rate dance composer by his failure as an opera composer; but he is not the only instance of vaulting ambition o'erleaping itself.

RICHMOND THEATRE.—This pleasant little theatre, we understand, will open on Monday for an extended season of six weeks, under the direction of Mdme. Castagloni, a lady new to London, but who has made reputation in the United States, as also in Dublin and Edinburgh, as a fine contralto singer. We hear that the dramatic, as well as the musical department will be respectably filled. During the first fortnight, Miss Edith Heraud will sustain some of her leading parts, and it is expected that the management will deserve and command fashionable support.

Mr. Albert Smith's entertainment of Mont Blanc achieved its two hundredth representation at the Egyptian Hall on Wednesday evening, on which occasion every lady in the stalls was presented with an elegant bouquet. At the close of the present season he will start for Chamouni in search of new materials, preparatory to re-opening his *salle*, which will be greatly improved during the recess, before Christmas. It is not Mr. Smith's intention to take Mont Blanc into the provinces this autumn.

MUSIC.

BIRMINGHAM MUSICAL FESTIVAL.—Some alterations will be made in the interna. arrangements of the Town Hall. A new gallery will be made for the singers in front of the orchestra, eighteen inches lower than the one in use on the last festival. The approaches will be from the floor by winding staircases at each end. The additional instruments in the present band are six violins, two violoncelles, two double-basses, two violas, and one serpent; the brass and wood having, at the last meeting, been found to be too strong for the stringed instruments. The town council have been trying experiments for the better lighting of the hall, from the roof. The effect of the new orchestra will be very fine, every piece being filled up, and the whole converging to a point, instead of the present unsatisfactory one. The great point of view, the conductor, Mr. Costa. On looking over the detailed programme, we find that the great tenor, Tamberik, will sing in English for the first time; he will have the grand air from "Il Flauto Magico," and the air, "Thou shalt break them," in the "Messiah." It will be worth a pilgrimage to this festival to hear him sing the "Ecco del ciel," the finale of the second act in the "Prophète," and also the grand air from Rossini's "William Tell," in the celebrated trio of which he also takes a part. Mdme. Viardot will sing in the "Elijah," the air "Woe unto them," and the grand solo, "Have ye not heard?" and in "Samson" she will give the air "Ye sons of Israel." Handel's air from "Susanna," "If guiltless blood," is one of Viardot's finest vocal displays, and has been judiciously inserted in one of the evening programmes. She will likewise sing the Cavatina from *Semiramide*, and the air "Ah! non fia," from the "Prophète." Madame Clara Novello in "Elijah," the "Messiah," the "Creation," "Samson," and "Christus," has prominent and onerous parts to sing; she will also be heard in the quartet from the 42d Psalm of Mendelssohn. Madame Castellan will take a very important share in the concert schemes, besides having interesting pieces in the "Elijah," "Creation," "Messiah," &c. The attributes of the principal vocalists appear, indeed, to have been carefully studied, in the arrangements of the programmes, and Miss Dolby, Miss Williams, Mr. Sims Reeves, Mr. Lockey, and Mr. Weiss have ample opportunities for distinction. Herr Formes has the weight and responsibility of the chief solos for the bass will tall. He has a most herculean week's work to go through, but he is strong and zealous. No mention has yet been made of the professor who is to preside on the organ.

HEREFORD.—The committee continue to receive favourable accounts as to the prospects of this interesting festival, which commences at the close of the Birmingham gathering. Mr. Townshend Smith is actively engaged in making the musical arrangements. It will be the farewell appearance of Mdme. Clara Novello in England, as she leaves at the termination of the Hereford festival for Madrid, where she is engaged as *prima donna* at the Italian Opera.

NEW ORGAN.—On Monday evening a selection of sacred and classical music was performed on the new organ recently erected in St. Mary's Church, Islington. The pieces selected included compositions by Handel, Bach, Mendelssohn, Mozart, Haydn, Spohr, Dussek, &c. Mr. J. T. Cooper, the well-known organist of St. Paul's Church, Islington, presided on the occasion. The organ was built by Mr. J. Bullen, of Fu ham, Norfolk.

THE BACHELORS' ANNUAL REVEL AT WINDSOR.—The annua revel of the bachelors of Windsor, was held as usual on Tuesday last, in the Bachelors' Acre, in honour of the birthday of her Roya. Highness the Duchess of Kent. There were abundance of shows, roundabouts, theatres, &c. The Great Western and South-Western Railway Companies ran excursion trains, which quite inundated the Royal borough. The juvenile cricketers, preceded by a band of music, with windlass, &c., accompanied by the bachelors and their friends, proceeded in procession through the principal streets of the town. At nine o'clock the sports began: they consisted of games of cricket, back-sword, wrestling, foot hurdle-races, &c., and the day passed off very pleasantly.

A NEW WATER WEED.—A correspondent of the *Cambridge Chronicle* says, a remarkable plant has recently made its appearance in the rivers Ouse and Cam, and already abounds to such a degree as not only to impede navigation, but, what is of far more importance in this fen country, threatens to injure our drainage by holding up the water. It occurs in dense, tangled submerged masses of considerable extent, and is so heavy, that, when cut (instead of rising to the su face and floating down to sea, like other water weeds), it sinks to the bottom. It is this property which is likely to make it injurious to drainage. The intruder is so unlike any other water plant, that it may be at once recognised by its leaves growing in threes round a slender stringy stem. The watermen on the river have already dubbed it "water thyme," from a faint general resemblance which it bears to that plant. That it is new to our rivers is certain. Watermen and fishermen with one consent pronounce it to be (as I heard one of them call it the other day) a "foreigner." How the stranger is, whence he came, and how he got here, are questions of considerable scientific interest; but by what means he is to be got rid of is the practical question.

BELGIAN AND DUTCH RAILWAYS.—A convention has recently been agreed to between the Dutch and Belgian Governments for the facility the establishment of direct communication between the two countries. The proceedings were concluded on the 9th ult. by the commissioners of the respective Governments. After pledging themselves to co-operate generally, and as occasions may arise, for the advancement of the object of the agreement, the Governments engage to take measures for the construction of a line commencing at the terminus of the Belgian state railroad at Antwerp, passing in the direction of the Hollandsch Diep by Breda or Roosendaal, and terminating near Roodevart, or the Inverdyck. Should it be resolved to carry the line by Roosendaal, a branch will be made to Breda. The Governments will agree upon a term by which the work shall be completed.

The *Prince of Wales*, from Sydney, on Wednesday, brought 35,000 ounces of gold, valued at £140,000.

LAW AND POLICE INTELLIGENCE.

PUBLIC HEALTH.—HEAVY PENALTY FOR A NUISANCE.—On Monday, at the Middlesex Sessions, Mr. Serjeant Adams sentenced a dust contractor of the name of Stapleton to pay a fine of £300, and to enter into a recognisance of £500, with two sureties of £50 each, to be of good behaviour for twelve months, for omitting to abate a nuisance which he had undertaken to do in 1850, when convicted on the prosecution of the parish of Paddington, of keeping on whatever in that parish immense collections of the refuse of Covent-garden Market, the effect of which was to produce a most offensive and unhealthy arising from it. As the money was not forthcoming, the defendant was removed in custody; but later in the day the amount was paid, and the recognisances being entered into, he was discharged.

LIBEL.—At Liverpool, on Monday, an action was tried before Mr. Justice Wightman and a common jury, in which a Mr. Grundy, an auctioneer, sought to recover compensation in damages for having been termed by the defendant, Mr. Cape, the owner of some house property in Manchester, a "rogue and a scoundrel." The cause of action arose out of a negotiation for the sale of a house of defendants, the plaintiff being called in as a valuer to value the property in question. In his cross-examination Grundy denied the libel had been before likened to "a harp struck by lightning," or to a "blasted lyre." For the defence it was urged that the conduct of the plaintiff had not been straightforward in the matter; that the defendant was a man of warm temperament, and called things by their right names; that he did not, as a certain noble lord was said to have done, when he wished to politely impute falsehood to another say that "he had postponed the interests of truth to the exception of the moment," but called a wheelbarrow a wheelbarrow, and said of the defendant what he thought of him. The damage, however, was of the most trivial kind; and, whatever their verdict, the plaintiff would eat his mutton-chop after the trial as heartily as he appeared to have eaten his breakfast before it. The jury found a verdict for the plaintiff.—Damages, 40s

THE STOCKPORT RIOTS.—SENTENCES ON THE PRISONERS.—On Monday, at Chester, Mr. Justice Crompton sentenced the prisoners who had been found guilty of participating in the late Stockport riots. George Pel, William Buttery, and Mark Gleave, the English prisoners who had taken part in the attack on Jackson Edgeley Chapel and upon Mr Tytlis's (the priest's) house, were thus sentenced: Gleave to be imprisoned and kept to hard labour for the space of two years; and the two other prisoners were severally sentenced to eighteen months' imprisonment, and to be kept to hard labour. The Irishmen Feeny, Patrick O'Hara, R. M'Dermott, M. M'Dermott, Thomas Murphy, T. Garvey, and Patrick Naughton, the Irishmen, who had been found guilty of the riot, were sentenced as follows: viz. Murphy, who had been proved to have committed an assault upon a harmless, unoffending man that he had met coming down the street upon the occasion of the riots, was sentenced to imprisonment, and to be kept to hard labour for fifteen calendar months; Feeny to ten months' imprisonment, and hard labour; Naughton to six months' imprisonment, and hard labour; Garvey and O'Hara to four months', and hard labour; Roger M'Dermott to three months', and hard labour; and Michael M'Dermott to two months', and hard labour Matthew Mulligan, an Irishman, having been tried and found guilty of the manslaughter of Michael Moran, also an Irishman, by striking him on the side of the head with a poker, during the Stockport riots, was sentenced to fifteen years' transportation.

CURIOUS HISTORY OF A LOST CHILD.—On Saturday last Mr. Edwards, the chairman of the Asylum or Refuge for the Houseless Poor, attended Guildhall, justice-room with a respectably-dressed lad, about thirteen or fourteen years of age, with intellectual face, and handsome features, and stated that the lad was an unfortunate child named Henry Saumarez Dupuis. The following facts connected with the boy will be read with interest:—In April, 1848, a tall, gaunt, and extremely repulsive woman was brought up at the Mansion-house, before the Lord Mayor (Alderman Humphery), charged, upon strong suspicion, of having stolen a child, which was believed to be the child of respectable parents The facts, as they were then elicited, were briefly these:—The woman, who was of the most depraved and filthy habits, had been seen begging about the metropolis and its suburbs with a child about three years of age, which she, notwithstanding its apparent repugnance, continued, or pretended, to suckle. At length, in a state of utter exhaustion and distress, she applied for admission to the Asylum or Refuge for the Houseless Poor, where she was attended by a kind-hearted, benevolent gentleman, Dr. Bowie, the surgeon to the institution, who, during the progress of her cure, was struck with the remarkable contrast between the woman and the child, and the decided superiority of form and feature in the latter, and, so great was the dissimilarity, that he at once concluded there could be no close relationship between them, and that she had, in all probability, stolen the child. Acting upon this opinion, he, with Mr. Edwards, obtained a warrant for the woman's apprehension, and on her recovery she was at once taken before the Lord Mayor. On her examination there she said her name was Mary Thompson, and that the child was adopted by a French woman, who commanded a small craft called the *Mary Ann*, in which she alleged the child was born in the month of February, 1840, while out at sea. She made many confused statements, but the above alone appeared to was that the child was hers by a man named Holloway, and born before her marriage with Samuel Thompson. The child was taken from her, and on being placed as a pauper inmate in the Mansion-house, Holloway seemed to be quite at home with his Lordship's children, and on nearing a piano played, appeared familiar with its tones, and, approaching the instrument, spread his fingers over the keys and struck a chord in B flat. On being asked what a gold chain that was shown him was, he readily gave it its proper name, and said it was a watch-guard. He said he had two mothers; his mother in the country was very kind to him, and bought him a doll; but the woman whom he called his straw-yard mother beat him and begged for money, fought, and got drunk. In his childish prattle with the Lady Mayoress and other ladies present, he said that he also had learned to wax the thread with which he sewed the shoes, but that he could not make them. He also stated that he was born by a man named Holloway, and born before her marriage with Samuel Thompson. The child was taken from her, and on being placed as a pauper inmate in the Mansion-house, Holloway seemed to be quite at home with his Lordship's children, and on nearing a piano played, appeared familiar with its tones, and, approaching the instrument, spread his fingers over the keys and struck a chord in B flat. On being asked what a gold chain that was shown him was, he readily gave it its proper name, and said it was a watch-guard. He said he had two mothers; his mother in the country was very kind to him, and bought him a doll; but the straw-yard

Parties visiting London would find the situation convenient for the Docks and West-end. Letters addressed to M T, 32, Batten chemists, Triangle, Kennington-cross.

A MARRIED GENTLEMAN, of education and great natural abilities, who passed a first-class examination at Sandhurst, and who has been for Three Years in the very best service on foreign service, is most thoroughly conversant with all the routine and required duties of military life, is desirous of PERFORMING some TWO SEMESTERS SONS for the ARMY, or any of the Military Colleges His terms being exceedingly moderate, the very best references will be required and exchanged —Apply by letter, addressed to S T D, 3, North Audley-street, Grosvenor-square.

SCHMALTZ'S WRITING INSTITUTION, Piccadilly, between the Haymarket and Regent-street.—Open from Ten till Nine daily. Persons of all ages received (privately) and taught as a class, or individually, in Penmanship, Spelling, and similar branches of education. Improvement guaranteed in eight or twelve easy lessons. Separate rooms for ladies, to which department (if preferred) Mrs. Smart will attend —For terms, &c., apply to Mr Smart, as above.

THE BRIGHTON SCHOOL, Director—ROBERT WINTER, Jun.

Assisted by Fifteen Lecturers and Masters.

The School will RE-OPEN on the 1st of OCTOBER, for the annual course of 31, coupled with its progressive increase, may be adduced to show that such an institution carries a comfort of its own.

THE SYSTEM combines the approved features of older establishments with others peculiar to itself, whereby English and memory are duly exercised, the power of the mind developed, and the bodily frame fostered and strengthened

THE EDUCATION of a child is not simply to accomplish much, but to do well that ordinary that which is undertaken

THE DISCIPLINE is firm, but parental and gentle, kind feeling, and sympathy with the pupil in his every pursuit.

RECREATION HOURS are passed in the Play-ground, the Gymnasium, the Cricket field, the Library, and the various rooms devoted to Drawing, Painting, Modelling, and similar amusements of an entertaining and useful character

THE MORNING HOURS are passed in study, to work well, to play well, and to do all things heartily

THE GENERAL ARRANGEMENTS are upon a liberal scale, the Class Rooms and Dormitories extensive and airy, providing a separate study for each class, and a separate bed for each pupil.

EXAMINATIONS are conducted at the close of every half year by gentlemen of acknowledged learning and talent, and the papers and reports printed for the satisfaction of parents and friends

HOME INFLUENCE is exercised by the transmission at the close of each Term, of a report of progress and conduct, founded on a table accurately compiled from a Weekly Register kept by all the Lecturers and Masters

Pupils prepared for the Queens' and H.E.I. Company's Service.

A Prospectus, with a List of Referees, will be forwarded on application to the Director.

ROBERT WINTER, Jun., Director

Clifton-road, Brighton

COCKS and Co, New Burlington street.

NEW VOCAL DUET.—"TWO MERRY MINSTRELS." Composed by S GLOVER. Price 2s 6d, sent postage free.

Since the publication of 'What are the Wild Waves Saying' a new duet by the same composer may be considered an event worthy of notice. The present composition is one of Mr Glover's happiest productions; it possesses the attractions of a lively and most exclaiming melody."—Musical Review.

DUFF and HODGSON, 65, Oxford-street

NEW SONG, "YOU ASK ME IF I LOVE YOU" Price 2s, sent postage free. "This is another happy composition of the same kind as 'Come into the Garden, Maud,' I mean that I love you more.' 'The Secret' 'The Rich Man's Bride,' &c. The remarkable beauty of the melody renders it a lasting favourite. The words sung with expression is in a most captivating composition "—Musical Review

DUFF and HODGSON, 65, Oxford-street.

NEW SONGS.—"THE YOUNG LADY'S DREAM," and "I'M A MERRY, LAUGHING GIRL." Price 2s each (sent postage free).

"Miss Lindley has introduced these two pleasing and effective songs. 'A Young Lady's Dream' is a most romantic and novel composition the melody is graceful and expressive and the accompaniment is very appropriate. 'I'm a Merry Laughing Girl' is by the composer of 'A Young Lady's No.' which Miss Poole has rendered so celebrated. The present is a lively sparkling production, calculated to charm wherever it is heard."—Musical Review

DUFF and HODGSON, 65, Oxford-street.

JULLIEN and Co.'s MUSICAL PRESENTATION and CIRCULATING LIBRARY combined Terms of Subscription, Three Guineas per annum. The principal feature which distinguishes this Library from all others is, that the subscribers, besides being liberally supplied on loan during the year with all standard and new works of merit, are presented with the music performed with three guineas worth of music every year gratis, which may be selected from the Catalogue at the time of subscription. Prospectuses forwarded free, on application to JULLIEN and Co., 214, Regent-street.

PROFESSOR MUSPRATT'S to MR. ALLSOPP. I have much pleasure in stating that your Ale, and that they do not contain a particle of any injurious substance. I and my family have used it for two years, and with perfect confidence in their purity. I know that Pale Ale, prepared, as in your brewery, under scientific surveillance, contains a large quantity of nutritive matter; and that, by its tonic properties, gives a healthy tone to the stomach.—SHERIDAN MUSPRATT, F.R.S.E., Member of the Royal Irish Academy, and Professor of Chemistry, Queen's College of Chemistry, Liverpool.

ALLSOPP'S PALE or BITTER ALE may be obtained in casks of 18 gallons and upwards from the Brewery, Burton-on-Trent; and from the undermentioned Branch Establishments:

London	61, King William-street, City.
Liverpool	at Cook-street.
Manchester	at Shudehill.
Dudley	at Hurst Tree
Worcester	at 11b, St Vincent's-street.
Dublin	at Usher's-chambers, Dame-street.
Belfast	at Mount-hall

In either of which places a list of respectable parties who supply the beer in bottle, and also in casks, at the same prices as from the Brewery, may at any time be seen.

SARL'S ARGENTINE SILVER PLATE.—17 and 18, CORNHILL.—This beautiful metal continues to stand forward and triumphant above all the various pretenses that are manufactured in solid silver, and orders to any extent can be immediately executed. Strand, aforesaid. Each article stock on the premises is of the same excellent quality as that exhibited at the various patterns

THE ILLUSTRATED LONDON NEWS.

No. 575. - VOL. XXI.] SUPPLEMENT, SATURDAY, AUGUST 21, 1852. [TWO NUMBERS, 1s.

GOVERNMENT BY SHOWS.—THE PARIS FETES.

A LOVE of show seems common to the whole human race. The most savage tribes rattle their arms, beat their Tom-toms, shout, dance, and gratify themselves by a display of all the magnificence they can command. The Chinese have their Feast of Lanterns, and are famous for processions. Of the Greeks we know little more than that they had many wars and many games. It is much to the present purpose to notice that the Athenians regarded no application of the public revenues so sacred as to maintain the theatre. The Romans were satisfied when they had bread and shows. Our own sober people flock in multitudes year after year to see the sorry display made by the Lord Mayor, or the procession of the Queen, to open or close the Parliament; and in default of national illumination and fire-works, they crowd nightly to Cremorne, or to the Surrey Zoological Gardens. If the ear catch and retain melody, so that snatches of song are for ever reviving in the mind, when all the rest of the past is forgotten, so in like manner the eye is ravished by brilliant combinations of colours; and in all ages the masters of mankind have kindled enthusiasm by appeals to the eye and the ear, by processions and music. All this is as old as the days of David and Solomon. This universal characteristic of mankind has induced speculative political philosophers, both ancient and modern, to affirm that a part of the duty of Government is to provide entertainment for the people. Even Mr. Bentham scarcely remembered beyond a narrow circle of disciples, except for his unintelligible style and his disinterested and ardent zeal to promote law reform—insists very strenuously on the necessity of having public shows and amusements. The period of civilisation when they will be dispensed with may, but has not yet, come; and all over Europe military spectacles and theatres are recognised as means of employing and diverting the people, of governing men, and evaporating their surplus activity. In France the theory has long been acted on; the Government takes the theatres into its pay, ordains holidays, and organises festivities; and Paris has just again been gladdened by one of those splendid but ephemeral exhibitions, in the getting up of which Louis Napoleon seems to be even more successful than most of his predecessors.

The new Republic had no pleasant anniversaries to commemorate, and its short existence was more stained by carnage than gilded by festivities. Yet M. de Lamartine and M. Ledru Rollin, not forgetful of customs, nor unmindful of means of success, tried to inaugurate it by some splendid ceremonies. They were admired by the show-loving Parisians; but they reminded the people too much of the first revolution—the bloody epochs of which are remembered with disgust—and they failed to fasten the Republic on the national affections. The Bourbons, long cut off from the people by courtly state, ending in imbecility and flight, and carried back to France by hostile soldiery, had only a few religious festivities to share with the people. Afraid of the terrible Parisians, their aim was to awe and crush rather than to amuse and delight them. Louis Philippe, though he owed his throne to the Parisians, shared the apprehensions of his family, and preferred spending his revenue in erecting forts to giving *fêtes*. He got up a gorgeous and ill-advised ceremony in honour of the ashes of Napoleon, and by reviving the recollec-

THE COLUMN IN THE PLACE VENDOME, ILLUMINATED.—(SEE PAGE 142.)

tions of the Empire, prepared for its restoration. Louis Napoleon, who owes his success to his quick faculty for understanding the wants and character of the French, establishes *fêtes* after *fête* in connexion with the life of the Emperor, or the glories of the Empire. On one day he has the "Feast of Eagles," and with much solemnity distributes to the soldiers those symbols of ancient victory and renown. On another, he opens a railway, inaugurating with national honours the triumph of modern art; and as its termination he reminds the French of what they have done, and may again do. He passes the Rhine with much military but peaceful pomp. Now he celebrates the anniversary of Napoleon's birth; and delights the Parisians with a sea-fight, and representations of one of the most daring actions in the Emperor's life. Knowing the object of Louis Napoleon, we can but admire his cleverness, and admit that his policy is well calculated to serve his purpose.

Though the end of Napoleon's reign was disastrous, and of his life inglorious, both were remarkable for great achievements. The Empire was distinguished by a vigorous government succeeding to anarchy; by the substitution of a wise code of laws for irresponsible and bloody tribunals; by the peace and security given to individuals; by the restoration of order and the re-establishment of religion; by embellishments at home, and conquests abroad; and is by far the brightest spot in the whole history of France. There has been nothing since to dim its splendour, there was nothing equal to it before, and it is ineffacably engraved on the hearts and minds of the French people. Even its disastrous termination has more hallowed the memory of Bonaparte than the consolidation and continuance of his power would have done. His death at St. Helena atoned for many offences. His victories are remembered, but he had ceased to be a troublesome despot long before he died, and his crimes are forgotten. By festivities, naturally attractive, the Prince President is to revive all the feelings of admiration that once prevailed throughout France for the Emperor, and on them he is to float to Empire. He invests himself with the glories of his predecessor, and looks to be declared Emperor by the national acclamations.

His appeals are religious as well as patriotic, and he unites a homage to the church and the saints with the most adroit flattery of the people. "The Feast of the Virgin Mary divides the honours of the 15th of August (says a contemporary) with the birth-day of Napoleon." In this respect, too, he has great advantages over his competitors. The Bourbons used religon for mortification and penitence. In them it assumed the hue of their own lives, and was dull, sorrowful, and sad. If they honoured the Church, marched in its processions and went to mass, it was to impress religious duties on the people, and was to awe them, by supernatural authority, into submission. Louis Napoleon connects religion with the glories of the Empire, and makes it triumphant and rejoicing. He goes to church in Imperial state, not like a barefooted monk. So, in accordance with the cheerfulness of the French, he ministers to their pleasures, and makes even religion subservient to his ambition. Slowly, but surely, he is moving on to the height of power; and will have, not unwillingly, the honours of the Empire thrust upon him. He does not hurry to his object. He possesses in fact, all the substantial powers of the Emperor, and might have taken the title on the 10th of May, or on the 15th of August; but he will not seize the crown and place it on his own head as did Napoleon at Milan; he is preparing the people to do this work for him, and place it on his brow.

The love of show is as much a reality as any other part of our common nature; and perhaps in the French, and some other people, as stable a foundation for a Government as fear, or reason, or mere pecuniary interest. At least, *fêtes* are better than forts; and if the Parisians can be soothed into obedience, or brought to act in unison for the common good, by the former, at about an equal expense, they are much to be preferred. The sole object of all government is, or ought to be, to promote the general welfare; and, on the first blush of the matter, that seems as likely to be effected among the French by theatrical representations as by standing armies. Revolutionary France, partly incited by such means, gained many victories before Bonaparte was at the head of her armies; and even his genius could not have effected much with a dull, dissatisfied, and little emulous people. Shows are a great expense; so is a police, so are ministers and ambassadors, so is a cruizing squadron and a Caffre war, so is the corporation of London, and the Court of Chancery; but if they are necessary, or answer some good purpose, their cost is not a sufficient reason to condemn them. The instances we have briefly quoted, and the entire history of France, tend to convince us that shows in that country are necessary; and we must say that the Prince President is very successful in getting them up.

As yet, with the exception of those acts of injustice and violence which accompanied the overturn of the Constitution and the spoliation of the Orleans Princes, the President has not shown any inclination to trample on individual rights, or infringe the obligations of good neighbourhood. He has even shown an inclination to repair some of the wrongs he did, by the amnesties he has granted. His own ambition, however, is the law he follows, and should that appear to prescribe individual injustice or national wrong, he is not to be trusted. What influence the safe possession of power, obtained by gratifying the desires of the people for show, safety, and tranquillity, may have over him time only can disclose.

When Louis Napoleon was first heard of we had little respect for the man, and no expectation that he would succeed. Five years ago an outcast and an adventurer, forbidden even to tread the soil of France, and now the controller of its fate, his success is the greatest marvel in the modern political world, full as that is of strange occurrences. The unexpected sagacity he has evinced now justifies the hope that he will make as good a use of the Imperial, as Henry V. or the Count de Paris would of the Kingly, power. If France can be guided to peace and kept tranquil by shows, shows may in the end be as useful to them as Parliaments. We in England have a profound respect for constitutional Government; the people on the Continent neither love nor understand it. Like us, however, they desire peace; they are anxious to get wealth; they dread political disturbances; and it seems possible, and even probable—so discredited are the Bourbons, so alarming are Socialism and Red Republicanism—that Louis Napoleon may be the real solution of their political difficulties. A theatrical Empire in France will be a pleasant show for the rest of Europe, if the French be satisfied by the representation, and their Emperor seek popularity and power only in pyrotechnical victories.

THE LATE AND THE PRESENT NAPOLEON.

The mere name of Napoleon is now proved to have been a spell-word, and the knowledge of that fact, with the possession of the appellation, has in these days been sufficient to make the fortune of one who confessedly had no merits of his own to plead in support of his claim to the suffrages of a free people. There is a mystery in this which afflicts the sensibilities of rival claimants, with ancestral honours of far elder date, but whose stars have paled before that of the new Cæsar. What, indeed, should be in him? or it?

> Why should that name be sounded more than yours?
> Write them together, your's is as fair a name:
> Sound them, it doth become the mouth as well;
> Weigh them, it is as heavy; conjure with them,
> Brutus will start a spirit as soon as Cæsar.

The solution appears to be, that the new Name is the wording of a new Principle. Any investigation, therefore, into the character of the man should properly be preceded by an inquiry into the nature of the principle which, by common consent, he is understood to have represented.

It was the spirit of the time that had embodied itself in Buonaparte; he and it had acted together for so long a period, that he became the expression of a public sentiment. What he was as a boy, what nature had meant him for, apart from the circumstances with which he became mixed up in his manhood; all this helps but little in the examination of the principle, save so far as in his native character and disposition a fitting vehicle was prepared for the manifestation of the power with which he was entrusted. "A Corsican by birth and *character*, he will," wrote his schoolmaster, L'Eguille, "do something great, if circumstances favour him." That same Corsican character served as a firm enough basis for the edifice which had to be built upon it. The sterner virtues, including revenge, lay at the foundation of the structure—a rude substratum calculated to sustain the higher accidents of a material existence—not those subtle and more refined developments which lead to more spiritual results. Not the man of thought, so much as the man of action—not so much he who sends his soul on voluntary pilgrimages, as he whose course in life is fated in a determinate direction—compelled to do and suffer task-work in the service of the race—the man of destiny: such was the man Napoleon.

He was shaped by that which was without him. His first feelings, as a youth, were for Corsica—a brief history of which he is said to have composed, and in which he expressed his indignation at the subjugation of his country by France. In a previous essay, he had shown himself a determined Republican; and, no doubt, says Hazlitt, his resentment against the Gallican oppressor "added its gall to the love of liberty." This love he subsequently transferred to the land of his adoption; and, "during all the first years of the revolution, he professed himself a Republican." Rightly says Hazlitt, "the feeling was merely common to him with others, an impression from without, or the impulse of warm youthful blood; not a conviction profoundly engraven on his understanding, or the result of the powerful and characteristic bent of the genius of the man."

Throughout our inquiry, then, we must bear in mind this primary condition of the question. The views of Napoleon enlarged with his experience. He was present in Paris on the 10th August, 1792. Las Cases has made Buonaparte express a "genteel horror" of the events that then took place. Hazlitt disputes his correctness, and justifies the populace, for whose excesses the old Court system was justly responsible, not the new revolution, which sought to correct their source. The wants, the ignorance, and corruption of the lower classes demonstrate the abuses of a Government, and call loudly for reform. Buonaparte at that time felt this as keenly as Hazlitt could; but having himself risen to power, and misused it, he became a pervert from his former creed, and did not always express himself with consistency. But then, at that far earlier period, such were the impressions that he received, that he resolved on identifying himself with Republicanism; and with this, whether under the form of an Empire, or any other, he continued to be identified to the moment of his death.

Republicanism is perhaps the best word to express the principle of which we are in search. Whether Democratic, Monarchical, or Imperial, it retains still the same meaning—in all it regards the Public Thing rather than the Private Interest. We may learn from Burke's "Reflections" that, previously to the French Revolution, it was Property, not Man, that was the object of solicitude with Governments. That revolution asserted the Rights of Man against the privileges of Wealth and Power. These had been developed into one extreme, those were advocated in the opposite; the former, however, were more practical evils, the latter partook more of a speculative character; they had yet to be made practical; at present they were the mere constituents of a theory; that theory had to be fought for. Wealth and power had established themselves into institutions; man, unarmed with them, was an outcast and a beggar—a pauper wretch. To prove that his poverty was no crime, what blood was shed, what guilt was perpetrated! To establish affirmative claims, it needed that one, by the force of native energy, should possess himself of the privileges denied to the many, and wear them in the name of the multitude, as the victorious antagonist of the few. The Democrat, it is true, became the Despot: but this was necessary, else the revolutionary triumph might not have been impersonated. It was so, however; and its name was Napoleon!

We may now, we think, pretty well understand the principle embodied in the person and expressed by this great name. As to the primary conditions, which the fact of his being a Corsican implies, Hazlitt tells us that "the Corsicans retain some traces of Eastern manners, as well as of barbarous life. For example, the father of the family and the sons sit at table, while the wife and daughters wait upon them, or eat their meal in one corner of the room standing. When they go a journey, the husband rides on before, well armed and mounted, and the wife follows on foot, carrying one or two of her children. Boys at twelve years of age learn the use of the gun, and go armed like men. You are in constant danger of being stopped on the high-roads by straggling banditti. Troops of these enter the towns and country houses, and carry off the most respectable individuals, who, on paying a certain ransom, are suffered to return home, and are glad to hush the matter up. The priests even, in some remote districts, officiate at the altar armed, and are often compelled to give absolution to assassins, under pain of becoming themselves their victims. The state of Corsica presents the image of war in time of peace."

This rude scheme of society was not without its analogue in the more cultivated state, even down to the banditti themselves. The pariah class of French society, transformed into military, were the tolerated, or legitimated depredators, whose delinquencies, for the sake of quiet, were systematically hushed up. This melancholy truth became patent to the world after the *coup d'état* of the 2d December, when Paris was treated as a conquered city by the troops who paraded its streets. Nor in this state of things was there any feature that was politically or historically new—it was merely another example of

> The good old rule, the simple plan—
> That they should take who have the power,
> And they should keep who can.

The Spanish Alva sought to do the same with the Netherlanders; and the wise Goethe has thoroughly expounded the system in his "Egmont." There the soldier and the civilian argue the matter out in an elaborate dialogue. It is the former who in this case, but ironically, objects that "the noble shares with his humbler brethren unequally;" to which, however, Egmont replies thus pregnantly:—"What was adjusted in former centuries, is now yielded without envy. But should men be sent a *second time* to enrich themselves at a grieved nation's cost, the people thus exposed to their rapacity would show a spirit hard to be repressed." Here is the difficulty—the seizing for the second or third time the national resources, and the providing for the new robberies as well as the old ones. It should, at the same time, be recollected, that the legalised banditti have other and nobler motives than mere rapacity; namely, the love of occupation. They would fain be doing something for their rations. But this same doing is necessarily short-lived; the time must come when the soldier must be content to do nothing: and the time *will* come, when the class out of which he is taken will find other and more glorious tasks to do, and when they will be producers, and not destroyers. This, however, can only come about by the enlargement, not only of the number of consumers in the market, but of the modes of consumption; all the arts of life must be cultivated; the number of human wants increased, the dignity of our common human nature being advanced in the same proportion. It is written, that all Utopias shall at last become facts.

In what we have stated of the military profession we mean no disrespect. Like all the other professions, it is founded on the vices, not on the virtues of man. Were there no sinner, there would be no need for a priest; no cheat, none for the lawyer; no debauchee, none for the physician. Those professions are institutes for the remedy of evils inherent in a corrupted humanity, and the members of them are honourably employed in the work of regeneration. It is to the abuse of them that objection is taken, which, in time, requires them to be removed or substituted, involving all the perils and disquiet of successive new states of transition, always painful, and dispensing with the security of ordinary laws.

The young Napoleon proposed speculative remedies for the evils of Corsica, but in his practice as a man he set about the remedy in true Corsican fashion. Corsica in him became the mistress of that France which had conquered her.

Reading the letter of Napoleon to Paolo, written in 1789, it is impossible to avoid curious reflections. The part that the writer then proposed to take in favour of Corsica, he knew would "raise against him the numerous body of Frenchmen who govern the island, and whom he attacked." Nor was his attack conducted in the gentlest manner. His "heart," as he said, "boiled with indignation;" he "wished to blacken with the pencil of dishonour those who have betrayed the common cause." His enterprise, he stated, "might seem daring; but love for truth, of his country, and fellow citizens, that enthusiasm which the prospect of an amelioration in our state always gives, bore him up." Is there, indeed, a Nemesis of nations?—and do the weak, merely by biding their time, avenge themselves on the strong by a more subtle method than that of direct attack? Corsica, erewhile deprived of her liberties by France, has now, in the person of her Buonapartes, a second time extinguished those of her old enemy. This, verily, is a strange *amende*, but it is true.

It is impossible to admit this train of reflection without recollecting that Louis Napoleon has expressed without disguise his Corsican feelings in relation to England. On his trial for his attempt on Boulogne, he said, "I represent before you a Principle, a Cause, and a Defeat. The principle is the sovereignty of the People; the cause is that of the Empire; the defeat is that of Waterloo. The principle—you have recognised it; the cause—you have served it; the defeat—you would avenge it." This is the Corsican vendetta. The re-establishment of the Empire is only the bridge between universal suffrage and national vengeance. Corsica has avenged herself on France? Will thus France be also avenged on England? From the ashes of her perished liberties is revenge to be the phœnix that shall arise? Or, rather, will not the destruction of freedom in France serve to paralyse the arm of her self-constituted avenger? This, at least, is the faith that we devoutly cherish.

Thus, by a comparison of the present and the past, have we endeavoured to bring together the events by which the principle at issue may be best illustrated, and the conditions by which it has been, and must be, necessarily limited. The latter are the meshes of destiny, from which both history and philosophy with difficulty escape. A direct mathematical solution of the social problem is impossible. Neither Fate nor Nature goes the nighest way to its end, but prefers the winding banks of the stream, perhaps from a sense of beauty; at any rate, out of these windings grows the poetic and romantic interest which cannot be dissociated, even from the hard facts with which the astute politician must professionally deal. The passions will interfere and impede the progress of society, let the wisest do what they will.

The Corsican chrysalis outgrown, we have next to consider Napoleon as the French Republican. Public opinion had entered like a spirit into his, and for the time inspired him with enmity to all Prescription. The Massacre of St. Bartholomew might be quoted as precedent for more than all the horrors of the revolution, which it by far exceeded. The contrast, as drawn by Hazlitt, is striking. The Reign of Terror sacrificed in Paris, in two years, about 4000 persons; whereas that butchery slew 70,000 Protestants throughout France in eight days! Such were kings, he adds, little more than two centuries ago. No wonder their prescriptions were distasteful to the Republican appetite. Napoleon, however, is supposed to have looked early ahead of the Republic. In 1798 the Austrian Plenipotentiaries had set down as the first article of the Treaty of Leoben, that the Emperor acknowledged the French Republic. "Strike that out," said Napoleon, "the Republic is like the sun, which shines by its own light: none but the blind can fail to see it." Afterwards he gave a political reason for what appeared to be a natural burst of enthusiasm. "In case the French," said he, "had afterwards wished to establish a Monarchy, the Emperor might have objected that he had only acknowledged the Republic." Hazlitt was of opinion that this was prying rather too narrowly into futurity, and looked too much like a deep-laid scheme to extinguish that light which was said to shine so brilliantly. It is thus that coming events ever cast their shadows before. Doubtless, Napoleon already perceived that the Republican power required impersonation. At any rate, if we take Madame Staël's account of him after his return from Italy in 1797, he had already begun to esteem himself "a thing apart." "He then appeared to live for the execution of his own plans, and to consider others only in so far as they were connected with, and could advance or oppose them. He estimated his fellow mortals no otherwise than as they could be useful to his views; and with a precision of intelligence which seemed intuitive from its rapidity, he penetrated the sentiments of those whom it was worth his while to study. There was a stiffness and reserve of manner which was perhaps adopted for the purpose of keeping people at a distance. His face had the same character. When he thought himself closely observed, he had the power of discharging from his countenance all expression save that of a vague and indefinite smile, and presenting to the curious investigator the fixed eyes and rigid features of a bust of marble." The enthusiast had become a consummate actor. It was clear that he was now to *play* divers parts in life: Consul, Emperor, were already among his *rôles*.

So long as in both these characters France and Napoleon were united in one interest, the latter, whatever title he bore, was perfectly safe. But the time arrived when personal considerations were stronger than public ones. The execution of the Duke d'Enghein deprived him of that moral power which previously protected him with its celestial ægis. From that moment his guardian angel was deprived of his shield, if not

of his sword; and his genius strove at disadvantage with antagonist influences. Whatever his external or temporary success, his cause was rotten at the core, a permanent canker was at the heart of his fair rose, and it gradually drooped and dwindled, until not a petal was left to report of its former beauty. From that moment, all his efforts were for the safety of his dynasty, not of France. He called on Austria to help him, and give to his claims the sanction of hereditary power. But the union was a moral impossibility. The battle of Waterloo simply put an end to a series of political falsehoods; and avenged on Napoleon the cause of that liberty which he had betrayed.

Yet this is "the defeat" which his successor would call on France "to avenge." Louis Napoleon is at this present time in the position of his uncle, when First Consul; and is surrounded by the same perils, modified, however, in accordance with the present condition of the political world. The position itself is not so objectionable as the means by which it was obtained. The *coup d'état* of 2d December was unnecessary; patience for a few weeks would probably have invested the President with renewed authority, without bloodshed or violence. But President with renewed authority, without bloodshed or violence. But this did not suit his ambitious views, which required that all should be the result of arbitrary will. To effect this undesirable object, he violated every pledge, oath, and obligation. Not so his uncle at the corresponding period of his career, the 18th Brumaire. He suffered the crisis to be forced upon him—to appear at least inevitable, and not his voluntary act. He was then solicitous not to do, all that the nephew since was most active in doing. He would not permit the barriers to be closed, to prevent the departure of couriers and stage-coaches. "We go," he said, "by the opinion of the nation, and by its strength alone. Let no citizen be interrupted, and let every publicity be given to what is done." Sièyes proposed that the forty principal leaders of the opposition should be arrested, and millions of names on the registry. A large proportion of these were obtained by trickery and chicane, but the majority were conscientiously given.

The country and the capital in France are at issue; the former understands nothing of politics, and yet outvotes the latter that does. What the elder Napoleon had begun to represent, the younger did so in a more complete form. It is owing to the ignorance of the provinces that Louis Napoleon is invested with supreme authority; that ignorance the elder Napoleon represented, too, in the latter part of his career. We have thus two evils indicated in embodied idealities; the remedies are equally obvious, but they must proceed in the way of natural growth, and not in the form of arbitrary paper constitutions, least of all in that of revolution, which uniformly throws back all reform for a century.

A valuable reprint of Hazlitt's "Life of Napoleon," which has just been issued in four handsome volumes from the offices of the National Illustrated Library, has suggested these observations. The work was almost suppressed on its original publication, but the bread thrown boldly on the waters has, nevertheless, returned after many days. It will be welcomed by all lovers of fearless writing and popular liberty.

PARIS, ITS WORKSHOPS AND WORK-PEOPLE.

PARIS, besides being the seat of Government, the heart of power, the source of political life, the throne of fashion, the favourite abode of literature and of arts, is the Brummagem of France. Its productions, infinitely varied, are admired and coveted over the whole world for their taste and elegance. Few objects in the Great Exhibition excited more astonishment than the excellent work of the Parisians. Nearly all the plate, jewellery (true and false), ornaments of bronze or of the precious metals, *pendules*, perfumery, gloves, boots and shoes, materials for hats, umbrellas, canes, gloves, musical instruments (except violins), artificial flowers, stained paper, books, &c., consumed in France, or exported from it, are manufactured in Paris. Most of the great capitals of Europe, Vienna, Berlin, Rome, London, are also manufacturing towns, but Paris far surpasses them all, except the latter, for the extent and variety of its productions. It is not merely one of the great manufacturing towns of France, it is the greatest; and, except the silks of Lyons and the cloth of Lille and other places in the north, the manufacturing industry of our neighbours is more properly Parisian than French.

The workmen and women, masters and apprentices, employers and employed, of Paris amount to hundreds of thousands, and exceed the inhabitants of any one of our manufacturing towns. According to a careful inquiry, instituted by the Paris Chamber of Commerce, to ascertain the effects on trade of the revolution of 1848, recently published,* the total number of persons engaged in business in Paris, in 1847, was 407,346. Manchester, exclusive of Salford, has 316,213 inhabitants; and Birmingham, 232,841. Paris boasts of 325 different species of industry. They have been classified in thirteen groups. The group of clothing embraces both tailors and milliners, and includes all the trades that serve to attire both sexes. The alimentary group includes butchers, bakers, and all who contribute to provide sustenance; but not those who, like some shopkeepers, merely sell it. The architectural group embraces all who contribute to build their dwellings. Parisian articles are those for which the capital is peculiarly celebrated; but the group does not include the jewellery and the bronze manufactures for which the Parisians are still more celebrated. With these explanations, the following table of the trade of Paris for 1847 will be understood:—

Trades Grouped.	Number of Masters.	Number of Workmen & Women.	Total.	Value of their production.	Average each one.	
Clothing	29,216	90,064	119,280	240 947,293f	2020f.	85c.
Alimentary ..	3673	10,428	14,101	228,563,090	16 084	44
Architectural ..	4061	41,604	45 664	145,412 679	3184	41
Furnishing the Working in the Precious Metals	5713	36,184	41,897	137,145,246	3273	39
Parisian Articles ..	2392	16,819	19,211	134 830,276	7018	39
Spinning and Weaving	6124	35,479	41,803	128,658,777	3077	74
Mechanism, Working in Metals ..	3799	36,685	40,484	105 818,474	2613	83
Ceramic and Chemical ..	3104	24,894	27,998	103,631,601	3701	39
Coachmaking, Saddlery, and Military Equipment	1259	9737	10,996	74,846,606	6779	43
Printing and Paper Work	1253	13,754	15,007	52,357,176	3488	85
Hides and Leather	2236	16,705	18,940	51,171,838	3077	74
Cooperage, Turnery, and Basket making ..	426	4573	4999	41,762 965	8356	26
Total ..	1561	5405	6966	20,482,304	2940	33
	64,816	342,430	407 346	1,463,628,350	3593	08

The total value, then, of the produce of Paris industry in 1847, was 1,463,628,350f., or nearly a milliard and a half. Taking the round sum, and calculating the pound sterling at 25f., the total annual value of the manufacturing industry of Paris before the Revolution of 1848 and it has since risen again pretty nearly to its former level—was £60,000,000. About one-ninth of the whole, or 168,172,187f. was exported including mimutry, 2,646,708f., hats, 1,219,224f., and umbrellas, 1,060,130f.; or, taking the round numbers, 170,000,000f. (£6,800,000) in all: eight-ninths are consumed in Paris.

The different species of industry enumerated, 325, do by no means include all the labour of Paris. Those who buy to sell again, without changing the form of the objects they deal in, are properly called merchants, and are excluded from enumeration. Railway companies, bankers, brokers, with all the persons who contribute merely to amuse, comedians, singers, dancers, &c., and the members of all the professions, teachers of all kinds, and artists, who are numerous in Paris, are not included. The description is confined to those arts which effect some change in the objects manufactured. Though the 407,346 persons engaged in them constitute nearly two-fifths of the population of Paris, 1,034,196, they are by no means the whole of the productive, and still less the whole of the industrious classes. To them we must add the merchants, the classes who amuse and instruct, the police, and the members of the Government, who all labour, and the sum is that the mass of the population are industrious. Nearly all mankind labour in one way or another, the great difference in industry being that some is misdirected and unproductive, and some wisely directed is productive of wealth or happiness. Beneficently is creation itself said to be the product of labour, for as all have to labour, even those who seem above it being obliged to strive and work to maintain their high place, it may well render us pleased with our condition to believe that even in this particular we are made after the image of our Maker. We in London hold ourselves to be extremely industrious; we are, indeed, flatteringly described with our kindred in Leeds and Liverpool, in Manchester and Glasgow, as amongst the most industrious and energetic of mankind; and it is pleasing to reflect that the Parisians, who are usually said to live only to enjoy, are probably not less industrious than ourselves. Two-fifths of the inhabitants of that gay city stedfastly engaged in sedentary and productive occupations, yielding to them elves and their country £60,000,000 a year, is a phasis under which we are not accustomed to regard the metropolis of gaiety and fashion.

The £60,000,000 is a very large proportion of the whole annual production of France. One part of it pays for the raw material, another pays the profit of the capitalist and the salaries of the masters, another part pays the taxes of the Government; and the part which falls as part pays the taxes of the Government; and the part which falls as wages to the workmen, including masters who employ no journeymen, is estimated at one-fifth or £12,000,000 annually. If this be an approximation to the truth, and the rest of the French were paid at the same rate, they would be a very wealthy people; but the varied industry of the Parisians is much better rewarded than the industry of the bulk of the inhabitants of France. An artisan in Paris, with his average wages of 3s. 2d. (3f. 80c.), is a much more wealthy man than any one of the five or six million of land-owners who throughout France labour very hard for very small returns. We should lead our readers into a great error, unless we reminded them that the wages of the Paris workmen in relation to the gains of the bulk of the French, are much higher than the wages of London workmen, in relation to the rewards of industry in other parts of England.

The number of employers in Paris is 64,816, and of employed 342,530, the mean being 5·28 persons employed to each employer; of the employed 204,925 are men, 112,891, more than one-third of the whole, are women, and 24,714 young persons, nearly 1 in 14. Only 7741 men, 7 women, and 393 youths are enumerated as not belonging to the fixed population of Paris, but as coming there to seek employment temporarily. This enumeration, however, it is admitted, is not to be relied on, and it is supposed that a larger number of persons are temporary sojourners. Among the young persons, 19,114 are apprentices in 264 trades comprising 325,452 workmen, or 1 apprentice to 17 workmen. The boys, of whom 1249 are under twelve years of age, amount to 16,863; the girls, of whom 869 are under 12 years of age, are 7851. A large proportion of the females, and a fair proportion of the young youth of Paris is employed in productive labour; but not so great, perhaps, as the proportion of young people and females employed in our manufacturing districts. Of the men, 150,953 work in shops or factories, 22,519 work at large, and 31,453 in their own rooms. Of the women, 63,929 work in shops or factories, 157 at large, and 48,805 in their own rooms. Of the young people, 24,036 work in shops or factories, 678 at large, and some at their own homes. The total number working in shops and factories was 238,918; at large, 23,344; and in their own rooms, 80,258. The proportion of those who work in shops to the whole body of workpeople is nearly two-thirds.

From the general tendency of mankind to reverence the manners of the past, and other circumstances, the practice of crowding persons into factories, being a new phase of society, has frequently been censured; and it is not, it must be admitted, free from many evils. But when compared with the condition of the dwellings of the poor in towns, which they provide for themselves, in which they work, or to which they are accustomed, if we may not say to which they are born, the factory system, in a sanatory point of view, is an improvement. London and all the old towns of England, within memory, have had new streets broken through crowded masses of buildings, alleys opened, old foundations torn up, and light and air admitted into holes and corners, whence they had been excluded for ages. A similar process has been occasionally going on in Paris ever since the Rastille was destroyed. Several new streets have been driven through the heart of the city, and many blocks of massive buildings have been removed. What the Parisians and ourselves now regard as a reproach was formerly adopted for safety and security; and their former condition, resembling our own, may be imagined from the manner in which they are still crowded together.

The number of houses in Paris in 1841 was 28,699; in 1846, 30,221, or an increase of 1522. According to the number of people, 1,034,196, that gives 34·2 persons to every house, or in every house 12·80 locations. Every establishment numbered on the average very nearly 3 persons, 2·95. In London, according to the late census, the proportion of inhabitants to every house is 7·7 so that the Parisians, though not one-half so numerous as the inhabitants of London, are packed together, tier above tier, nearly 4½ times as close. Improvement latterly seems scarcely to have kept pace with the increase of the people. Both in Paris and in London they are somewhat more closely lodged at present than a few years ago. In 1841 the proportion of the persons to inhabited houses in London was as 7·4, and in 1851 as 7·7. That one-third of the Parisians work otherwise than in shops and in factories, badly lodged as is the bulk of the population, can scarcely be considered an advantage.

The following specimen of some of the 325 trades selected from amongst the groups gives an idea of their relative importance

Trades	Annual Value of Production.	Trades	Annual Value of Production.
Tailors	80 649 896f.	Bronze Manufacturers ..	18 493,576f.
Butchers	74,895 432	Painters	16,144,940
Bakers	60,242,390	Printers and Lithographers	23,046,075
Shoemakers	43 282,487	Glovers	14,668,247
Jewellers	40,981,834	Milliners	12 426 113
Gold and Silversmiths ..	29,026,100	Artificial Florists	11,658,658
Fringe-makers	28,404 987	Paper Stainers	10,227,100
Upholsterers	27,992 950	Founders (Metal)	10,033 550
Builders	26 998 895	Perfumers	9,241 851
Masons	26 883,740	Umbrella-makers ..	7,434 440
Engineers	25,947,800	Toymakers	4,351,569
Sugar Refiners	23 850,000		

Of the 64,816 masters by whom the whole are carried on—

7,117	employ	more than 10 workmen,
25,116	,,	from 2 to 10 workmen,
32,583	,,	1, or work alone.

Amongst the tailors there are no less than 4650 small masters, 1641 of them having no journeyman, the rest only one. So amongst the shoemakers, 1605 masters have only one workman each, and 2699 work alone. The mantua-makers, like the tailors and shoemakers, are many of them in a small way, and 4663 employ only one sempstress, or work alone. These businesses are carried on very much on the same scale in our metropolis, and although some of our large slop-sellers and wholesale shoemakers employ many more than ten workmen, and though all factory employments are carried on here on a much larger scale while that number is seldom much exceeded in Paris, yet amongst us many small tradesmen and tradeswomen, in these lines of business, earn a reasonable subsistence without deriving any profit from setting others to work.

The bakers of Paris are in a peculiar condition; they are placed especially under the Prefect of Police, and the number of them is strictly limited. It was 600, but an individual having obtained a patent for a kneading trough, he was added to the privileged few, and they now number 601. Each one, in proportion to the quantity of bread he bakes, is obliged to keep a certain stock of flour in a public granary he cannot close his establishment nor pull down an oven without notice and permission; and the whole body, in return for privileges, is subject to very stringent regulations. The bread of Paris is unexceptionable, and in proportion to the price of wheat in London and Paris is made cheaper than bread in London. Our bakers are subject to no police regulations; they are twice as numerous in proportion to the population (the numbers being, Paris 1,941 to 1; bakers 601; London, 2,361,640—bakers, 2651) as the bakers of Paris, and it has, therefore, been proposed in the interest of the consumers to subject the bakers of London to similar regulations. By the latest return we have seen the price of wheat in London was 7, the price of flour 23, and the price of bread at first-class shops 28 per cent. higher than in Paris. Between the price of flour and the price of bread the difference is only 5 per cent. and that only with full-priced bakers. Whether the baker buys with ready money, or is dependent on the miller, he must recover in the price of bread not only the increased price of flour, but something more for profit on the large sum he must employ to buy it. The increased charge of the miller being 16 per cent., it is with him, and not with the baker, that the increased charge originates. Our millers have remained far behind the continental millers, and are only now overtaking them. Mills have lately been erected here on the Paris plan improved, which, in twelve minutes after the wheat is taken in, send forth the flour fit for market. It is not worth while, therefore, making a change in our system of bakers for such a small per centage, when that higher charge, in consequence of the improvement in grinding, is undergoing extinction.

It must be remembered, too, that rents are higher in London than in Paris; wages are somewhat better; and these, with all the charges to which the baker is liable, must come out of the price paid by the consumer. Unless all these items were strictly adjusted, it is not fair to compare the additional charge of the London baker more than the flour costs with the additional charge beyond the price of flour of the Paris baker. A fairer comparison would be between the gains of bakers and those of other tradesmen in London, and the gains of bakers and those of other tradesmen in Paris. We are quite sure as the rule that the latter are less, and their expenses are less than those of the generality of London tradesmen. On referring to the list at the beginning of our article, it will be seen that, in proportion to the number of persons employed, the value of baker's labour in Paris is more than double that of any other class of tradesmen. The presumption, therefore, is, that the bakers of Paris levy a very considerable tax on all other inhabitants of Paris, which goes to compensate them for the losses to which they are subjected under the police regulations. There is then good reason to believe, on the whole, that the example of the bakers of Paris is not an exception to the principles of Free-Trade. The consumers of London, taking their circumstances into consideration, are more cheaply served by the London bakers under the system of competition than the consumers of Paris are by the bakers of Paris. One fact, too, is certain and important: while the other trades of Paris increase very fast and spread their produce pretty equally over society, enriching the bulk of the people with something like wealth into the bargain, the bakers do not increase, but the amount of baking business increases in a few hands, and the bakers are becoming to Paris what the brewers, under the licensing system and the malt-tax, are to London monopolists.

It is mentioned above that the average wages of the artisans of Paris are 3s. 2d. per head (3f. 80c.)—the maximum 5f. (4s. 4d.), the minimum 50c. (5d.); 24,455 workmen have less than 3fr., 17,216 have from 3 to 5fr., and 10,393 have more than 5fr. Of the great majority who appear to approach the average, the average wages of women is 1fr. 63c. (1s. 4½d)—the maximum 20fr. (16s. 8d.), the minimum 15c. (1½d.); 950 women now receive less than 60c. a day, 100,050 have from 60c. to 3fr., and 626 receive more than 3fr. In Paris as in London the women are wretchedly paid, and in both places the causes of the misery and the remedies are the same—the immense number of females who can sew, and who unite sewing with some other occupation, or do not wholly depend on it for a living. Like our trades, the trades of Paris have their dead season. In fact they have two, in July and August and in January and February. The most active seasons at Paris are in April and May, and in October and November. There are disputes in Paris, as in London, between masters and workmen; and there as well as here the latter have tried to carry on business by associations, independent of masters, without attaining a brilliant success. The workmen there, too, keep "blue Monday" as our workmen keep it; and if they occasionally work on Sunday, they have rather a large number of holidays at every period of the year. Of the workmen, 21 per cent. dwell in lodgings, and the *maisons garnis* at Paris for the poor are desolate and filthy beyond description. The females are better off, only 9 per cent. live in lodgings. The poverty and want which prevail amongst many of them are attributed to their own improvidence, but great numbers of them have their own establishments, are decorous, careful people, and put money in the Savings Bank. Their character, as well as their rewards, is superior to that of the mass of their countrymen.

The majority are tolerably well-informed. On the whole, 87 out of 100 can read and write. In some branches, of course, as printing, the whole can read and write; and in some, as in weaving, a larger proportion—27 per cent. can neither read nor write. Of the spinners, nobbin-makers, and the engineers' labourers are above one half can read and write, and the engineers' labourers are independent of masters, without attaining a brilliant success. The workmen there, too, keep "blue Monday" as our workmen keep it; and if they occasionally work on Sunday, they have rather a large number of holidays at every period of the year. Of the workmen, 21 per cent. dwell in lodgings, and the *maisons garnis* at Paris for the poor are desolate and filthy beyond description. The females are better off, only 9 per cent. live in lodgings. The poverty and want which prevail amongst many of them are attributed to their own improvidence, but great numbers of them have their own establishments, are decorous, careful people, and put money in the Savings Bank. Their character, as well as their rewards, is superior to that of the mass of their countrymen.

The majority are tolerably well-informed. On the whole, 87 out of 100 can read and write. In some branches, of course, as printing, the whole can read and write; and in some, as in weaving, a larger proportion—27 per cent. can neither read nor write. Of the spinners, nobbin-makers, and the engineers' labourers are above one half can read and write, and the females are about as well educated as the males, and so per cent. can read and write.

Of all the workmen of Paris, however, those who make plate and jewellery, and articles in bronze, and all the articles that are decorated as peculiarly Parisian, are the most intelligent and most celebrated. They generally work three or four together, rarely are they united to the number of ten or a dozen; many work at home. The children, after going to the communal schools, are apprenticed for a longer or a shorter period. They have the advantage of being in a society where reading is extensively cultivated. Naturally vivacious, a continual intimacy with objects of art begets in them an exquisite taste, and they readily adapt themselves to gratify all the desires, and even the caprices of their customers. They love novelty, they have a facile invention, they work with great activity and energy, and sometimes with great perseverance but they take afterwards a long repose. When a necessity for completing a job in haste arises, they work night after night, and day after day, and are only seen to go to their beds, and at the end, repose and pleasure wholly occupy the man. In general, those who work together in large bodies are less instructed and more rude than the others, and amongst them most turbulence is found. The workers in the precious metals are the most skilful for the strictest probity. Small objects of value are placed at their command without control; they respect themselves, are well paid, lead regular lives, and are respected. We have seen and admired the produce of the Paris workshops, but of the workmen of Paris we have heard only as behind the barricades, or urging forward insurrection. From the revolution in 1848 they were the greatest sufferers. Half their wages, or 6,000,000, were sacrificed, had the trade of Paris was suspended, and a moiety still remained at the caprice of his worse for wear and months obliged to beg or work without of his employer. It is computed that 100,000 persons were assisted on an existence by a miserable donation not amounting to 20d. a day each. If we could follow each of them to his home, we should find in Paris, in the summer and autumn of 1848, a mass of misery, starving almost equal to that caused by the deplorable famine of Ireland. In such consequences we have as firm a guarantee as can be given, that the bulk of the Parisians desire tranquillity, and will preserve peace, if their rulers will only trust them fairly, and allow them steadily to pursue their own path to prosperity.

PREPARATIONS FOR THE FETES.

THE FETES AT PARIS.

The great Napoleonic *fêtes* of Paris, though nominally beginning on Sunday, the 15th, may fairly be dated from Saturday, the 14th. The immense line from the Place de la Bastille to the triumphal arch on one side of the Seine, and from the Pantheon, the gardens and Palace of the Luxembourg, and the Church of St. Sulpice, to the Hôtel des Invalides on the other, presented, during the whole of Saturday, but particularly during the afternoon, the most animated and curious spectacle that can well be imagined. Within that space are comprised the spots that present the greatest attractions for strangers as well as for Parisians. Along the whole line of street that begins at the Faubourg du Roule, and extends far away, under the different denominations of the Faubourg and the Rue St. Honoré, to where it is lost in the Rue de la Ferronnerie, and those narrow passages that still retain the names of the various trades which once flourished in the vicinity of the Marché des Innocens, a tide of human beings, apparently of every class and every calling, continued in an uninterrupted flow. As the way became narrower in the direction of one of the great centres of attraction—the chosen spot where the *Dames de la Halle* ply their noisy calling, the passage was frequently blocked up with foot passengers, carts, and vehicles of every description. Along the nearly parallel lines of the Rue de Rivoli, the garden of the Tuileries, and the Champs Elysées, to the Barrier de l'Etoile, the crowds were not less great; and on the Boulevards, from the Porte St. Martin to the Madeleine, the promenaders had often to wait a considerable time before venturing to traverse from one side-path to the other, if they did not choose to run the risk of being crushed by carriages of every description that rolled along, or crossed from the transversal streets. The terraces of the Tuileries, facing the Place de la Concorde, the river, and the quays on both sides were equally alive, and the Pont de la Concorde, impassable to carriages as well as to foot passengers, presented perhaps the greatest object of attraction. The restaurants, cafés, and confectioners' shops, from the Italian Boulevards to the end of the Rue de la Paix and Castiglione, where the latter joins the Rue de Rivoli, and from the Boulevard des Capucines to where the noble Rue Royale issues on the Place de la Concorde, were closely crowded. The variety of idioms and dialects heard in those encumbered thoroughfares showed that Paris had received an immense addition to her ordinary population. On the quays, and by the fountains and pillars, and garden parapets, might be seen whole families, apparently visiters for the first time to the capital. Not the least interesting point was the structure at the end of the Pont de la Concorde, and nearly fronting the National Assembly, now the *Corps Législatif*, and which is almost completely concealed from the view of those who stood on the Place de la Concorde. The structure that was the object of so much curiosity represented the Fort on Bard, with its frowning rocks covered with snow, which arrested for a space the division of Lannes during his passage over the Great St. Bernard, and which the First Consul succeeded in turning. Seen from the terraces of the Tuileries, this temporary edifice of wood and painted canvas, intended to picture forth a most interesting episode of the campaign which terminated in the victory of Marengo, was not without effect.

The morning of Sunday rose in clouds. From daybreak till half-past seven the rain fell rather thickly; it then passed off, and though there were occasional glimpses of sunshine, the sky still looked threatening. Yet soon after six o'clock many hundred persons assembled in the Place de la Madeleine, in expectation of obtaining admission into the church to witness the ceremonies, at which it was known the President would be present. In this, however, they were all, or very nearly all, disappointed, as no one but those connected with the church was

SKETCH NEAR PARIS

admitted without a ticket—the sacred edifice, vast as it is, scarcely affording accommodation to the dignitaries of State, Senators, members of the Council of State, members of the Legislative Corps, judges, members of the National Institute, and other public functionaries who had been specially invited. As an early hour might be heard the cannon of the Invalides firing salutes in honour of the anniversary of the Emperor. At seven o'clock the National Guards of the Arrondissement and the Banlieue, infantry and cavalry, dressed in their newest uniform, mustered in the different quarters, preparatory to marching to the review ground. About a quarter before eight o'clock the grand entrance of the church was thrown open to admit a full military band, who assisted the ordinary choir during the service. A few minutes after eight, the judges of the Court of Cassation, arrayed in their scarlet and ermine robes, arrived; and from that time till half-past nine the line of carriages was uninterrupted. The attendance of naval and military officers was very numerous; that of members of the Legislative Corps, at least of those in uniform, was thin: and as but one gallery in front could be reserved for ladies, the female attendance was not at all large. Amongst the military officers present were several who wore the Prussian uniform, and two or three gentlemen appeared in the full dress of the British Foot Guards. The diplomatic corps was also represented. The Archbishop of Paris arrived at the church at a quarter before nine o'clock, and in about half an hour after a strong body of the Municipal Guard, horse and foot, occupied the Place de la Madeleine, so as to prevent any interruption to the President on his arrival. Precisely at half-past nine o'clock, the hour indicated, the drums beating to arms, and cheering in the distance, and in the direction of the Rue Royale, gave notice that the principal personage of the day was approaching. A squadron of Gaides handsomely dressed and accoutred, and well mounted, first made their appearance, and elicited a burst of applause from the crowd for their martial bearing and the elegance of the officers' uniform. Next came a squadron of Lancers, a squadron of Carabineers, and a troop of cavalry of the National Guard of Paris. The arrival of the President's carriage at the church steps produced a general cry of "*chapeau bas*" from the persons standing in the rear of the crowd, either out of compliment to the President, or to obtain a better view of the *cortège*. Louis Napoleon appeared to understand it in the former sense, as he put his uncovered head out of the window, smiled, and bowed several times. The people assembled appeared delighted with the pageant—several, the women particularly, exclaiming loudly, "*Comme il est beau!*" "*Ceci est admirable!*" At the same moment the rain had ceased, and a gleam of sunshine followed, which tended to increase the good humour of the crowd, who seemed disposed to be pleased with everything. The guards on duty gave every facility to the people to see what was passing, sometimes even permitting them to transgress the prescribed limits. Another object which added animation and interest to the scene was the presence of a band of old warriors, the relics of the Imperial armies, who drew up in line and received with the military salute the Prince while he was still outside the iron railing. The veterans had evidently received marks of the President's munificence, for, in place of being attired in the old-fashioned and moth-eaten uniforms usually observable, their clothing today was quite new; and some of the uniforms were really fine, particularly that of the Red Lancers of the Imperial Guard. When the

FIREWORKS IN THE PLACE DE LA CONCORDE.

President, who wore the uniform of a Lieutenant-General, alighted from his carriage, he was received at the foot of the church steps by several general officers who were waiting for him bareheaded. He ascended to the lofty vestibule firmly, and showed no signs of the indisposition with which it was stated, he had been recently affected. The *façade* of the Madeleine was richly decorated; the pillars were covered with crimson cloth, studded with bees, and on each side stood a pyramid surmounted by an eagle, one of which had been blown off by the wind the previous night, but was afterwards replaced.

The interior of the church was fitted up for the occasion. The solemn music, the lights, the odour of incense, the rich uniforms of the military and civil officers produced their due effect. The President was ed to his place near the altar by the Archbishop, and the curé of the Madeleine, M. Duguerry. The ceremony of the blessing of the standards was performed by the prelate, and before the religious service of the day or the "Te Deum." The standard-bearers had taken their places in front of the church. The eagles were soon after delivered to them, and they were ordered to proceed to their respective corps; when they reached, each took his station about ten paces in front of his corps. The fifty-two battalions of the National Guard of Paris and the Banlieue were drawn up in two lines from the Madeleine to the Porte Maillot of the Bois de Boulogne. No attention was paid to their numbers; they were mingled together, the town and the banlieue alternately.

The National Guard made a very neat appearance. The clothing of the men and officers fitted well. Their epaulettes were white as snow; their accoutrements clean, and well put on; their shakos smart; their firelocks polished. The horses of the cavalry were generally good. To be sure, one might now and then discern in the ranks of the infantry some whose *embonpoint* was more inconvenient than graceful, and whom the fatigues of a long march from the Porte St. Denis to the Champs Elysées rather tried. Then in dressing up or marching a little irregularity was now and then discernible; and they did not appear to be always well prepared for unforeseen impediments on the line of march, such as obstinate or stupid cabmen, wayward omnibus drivers that try the patience, and prove the tactics, of the civic force. Their music was unexceptionable.

At half-past ten o'clock Louis Napoleon mounted his horse at the Madeleine. The *cortège* was opened by two squadrons of Guides, one of Lancers, and half a squadron of cavalry of the National Guard, and was closed by a squadron of Carabineers and Lancers, attended by Generals Magnan and St. Arnaud, and a number of other general officers, with their respective staffs. The President rode in front of the right line of the National Guards to the Porte Maillot, at the Bois de Boulogne. He returned in the same manner, and descended along the left line, stopping and saluting the eagles as they lowered before him on his way. On his return to the Place de la Concorde he proceeded to the Quays, and passed in review, on the right and left, the cavalry of the civic force, that was drawn up on both sides of the Pont de la Concorde. At a quarter to twelve he took his station close to the Pont Tournant of the garden of the Tuileries, facing the obelisk, where the whole force defiled before him. This operation lasted nearly two hours, and could not be otherwise than fatiguing. As the President passed along he was cheered. The cheers appeared very warm during the *défilé*, particularly on the part of the National Guards. When the last detachment had marched past, the President clapped spurs to his horse without waiting for his escort, which was at some distance, and in an instant he found himself completely surrounded by a multitude of people of almost every class, who formed his only escort, with the exception of a troop of lancers of the National Guard, who with some difficulty kept a passage open for him, until, amid cheers, he reached the Palace of the Elysée. The cries of "*Vive Napoleon*" were on some occasions rather vociferously uttered, by the peasants and blouses particularly.

With this rather unusual escort the President arrived at the Elysée at a quarter to two o'clock. Though the day kept free from rain, yet it was not agreeable; the wind was very strong, and the dust most annoying, and both were full in the face of the President during the *défile*; a few drops of rain occasionally fell. The new equestrian statue of the Emperor, executed by Count de Niewkerque, and now placed on its pedestal at the Rond-Point of the Champs Elysées, was saluted by the general officers as they passed.

It was about one o'clock when the first battalion of the National Guard marched along the Boulevards on its return; and the others continued to pass on successively until nearly three o'clock. Each corps carried the colours it had just received. The eagles differed in this from those of the Line, that they were silver instead of gilt; and on the flag itself were inscribed, in letters of gold, "R. F." (Republique Française), and the words "Garde Nationale." Each battalion had its company of sapeurs-pompiers, its pioneers, and its *tambours* in full dress. Many of the men carried laurel branches in the barrels of their muskets.

THE NAVAL COMBAT ON THE SEINE.

The naval combat between the frigate *Ville de Paris* on one side, and the steamers *Arcas* and *Calypso* on the other, began at half-past four o'clock, in that part of the river between the Pont des Invalides and the Pont de Jena, in the presence of a countless multitude. The attack on the frigate was begun by an attempt on the part of the steamer *Calypso*, near the Pont des Invalides, who sent boats to reconnoitre the position of the frigate. The boats were hailed by the sentinels on board, and received with a fire of musketry, which compelled them to fall back on the steamers; still, however, keeping up a well-sustained fire as they retreated. In a moment about a dozen or two of boats belonging to the attacking vessels, and with their crews and a party of infantry soldiers, again made for the frigate, the *Ville de Paris*, and attempted to board under cover of the fire of two forts, each mounting three guns, standing on the bank to the left and right of the frigate. After a desperate attempt on the part of the flotilla to capture the *Ville de Paris*, it was obliged to retreat, with (presumed) considerable loss on both sides, for the frigate and the steamers supported their men during the action. The cannon fired on both sides, as well as the musketry, and the bridges of the Invalides and of Jena, with the banks, were soon involved in wreaths of smoke. The commanding officer of the flotilla was, with others, taken prisoner, and conducted on board the *Ville de Paris*, where he surrendered his sword to the captain. Then the action became serious; for, when the smoke cleared off, the frigate, while, as she advanced, her swivel guns threw out their fire. The combat lasted for some time, occasionally to the advantage of the crew of the *Ville de Paris*, and again to the assailants. The latter, finding at last all their efforts to be in vain, only thought of providing for their retreat with as little damage as possible. The *Ville de Paris* was not disposed to let them off so easily: she manned her boats and sent out to the pursuit of the discomfitted *Arcas*, and, in the meantime, managed to get clear of the combat. The pursuit was carried on vigorously, and the flying had no time to repair the damage, and scarcely a moment for defence. So harassed was she that, pressed every moment closer and closer by her untiring enemy, she was at length forced to haul down her flag. She was boarded, and her captain and crew made prisoners. The captain was conducted on board the frigate, and gave up his sword to the victorious commander of the *Ville de Paris*, surrounded by all his officers. The other steamer, the *Ville de Paris*, surrounded by her companion, bore down the *Calypso*, seeing the defeat sustained by her companion, bore down with her crew of 150 men to the succour of the *Arcas*, but apparently to parley, as she hoisted the white flag. Boats passed frequently from one to the other vessel, while hostilities were suspended. The presence of the *Calypso* revived the courage of the prisoners on board the *Ville de Paris*. They rose in revolt, shouts and firing of musketry followed; the frigate signalled the interruption of the armistice, the drums beat to arms, and the combat began afresh and became general. The *Calypso* and the *Arcas* placed the *Ville de Paris* between two fires, and soon made their way to the bank. The frigate manned her rigging to repel the attack, while she continued exposed to the fire of the forts on the bank, and to that of the steamers. The attack at this moment became general. Amid the roar of the guns, and the rattling of the musketry, were heard the cries of the conquering, the shrick of the boatswain's whistle, and the cries of the drums, with the shouts of the delighted spectators on both banks. The boarding parties were at length completely repulsed, and the frigate sent out her boats in pursuit of her assailants, who retired rapidly. The magazines of the *Calypso* and *Arcas* blew up, and both steamers hauled down their flags. The fire then ceased, and the *Ville de Paris* remained victorious.

The place from which the President was to witness the spectacle was on the left bank of the river, where it makes a bend midway between the Pont des Invalides and the Pont de Jena. The whole vast space on both banks was alive with human beings, and as far as the eye could reach along the heights of Chaillot all was covered even to the house tops. Platforms and tents were to be seen far away in the distance on both sides. Down the river as far as Bercy, where regattas have been held, the multitude, I am told, is equally great. I have not heard as yet of any accident occurring.

During the afternoon the old soldiers of the Empire proceeded to the column of the Place Vendôme, to deposit their customary offerings of crowns of *immortelles* and garlands of flowers, and at the moment I write the whole of the railing is so covered. One of the chaplets bore the inscription, "*Sa famille regne, c'est pour le bonheur de la France.*"

THE PASSAGE OF THE MONT ST. BERNARD.

PARIS, Monday, August 16th.

The two most interesting features in the *fête* of yesterday were, unquestionably, the naval combat and the fireworks representing the passage of Mont St. Bernard. That an idea may be formed of the latter, it will not be superfluous to say a few words on the incident it was intended to describe. The campaign which terminated in the battle of Marengo, was principally undertaken to recover the *prestige* which a series of successes the most wonderful had invested the French arms with, and to win back victory to the French standards which had abandoned them during the absence of Bonaparte in Egypt. The First Consul had reserved for himself that task, and on the very field where his earliest and his noblest laurels had been earned. The passage of the Great St. Bernard, and the triumph with which that struggle against nature was crowned, are, of course, familiar to all; but, perhaps, the interesting, and, to a certain extent, important, episode of that campaign is lost in the glory of the whole. Just as the greatest difficulties of the passage of St. Bernard had been overcome, and as nature seemed to have withdrawn her opposition to Bonaparte's onward march, others commenced of no less formidable a kind. Lannes had swept the Austrians at Chatillon; but, as he advanced to the narrowest part of the gorge of Aosta, he was astonished to find the citadel of Bard rising before him on a perpendicular rock, on the bank of the river Dores, like the guardian giant of the pass. The citadel was only strong from its almost impregnable position, and this was of such a nature as to threaten to actually shut up the French in a ravine without supplies of any kind. A desperate attempt was made by the general of division to carry the citadel by assault, but all in vain. The attempt was relinquished. Surprised and irritated at this unforeseen obstacle in his path for though the existence of the fort had been known to the Italian officers of the army, yet all appeared ignorant of its strength—the First Consul examined it in person from the summit of the Albaredo, a lofty crag in the chain of mountains which formed one side of the narrow pass, and which completely commanded both the citadel and the village. With his usual rapidity of idea he resolved on storming the town in the first place, and, profiting by the diversion, to conduct the army in files by a ragged path way over the Albaredo itself, and down to the other side, and thus turn the fort Bard—which he soon saw was too strong to be won by a *coup de main*. The town was carried under a tremendous fire from the citadel. The passing of the men and horses was, however, of little importance while the artillery remained behind;—for without his guns the campaign would have been useless, and must be given up; and the battle of Marengo, which placed the Imperial crown on the brow of the First Consul would not have been fought. The Governor of the Fort, alarmed at the passing of 30,000 men over the tremendous Albaredo, by means of steps rudely cut in its face—like those which serve as a communication between the Convent of Monserrat at Catalonia and the hermitages perched on the dizzy summit of each separate mountain had the last consolation that it was utterly impossible, as he believed, for heavy guns to be conveyed by the same perilous path; and without guns he knew that Bonaparte would not descend into the plain. But while the Governor was thus giving himself confidence, and imparting it to his superiors, the French guns had already passed through the village of Bard, and under the very citadel. It was effected by one of those stratagems which only belong to genius to conceive, but which, when explained, seem as simple and natural as that which enabled Columbus to make the egg stand on one end. The guns had been dismounted from their carriages, concealed under branches of trees, and dragged, during the night, by men, along the streets, which had been previously covered over with straw, and the wheels of the carriages covered carefully with blankets so as to exclude every sound. The attempt succeeded completely. Batteries were erected on the summit of the Albaredo, which commanded the citadel, and which soon had no other alternative but to surrender. It appears that the resistance of the fort had been overlooked in the general plan of the campaign, even by such a general as Bonaparte; but it was nearly costing him the loss of his whole army. Once free from this dangerous spot the army advanced along the valley to Ivrea, which was carried by Lannes, who again defeated the Austrians, and the roads to Turin and Milan were equally open for Bonaparte to choose.

It was the episode thus hastily sketched that was intended to be represented by the frail structure raised on the present occasion on the space between the Pont de la Concorde and the National Assembly, and extending along the Quai d'Orsay to the right and left.

The structure was composed of wood and canvass, painted so as to give a good idea of the ground—the snow lying thickly on the rocks, the stunted shrubs, the green ice, and the dark and frowning battlements of the castle. The mountain, however, was sadly shorn of its terrors by repeated gusts of wind which swept down the river and quays, and the canvass, particularly in the upper parts, torn away and exposing the framework of wood on which it was supported. The damage done, in fact, was considerable, though the lower part of the gorge was, so far as could be perceived, uninjured, and the Castle of Bard, though it lost a battlement or two, maintained its reputation, and may still be seen nearly in the same condition as before the hurricane swept away its protecting crags. With all these disadvantages, the representation, although diminished as it was, went off very well.

The spectator, standing in the centre of the Place de la Concorde, with his face turned to the bridge, had at his left hand the citadel of Bard and a portion of the valley of Aosta, in the direction of the Rue de Bourgogne, and on his right the chain of mountains and the rock of Albaredo, with the narrow pass of the gorge at their feet. The hour for commencing the fireworks, of which the attack on the fort was to form a part, was nine o'clock, and long before that hour not merely the Place de la Concorde, the quays, the terraces of the Tuileries, the Champs Elysées, and the Rue Royale, were covered with the multitude; but far, far away in places where not a glimpse could possibly be caught of the spectacle, but where only a view might be had of the red sky above, human beings in countless masses were congregated. The signal for the commencement was to be given by the President of the Republic, for whose special service, and that of his suite, an elegant canopy had been erected in the grand balcony of the Minister of Marine, exactly in front of the palace of the Chamber of Deputies. Before the clock struck nine, a rocket was let off by Louis Napoleon; in an instant it was answered from the opposite bank by a discharge of artillery and a flight of countless rockets, which shot up into the dark sky, and, bursting among the stars, fell in one mass like a cascade of fire. This was repeated again and again in every variety of form and colour which the genius of pyrotechnism could invent, while in the midst of the deluge of guns and flashes of dazzling brilliancy, and which made the sky from the Barrière de l'Etoile to the Pont Royal look as if heated by an immense conflagration, might be seen on the mountain to the right of the fort, and far above it, the figure of the First Consul on horseback, the charger rearing, his hind feet resting on a semicircular rock, and the rider turning towards the stars, which, in the distance, the way that Bonaparte, with some few companions, in the direction of Geneva, the way that he was to lead his army to the plains of Marengo. The figure had its face turned towards the triumphal arch of the Barrière de l'Etoile. This beautiful play of light continued some time longer, when at the proper moment the equestrian figure burst forth in a splendid blaze of light, and from the rock issued a balloon, which shot into the air bearing aloft an illuminated letter "N," of colossal dimensions. The balloon continued to rise and the letter to diminish by successive bursting, until at last its splendour disappeared in the cloud from the view. The fort, and far above it, the figure of the First Consul on horseback, concluding burst of fire, the bouquet, once more revealed the statue of the First Consul, surrounded by blazing stars of every size and hue, and was the crowning glory of the whole. I may add, that the figure of Bonaparte was modelled on the well-known equestrian portrait by David. It is of course unnecessary to say that Bonaparte did not ascend the great St. Bernard on a fiery charger. A great part of the way was passed on the back of a more humble animal.

THE ILLUMINATIONS.

The illuminations in the other parts of the city were intended to be on the grandest and most brilliant scale, but here too the wind interfered most rudely and recklessly. As is generally the case, the Place de la Concorde and the noble avenue of the Champs Elysées were, after the subject just sketched, the principal points of attraction. The beautiful rostral columns in the former place were encircled by spiral wreaths of iron work from the bottom to the top, and from these were suspended lighted lamps of various hues, and on the summit the letter "N," surrounded with laurel, with the Imperial Crown above. Between every two pillars was erected an hexagonal fountain of classic form, painted to resemble white marble, and filled with evergreens and flowers, and hung with lines of lamps. The pedestal was of triangular form, a Cupid riding on a swan, and blowing a gilt conch shell, supporting the wide-spreading cup above. From the centre of the cup rose a pillar terminating in large palm leaves, surrounding a tulip shaped cup of ground glass, which was to bear a jet of gas at night. This pillar had around it three female figures with joined hands. Globes of white ground glass were everywhere to be seen through the foliage, and the effect was pleasing. All round the Place, on a line with the fountains, were erected tripods of white and gold, serving as the supports of strings of white globes, which were to serve for the illumination at night. Behind was a close line of lofty flag staffs, and from the summit of each floated a tricoloured pennant. Ranges of steps, raised one above the other, ran round the base of the permanent fountains in the square, and the intermediate space was turned into a parterre, on which were seen masses of flowers of many hues, and each was enclosed with a rustic trellis work.

The centre vase of each fountain, raised high by a framework of iron, bore at the top the initial "N," intended to be lighted up at night. Festoons of white globes were suspended round each fountain, amidst the shrubs and flowers, and between the groups of white statuary, so that the streams of water would gush out through the light on the verdure beneath. The obelisk of Luxor was to about one-third of its height encircled with a framework with metal pipes, from which gas jets were to produce an illumination. The Place de la Concorde itself was surrounded by a single line of lofty flag staffs, with flags and streamers floating from the summit, and connected together by strings of lighted lamps, forming luminous arcades. The seated statues at the corners of the vast square, representing the fortified places of France, had two clusters of flags floating on each side. The grand avenue of the Champs Elysées was lined with 62 fountains, eight feet high, and adorned with groups of statuary, flowers, and lamps. At each side a gas apparatus was placed in 156 places, fitted to the permanent candelabra, and surmounted with eagles, and the letter "N." crowned, and which were marked out in jets of gas. From the Place de la Concorde to the Triumphal Arch, festoons of lamps connected the fountains and the bronze pillars of the candelabra with each other. At the Rond Point stood the bronze equestrian statue of the Emperor, with bas-reliefs representing Roman warriors on the sides of the pedestal, and four large bronze eagles, with outspread wings, at the base. The statue is larger than life. The Emperor is represented as turning his face a little towards the right, and his right hand is laid on his breast. The statue looks in the direction of the Tuileries. Of the large edifices opposite the Chamber of Deputies, the Garde Meuble was ornamented at each wing with hangings of crimson and gold, and the intermediate spaces with drapery of blue and silver. The spaces between the pillars above were dressed out with tricolour streamers, and masses of coloured lamps suspended in the centre for the purposes of illumination. The hotel of the Minister of Marine was ornamented in a similar manner, with the addition of a gallery and canopy of crimson velvet and gold on the balcony, with eagles at the summit, and four gilt anchors suspended from the front. It was from this spot the President witnessed the spectacle.

The illuminations, the lighting of which began just at nightfall, now became the subject of general curiosity. The Place Vendôme was not too crowded as was to have been expected, from the *éclat* which the lighting of the column was intended to produce. Nor did the public use anything by their indifference, for the lighting, owing to the high wind, was a failure—part of the lights not burning at all, and the others doing so only fitfully and ineffectually. The statue of the Emperor at the top was not illuminated, and that gave the whole an incomplete appearance. Round the square, in the place of the ordinary gas lamps, were wreaths of light, with the names of twelve of the principal battles of the Emperor in the centre of each; but the wind marred the effect of these, and the arrangement of the names was without regard to chronological order. The battles mentioned were—Lodi, Rivoli, Taurus, Jena, Eylau, Lodi, Wagram, Arcole, Mondovi, Moscow, Ulm, and Marengo. The Rue de la Paix and the Rue de Castiglione, leading to the Place Vendôme, were only partially illuminated.

In the principal avenue of the garden of the Tuileries, and on the terrace surrounding the large basin, there were also illuminations. On the Terrasse des Feuillans a grand concert was given. It consisted of the following pieces:—Air of "La Reine Hortense;" overture of Auber's "Sirène;" fantasia on the "Huguenots" of Meyerbeer, with the new instruments of M. Sax; fantasia on Auber's "Enfant Prodigue;" bolero of Fessy; a military fantasia by Mohr; overture of the "Jeune Henri" by Mehul; cavatina from Adolphe Adam's "Chalet;" A. Adam's "Sanctus," on the new instruments; the "Rossignol," a waltz by Labitzki; and, finally, a military allegro by Landelle. The performers were about 200 in number, and were under the direction of M. Landelle.

The Place Vendôme was not the only place where the violence of the wind occasioned disappointment. In the Place de la Concorde the illumination did not come up to general expectation. In truth it must be admitted that it was there, as in other places, a failure. A great part of the lamps were not lighted at all, from want of time; others, from the violence of the wind, soon became extinguished; and the lighting of the column was not only imperfect, but the coloured glasses selected were not in good taste. But the effect produced by the festoons of lights in the principal fountains was charming.

The Champs Elysées were also far from presenting the brilliant appearance which had been observed at the preceding *fêtes*. The electric lights at the fountains could not be brought into play; the lighting of others was not completed; and from several no water fell. The "N.'s," imperial crowns, and eagles, which were substituted for the ordinary gas-lamps, were, taken severally, successful; but, on the whole, they did not produce light enough to create great effect in the great avenue. The Arc de Triomphe, which was to have been one of the great features in the show, was all but a failure—the violence of the wind having prevented the fixing on the top of the gigantic eagle by Bayre—the electric light which was cast on the monument not having been at all brilliant—and the illumination of the cornice appearing scanty.

At the church of the Madeleine, the illuminations prepared were not completed. But on the Boulevards the effect was good. On this great thoroughfare, from the Madeleine to the Bastille, 150 of the 300 ordinary gas lamps were turned into palm trees, of about two yards in diameter, containing on each leaf globes of different colours, and variegated lamps were wound about the trunks.

At Bercy and the Barrière du Trône there were concerts, pantomimes, and illuminations.

In different parts of the town some private houses were illuminated, but, on the whole, the number of these was limited. All the public buildings were lighted up.

The President remained for some time after the fireworks on the balcony of the Hotel of the Marine, and the people still remained there, believing, perhaps, that the President's stay was occasioned by the approach of some new spectacle which had not been promised in the programme. He retired, however, about half-past ten o'clock.

To give an idea of the masses of the people that crowded every thoroughfare is difficult. From ten o'clock until long past midnight, a tide of human beings flowed incessantly along the whole extent of the Boulevards on their return to the faubourgs, and persons who were present state that the appearance in the Rue St. Honoré, Rue des Petits Champs, Rue de Rivoli, and particularly the quays, was something awful. They were moving along the quays until past four this morning. Hundreds of people, who had come in from many miles distance, sought repose under the trees in the Champs Elysées, where they were seen this morning. The railway had been bringing people in for several days previous by thousands.

As already stated, considerable disappointment was felt at the partial failure of the illumination. Though one would suppose that the violence of the wind was sufficient to account for it, yet rumour speaks of other, and perhaps unfounded, causes. Some say that a certain number of workmen employed on the occasion struck for higher wages at the most critical moment, when they knew that unless their demands were satisfied a failure was certain. Others attribute it to the *Rouges*, who prevailed on them to strike. The wind also damaged considerably the structure at the Marché des Innocens, where the ball was to be given last night. The following notice was posted up last evening in various parts of Paris:—

Prefecture of Police.
Ball at the Marché des Innocens.

The violence of the wind having, in the course of the day, torn off the large canvass covering which was extended over the centre of the ball-room, the ball cannot take place this evening.

The extreme violence of the wind does not allow the works required to repair this damage to be executed without the workmen being placed in danger of their lives.

In consequence, the ball is postponed to Tuesday next, and the cards of invitation already delivered will be received on that night.

THE PRESIDENT'S SOIREE AT ST. CLOUD.

The President of the Republic gave a grand *soirée* on Monday night at the Palace of St. Cloud. The cards of invitation fixed nine o'clock for the commencement of the reception, and before half-past nine at least 1000 persons had arrived. By ten o'clock at least 2000 were present, and guests continued to arrive till after midnight. Among the company were a great number of senators, members of the Council of State and judges, the members of the Diplomatic Corps, all the generals of the army of Paris, and a considerable number of colonels and other officers. At a little after ten o'clock the Prince, accompanied by some members of his family and some of his Ministers, went through the rooms bowing to his guests. On his retiring the dance commenced in the long gallery, and this was followed by a splendid supper.

A considerable portion of the company remained till past four o'clock in the morning. It is stated that over 3000 persons were present; and some idea may be formed of the crowded state of the rooms by the fact of the file of carriages reaching beyond the bridge of Sureune. The uniforms were very numerous, and amongst them was one which attracted general and marked attention. It was the full dress of a brigadier of the Nizam's cavalry. The *mundul*, or turban of cloth of gold; the *ulkhalak*, or dark blue tunic covered over with the richest gold embroidery; the *mazeez*, or scarlet embroidered vest; and the *kummabund*, the scarlet and gold embroidered scarf worn round the waist, all looked most gorgeous. The dark *besand* complexion, the bare throat, and jet black moustache of the wearer led every one at first to believe that he was actually a native of some eastern land. The decoration of the Spanish Order of St. Ferdinand reposing modestly on the embroidered breast, showed, however, that he had seen service in other countries than in the East. The officer in question was Brigadier Beatson, an Englishman, who had long served in India. He had distinguished himself in the East on several occasions, par-

tionlarly in 1844, when he led the Bundelound legion, which, though only a local corps, and raised for particular service within certain limits, volunteered to proceed to Scinde and serve there under Sir Charles Napier. Brigadier Beatson served for two years in Spain in the British Legion under Sir de Lacy Evans, his ardour for the field service of his profession having induced him to apply for leave of absence to that extent. After his two years' service in Spain, where he had been severely wounded, he returned to India, where he continued to serve with the same distinction until very recently. Nothing could surpass the attentions which he, and indeed the other foreigners who were present at the ball, received from the French officers of every rank.

THE GRAND BALL IN THE MARCHE DES INNOCENS.

(From the Times Correspondent.)

The improvements which modern taste and modern convenience have effected in Paris are rapidly effacing the memory of spots long hallowed by tradition, or execrated as the theatre of public crime or deeds of private vengeance. That of Tuesday night's revelry was once traversed by the belated passenger with trembling step and hushed breath, for he was amidst the terrors of the valley of the shadow of death, and the boldest ruffian that ever swaggered along the narrow and gloomy streets of old Paris covered his face with his cloak and muttered a hasty prayer as he approached it. That spot was at one time a vast charnel house—the last resting-place of the outcasts of the world. It was the favourite scene of the ghost stories of the romance of the 14th, 15th, and 16th centuries. The ground now occupied by the Marché des Innocens was for centuries the cemetery attached to the church of the same name. The sacred edifice itself owed its foundation, as we are informed by the Chronicler Vigeols, to a crime, attributed, but in all probability falsely, to a foul murder committed by a Jew. We are not told of the punishment inflicted on the assassin, but it is recorded that the victim was doubly avenged. The blood worked miracles, and the piety or the superstition of the public raised the edifice to perpetuate the memory of the crime, which was assimilated to that of Herod. This occurred towards the close of the 12th century.

On two important occasions the church was placed under interdict. One evening in the latter days of Charles VII. a man and a woman chanced to perform their evening devotion before the same altar. Owing to some unexplained act of violence on the part of the man, the woman stabbed him. The spot on which blood is shed becomes scoursed, and until the moral stain be removed by penance, as the material one is by purification, no religious rite can be performed there. The Prelate who then filled the Episcopal Chair of Paris was Jacques du Chastelier, known for the rigour of his discipline. For twenty-two days all religious rite was suspended; no prayer was heard within its precincts; the bell ceased to toll the morning office or the vesper hymn. The temple was dark and silent as the vaults beneath it; the gates were closed to the living and the dead: the former were forced to pray elsewhere, and the dead found an asylum in unconsecrated ground. A course of severe penance and a copious offering at length restored the parish to the favour of the Bishop. Three years after, Denis Demoulin, the successor of the terrible du Chastelier, again shut up the church and the cemetery, where some new and nameless profanation had been perpetrated: penance still more rigorous, and a largess still more munificent, once more opened both to the faithful.

The spot where the orchestra of last night was placed was the site of an asylum for fair penitents, whose frailties—for the fifteenth century was fruitful in passion and in crime—were washed away in tears; where those whose remorse came early, or who could sin no more, passed the remnant of their existence. A communication existed between the cells and the church by means of closely barred apertures, through which their course and scant meal was passed. The spot is still pointed out where the beauteous Réné de Vendomais, wife of the Seigneur de Soudai, expiated her double crime—love for the gallant archer of King Charles the Eight's body guard, and the murder of her lord.

At the close of the 12th century the gallery or passage known as the Charnier, the very scene of last night's festivity, was constructed. Lofty and sombre, covered with funeral monuments, paved, as it were, with tombs, it even then presented a curious contrast with surrounding objects. Side by side with epitaphs wrought in marble, death's heads, and crosses formed of human bones, might be seen head-dresses of the latest fashion, toys, musical instruments, and weapons of warfare. The present Rue de la Ferronerie (then called Charronerie) ran parallel to the charnel-house, and on it was depicted in gaudy colours the *Danse Macabre* (the invention of a troubadour named Macabrus), intended as a satire on the amusements and follies of the living. In front of this strange *melange* of the sacred and profane stood the pulpit of the street-preacher *Frère* Richard, the indomitable scourger of the vices of the day, and whose invectives, bitter as they were, never failed to attract a full audience. It was in the Rue Ferronerie, also, that Ravaillac stabbed Henry IV.; and at a short distance, in the Rue de la Tonnelerie, Molière was born.

The frequency of crime, the supernatural terrors with which superstition invested the spot, and the pestilential vapours from the vaults, rendered the whole place an intolerable nuisance. The latter in particular had long made fearful ravages amongst the population of that quarter of Paris. But it was not until 1786 that the remains which had been accumulating for six centuries were removed to the catacombs, and the old church itself demolished. The fountain which stood at one end—the joint work of Lescot, Abbot of Clugny, and Goujon, the latter one of the victims of St. Bartholomew—was also carefully removed; the cemetery, long so famous and so terrible, became the present market—Marché des Innocens—and the same fountain now adorns its centre. The sheds that still exist, and that have replaced the immense *paraphuies* which in other times protected the *dames de la halle* from the inclemency of the weather, were constructed by order of the Emperor Napoleon.

It was on that same ground, so long associated with pestilence and crime, that the festivities of last night were held. For nearly a fortnight previous more than 600 men were working day and night at the construction and decorations of the ball-rooms. The space extended nearly the entire length of the market—from the Rue Lingerie to the Rue St. Denis on the west and the east, and the Rue Aux Fers and La Ferronnerie to the north and south. The structure itself was 50 feet in height, about 400 feet in length, and 180 in breadth. On the ground, which is usually occupied by the venders of vegetables, a solid flooring, but not without a certain degree of elasticity was laid; it was covered over with a carpeting of painted canvas.

The hour for throwing open the doors to the public had been fixed at nine o'clock, but for several hours previous the streets and passages leading to the great centre of attraction were entirely encumbered by the population. The evening was dark and lowering, after a day of much heat; and disagreeable predictions were heard of rain, which, unfortunately, were to a great extent realised at a later hour. The three thoroughfares directly leading from the Boulevards to the Marché des Innocens, from north to south, are the streets Montmartre, Poissonière, with its continuation, le Petit Carreau and Montorgueil, St. Denis, and St. Martin; but, as they approach the market, they are broken up, as it were, by smaller passages, exceedingly narrow, and by no means of the cleanest. The Rue St. Denis extends away to the river through the Place du Chatelet, and the Rue St. Martin continues, under the denomination of Rue des Arcis, to the Pont Notre Dame. These thoroughfares, which are of considerable length, were, from six o'clock, filled with vehicles of every possible description; and, rumbling slowly along, and to the annoyance of the lighter conveyances, as to the foot passengers, might be seen immense waggons, such as those used in Paris for the removal of furniture from one house to another, filled with peasants and their wives from the surrounding villages, dressed in their quaint holiday attire, and protected from the weather, which, however, had not as yet gone beyond the threatening condition, with branches of trees ornamented with flowers, so that they resembled moving gardens or harbours. The great difficulty, and in some cases danger, consisted in making way through the narrow streets—the Cordonnerie, the two Friperies, the Poterie, Aubrey le Boucher, &c., which lead from those wider places directly to the market. But this was not the only side on which a pacific assault was made on the Innocens. From the opposite bank, the Isle of Paris, and far away to the Rue de la Harpe, St. Jacques, from the streets which lie contiguous to the Pantheon, the Luxembourg, and Saint Sulpice, people were thronging. The result was that the immediate approaches to the market were found occupied long before nine o'clock. Detachments of the National Guards, the Gendarmerie Mobile, and the Garde Republicaine were on the spot, and did their best to keep the places as clear as they could. Independently of these guards, a cordon of Gendarmerie Mobile surrounded the building, and detachments of Sapeurs-Pompiers were on the spot with their engines, ready to act in case of accidents from fire.

It was about 20 minutes past 9 when the doors were thrown open, and in an inconceivably short space of time the saloons were nearly full. The spectacle that met the eye on entering the hall certain repaid the trouble and the fatigue in getting there. It would be difficult to give a just idea of the fine effect of the *ensemble* The immense hall was divided by the fountain into two compartments—one on the side of the Rue St. Denis, the other on that of the Rue de Poterie. Along the whole extent ran an immense gallery, or rather a series of galleries, and capable of containing 200 persons each; the seats were raised one above the other. These vast tribunes were lined with cloth, and had a flowing drapery above and at both sides, of crimson velvet, thickly studded with stars in gold. These tribunes were erected in a series of porticos, supported by white statues, and adorned in the luxuriant style of the 16th century. The ascent to each separate gallery was by a lofty staircase, concealed in front by drapery held up by figures in white plaster, and adorned with flowers. The ascent was on one side, and the descent on the other. Two galleries, also richly decorated, were erected at both extremities, of equal height from the ground as the lateral tribunes, and were occupied by two orchestras, consisting of 200 performers. At each of the four angles of the saloon double staircases had been erected, each conducting to a refreshment room. The four entrances to the ball room corresponded to the four cardinal points. The principal one on the west side consisted of a portico representing the city of Paris—a female figure seated in her barge, and holding her cornucopia, from which fell fruit, vegetables, birds, &c.; the second entrance was in the direction of the Rue Ferronnerie; and colossal caryatides supported each of the entrances.

Benches covered with velvet, raised one above the other, ran round the hall: and in the space which separated the two large compartments, divans were spread out that invited to and afforded repose. The gem of the whole was, beyond all question, the fountain—one of the *chefs-d'œuvre* of the sculptor Goujon. It rose up towards the roof from the centre of the hall. The dome-like summit was surrounded with an eagle gilt; and in the centre of the four pillars which support it, gushed up the water, which again fell from the four Gothic outlets, and, passing through many lights, broke in separate cascades into the basin below, whose brim was covered all over with moss and flowers. From the centre basin it was again thrown up, and again fell in cascades, still amongst alternate light and flowers, into successive basins, until the united waterfalls met in one large reservoir beneath, and seemed to be lost in the living parterre which formed its base. From the mouths of four recumbent lions at the angles of the pediment on which the pillars reposed, sparkling streams also gushed. The roof of the dome seemed of the colour of silver: and the effect was heightened by the numberless lights which blazed between. The very sight of that noble fountain, with its cascades and shrubs, and odorous flowers, was a relief to the eye and on the heated atmosphere it shed light and freshness and music. The intermediate space between the fountain and the benches was divided into parterres planted with flowers and shrubs.

For the patronesses of the ball benches covered with velvet were raised in the four angles of the saloon, and above each a canopy of the same stuff raised with silk ropes, adorned with tassels and gold fringe. The *dames patronesses* were recognised by a bouquet of flowers of a certain colour, and different from the others, and the *commissaires* or masters of ceremonies were at the button-hole a blue riband with silver fringe, and fisted on with a small gilt eagle. The gallery that was intended for the President of the Republic and his suite was placed on the same height as the others from the ground, and in the centre of the hall, in front of the fountain. It was richly decorated, and the draperies also held up by eagles. There were also separate galleries similarly, but less richly decorated, for the civil and military authorities. (In addition to the decorations already mentioned, the walls exhibited a series of ornamental sketches or sculpture, in harmony with the fountain.

The guests were first received into a large hall at each of the entrances, where extensive *vestiaires* were provided for depositing cloaks, umbrellas, &c. This place also was decorated with flowers and shrubs, and though sufficiently lighted, yet appeared dim when contrasted with the blaze of light inside.

The effect, however, of all this splendid display was soon lost to the spectator under the influence of the heat, owing to the denseness of the crowd that filled the place a little after ten o'clock. Even at that hour the heat became intolerable. Parties of National Guards moved at intervals here and there through the multitude, to keep the passage open, which soon closed up again. The company was, as might have been expected from the nature of the entertainment and the parties to whom it was given, of a very mixed description.

The great mass of the guests were either the people of the Halls or their friends, and though I have heard of no instances of any violation of decorum, they felt and appeared quite at home, or as if they were at one of their usual suburban festivities. The dancing was begun early, and its form, at all events, continued, notwithstanding the heat. Some idea of the crowd may be formed from the fact that up to an early hour in the morning more than 25,000 tickets had been issued, and it is estimated that not less than from 22,000 to 23,000 were actually present. The heat was so intense at one time that an opening had to be made in the canvass that covered the fountain in order to admit the air. About eleven o'clock the threatened storm burst, and the rain poured down in torrents. It penetrated through several parts of the roof, and streamed copiously through the six-holes. Umbrellas were seen up in various directions, and the crush became greater than before, as every one was naturally desirous of avoiding the torrent. It cleared up about half-past eleven o'clock.

The President of the Republic had been anxiously expected, and it was believed that he would make his appearance between 11 and 12 o'clock. He did not appear, however, during the night. The reason of his absence is variously explained. It is said that an ovation was intended for him by the ladies of the Halle, and that it was considered better not to give occasion for the enthusiasm of those ladies, who are wont to express it in a very marked manner. Others allege fatigue, having been up till a late hour on the previous night with his guests at St. Cloud. At the Bourse a discovered plot is the cause assigned. What is positive is, that he did not appear, and to the general disappointment. Several of the Ministers were present; some of their ladies opened the ball with the principal persons, the *forts* of the Halle, and the Ministers themselves with the wives of the *forts*. It was also intended that 14 of the youngest and best-looking girls should sing verses composed and set to music for the occasion, welcoming the President; and at the same time to present him with bouquets.

About one o'clock a considerable portion of the company retired; the rain then completely passed off, and dancing was renewed with equal vigour and less discomfort than before. Day had already dawned when the last portion of the immense crowd separated, and left the ball-room to silence, only interrupted by the murmurs of the ever gushing fountain.

On this, as on similar occasions, the great fault was the issuing of so many tickets. For hours the atmosphere was intolerable, and every one felt uncomfortable. So far as mere decorations went, they were beyond praise. The disappointment, though it ought not to be one, was in the extent of the vast and motley assemblage.

(FROM OUR OWN CORRESPONDENT.)

PARIS, August 17.

The popular *fêtes* just celebrated in Paris leave a certain impression—at least so far as such amusements can leave any impression on the memory of a people so naturally forgetful. The finest *fêtes* of the Monarchy, which always made these amusements a point of honour, have been equalled, if not surpassed, by the brilliancy and the variety of entertainments which the Republic has richly displayed upon the occasion of the birthday (name-day) of its President.

Never, perhaps, had so many elements of surprise and curiosity been lavished in all directions to excite the public taste—somewhat dulled by familiarity with previous solemnities, arranged according to one immutable programme. Nor was it astonishing that it should be so; for the aim was to revive, even in the minutest details, the memory of the Emperor Napoleon. So that these *fêtes* had in reality something of the character of an apotheosis; and we know with what pomp and splendour these solemnisations are usually accompanied. The 15th of August was the day fixed by the rites of the Empire for the celebration of the anniversary *fête* of the Emperor. The President of the Republic has sought carefully to preserve this tradition, and has chosen this date for himself, notwithstanding the monarchical appearance of the institution; for the French people must have diversions under all Governments, and the motive from which they are given is precisely what it cares least about.

A sum of £250,000 sterling had been put at the disposal of the directors of the *fêtes*, which may certainly appear enormous in a time when economy in public expenses is largely considered. But it is a mere trifle, compared with the exorbitant sums appropriated to such solemnities under the Empire. If we refer only to the coronation (*sacre*) of Napoleon, we find that the *fêtes* which took place on that occasion, cost no less than ten millions sterling. But it is well known to what a degree the Emperor went in ostentation and prodigality. However, notwithstanding the relative mediocrity of the expense of these last *fêtes*, they succeeded in leaving nothing to be desired. One step onward in these matters which is not to be disdained, is the large share attributed to the arts in these popular amusements. This excellent innovation gave to these last *fêtes* a less futile character; for everything is useful which contributes to form the taste of a people. I turn, however, to the details of these *fêtes*, which attracted so large a concourse of strangers to Paris, and excited to the highest point the proverbial silliness of the Parisians.

1.—MARRIAGE OF FOURTEEN YOUNG COUPLES.

Fourteen pairs had been chosen out of the twelve *arrondissements* of Paris, and the two comprising the suburbs, to be united in the bonds of matrimony. A sum of £120 was given to each of these couples, besides £12 for the wedding expenses. The marriage contracts were signed on the 12th at the Hôtel de Ville, in presence of the Prefect of the Seine; and the civil and religious ceremony took place in the *arrondissements* and parishes of the parties, on Saturday, the 14th. Although this celebration was in the ordinary form, and in private, it nevertheless drew crowds after the wedding parties. The singular idea of these official marriages has raised in Paris for a moment quite a rage for the matrimonial knot. The total number of couples desirous to take their chance of the dowry amounted to no less than 12,797, classified thus:—Hitherto unmarried persons from twenty to thirty, 9792; and from above thirty, 2280; widows and widowers, for the first time, 503; for the second time, 314; for the third time, 6; and for the fourth time, 4.

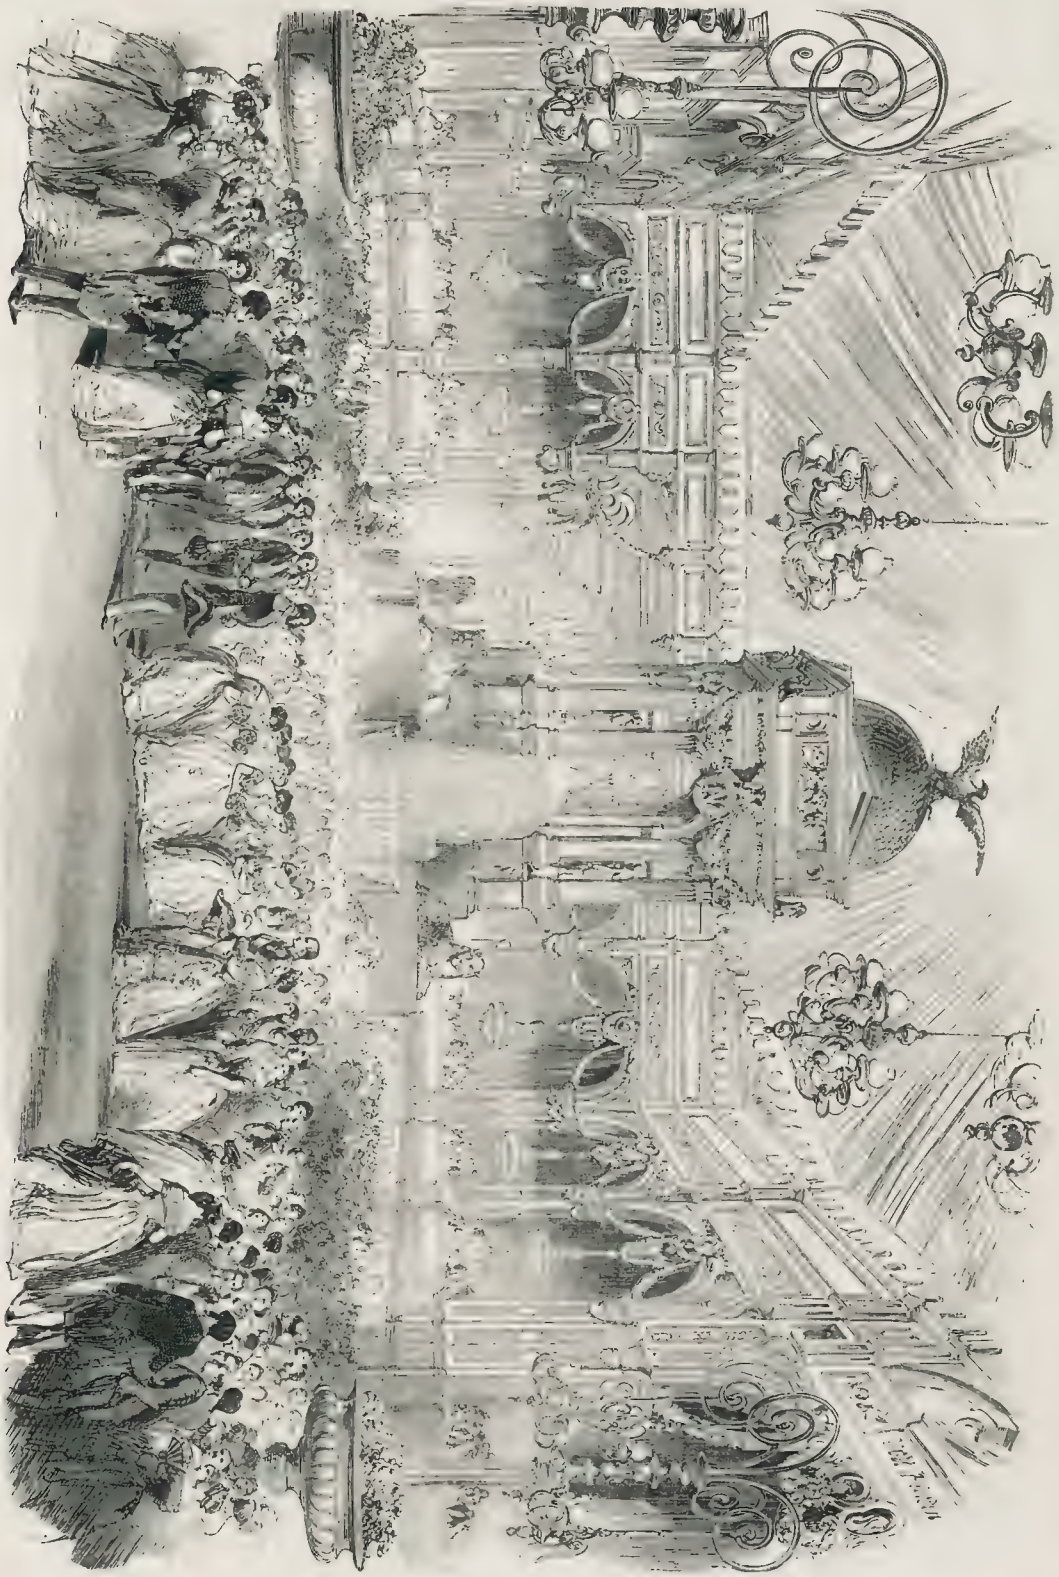
2.—BLESSING OF THE STANDARDS OF THE NATIONAL GUARDS.

On the 15th, at nine o'clock in the morning, a thanksgiving mass was celebrated in the Church of the Madeleine, by the Archbishop of Paris. The President of the Republic was present, along with the principal dignitaries and official bodies of the Republic. He was placed in the middle of the choir, and Prince Jerome Bonaparte, his uncle, occupied a *fauteuil* at his right, a little behind. The Ministers, Marshals of France, and Admirals were ranged in the hemicycle behind the President. On the left of the altar, and outside the balustrade which separates the choir from the nave, the Senate were placed on a raised estrade. The diplomatic bodies occupied an estrade of the same height on the opposite side. The nave was occupied by the Council of State and the Legislature, by the general officers of the Army and Navy, the Judicial bodies, the municipal and departmental administrations, and by the principal public bodies. The lateral galleries were reserved for the ladies of the Ministers, of the diplomatic personages, and of the principal functionaries. Under the organ, at the door, two orchestras of raised rows of seats were occupied by the vocal and instrumental staff of the Opera and of the Conservatoire, which executed with rare perfection the beautiful mass of Dietz. After divine service the benediction of the standards took place. The aspect presented by the interior of the church was most brilliant. Nothing was seen but suits embroidered with gold and silver, and all the fashions recently decreed for the several branches of public administration. At the close of the mass the President distributed the standards to the different battalions of the National Guard, which were ranged in battle array in the course of the Champs Elysées. He then reviewed the National Guard, which, since its reorganisation, is remarkable for its excellent bearing and improved discipline.

3. NAVAL FETE.

The French know of no way of amusing themselves without burning powder, and the programmes of all their *fêtes* invariably include sham battles. On this occasion, besides the arduous battles exhibited in the theatres, raised in the Champs Elysées by actors quite unlearned in military tactics, the public were enabled to enjoy a naval combat, acted according to rule by real sailors, and with real cannon, in proportions suited to the narrow bed of the Seine. The frigate *La Ville de Paris*, built last year at Paris, and destined for the instruction of young naval aspirants, of course played an important part in this maritime exhibition. From early morning she had been decked out with flags, and presented the completest war array. Towards one o'clock, as a prelude to the new emotions awaiting the spectators, regattas began, in which a great number of the best boats usually plying on the Seine took part. Three courses were run: one with sails, one with oars, and another with light gigs. These races showed the very remarkable ability of the Parisian watermen in this branch of sport, which has made surprising progress in the last few years. The prizes were vigorously disputed, and the result of the races was most satisfactory for the bottmen of the Seine. At four o'clock, a little after the termination of the regattas, the President appeared in the tribune prepared for him on the Quay d'Orsay. This was the signal for the combatants to commence. The frigate *La Ville de Paris*, which was brought to bear upon two forts, represented by two batteries established on the parapet of the Quay de Billy and the Quay d'Orsay, was the point of attack for the united forces of the *Arcas* and *Calypso*, two steamers plying on the Seine, and rigged out for war, for this occasion, with swivels. The different episodes of a naval fight were represented. Thirty long-boats, brought from Havre, and manned by mercantile sailors and with wood-men from that port supported the different vessels engaged. The frigate and steamers were manned by officers and sailors belonging to the navy, and by a numerous detachment of marines. The frigate alone had 300 men. The engagement presented the different movements of a battle—the attack, boarding and capture of the enemy, a revolt aboard, &c. And, finally, the victory remained with the *Ville de Paris*. This sham fight, quite new to the Parisians, evidently excited great interest. The com-

COLOSSAL STATUE OF NAPOLEON, IN THE CHAMPS ELYSEES.



THE GRAND BALL IN THE MARCHE DES INNOCENS.

bat was prolonged till night, and then the vessels were brilliantly illuminated. The *ensemble* of these illuminations, the long garlands of high glittering over the tranquil waters of the river, had quite a magical effect During the naval combat 12,000 musket and 1200 cannon-shot were fired. We shall engrave this splendid scene next week.

4.—THE FIREWORKS.

At the extremity of the Bridge de la Concorde, and along the left bank of the Seine, rose an immense theatrical decoration, representing Mont St. Bernard covered with snow. The spectators, still excited by these last images of war, had here presented anew to them fresh scenes of carnage. Now it was an engagement between French troops and an Austrian army, which opposed their passage over the mountain. By the light of Roman candles, which the combatants discharged at each other for musketry, the military evolutions were seen. We shall only speak of the decorations, which were very fine in effect, and were from the talented pencil of M. Desplechin, decorative painter to the opera. The fort occupied by the Austrians was finely executed. The whole of this decoration had a beautiful and strikingly true effect. The fireworks, for which this fine painting served as motive, certainly exhibited the astonishing resources of pyrotechnic art. In falling, they imitated, with wonderful illusion, the flakes of snow, which is a quite new and very beautiful effect in fireworks. After several other displays, there appeared at the top of the mountains, as it were, surmounting the sphere of the world, a colossal figure of the Emperor Napoleon, dressed in the historical grey riding-coat, and crossing the mountain on horseback in the attitude given him by David the painter, in his picture commemorating this memorable event. After the fireworks, a balloon was let off, ornamented with a new sort of fireworks, and bearing up a shining N in the midst of coloured aureola. It was calculated that 1200 pounds of powder were consumed in the different fireworks. There have certainly been illustrious deeds of arms in the military history of France which have cost less.

5.—THE ILLUMINATIONS.

The Place de la Concorde, and the great avenue of the Champs Elysées, which had been decorated with extraordinary magnificence, presented quite the aspect of a river of fire. Elegant fountains, placed here and there around the Place and along the avenue, with candelabra of great dimensions between them, scattered floods of light, which continued onwards with the dazzling brightness of electric light. Banners formed of coloured glasses planted all about, enclosed the Place in a square of fire. At the four angles of the obelisk in the centre, gas devices hung aloft in the air, the eagles and the initial of Napoleon. The Arch of Triumph was also brilliantly illuminated. The Vendôme Column was illuminated with a spiral device which followed the line of the helix. Escutcheons, placed over the illuminated devices, recalled in shining characters the eight great victories of the Empire. The Tuileries, the Ministry of the Marine, the Madeleine, the Boulevards, and the principal public buildings, were also illuminated.

6.—BALL GIVEN TO THE DAMES DE LA HALLE BY THE PRESIDENT.

The market place of the Innocens was swept clear of fruit and vegetable stalls, and transformed into an immense ball-room. A strange destiny this place has had. Before being applied to its present use, it had served as a burial-ground; and it was not till the end of last century that it was converted into a public market. The wooden sheds which now shelter the dealers date only from the reign of Napoleon. The magnificent fountain in the centre is the work of Pierre Lescot, a noted architect of the 15th century; and the subjects which decorate it are by the famous Jean Goujon. It was transported there, at the formation of the market, from the angle of the two neighbouring streets, where it originally stood. From its antiquity, and especially from its bas-reliefs, it is considered as one of the most precious antiquities of Paris. It formed the main central point of the ball room; the general decoration of which harmonised, by its Renaissance style, with the ornaments and bas reliefs of the fountain. An illumination with gas, skilfully combined with effects of eccentric light, lent a magical appearance to this admirable monument. At the foot of the principal basin spread a triple row of benches, and the space between them was filled by four delightful flower-beds. A gilt eagle, with outspread wings, crowned the fountain; whilst four smaller eagles, at the four corners, held four garlands of flowers, which united to four sheaf-shaped candelabra. The benches just mentioned were covered with rich crimson velvet, girt with gold fringe and tassels. The President's *loge* was placed in the centre in front of the fountain. The authorities had likewise reserved stalls. An immense antique *velum*, stretched over the whole length of the hall, sheltered this elegant edifice, which measured no less than 375 feet in length by 180 in breadth, with a height of 45 feet. It held 20,000 persons, besides the space reserved for the dancers. A profusion of carpets, mirrors, flowers, and lights completed the illusive effect, and reminded one of the most elegant saloons. A crowd of the invited had early burst into the vast inclosure. The *dames de la halle* especially were noticeable decked in ribbons and in their gayest gala costume. The radiant physiognomy of these joyous goodwomen contrasted prettily forcibly with the somewhat stiff bearing of the visitors from the upper ranks, who came to have the pleasure of mingling a little in life "below stairs." But in fact the *dames de la halle*, though this *fête* was specially given to them, had received but a small number of invitations.

Among the ladies of distinction who honoured the *fête* with their presence, the Princess Mathilde, cousin-german of the President, was especially remarked. The ball was exceedingly animated, and the dances maintained within the most rigorous bounds of decorum were prolonged till daybreak. We give the bill of fare:—40,000 ices and sherbets; 40,000 glasses of sirups; and 66,000 different cakes. The service was conducted with great order and regularity by 150 stewards.

A pleasant innovation was introduced into the *fêtes* of the 15th August. During the day, the military bands executed symphonies at the Place de la Bastille, the Château d'Eau, the Place Vendôme, the Madeleine, and the Carré Marigny. Finally, that all the arts might have a share in this magnificent *fête*, an equestrian statue of the Emperor, of colossal size, was exhibited at the Rond-Point of the Champs Elysées, upon a pedestal which leaned upon the fountain there. The statue might have been better; it was by M. de Nieuwerkerke, at present Director of the Museums. The pedestal, however, was an excellent work, by M. Mangnin, the architect. It was adorned on two fronts, anterior and posterior, with crowned eagles, well designed; and on the sides are two figures of Peace and War. On the socle are inscribed the victories of Napoleon.

It will be seen that the *fêtes* of the the 15th August have thus been only a glorification of the Emperor. It was he who was the hero of the day, and it was not without motive that the printed programmes of the *fête* contained in large letters these words "*Saint Napoleon.*" Such a canonisation will, doubtless, seem amusing. The apologists of the great man, comparing him often to Charlemagne, who passes for a saint, probably wish to maintain the parallel to the end. Unfortunately, the letters of canonisation of the ancient Emperor of the East have not yet been discovered; and his saintship is scarcely recognised, except by schoolboys, for whom his saint's day in the calendar brings a holiday. We have but little more faith in the saintship of Napoleon: still, it is not impossible that it may be acknowledged on the same account; and that not only by schoolboys, but by the people also, so long as the 15th of August brings about such popular *fêtes*.

LITERARY MISCELLANIES.—No. I.

NEWSPAPER CORRESPONDENTS.

FEW would believe, but those who have had actual experience, the immense number of letters, upon all subjects, that are daily poured into the Editor's box of a London daily or weekly journal. No question is too absurd for Newspaper Correspondents to ask, and no trouble they can give seems unreasonable in their eyes. They expect an editor to be skilful in the law, and to expound the most complicated questions of legal difficulty; to be learned in medicine and divinity; to know all languages, ancient and modern, and all dialects, from the Cherokee to the Kamschatkadale; to know the most intimate secrets of all trades and professions; to be as expert in mathematics as Euclid, in mechanics as Archimedes, in astrology as Nostradamus, in astronomy as Laplace or Herschel, in chemistry as Faraday; and to discover a meaning in the pages of a German metaphysician. They expect him to have a memory capacious enough to remember every event, great or small, that is recorded in history, or that has happened since the invention of printing; to know how many ounces of glass there are in every street in the metropolis; how many mandarins with tails have appeared in China since Confucius; when every great criminal was hung, what he said in his last dying speech and confession, and who bought as relics the pieces of the rope that strangled him; when every prize-fight came off, and who was the conqueror; the precise age to a day of every actress that either is or ever was upon the stage—what place a popular actor performed in which he first came out, and what place he has performed in every night since, and the amount of his salary; the precise words a minister may have said twenty years ago in the passing of a private bill; the number of bricks in the Tower of Babel; the specific gravity of the dirt and putridity in the river Thames at high water, and how many fish, from white-bait to eels are annually caught between Greenwich and Twickenham. Sometimes the correspondence is amusing from the excess of its stupidity, insanity, simplicity, or impudence. Sometimes a jumble of all these qualities increases the piquancy of a letter. Some letters are literary curiosities, worthy of a chapter in the entertaining miscellany of the elder Disraeli.

Dipping our hands into a mass of this kind, we have selected the following as by no means deficient either in instruction or amusement, and as specimens to the uninitiated of the matters that both the learned and the unlearned think it necessary to write about. The first is from a visionary gentleman who dates from Little Queen-street, Lincoln's-inn-fields; and whose epistle reminds us not a little of the similar visions of the celebrated Lord Herbert of Cherbury, which he saw, as he informs us, in the very next street, Great Queen-street, near about the spot where the Freemasons' Tavern now stands. We have omitted the name of our dreamer of dreams; but in every other respect print his letter *verbatim et literatim*.

AN APPARITION.

"Little Queen street, L. I. F.

"SIR, It is now seven years since an occurrance took place the plain facts of which I will endeavour to state as simply and naked as possible. At this distance of time I can calmly and dispassionately comprehend the whole circumstance, unvarnished, and uncontroverible facts.

"When sojourning in Reading, about the beginning of August, 18—, I was sitting one evening with my landlord (a man about thirty-five years of age), and his wife, and brother, when an extraordinary dread came upon me, and overwhelmed my mind. I exclaimed to my landlord, 'Will you sit up with me this night, and take paper and pen, and I will dictate all that passes,' in a most supplicating tone of voice: in short, he consented. I had a most overpowering presentiment that something was coming upon me.

"In a short time, as well as I can remember, I went up-stairs to bed, which was in the front room on the first floor, my landlord and his brother coming with me. As I entered the room, I exclaimed, 'What have I to fear?' I then undressed, and got into bed, which was made on the floor. After being in bed a short time, I began sucking or drawing in something at my mouth; then by supernatural power I sang a hymn in a most extraordinary voice. I was talking in some strange language for some time; or, more truly, a supernatural power spoke through me. I exclaimed in a powerful tone, 'The voice of God!' 'I am the inhabitants of the earth!' At one time I recollect I said, as though speaking to the Almighty, 'Teach me to be humble,' in a strange tone of voice. At one time I observed my landlord writing at the table, with his brother by his side; I heard him exclaim, 'It's astonishing!' and a voice was heard which said, 'Tichiper! Tichiper!' Whether there is such a word in any language I know not. The word was said close to my ears in a loud whisper, I heard my landlord repeat it; a beautiful singing commenced, and I heard encouraging and strengthening my spirit. I exclaimed to my landlord, 'I shall sojourn with you for a time, and then I shall depart.' Then many most beautiful angelic voices surrounded and pressed upon me, and gradually and gently raised my soul up a great height away from my body, all one above the other, conveying something to me in most sweetly whispering voices, and seemed to be endeavouring to convey something to my spirits of great import. Beyond this I cannot go. But presently after I came to myself in my body, and looking up earnestly, and, as it were, asking permission, I exclaimed to my landlord, 'Ministering angel!' Then it was I think that I turned round on my right side with my face to the wall, and my landlord came and looked in my face, and I felt a most beautiful smile play upon and lighten my countenance. I then went off into a sort of sleep till the morning. When I arose I felt the spirit of grace and unspeakable love to be upon me, and I recollect saying in an extraordinary rich, deep, and impressive tone of voice, 'It is a beautiful morning.' For several days after this I seemed to be in possession of a new life and spirits, such a holy feeling, and so awakened to a sense and an enjoyment of divine things.

"But it gradually subsided and left me; and in a few days I left Reading and returned to my parents in London. My landlord never showed me what he wrote that night. I have never seen him but once since, and that was about three years since, and then he called upon me unexpectedly one day, but I had only time to exchange a few words with him. What he wrote down I know not.

"Having lately heard some strange accounts of supernatural noises being heard at Clewes and elsewhere, I have hastily penned the above, and leave the world to judge.

"I am, your humble servant, "E. L."

Our next is from a man [with less method in his madness. Notwithstanding its deficiencies in grammar and orthography, there is a kind of insane poetry about the complaints of the writer, and his words, incoherent as they are, speak of intense suffering, and excite much pity.

"The cursed wheel and the cursed knife" that the poor man fancied were working in his brain make the blood curdle.

MAYNOOTH COLLEGE.

"BIRMINGHAM.

"MR. EDITOR—I would Be very happy if you would Be so kind to put a stop to that cursesid place Maynooth College I was put into Maynooth College men and Women exposesid my nackedness they got six sovergns from the odd fallows for my funeral in place of 10 so much up Deadmen and woman there is no man in this world knows what I am suffering night and Day every minute they cover mey over with every sort of vermin night and day they keep out a crying making youse of they most Abominible Language thare is spacters murdering may all Day and night thare is alway some in my head night and day if you have got any feeling for a fallow creature you would do what is in you Put a stop to that cursesid wheel that cursesid knife they are sil in my head they maid youse of the crosses to murder may and I have to wander from one town to another withot shoes and covered over vermin.

The next two letters we pass by, one being from a simpleton wanting to know the address of some celebrated fortune-teller, residing near the Elephant and Castle; and the other from a poetical youth, who modestly asserts himself to be like Burns, "a bard of nature's own creation." The young men who have similar notions would people a thousand Bedlams. The next, however, seems to merit publication, although from the post mark, it seems to have been written a considerable time ago. It lets us into secrets which are not a little curious, and depicts grievances which will, doubtless, be new to most people. The writer is a "post-boy." His communication is a gem; and although he does not inform us whether he is a "country boy," a "stone boy," a "short-ride boy," or a "mail-cart boy," it is evident that he knows his business. If his still extant (and Dickens informs us that post-boys never die), that he will not be so cruel to the lovers and men of business throughout the country as to carry the threats contained in this letter into execution.

THE GRIEVANCES OF THE POST-BOYS.

"Please Sir will u inform the public the scanlus way the post-boy is treated in your paper. the post-boy is a set of honest boys to what any body wood think of them, as they ar rugid (ragged?) but honest, they have not wages a nuf to keep them and buy clothes too; but if there master do not rise there Wages they will be drove to brake open leter as the postman do, they have 12 time the number in there share as a postman on the roads. First they have to find out of there wages briches, gater, why your shoe or boots, shirt, handkerchief, stable broom, dandy Curry coome, fork to do their work Wich there master ot (ought?) to pay for loging washing and vituals all out of there Wages and if a boy mit with a scoldinte they have to make a gathering for him out of there wages or els he Wood Starve if he had not one to keep him. Wich there master ot to give, they have to go thrue all Whether and find there bone coat or go With out one, and if they ar behind they ar find 6 or 1d which used to be share every 6 month but now the forman keep it, and which they ar have a heavy load of letters more than his horse can carry he hire s cart and they stop it out of his wages, and if his horse nock up on the road he is friten to hire one as he will get the sack for it Wich dels the letters a hour more at times wich it wood not do if he hire one. The londen boys has to give the holder money for help them, wich the celers at to do with out, and the Country boys has to give to the man that bring his corn for his horse money or beer and diner or some vitual at the times of meals, that he cannot be sent out of what little they get, and if a boy complain of his horse been bad or not fit for the ride, he may be, on the foreman says that if he dont like to ride him there is a nother boy will, and that keep him with a bad horse to ride on for a boy have a heavy load of letters to go, and every thing out of or lose is place, and when winter come he is oblige to go down the country to what place he may be on thrue the frost and snow and slipery roads, with out a coat if he has no one, and his breches or gaters torn or ragit, and his feet out of his shoe or boots, and no Crismas dinner or Crismas box to incourage him in honesty only what he get on the roads from the postman, and ther is not a Winter that some but a boy meets with sadden, and ther is nothing for him but what they gather for him; a boy had his leg brake, a nother had his thi broke, both war in the hospital together, and nothing was given them but what ther fellow servant give to them in hope the public will not be alarmed at hearing of the post boys striking for their just wages, wich use to be country boys 15s. 6d. per week; and the stone boys as ride about London, 10s. 6d.; and the short ride boys 17s. per week, and the mail-cart boy £1 1s.; but now the boy have country boys 9s, and every thing out of it keep jacket, waistcoat, hat; stone boys, 7s. The same street ride 5 and 3 the same, and they are determined to strike soon if ther wages is not raised to what it use to be on the Queen birth day they have to find white wood breches, boots, spurs, whip, bow. No more at present. Soon i hope by puting it in the paper that it Will be the mens of geting the Wages hired, or it Will stop the post one day.

"Sign by a post boy."

The next is a sensible document, and expresses in proper language a grievance, in which the writer will find many to sympathise with him.

A HARD CASE.

"SIR,—Imploring you to insert in, and all other editors who may see it to copy from, your paper the following letter (as it may make many a rich one, *during lifetime*, reflect what he ought to do for a poor relation, and render him less satisfied in his conscience by some intended *post mortem* benevolence), the writer will begin with saying that he has an uncle of great wealth, and that far within his income, who expresses an intention of sharing among us, his nephews and nieces, the whole of his property at his decease; and we have no doubt whatever (nay, indeed, he said to know) that he will be made comfortably independent at that generation; and his conduct, whenever we meet him, is outwardly kind and kinsmanlike; yet, with an unaccountable indifference, he sees us, who were bred to better things, labouring with prayers for the means of existence, without *offering* a sixpence, or even a shilling to us on the road; and should the writer meet him to-day in his carriage, the singular spectacle would be exhibited of an uncle greeting kindly a nephew who dares not ask him for a shilling to get a meal; not, possibly, that he feared a refusal (for, when pressed, the *post mortem* intention has occasionally assisted), but the rich relation who knows that his kinsman is in want without *volunteering* relief, is not a person to be urged without danger to future hopes: so sensible is the writer of this that he, his wife, and little ones have gone without food two days running rather than solicit; and he goes this day with a heart sore by vexation and disappointment to an empty house and to demands he cannot meet—yet, the female part of the family have been driven by distress to the verge of ruin. The uncle is aware of this; he has listened prayers for the addition of many years to his already venerable age. We who are poor and yet share among us so readily any little good thing that may happen, and take so much (though often useless) pity on each other, cannot understand why this sparing to the rich. He may see this in your paper, but it eases my heart to write, and what I have said is so just that offence cannot be taken; and this letter, if you are so kind as to insert it, may do good for many like situated with the writer, who is,

"Respectfully, your humble obedient servant,

"A QUIET SUFFERER."

With two more letters we conclude. We are sorry to be obliged to leave the queries of our very modest correspondents unanswered, especially the "Lady of Distinction," whom it pains us to neglect:—

"BRIGHTON, June 8, 1852.

"SIR,—I should feel greatly obliged could I, through the medium of your columns, obtain answers to the following queries:—

1. Date of birth and death of John Lydgate?
2. Date of birth and death of Sir John Cuske?
3. Date of death of Steele, the partner of Addison?
4. Date of death of Wordsworth?
5. Date of birth and death of Sharon Turner, the historian?
6. Date of death of James Montgomery, the poet?
7. Birth and death of Henry Hallam, the historian?
8. Is Mr. Tytler, the historian, still living? If not, date of birth and death?
9. Will you favour me with the names of two or three of the *most* eminent divines who have flourished in the paths of theological literature since the year 1700, with their dates?
10. Which do you consider to be the greatest novel-writer of the present day?
11. Date of birth and death of Sir William Blackstone?
12. Also of Washington Irving, Mr. *Thomas* Disraeli, and Sir John Herschel?

"Hoping I have not trespassed too far—I remain, Sir, your obedient servant,

"* * *

"P.S.—I have a copy of the above."

QUERIES BY A LADY OF DISTINCTION.

A lady of distinction begs to be answered the following questions:—

1. Whether the New Crystal Palace Company at Sydenham would not do wisely if they covered all the articles with glass, as it would prevent the dust from eating into them?
2. Whether they not use the same glass that came from the Crystal Palace in Hyde-park for the People's Palace at Sydenham?
3. In the ILLUSTRATED LONDON NEWS for Saturday, August 7, I read an account, &c., part of the coast of Sussex giving way. Would it not be well if precautions were taken for all parts of the coast in the British Isles?
4. Do you not think that if several lightning-conductors were put up in each town, &c., that less accidents would occur?
5. Why have you not said a word about Lady Harriet Anne Frances, daughter of the last Earl of Blessington, and wife of Count D'Orsay, whose obituary you gave in the ILLUSTRATED LONDON NEWS of August 14?
6. How many more Roman Catholics are there in England and Scotland than Protestants?
7. Is it not true that when the tide comes up the whole mass or body of the sea rises, and that when the tide goes out the mass or body of the sea sinks?
8. Are there many places in Europe where the verdure, corn, trees, &c., grow down to the brink of the sea, as at Clovelly, Ilfracombe, Lynton, and Teignmouth, in North Devon?

Wednesday morning, August 18, 1852.

THE GREAT EXHIBITION OF 1851.

REPORTS OF THE JURIES. PRINTED FOR THE ROYAL COMMISSION. 1852.

SECOND NOTICE.

THE more we examine this ponderous volume of jury reports, the more convinced are we that in the main it is a production which will redound little to the credit of the juries, and afford very little satisfaction to the general mass of exhibitors, whose interests were entrusted to their charge, and much less to the public at large. With scarcely an exception, we find these reports imbued with a spirit of partisanship which we have already, more than once, hinted our suspicion of, and of which some of the more glaring evidences were at the time exposed: a spirit manifested now in favour of an individual producer, at the expense of an equally meritorious rival; now in favour of a whole national industry, to the disparagement of a similar branch of industry in a neighbouring and friendly state; sometimes in obedience both to personal and national claims—and here of course, involving a double act of injustice. As a general rule, the kind and generous sentiments in which the Exhibition of 1851 was conceived and in part carried out, have been signally belied by the proceedings of these juries, which, by the pertinacious exertions of a little knot of interested parties, who found their way into them, and formed, we believe, in each case, a minority of the whole body, became converted into an organised machinary for puffing purposes; the honour of an award—honourable only when worthily obtained—being held as a secondary consideration to that of the material it might afford for a window ticket or heading to an advertisement. And, as for commercial purposes, a mere certificate of excellence is not sufficient, unless accompanied by some act or omission implying a negation of merit in all rival producers, we find not a few instances where the struggle has been not so much to obtain a prize for A, as to prevent the award of one to B and C; a struggle, or juggle, which has been too often successful, and which the juries in their reports have to endeavour to justify by a process of reasoning, which, whilst it justifies nothing, only leaves the flagrancy of the misdeed more palpable and prominent than it would otherwise have been. In some cases it is truly melancholy to read the laboured efforts of the Reporter to reconcile absurdities, to smooth the rugged path of intrigue, and make the worse appear the better cause. Here, praise grudgingly conceded, with many an "if" and "but;" there, the highest honours lavishly bestowed (honours often doubled by unsparing friends in other juries, for the intrigue had endless ramifications); in another case, the highest merit acknowledged to exist (for it could not be either overlooked or denied), but special reasons stated why, in accordance with the general instruction of the Council of Chairmen (instructions which nobody understood, and everybody construed to suit the occasion), the honours under other circumstances due, could not be awarded.

Fettered by views and motives of this kind, and with no common principles of action to guide the whole of the juries as a collective body, their reports, as may be supposed, are of great diversity of merit and interest. Some of them, particularly those relating to articles of raw produce, are very copious, and contain much highly interesting information; but in many cases the information is conveyed in a style more fitted for an encyclopædia than for a record of the details of a particular exposition. On the other hand, not a few of the reports are so brief and meagre as to be utterly valueless, and to be fairly pronounced ludicrous when compared with the copious *resumés* which have already been produced by the ablest organs of public opinion. And it happens, oddly enough, that amongst those classes treated in this shabby manner, those comprehending some of the most important branches of manufacture—as those of cotton, wool, silk, &c, the staples of a nation's wealth—are included. But more of this when we can treat of the departments in question.

On the present occasion we shall turn a little further on, and commence our critical remarks with the reports on Classes 21 and 22—those relating to cutlery and edge-tools, and to iron and hardware generally. Now, if there were any one branch of production in which the English national wealth and manufacturing skill are more pre-eminently and indisputably superior than in another, we should say it was precisely that comprehended in these two important classes. Anybody who could "tell a hawk from a handsaw," would, we presume, have no difficulty in telling an English knife—carver or pen—from the hacking and hewing instruments manufactured in any other part of the world. The report—of barely four pages acknowledges that England has long enjoyed a pre-eminence in these wares, a pre-eminence which "the jury can have no hesitation in pronouncing that *she still retains to a very remarkable degree* in the present Exhibition; though this general statement must *now* admit of modification, and it would be untrue and unfair to make it without adding that *she has in certain branches of the manufacture some formidable rivals.*" What these branches are, however, is not stated; though the production of table-knives &c., by some of the small states in the Zollverein (which, by the way, are mere clumsy imitations of British goods, very often with the marks of English manufactures forged upon them) is darkly hinted at. The articles in general knife cutlery from Saxony and Wurtemburg (it is particularly stated, "though they cannot be pronounced equal to the best English, are of very good quality, well finished (especially the Saxon portion), and mounted with much costly ornament." A set of files exhibited by Messrs. Stubbs, of Warrington, "*would have deserved* the highest assignable reward (i. e. the council medal), in respect some of dimensions, others of minute delicacy, all of strength and efficiency of material," "far surpassing any other objects of the same class;" but they only got a prize medal, "in common with a number of associates not unworthy of their company." And amongst these associates not unworthy of their company, are two or three for the identical articles of files from France; of which French files, the report states they are "of considerable merit as to workmanship, though found, after a careful trial, to be *not quite perfect as to quality of steel.*" In other words, they are files which would not stand filing. Our readers may, perhaps, recollect that in the course of the Exhibition a wager was made between these very French files and the English files, and that the former were beat hollow, being literally cut to pieces by the latter; yet the jury awarded the same prize to the one set of files as to the other; all the while acknowledging that the English files would have been entitled to the very highest assignable reward, instead of an award which, in the company in which it received, may be considered a disgrace—disgrace as deep as any file or rasp is the victim of.

The report on "Iron and General Hardware" is more lengthy than that upon cutlery, extending to eleven pages. This department, comprehending so many articles of utility susceptible more or less of taste in design and ornament, affords Mr. Dyce, who draws up the report, an opportunity to repeat all the old commonplaces about our barbarous want of artistic taste, and to draw a damaging comparison between us and our more civilised and elegant neighbours of France, Belgium, Germany, &c, but more especially the first-named. Now, we are not here to deny that, in many branches of ornamental manufacture, we were, fifty years ago, considerably behind the producers of France and some other countries, where an artistic feeling had survived from a brighter age amongst artificers, and where approved models remained as types of design. But further than this we are not disposed to concede even to the French; their want of taste on all occasions where they have attempted novelties of design being lamentably apparent. The jury themselves, whilst insisting upon the superior artistic skill of the French in ornamental bronzes, &c., admit that, "in point of purity of taste," this praise may require "qualification;" that "the questionable taste in particular, in which many French *pendules* are designed, is scarcely compensated by the obvious dexterity of the modelling and chasing." Yet, in spite of this important admission, which we have ferreted out from a very quiet corner of the report, what is the general tenor of the jury's observation in this interesting department? All wholesale condemnation of everything English in which artistic taste or skill is in the slightest degree involved. One passage will serve as a specimen of the whole:—

> On a general review of the contents of Class XXII., the jury observe, first, that although the contributions from the United Kingdom are twice as great as those from all other countries, and, with few exceptions, consist of examples in all branches of metallic manufactures, the character of the contributions seems to indicate that British hardware manufactures is at present chiefly pre-eminent for excellence of workmanship and material, contrivance, ingenuity, mechanical skill, and other qualities, which, *independently of taste* (the italics are in the original), give value to productions intended to supply the every-day wants and conveniences of life. There seems to be no doubt that in this class of manufactures, in which taste is either not a necessary element or applicable only to a *very limited extent* (these italics are not in the original), the palm of superiority must be accorded to the United Kingdom.

There is then a long disquisition in support of this position, filling up more than half of the report—not very intelligible, it is true—and which it is unnecessary to quote further, as it all turns upon the one point, and leads to the one foregone conclusion, verifying the old saying about "giving a dog a bad name," &c.

Now, to return to a point from which we diverged a few sentences past, let us fairly confront this vulgar prejudice about the superiority of everything foreign, and the clumsiness of everything English, to which old ladies who love cheap bargains, and crotchetty, unhappy bachelors who have finished their education abroad, before they had fairly commenced it at home, support with their sweet voices. We have admitted that fifty years ago the Frenchman was superior to the Englishman in respect of productions in ornamental hardware—such as bronzes, &c.—from having the advantage of the reminiscences of art and artistic models flourished in happier days; and from having approved models, also, which he might safely follow in his designs. But, as we have already stated, further than this we will not go; on the contrary, we are prepared to submit, and very confidently, too, that the intestine troubles which have kept possession of France since the period in question, and which have exterminated or expatriated the Royal and noble families who formerly gave encouragement to her produce in articles of *vertù*, have had a fatal effect upon her resources and appliances for art-production. The report of this very jury, indeed, contains a passage, which appears to us very significant, in support of our position. This passage pretends to show, that in England, in the various branches of manufacture under notice we commenced with the useful, and by degrees added the ornamental; whilst in France the course had been directly the reverse. There "it started with an artistic system of manufacture, patronised and supported by Government influence and resources; and *its progress has, for the most part, been downwards, from the supply of the artificial demands of luxury and refinement, to the necessary demands of utility and comfort.*" The falling off in many of those luxurious manufactures, upheld and maintained for a time by the encouragement of a class of society which no longer exists in France, is undeniable that of the Sèvres china confessedly so—whilst, as a general principle, every branch of ornamental production has necessarily had to conform to the requirements of perhaps a more numerous, but certainly a much less munificent class of customers. Accordingly, whilst the memory of her ancient cunning still remains to her, and will probably survive for many ages, not utterly extinguished, it will be but the faded dream of a splendour passed away, and which can never hope to enlist the sympathies of new genius of the highest class, nor to infuse new blood into its organisation. Accordingly, whilst in French ornamental works we find copious repetitions, or adaptations of forms and devices, which have long been accredited by the stamp of approval, we find scarcely an instance of entirely new device which is not open to the charge delicately insinuated by the writer of the Report of "impure," or "questionable." taste.

In England, on the other hand, the very same period which has seen the destruction of the ancient splendour of the French Court, and with it the decline of her arts to the fatal point of "mannerism"—in England, the very same period has been one of rapidly accumulating wealth, increased enterprise, and, concurrently with these two essential ingredients of all progress, an increase of knowledge in matters of art, and an ardent thirst for still deeper draughts at the Pierian spring—manifestations not confined to the exclusive circle of a Court (as was the case in France), but participated in by the great mass of the well-educated ranks of the community. It would be contrary to all the world's experience—all the analogies in nature and in political science—to suppose that such a demand should exist without calling into existence the means of supply. Indeed, pursuing the theory which we have already suggested, and which we consider a perfectly correct one, we hold that the very fact of a strong and general demand for works of art establishes the fact of the existence of the materials wherewith to supply it; and, consequently, that the growth of art naturally commences with the education of the public, and not with that of the artist.

And there can be no room for question, in the mind of any impartial observer that decorative art, more particularly in the departments comprehended under the general denomination of hardware, has made very marked and successful efforts amongst us within the last half century—efforts fostered and promoted by a most liberal outlay of capital, and directed by the very highest talent, not only indigenous, but of foreign origin, which capital could command. Within this period Flaxman's original genius, and that of Stothard gave a new direction to the industry of the country in the matter of artistic design; and, since their time, Chantry, Nollekens, and more recently, Bell and Foley, have followed, each adding his quota of inventive taste to the general stock. Contemporaneously with this we have had a new and large experience of the finest models of the ancients—Egyptian, Greek, Etruscan; and, more recently, those of Nineveh, many of which were unknown to the French in the best days of their art. And can it be supposed that all these appliances have been thrown away? On the contrary, establishments for the production of objects in the baser metals, not only of pure utility, but more or less of a decorative character, have been reared and carried on, with the aid of artistic talent, which were never equalled by anything of the kind in France in its brightest days of Court favour. The houses of Elkington, of Messenger, and of Potts, which hold the highest rank in our present day, have done things equal to the very best things produced in the factories of France, not only now in their days of faded reminiscences, but in their day of artistic reality. In bronze and iron casting—a branch of enterprise in which we were confessedly deficient at the commencement of the present century—we have made advances, which, both in regard to the magnitude and character of the works produced, entitle us to take rank with the oldest and most accomplished artificers in the world. The Coalbrookdale Company, by the number and importance of the works exhibited by them, have succeeded in forcing recognition of their deserts from this jury, in the form of a council medal; but there are other producers who individually have exhibited as fine or finer specimens than the company in question, who are refused the honour they so richly deserved; amongst others, Messrs. Baily, whose ornamental balustrade was, perhaps, the most admirable specimen of casting either in the British or Foreign side of the Exhibition. In the above observations we refer only to the merits of design and execution; but there can be no question that when the quality of the material, and the solidity of production are taken into account, the claims of the various specimens on the English side preponderated greatly over all competitors. Yet the jury in their awards give only a common medal to Potts and to Messenger, although they admit that "single exceptions" of their productions "may be placed side by side with many of the French specimens, with no disadvantage to the former;" and give only a common medal to Messrs. Baily, in common with various producers of brass and copper tubes, gas meters, kettles, pots, &c. They give at the same time council medals to André for a cast-iron fountain, "design an alligator and fish," a very second rate performance; council medal to Aubanel, of Paris, for a very disagreeable group of "an eagle and lamb," &c.; council medal to Barbédienne, of Paris, for bronzes (a firm already rewarded by a council medal in Class 26); council medal to Matifat, and council medal to the Vielle Montagne Company for their various castings in zinc, which included that very notable and ugly colossal statue of her Majesty, which occupied a large space in the west nave. It happens, by the way, that upon the value of the last-mentioned award, some doubt is thrown by the observations of Dr. Waagen, who, in his supplemental report in Class 30, says:—"I am of opinion that the council medal was quite as fully deserved by this establishment (that of Geiss and Co., of Berlin) as by that of the "Vielle Montagne."

For the rest this jury report the important fact:—

> "One branch of hardware industry; viz. the manufacture of Jew's harps, is represented solely by Austria; and judging, from the number of exhibitors, must form a trade of considerable extent." The exhibitors from Austria of this "branch of hardware industry" are five in number, and each has earned the proud distinction of "honourable mention." Query—Did the jury try the "harps"? and, if so, were they not trenching on the province of the Musical Jury Class 10A?]

With regard to locks (the decisions upon which have caused so much angry remark), the report very complacently states, that, "On the *comparative security afforded by the various locks which have come before the jury, they are not prepared to offer an opinion!*" And yet they have given awards, coupled with the addition, in certain cases, of "special approbation." What can this possibly mean? We confess that to us it looks very like a farce.

TO CORRESPONDENTS.

CONNINGHAM.—According to Blackstone's "Scale of Precedence," founded on Camden's "Ordine," the arrangement is as follows:—1. Doctor of Divinity; 2 Doctor of Medicine; 3. Barrister; 4 the County and Borough Magistrates (the latter when appointed by the Crown); 5. the Rector of the Parish

A SUBSCRIBER, Devizes.—The address of the Athenæum Institute for Authors and Artists is 39, Sackville-street, Piccadilly

SEINE.—Ham is a small town of France in the Department of Somme

A. Worthing.—The Northumberland Prize Life-boat is engraved in No. 531 of the ILLUSTRATED LONDON NEWS

A TWO YEARS' SUBSCRIBER, Pimlico.—A memoir of Mr. Eliot Warburton appeared in our Journal of April 17; of Mr. Lutrel, in Vol. XX. The late Mr. Rodwell was born in London

T C, Birmingham.—The length of the *Great Britain* steam ship is 336 feet

M H X C, Doncaster.—The Engraving of "Little Boating Prevented" appeared in No 529 of the ILLUSTRATED LONDON NEWS

H. No 121 of our Journal, containing a Portrait of C Waterton, Esq, is in print

A F, Brighton.—Any binder in your town will undertake to bind your volume in the covers to be had at our office, 198, Strand

PHILO-NAUTICUS.—See the account of the Light of all Nations in No 8 of our Journal

I H I.—A son, having no paternal coat of arms, is not entitled to use his mother's

W N R.—The price of the ILLUSTRATED LONDON NEWS for February 21, 1852, was 6d

VERT.—An application to any one of the officers of the Heralds' College will do. The Heralds have no fixed district assigned to them.

ZETA.—A passport is, we believe, still necessary.

X Z C.—The Hon. Mrs. will be the more correct address.

R H G.—The daughter of a Duke, when married to the eldest son of a Marquis, retains her title of Lady Mary, or Jane, as the case may be, with the addition of the name of her husband's courtesy designation. Thus, the wife of Earl Grosvenor, being the daughter of the Duke of Sutherland, is called Lady Constance Gertrude Grosvenor. The reason is, that the rank of a Duke's daughter is superior to that of a Marquis's eldest son.

R N.—There is no law against the marriage of first cousins, even if their fathers had married sisters

MONOGRAM.—The device sent will do very well

HASTINGS.—The coat-of-arms sent is that of the Stanhopes

X X.—Richard II. was the first English King who bore supporters; namely, two angels. He used for badge "a white hart, couchant, gorged with a gold cornet, and chained under a tree;" a device adopted from the designs of his mother, Joan, the Fair Maid of Kent. He had other badges; viz., "a pessod broad," the sun in splendour, and the eradicated stump of a tree couped or. Henry IV.'s supporters were—*Dexter*, A swan gorged and lined; *Sinister*, An antelope also gorged and lined. His badge was the Red Rose of Lancaster, ensigned with the crown

A SUBSCRIBER.—The House of Lords sitting as a court of the highest appeal, in the case of the late Sir George Warrender, divorced in Scotland from an English marriage to an English lady, maintained the validity of the Scotch divorce

A CONSTANT SUBSCRIBER is desirous of ascertaining particulars of the son of the celebrated Admiral Sir George Rodney, and of discovering if he left descendants. Can any of our readers assist the inquiry?

A SUBSCRIBER. A bankrupt or an insolvent is not debarred from holding a Government situation

H S.—Apply at the Prerogative Office, Doctors' Commons, St. Paul's, where the fees will be mentioned, and the will copied without the intervention of an attorney

FLORENCE.—The Count de Chambord is the Duc de Bordeaux, son of the late Duc de Berri, and present head of the Royal House of Bourbon, as such being the present King of France. Mr. Kingscote, of Kingscote, is the new Liberal member for West Gloucestershire.

P Q.—Commissions are not purchasable in the French or Austrian services. They are obtained by service, or through the great military schools. There are several English subjects in the army of Austria.

C C N will, perhaps, name the subject

A SUBSCRIBER, Thirsk, should apply to a bookseller

J D M, Eastbourne.—The appointments to situations in public companies usually lies with the Board of Management.

A REGULAR SUBSCRIBER, Parkfield, Birkenhead.—It would be a breach of etiquette to name the editor in question

H G, Somerset.—We have not room

J ANDERSON.—The camera may be reduced to the size, which gives a perfect picture with advantage. If the image is not perfect beyond 4 × 3 inches, there is no advantage in having it any larger

A CONSTANT READER, Six-mile-Bridge, Ireland, is thanked; but we have not room for the sketch

A TOURIST is thanked; the subject have already been engraved in our Journal

T SMITH, Gardner-street.—Send your coins to Mr Webster, 17, Great Russell-street, Covent-garden, and you will get their full value

LAVENHAM.—Your supposed "coin of King John" is only a worthless brass weight of James I.

GREAT GRIMSBY.—The WAX impression of the Chinese coin is not decipherable

DERE.—Communicate with Mr Webster, of 17, Great Russell street, Covent-garden, and you will obtain the necessary information at a small cost

T. W.—There is, we believe, a large property still unassigned in the Jennens case; but we have not the details.

W. J.—Apply to the clerk at the Will or Prerogative Office, Doctors' Commons, St. Paul's Churchyard, London. The charge depends on the will copied.

P. CORBYN.—Refer to Burke's "General Armoury," for the blazon of the arms required. We have not space to give them.

CHRISTOPHER.—"1853 64" is to be written to meet the change of style

PUDSTON.—*Arms* of Butler: "Arg. a bend between fourteen billets gu.

Crest: Out of a ducal crown gu., a pair of wings arg. billetée"

A LIVERPOOL SUBSCRIBER.—We can find no arms recorded to the name of Broadbridge

C W.—Arms of Dethick: "Arg. a fesse vairé or and gu. between three wate bougets sa."

PHILO.—A crest obtained by grant (this is what our correspondent means, we presume, by a crest "bought") is inheritable only by the male descendants of the grantee, unless the patent contains a specific limitation

A MIDDLESEX MAGISTRATE.—A magistrate is an Esquire by office, and has a place on the scale of precedence, higher than a clergyman. (See Blackstone)

HERALDINE.—*Arms* of Pond or Pede: "Az. on a bend or, three shamrocks gu.

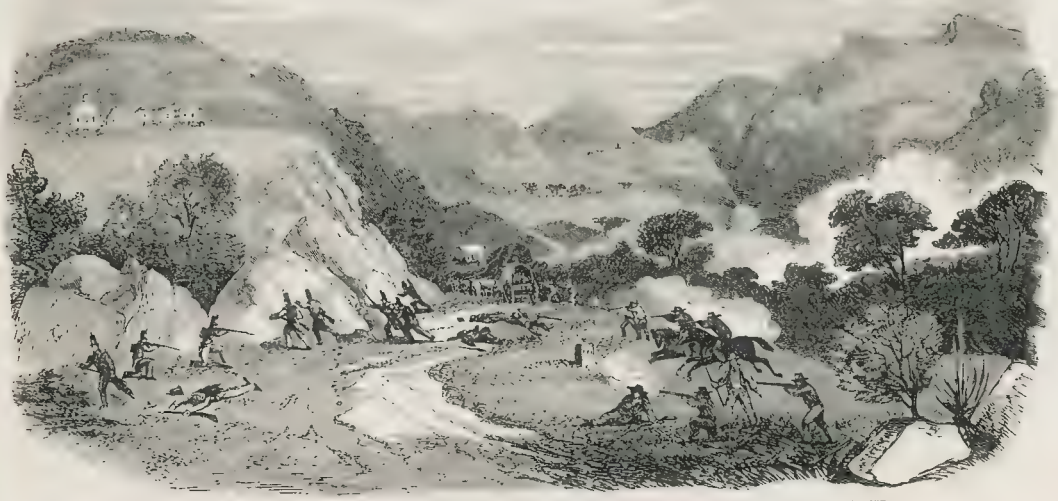
Crest: A chapeau gu. turned up erm. with two ostrich feathers, one stuck on each side, the dexter or, the sinister az." The family of Pond was settled formerly at Bury, county Suffolk. There should be no wreath under the Cap of Maintenance

THE KAFFIR WAR.

VIEW ON THE GOLA RIVER, A TRIBUTARY OF THE WATERKLOOF.

We have received by the last Mail the accompanying Views from the seat of the war in Kaffraria. The first locality represents a portion of the Gola River, a tributary of the Waterkloof, three miles from the spot where Colonel Fordyce fell. At the latter spot, on the morning of May 17, at daybreak, Colonel Buller commenced an attack upon the upper part of the Waterkloof, known as the Horse-shoe. "From all I can learn," says a correspondent of the *Cape Frontier Times*, "this is but the second time this war that this place has been attempted to be stormed. The first by Major-General Somerset, who, with about 2000 men, was repulsed; and that on May 17 was with but 400. The Kaffirs fought bravely and well, and it is to be regretted that what is called the army of the Cape of Good Hope cannot furnish a stronger division to oust these daring banditti from this their apparently only stronghold. They, on this occasion, showed themselves to the number of 2000. Of this I am certain, for, from experience, I can estimate Kaffir numbers."

The second Illustration shows the scene of one of the severest misfortunes the colony has experienced since the commencement of the war, namely, the affair of June 12, briefly described in our Journal of last week, when one mule and four ox-waggons left Graham's Town for Fort Beaufort, with 84 men of the Royal Sappers and Miners, under the command of Captain Moodie, R.E. After halting at Fort Brown, where a few of the men were left, the rest moved forward without obstruction to the Konap. This river was forded, and the waggons had reached a dry ravine just at the foot of the Konap hill, when a strong party of Hottentots, lying in ambuscade, suddenly opened a murderous fire upon them, the result being, nine of our men shot dead, and six wounded. This reduced the number of the escort to some fifteen serviceable men, who, finding themselves entirely surrounded by the rebels, saw that the only hope of saving themselves was by retreat to the ruins of the abandoned military post adjacent. This spot they succeeded in reaching, and instantly barricaded themselves in as well as they were able with such materials as were on the spot, fully expecting an immediate attack by the rebel force. The latter, however, contented themselves with driving off the waggons, in which were 4 women and 10 children, and a great deal of baggage of considerable value, not the least important part of it being 50 of the newly-invented Minié muskets; the nipples of which, however, had been very prudently taken out by order of Major Burnaby, and sent forward by another conveyance, so that they will be of little use to the captors. It is affirmed, also, that these waggons contained a considerable quantity of ammunition, an invaluable prize to the enemy at this juncture. It is supposed that these marauders are part of Uithalder's banditti; it being known that a body of 200 of his freebooters were detached from his camp on the Buffalo on the 8th, and that these went in the direction of Fort Beaufort. The total loss



ATTACK ON GOVERNMENT WAGGONS, BY REBEL HOTTENTOTS, AT THE FOOT OF KONAP HILL, BETWEEN GRAHAM'S TOWN AND FORT BEAUFORT.

THE KAFFIR WAR.

VIEW ON KAT RIVER, TWELVE MILES FROM FORT BEAUFORT.

sustained is 19 killed and wounded. Killed, 9 sappers and miners, 2 waggon-drivers, 1 woman; and 7 wounded. The marauders, on the retreat of the military, proceeded to rifle the waggons, and went off with the whole of the firearms and ammunition, and whatever else they chose to appropriate. No information is given as to what loss was sustained by the rebels; but it is said that several were shot, but were carried off by their comrades.

Another account, the *Frontier Times*, states:—"As the train were proceeding along the road beyond the old Konap Post, where the neighbourhood of the road is very bushy, and there are large stones alongside of it (close to the twenty-five mile stone), a murderous volley was suddenly poured in upon the waggons and escort, killing nine of the poor fellows and wounding six—thus putting fifteen of the escort *hors de combat* at once. Some of the oxen and mules were shot besides. Those who fired this volley were footmen, who were under cover of the stones, and immediately afterwards a body of the enemy's horsemen (Kaffirs and Hottentots) rushed to the waggons and surrounded them. The remnant of the escort, it appears, after this, made the best of their way to the old Konap Post, which they determined to defend. The waggons contained ordnance stores, clothing, blankets, &c., and what is most to be deplored, 3000 rounds of ammunition and 36 Minié muskets, which fell into the hands of the enemy. Six soldiers' wives and ten children, we sincerely regret to add, were with the waggons when the attack was made, and it is supposed were made prisoners by the rebels. General Somerset did his utmost at the commencement of the war to get a post established at the Konap, for the purpose of keeping open the communication between Graham's Town and Fort Beaufort. And at a later period General Somerset made another attempt to effect this object. It is supposed that the rebels had been informed that an ammunition waggon was on the way to Fort Beaufort. It is worthy of mention that this successful and fatal attack, and capture of ammunition and other booty, was made about half-way between the head-quarters of his Excellency the Commander-in-Chief and the metropolis of the Eastern Province. We are happy to add that all the soldiers' wives and children are now safe at Fort Brown, with the exception of one woman who was shot by accident in the attack upon the waggons Nothing, it is said, could exceed the cool and determined bravery of Captain Moodie, or the gallantry of the soldiers. When pressed by overwhelming numbers, they gallantly lost their ground by degrees, and endeavoured to make a determined stand at the last waggon, until further resistance was absolutely hopeless."

The next Illustration shows a portion of Kat River, sketched about two miles below Houre's Post, and about twelve miles from Fort Beaufort, the present head-quarters of the Commander-in-Chief. This portion of the river is about twenty miles from its source in the Kat settlement, to which so much notoriety is attached, the Hottentot rebellion having originated there. The elevations in the distance of the view are the Chumie mountains, part of the Amatola range.

In the fourth View is shown a train of waggons attacked by the enemy in crossing a drift of the Fish River, a harassing mode of warfare which has proved very destructive to the colonists.

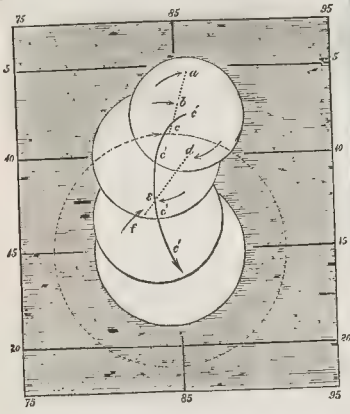
ATTACK ON WAGGONS, IN CROSSING A DRIFT OF THE FISH RIVER.

REVOLVING STORM.

(To the Editor of the ILLUSTRATED LONDON NEWS.*)*

In your Journal of May 29th, 1852, an account of a revolving storm is given, in which it is stated that "the Cyclone appears to have recurved very suddenly, and on recurving to have moved southward very rapidly." From a very careful consideration of Captain Robertson's letter, it appears to me, that when the gale set in on the afternoon of the 24th, wind E.N.E., the Cyclone had already recurved, and its centre was rapidly bearing down upon the ship; or, in other words, the ship was on the axis line of the storm. This was evidently indicated by the wind hanging at E.N.E. from sunset to midnight, denoting the course the hurricane was pursuing to be exceedingly different to the usual course of Cyclones on more westerly meridians, unless the course of the ship indicated that she was sailing parallel with the curve of the centre. At 4 A.M. of the 25th, the centre of the storm had passed the meridian of the ship, so as to bring her fairly within the right hand semicircle, but very near the centre. At 8 A.M. we have the wind S.E., the centre of the storm bearing N.E., afterwards the wind gradually veers to S. From these changes it is difficult to find evidences of the recurvature, but the passage of the storm towards S.S.E., or S.E. is undoubted.

The latitude 16° S. and longitude 84° E., places this storm in quite a different category to most storms occurring in the Indian Ocean. The fact of its having recurved in so low a latitude as 16° is strikingly in accordance with the case of the *City of Poonah*, which fell in with a revolving storm, recurving, in 12° S., and corroborates an idea which I have been led to form, that the storms of the Indian Ocean recurve at lower latitudes on the more eastern meridians. I send you a Diagram of the most important part of the storm's track, with the probable size of the effective portion of the whirl, *i.e.*, in which the force of the wind is sufficient to effect loss and damage. The logs contributing to the diagram are those of the *Windsor* and *City of Poonah*. The track *a b c*, between 5 and 10 degrees south latitude, is that of the *Windsor*. She was in the posterior or succeeding semicircle of the storm, and experienced westerly and north-westerly winds. The track *d e f*, between 10 and 15 degrees south, is that of the *City of Poonah*. She was in the anterior or preceding semicircle at *d* and *e*, with wind at east. When at *e* the centre had rapidly neared her, and in the course of the succeeding 24 hours the ship and centre nearly met, the barometer falling to 28·59 at 3 A.M., and "the hurricane moderating until 4 A.M., when it blew again with redoubled fury." The ship had now passed from the left into the right-hand semicircle, the wind veering from S.E. to S.W.



POSITIONS OF THE "WINDSOR."

(*a*) Lat. 5° 47′ S.
Long. 85° 43′ E.
Bar. 29·84
Wind W.N.W., W.

(*b*) Lat. 7° 37′ S.
Long. 85° 11′ E.
Bar. 29·77
Wind veering W.N.W., N., afterwards at S.W.

(*c*) Lat. 9° 11′ S.
Long. 84° 31′ E.
Bar. 29·77
Wind, sarong westerly gale.

All the above winds are perfectly characteristic of the semicircle of the storm *next the Equator*, and are by no means so dangerous as those in the opposite semicircle.

POSITIONS OF THE "CITY OF POONAH."

(*d*) Lat. 10° 36′ S.
Long. 83° 48′ E.
Wind East.

(*e*) Lat. 12° 12′ S.
Long. 83° 22′ E.
Wind East.
Bar. 29·80

(*f*) Lat. 13° 14′ S.
Long. 82° 40′ E.

It would appear, from the altitudes of the barometer at *b* and *e* being nearly of the same value, that the ships were on or near the same concentric circle of the storm, the wind, however, was far more violent at the *City of Poonah* (*e*) than at the *Windsor* (*b*).

During the twenty-four hours *c* to *f*, the *City of Poonah* lost her main and fore-top masts, had to cut away her mizen-top mast, lost her lee-quarter boats and was compelled to launch the wreck of her weather-quarter boat overboard.

c c c c Shows the approximate path of the hurricane, its recurvature about 12° south, and the *City of Poonah* crossing in front of its track.

Barometric readings and winds, *City of Poonah*, crossing in front of the storm's path between the noons of Nov. 11 and 12, 1851:—

Hour.	Bar.	Wind.	Remarks.
Nov. 11, noon	29·20	E.	
" 1 P.M.		E.	
" 2 "	29·70		
" 5 "		E. by S.	
" 7 "		E.S.E.	
" 8 "	29 30		
" 10 "	29 00		
" 12 "	28 90		
" 1¼ A.M.			Ship loses topmasts.
" 2 "	28·77	S.E.	
" 3 "	28·59		Barometer lowest, hurricane moderating, ship crosses storm's track in front of centre.
" 7 "		S.	
" 10 "		S.S.W.	
Nov. 12, noon		S.W.	

The above instances of the *Equestrian's* and *City of Poonah's* storms recurving at lower latitudes than 15 or 16 degrees south, appear to be as well authenticated as any we have on record. The facts themselves are highly important, as indicating the great value of commanders determining for themselves the direction in which a hurricane may be moving. It is clear that Captain Robertson depended on the usual storm tracks in the Indian Ocean, and Captain Triscott, of the *Poonah*, held on his way with every indication from the increasing force of the wind, its hanging at E., and the falling of the barometer—of the recurving of the storm. The example is highly instructive, and is greatly calculated to add to our knowledge of storm paths in the Indian Ocean. By your giving it publicity in your widely-circulated journal, a knowledge of the most dangerous portion of the paths of revolving storms will not only be more extensively diffused, but may become available in putting commanders on their guard in these particular latitudes and longitudes.

I am greatly indebted to Messrs. R. and H. Green, of Blackwall, for extracts from the log of the *City of Poonah*; and to Mr. Rosser, of Mrs. Taylor's establishment in the Minories, for extracts from the log of the *Windsor*.

I have the honour to be, sir, your very obedient servant,
WILLIAM RADCLIFFE BIRT.

11A, Wellington-street, Victoria-park, London, July 30th, 1852.

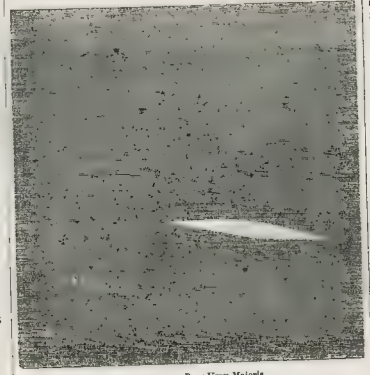
P S. The dotted circle is intended to show the probable distance from the centre of the storm to which the gyrations extended, as both ships were evidently in the posterior semicircle on the 12th.

EXTRAORDINARY METEOR.

(To the Editor of the ILLUSTRATED LONDON NEWS.*)*

STOKE, Sub-Hamdon, near Yeovil; Aug. 13, 1852.

A METEO of an extraordinary appearance was seen here last night (August 12), at about 9.20 Greenwich time, to which my attention was directed by a very bright flash, as of lightning; and immediately turning my eyes to the north, the body of the meteor (if any) had disappeared, having left a brilliant mass of light about 15 degrees in length, of which I send you a Diagram. This continued visible for nearly ten minutes,



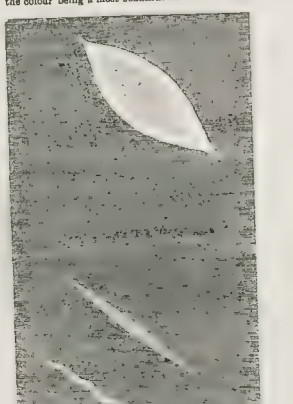
A. Pole Star. B. α Ursæ Majoris.

gradually fading; but (what I consider most remarkable) it resolved into two or more distinct bodies nearly of the apparent magnitude of the planet Saturn, which remained so long visible that I almost doubted if there were not stars in that precise spot which I had not noticed. They, however, became less and less visible, and had disappeared in about ten minutes after. I hope to find that this meteor has been noticed by other observers in distant parts of the world, and its place correctly marked, which may lead to a calculation of its distance, &c. R. W.

(To the Editor of the ILLUSTRATED LONDON NEWS.*)*

HOLTHEAD, Anglesey, August 13th, 1852.

I BEG to call your attention to an extraordinary meteoric appearance in the heavens, which occurred in this neighbourhood, on the evening of the 12th inst. At 9.20 P.M. (Greenwich time), my attention was suddenly attracted by what appeared to me to be a peculiarly vivid flash of lightning; and, on turning towards the S.S.W., the direction whence it came, I saw a magnificent body of meteoric light, of the form shown in Fig. 1; the colour being a most beautiful and intense blue.



It occupied at least a fourth part of the visible heavens, inclining towards the earth at an angle of 45°, and lasted for thirty or forty seconds, gradually diminishing in width, to a narrow streak of light; the length remaining the same as when I first saw it. (Figure 2.) Just previous to its fading away, it became flickering and wavy. (Figure 3.) The sky at the time was clear and cloudless, and a fresh breeze blowing from the N.N W.

I am, &c.,G. F. L.

[Mr. Glaisher, F.R.S., would be glad if observers of this meteor would furnish him with their accounts—particularly noting its path among the stars, its elevation at the time of its appearance and of disappearance, &c. directed to 13, Dartmouth-terrace, Lewisham, Kent.]

THE NEW CRYSTAL PALACE AT SYDENHAM.

IN our Journal of August 7, we described the external character of the New Crystal Palace, and glanced at the interior arrangements. We are now enabled to give an outline of the plan of illustration of objects in Natural History, a large portion of which the Directors of the Crystal Palace Company propose to place before the public on the 1st of May, 1853.

One of the most conspicuous and attractive sections will be that of Ethnology. No museum has yet ever attempted to show models of the different varieties of the human race, together with their national costumes, their domestic and agricultural implements, their armour, their dwellings, their modes of conveyance, and other characteristic objects appertaining to them. But, under the guiding direction and personal superintendence of such an eminent ethnologist as Dr. Latham, no fears are entertained that all these will one day ornament the compartments of this noble building, and that a very large proportion of a complete collection will be ready by the opening.

It is intended to arrange the growing plants in such a manner as to show what are the peculiarities which mark the Flora of different parts of the world. To this end the surface of our globe will be divided into regions, or natural provinces, which are each characterised by particular races of animals and vegetables, and all the arrangements of natural objects will tend towards the due illustration of the "countries" (as it were) which nature has mapped out upon our earth, and which she has peopled with the subjects of her three kingdoms.

The ethnological specimens will therefore appear near the plants of the region to which they both belong. Close by them will be placed specimens of the most characteristic quadrupeds, birds, reptiles, fishes, mollusca, and insects, which are to be found in the same part of the world. All these will be shown in the attitudes most natural to them, and best exemplifying their peculiar habits and dispositions; for which purpose the assistance of the exhibitor of the most life-like stuffed specimens in the Great Exhibition will be obtained. The fish will be preserved on a plan not hitherto tried, that of making them appear to be swimming, in very large glass vessels containing a sufficient quantity of some preservative fluid having the appearance of water. The molluscs will be represented, not by their shells only, but by shells containing models of the animals crawling or swimming in the localities peculiar to them; and in all cases the soil or situation which all these creatures inhabit will be imitated and represented as closely as possible. So that a visitor will find himself surrounded, wherever he goes, by groups of objects, taken from all the three kingdoms of nature; not placed, like museum specimens, "all in a row," but artistically arranged so as to exhibit individual habits and peculiarities to the best advantage; and so associated as to give an accurate idea of the Fauna and Flora of the region they are designed to illustrate. The selection of characteristic examples of the zoological portion has been kindly undertaken by Professor Edward Forbes, Mr. Waterhouse, and Mr. Gould, whose attainments as naturalists are too well known to need comment; and the whole will form an extensive series of small collections, illustrating in a manner never hitherto attempted, the physical geography of the whole world. Such an exhibition, while it cannot fail to be amusing, will be at the same time replete with instruction of the soundest character, and afford a clearer insight into the subject of the distribution of plants and animals on the surface of the earth than many months of reading.

It is ultimately intended to exhibit a series of geological illustrations, corresponding to those of physical geography, on a scale which no geological museum can attempt, for want of space. Not only will the external appearances of the earth's crust at different places be shown, but also the geological strata of particular portions. Models will be prepared to illustrate mining and quarrying, to show the action and results of volcanoes and earthquakes, and to exhibit geology in its practical bearings with reference to well-sinking, the supply of water tunnelling, &c. The name of Professor Ansted will be a sufficient guarantee for the accuracy of execution of these details.

For the present, however, the principal endeavours of the Company are concentrated in bringing out as complete a collection as possible of life-sized restorations of those colossal extinct animals and birds, which we now only know of by their fossil remains. Under the direction of Dr. Owen, it is confidently belived that a museum of such creatures will be formed which will excite the wonder of every one, and afford little opportunity for disapprobation, even amongst the most scrupulously particular anatomist.

Reference must also be made to another section of the natural history department, which is likely to prove the most useful and commercially-valuable portion of the exhibition; though, perhaps, not one of the most attractive. We allude to the collection of raw produce, which is designed to show all the various articles taken from the animal, vegetable, and mineral kingdoms, and applied to ornamental and useful purposes by the skill of man. With this view, the directors invite the assistance of all, in the way of contributions of raw products, either now in use or likely to be brought into use, in the arts and manufactures; and they may reasonably look forward at no distant period to being able to show such a collection of raw materials, conveniently arranged and tritely labelled, as shall not only convey an immense amount of useful instruction to the mass, but give a far greater impulse to improvement amongst the manufacturers of Europe than was imparted even by the Great Exhibition of 1851.

We also Engrave the ground-plan of the building, in which the parts marked A A are intended for offices; B and C are for refreshment rooms—one of which will be fitted up in the style of the Alhambra, and the other in the Pompeian style. At the left side of the plan we have placed four diagrams, explanatory of the various ways in which the plants employed are carried out in the Engravings, to denote the different divisions of the plan; all the portions being tinted to agree with these diagrams.

No. 1 shows the spaces allotted to plants; 2, spaces for the exhibition of manufactured articles; 3, the staircases; 4, ornamental pieces of water, in which will be fountains. There are also in the plan four semi-circular spaces, filled with small dots, which denote spaces reserved for birds.

THE GREAT INDUSTRIAL EXHIBITION TO BE HELD IN DUBLIN, 1853.—The following descriptive particulars of Mr Benson's design, which has been adopted for the Exhibition Building will be read with interest:—Presenting a front to Merrion-square of 300 feet, the main or centre feature of the elevation consists of a semicircular projection which forms the eastern termination of the Central Hall. This will be a noble apartment of 425 feet in length, and 100 feet in height, covered by a similicular roof upon trellis ribs, in one span of 100 feet. On each side of the Centre Hall, and running parallel to it for the same length, are two halls 50 feet wide, with domed roofs, similar to that which covers the main nave or hall of the building. The height from the floor to the roof of each of these halls will be 65 feet. They are approached through passages from the Centre Hall. In addition to these three halls are four compartments of 25 feet wide, and the other in the Pompeian style. At the left side of the plan we running the whole length of the building; two are placed between the centre hall and the side halls, and two on each side of the latter; divided into sections of 25 feet square, forming convenient divisions for the purposes of classification. Over these compartments are spacious galleries, also running the length of the building, which will not only afford increased space for exhibition, but be an agreeable promenade from whence the effect of the three halls will be seen to great advantage. The ceiling of the halls, being divided into panels formed by broken and equally distributed bars. The construction of the building is strongly marked on the elevation, and forms in fact the ornamental character of the design. There are also external galleries which will be attractive features in the exterior, and will be useful in providing access to the roof for repairs, &c. The materials of the building will be iron, timber, and glass. The latter will only be used for light, as before described. The parts of the roof on each side the lights will be timber, covered with the water-proof cloth. The trellis girders which support the galleries will be of wrought iron, supported on cast-iron pillars. Ample accommodation in the way of refreshment, retiring rooms, offices, &c., is provided in the plan. The available area of ground floor will be 147,204 feet. Of wall space there will be no less than 87,000 feet. The design, not only in respect to the striking and bold effect of the elevation, but also of the interior, is deserving of the highest praise.

BIRMINGHAM MUSICAL FESTIVAL in aid of the FUNDS of the GENERAL HOSPITAL; the 24th, 25th, and 26th days of September next.

THE ILLUSTRATED LONDON NEWS

No. 576.—VOL. XXI.] SATURDAY, AUGUST 28, 1852. [SIXPENCE {WITH SUPPLEMENT, GRATIS.

RAILWAY AMALGAMATIONS.

THE subject of the greatest interest during the past week has, undoubtedly, been that of "railway amalgamation." Mr. GLYN, the chairman of the London and North-Western Railway Company, speaking to the shareholders of that gigantic concern, and through them, by means of the indefatigable and ubiquitous press, to the public, has made known a new project. He has announced that a negotiation has been commenced for the "amalgamation" of two great companies, which have for many years past carried on against each other a war of vexation and of litigation. The London and North-Western and the Great Western Companies have long been striving to injure and destroy each other, the object being to monopolise traffic; the results being public inconvenience and danger, and the diminution of the dividends of the shareholders. As might have been anticipated from the first, no one has gained by the unwise and stubborn conflict but the lawyers, to whom, as disputes of all kinds invariably do, it has yielded a rich harvest. Grown wise by adversity and suffering, the two companies have, it appears, resolved to coalesce; or, if the negociations between them have not yet attained that stage of development which would justify us in stating that their resolution has been definitively taken, they have at all events reached the preliminary and introductory stage of agreement upon the principle at issue. The principle has been conceded, but the details are still in dispute, or under amicable consideration. We are certainly not of the number of those who think these companies are to be blamed for the truce which they have sounded, or for the desire which they have expressed to form a league for mutual benefit. On the contrary, we think that in so doing they are only acting with sound sense and common prudence. If railways do not pay a fairly remunerative dividend, it is useless to indulge in the hope that they will long continue to be properly and safely managed. It is the first duty which men in the position of railway directors owe to themselves and to their constituents, to avert pecuniary difficulties and possible bankruptcy. Neither small individuals, nor great companies, nor mighty nations can, with impunity, set the laws of arithmetic at defiance. Not only must both ends be made to meet, but there must be a fair reward for risk and liability, and for capital invested, or the best-imagined schemes of men and directors are certain to go wrong: just in the same manner that nations which cannot or do not pay their way, and which annually exhibit a deficit in the public balance-sheet, are certain to store up trouble, and to sow the seeds of revolution.

But while the companies which have obtained from Parliament the virtual monopoly of the means of locomotion throughout the greater part of England, are right as regards each other, and as regards their individual shareholders, in debating now, and acceding hereafter to, the proposals of amalgamation made by Mr. Glyn, there is another party whose rights and interests are involved. That party is the travelling public, and as in these days everybody travels, we may justly assert that the case is one in which the railway companies represent one side, and the people of Great Britain the other.

The public undoubtedly owes much to the enterprise and to the skill of the men who have made and who conduct the great lines of internal communication in this country. It will not begrudge them the fair reward which is due to their exertions. But these companies have very great power; and, unless they are strictly watched, have very great temptation to abuse it. The public must, therefore, be on its guard, lest such a gigantic amalgamation—and which, if carried, cannot but prove an incentive, an excuse, and a signal for others of a magnitude little inferior—do not produce results in a high degree injurious to all classes who trust either their persons or their goods to its care. Corporations have no consciences; and monopolies, by their very nature, are tyrannical. Rivals in business who have long and fiercely competed with each other, if they do ever become friends and brothers, invariably take their revenge upon the public. It is not for a sentimental admiration for, or a love of, each other, that they combine; but it is for the love of the public dollars; it is not fraternity, but cupidity, that inspires them. A partnership between such quondam competitors is nothing more or less than a league to retrieve all those past losses which they owe to their own folly and recklessness, and to make, *per fas aut nefas*, greater gains for the future. For these reasons, among many others, the public looks with some alarm upon the design which Mr. Glyn and his co-directors have announced, and which the chairman and directors of the Great Western have entertained with such coy appreciation. We trust, however, that the Legislature which granted them individually the great powers which they wield, will not sanction any amalgamation without taking the most severe precautions against either extortion, inefficiency, or neglect of the public safety and convenience. These are things to be jealously watched; and the more Titanic the corporation, the greater necessity for controlling it to such a degree as to obviate all such dangers.

RETURN OF THE EMPEROR OF AUSTRIA TO VIENNA.—(SEE NEXT PAGE.)

There are many points in the English system of railway management which are admirable—and many which are execrable. No Englishman would like to see the Continental system in full operation here. The introduction of that mania for meddling and over-governing, which exists on the Continent, would not suit the English temper. A system which pries into every thing, which attempts to regulate every thing, which treats men as if they were children utterly incapable of taking care of their own interests and safety, which imposes fetickses and bothers, and baffles, and beweighs and bemeasures human beings, as if they were bales of goods, would never answer in these islands. But while sensible men would object to such a system, they object equally to the pernicious system of *laissez faire*, which allows and fosters the growth of huge and irresponsible monopolies, and which hands over the helpless public to be dealt with by unconscionable corporations, which have, and can have, no possible object but gain; and which, in pursuit of it, commit acts which neither of the individual members of whom they are composed would ever dream of attempting. The Legislature has sanctioned and enforced some degree of supervision and control over railways; but it may fairly be doubted, even before these and other great amalgamations which are spoken of shall take place, whether it has been sufficiently stringent with them, and whether it might not with great advantage carry its control a little further. It has, to a certain extent, interfered, but the every-day experience of those who travel painfully shows that the limits of its parental supervision have not yet been attained. Our second and third class railway accommodation is, on almost every line, a scandal and a disgrace; and exhibits our railway management in a most unfavourable contrast with that of the Continent. And we much fear, if companies which have reduced themselves to the very brink of ruin by their own reckless extravagance, and miscalculating cupidity, are allowed to amalgamate without conditions being imposed upon them on the public behalf, that a public wrong will be done. The monopoly of such a line as the London and North-Western is already sufficiently dangerous, and requires to be restricted rather than extended. But we have no doubt that the subject will receive due consideration from Parliament; and that no amalgamation will be sanctioned which shall not give security to the public against extortionate fares, infrequency of communication, and gross inefficiency of service. Such corporations as these are by far too powerful to be safely left to their own devices.

RECEPTION OF THE EMPEROR OF AUSTRIA AT VIENNA.

The return of the Emperor of Austria from his Hungarian journey has been celebrated in Vienna, according to the official announcement, "in a festive manner." On the 14th instant, soon after five o'clock, his Majesty reached the Northern Railway terminus, where he was received by about 400 officers of high rank. There were several triumphal arches between the Hungarian-frontier station and the Vienna terminus, where 21 engines, decked out with boughs and flags, were drawn up in file. Over the entrance to the waiting-rooms were the pensions of the thirteen crown lands, and above them floated the black-yellow standard. A fountain had been improvised, and there was a triumphal arch outside the building, with a full-length portrait of the Emperor, and an appropriate inscription.

In front of the grand arch an address was presented to his *Majesty*; at the cathedral he was received by the clergy, Ministers, and Reichsrath, and after "Te Deum" was sung, the Monarch went at once to the Palace. Throughout the line his Majesty was received with cordial cheers.

At nine o'clock the Emperor drove through the city to see the illuminations. The houses were uncommonly well lighted up, but there were few of those ingenious and magnificent devices which are so common in London on festive occasions. The fine flowers placed between the lights produced a good effect. There was also a profusion of flags. In the evening the streets were so crowded that the Emperor's carriage could with difficulty make its way at a foot-pace through the city. The delight with which his Majesty was received was perfectly unceasing. There were occasional displays of fireworks, in the form of the Imperial emblems, pictured by our Artist upon the preceding page.

A Crystal Palace in France.—The French Government is at present getting drawn up the draft of a decree relative to the construction of a crystal palace in the large square of the Champs Elysées. The building in question is to be conceded to MM. Ardoin and Co. for 35 years, the state guaranteeing a minimum interest of 4 per cent on a capital which is not to exceed 13,000 000f. Before any sum is set aside for interest, the amount required for the sinking fund is to be deducted. A sum of 50,000f. is to be deposited in guarantee of the good execution of the works, which are to be commenced within two months after the date of the concession, and terminated in two years. The national exhibition of the fine arts and that of the manufactures are to be held in the edifice at the period fixed by the Government. At all other times the State reserves to itself, for military and other *fêtes*, the free use of the building any two days in the week which it may select. Should the Government not require it but only on the two days of the week, the company may profit by it, on asking leave of the Minister of the Interior. During the other five days of the week the company having the building may employ it for private *fêtes* or exhibitions. During the national exhibitions the company may open it only days fixed by the Government, an entrance fee, which is not to exceed 5f., one day in the week being fixed at 50c. The Government may at any period after the first ten years take possession of the building on condition of paying to the company, by way of compensation, the average of the last five years' receipts, multiplied by the number of years remaining to run to the end of the concession. As the ground belongs to the City of Paris, the company is to pay to it annually a rent of 120000. The city of Paris is to be entitled, with the authorisation of the Minister of the Interior, to the use of the building gratuitously for its *fêtes* and ceremonies.

An Emblem of Imperial Glory.—M. Gavini, the Prefect of the Loir, has recently made the acquisition of a writing-desk used by Emperor Napoleon, which has remained concealed for 37 years in a house in Cahors. It appears that during the 100 days a carrier named Serres was employed to carry a bust of the Emperor to a town in the south in which the Government had accorded it. On the way he heard of the disasters of the French army and of the proscription attached to all emblems connected with the Imperial glory, and he thought it advisable to hide his bust. Trying to find an asylum for it, he had an injunction on his wife not to bring it out until some member of the Imperial family should have ascended the throne. On the 2d of December the widow consulted some of her friends as to whether she would be justified in bringing forth the bust. Their answer, it would seem, was in the affirmative. M. Gavini has now obtained possession of it. This bust is to be placed in the room where the Council General meets.

British and Foreign Hospitals.—Paris, with a population of 1,000 000, has upwards of 10,000 beds in its hospitals; whereas London, with a population of 2,000,000, and an annual mortality of 45,000, has only 5000 beds; St. Petersburg, with a population of 476,000, and an annual mortality of 10,000 to 11,000, has 6000 beds; Vienna, with a population of about 400,000, and an annual mortality of 16,000 to 17,000, has 3700 beds; Berlin, with a population of 345,000, and an annual mortality of 8000 to 9000, has 3000 beds; Warsaw, with a population of 150,000, has 4000 beds; and Manchester, with a population of 360,000, has 133 beds. The above statement does not include the wards for the sick in the poorhouses of the Continental towns, or in the workhouses of London.

The Submarine Telegraph.—Messrs. Newall and Co., the extensive wire-rope manufacturers at Gateshead, have large orders for telegraphic wire for submarine telegraph purposes. It is proposed to connect Harwich with the Hague; Dover with Ostend; Toulouse with Algiers; Copenhagen with the mainland of Denmark; Portpatrick with Donaghadee; St John's, New Brunswick, with Halifax, Nova Scotia; Cape Tormentine, New Brunswick, with Prince Edward's Island; and East Cape, Prince Edward's Island, with Cape Ray, Newfoundland.

Funeral of a Distinguished Polish Refugee.—On Sunday last the mortal remains of General Albert Darosz, who served in the Polish army in the year 1831, during the struggle for the independence of Poland against the power of Russia, were consigned to their last resting place in a vault at Highgate Cemetery; on which occasion there was a very numerous attendance, comprising Poles, Italians, Frenchmen, and Hungarians, as the deceased was highly respected.

Gift from the Emperor of Russia.—The Emperor of Russia has conferred a tribute to the talent of Mr. George Fowler, a rope-maker, of Millwall, for his inventions and improvements in the machinery used in the manufacture of the several descriptions of rope, and likewise for the advice and assistance he rendered in the establishment of the Imperial Government's rope walks at Cronstadt. Mr. Fowler attended at the Russian Embassy, Hay-hill, and was presented by the Russian Ambassador, by order of his Imperial Majesty, with a valuable gold repeater, made by Dent, the cases are splendidly chased and engraved, and bear a suitable inscription.

FOREIGN AND COLONIAL NEWS.

FRANCE.

The political intelligence from Paris this week, poin's to the coming Empire still more demonstratively than any advices we have hitherto chronicled of late. The Council-General of the Departments (the highest administrative and deliberative constituted bodies in the provinces) have followed up with assiduous and emphatic expression of opinion the *pronunciamento* of the Councils of Arrondissement, which we noticed last week, in favour of the speedy revival of the Empire under Napoleon II. The Councils-General met in their usual autumnal session, on Monday last, throughout the provinces, and already the Government at Paris has been apprised by telegraph of the resolutions which a large proportion of these important bodies came to on the first day of their meeting upon this interesting subject. Amongst the councils which have distinguished themselves by this loyal alacrity are those of the Departments of the Lower Alps, Ardèche, Mouths of the Rhone, Correze, Dordogne, Eure and Loire, Gironde, Indre, Indre and Loire, Isère, Maine and Loire, Upper Marne, Mayenne, Meuse, Morbihan, Lower Pyrenees, Upper Rhine, Tarn, Yonne, Charente, Cher, Côtes du Nord, Côte d'Or, Doubs, Haute Garonne, Loir-et-Cher, Loiret, Marne, Nord, Pas de Calais, Lower Rhine, Saone et Loire, Seine Inferieure, and Somme, all of which call for the perpetuation of Louis Napoleon's power, on a more stable basis than it at present rests upon.

Some of these declarations are very marked and out-spoken in their character. Thus, the Council of the Basses Alpes prays Louis Napoleon to "accept the hereditary power which the nation will be happy to confer upon him."

The Council of Ardèche hopes, "that power becoming more and more consolidated in his hands will ensure the country peace and prosperity."

The Council of the Bouches du Rhone hopes that "the stability of our institutions, better appropriated to the genius of France, may allow Prince Louis Napoleon to complete, for the grandeur and repose of the country, the work he has so gloriously commenced."

The Council of Correze calls for stability of institutions. "The present will be more prosperous (it says) if the future be founded to-day."

Dordogne prays for "the duration and stability of the power conferred by the people, for the sake of saving the country from new revolutions."

Eure et Loire desires to see the military power of the Prince secured for ever from the attacks of parties.

The Council of the Gironde call on the Senate to exercise its right in favour of "giving to the Government of Louis Napoleon the form and stability called for by the interests, the genius, and manners of France."

The Council of the Indre demands that the era of revolutions be closed by the establishment of hereditary power.

Indre et Loire sees the hand of God in the act of the 2d December, and expresses profound gratitude for all measures of the Prince President

The Council of Isère hopes that "our national institutions may be placed on a broader and more durable basis"

Maine et Loire expresses confidence and gratitude; as also do the Councils of Marne, Mayenne, and Morbihan.

The Lower Pyrenees goes a little further in calling for consolidation of power; and the councils of the Upper Rhine, Tarn, and Yonne express gratitude and devotion.

The Council of Loire-et-Cher (Blois), demands that Prince Napoleon be proclaimed Emperor of the French.

The Council of the Côte d'Or (Dijon) invites the Senate to devise means of perpetuating the Government in the hands of the heir of the Emperor.

Several of the Ministers who have been elected to the chairs of these councils have left Paris in order to preside at them; and on Tuesday the Commander-in-Chief of the Army, General Magnan, in addressing the Council General of the Lower Rhine as their chairman, made the following important statement.

"Yesterday, at the moment when I was taking my leave, the Prince President told me that he was engaged in considering the formation of a strong and solid military reserve, which, without compromising the respect and dignity of France, would enable him to effect the economies which he desires to introduce in the public taxation. Then, after having saved France from anarchy, as he says, as much as lies in his power, to diminish the charges that press on agriculture, that nurse of a people, and that press too on property and on industry. Let us second the beneficial intentions of the Chief of the State. Let us aid him in our spheres to render France prosperous, and so satisfied that there shall be but one wish—that of living and dying under the government of a Prince firm, enlightened, and benevolent."

The inhabitants of Aulnay, in the department of the Aube, have addressed a petition to the Senate, in which, after demanding that Prince Louis Napoleon Bonaparte be elevated to the imperial throne, they require "the suppression of universal suffrage as respects municipal and canonal elections, that system being the sole cause of the dissensions and ferments of discord which, since 1831, divide the smallest districts into two hostile camps, and disturb local tranquillity."

Various other indications are not wanting to show how France is preparing herself to accept as a matter of course the proclamation of the Empire at an early period. The following is an instance:—A dinner was given on the 15th inst. by the Prefect of the Jura, at which he proposed the toast of "To the Prince and to the Emperor," prefacing it with these words—"Gentlemen, we now celebrate the *fête* of Saint Napoleon. I rise to propose to you a toast in honour at the same time of the Emperor and King Napoleon I., and of the Prince President Napoleon II." The principal members of the clergy, the magistracy, the army, and the municipality were present. Again, we find it stated that on Sunday last the President, accompanied by the Commander-in-chief and the chief of the staff of the National Guards of the Seine, proceeded from St. Cloud at twelve o'clock to Versailles, where he passed in review the body of cavalry quartered in that town. The cry raised by the lancers and the cuirassiers was, without exception, that of "*Vive l'Empereur!*" After the review a reception took place of the authorities of the town and of the department. The grand water-works, played, and added to the animation of the scene. A display of fireworks was given at dusk, and the President returned to St. Cloud at nine o'clock.

The *Moniteur* announces that the Minister for Foreign Affairs signed two treaties, on Sunday last, with the Plenipotentiaries of the Belgian Government, the first reciprocally guaranteeing all property in literary works and works of art; the second making certain modifications in the Customs tariff.

Two decrees have been published—one abolishing the present export duties on raw and milled silk, and the other assigning certain drawbacks to various products, having salt for their basis, as well as to bottles, soap, and large looking-glasses.

The electoral college of the 3rd circumscription of the department of the Seine is convoked for September 26, to elect a deputy to the *Corps Legislatif* in the place of General Cavaignac, declared by the legislative body to have resigned. The 4th electoral college of the Seine is also convoked for the same day, to name a deputy to the same legislative body in the place of M. Carnot.

The warnings to the journals, both in Paris and the provinces, continued to be administered with the most harassing pertinacity.

The *Journal de Toulouse* has been suspended for two months, it having been twice previously warned. An article containing an attack upon the Emperor Napoleon is the reason assigned for this extreme proceeding.

The low price at which the *Moniteur* is now sold has greatly interfered with the circulation of the other journals. The *Pays* and the *Constitutionnel* have, therefore, found themselves compelled to reduce their annual subscription list; and other proprietors, it is thought, will shortly follow the example, or abandon their publications altogether, as the newspaper press is now all but in a ruined condition.

UNITED STATES.

The fisheries question still continues the prominent topic of intelligence from New York, the latest advices from which are dated the 11th instant.

In the accounts from Washington we find it stated, under date the 10th instant, that the President of the United States, Mr. Fillmore, had had an altercation of serious character with the Secretary of State, Mr. Webster, on the subject of the fisheries misunderstanding with Great Britain, and that Mr. Webster was about to retire from the Cabinet. In confirmation of this, it is added that several waggon-loads of furniture belonging to Mr. Webster had been shipped on board a Boston packet, and that Mr. Webster had written to a friend that he would only visit Washington to wind up his business, and retire.

Further seizures of American vessels found within the prohibited three-mile distance by the British authorities are announced. A schooner, which arrived at Boston on the 9th inst. from Prince Edward's Island, reported the seizure of the schooner *Eton* for fishing off the islands. The vessel was reported to have been in a calm at the time, and fully three miles from land. The fishing schooner *Florida* was seized and taken into Charlotte Town on the 6th inst. It was stated at Boston that an American fishing vessel within the prohibited limit had been fired into and sunk by a British cruiser, for refusing to come to when ordered; also that the condemnation and sale of the American schooner *Corral* had been ascertained to be wholly illegal, as the seizure was a mistake, and intended for another vessel.

The *New York Herald* says, there is reason to believe that the Japan expedition has been abandoned.

The Secretary of the Navy has directed Commodore M'Auley, of the Pacific squadron, to send a war vessel to the Guano (Lobos) Islands, on the coast of Peru (South America), to protect the interests of American citizens who might be there. The Government of Peru have lately, however, endeavoured to give proof to the United States Government that they have exercised, not any rights of ownership of the Lobos Islands, which the latter do not appear to think quite conclusive

Mr. Joseph R. Ingersoll, of Philadelphia, had been nominated as Minister to England.

THE CHOLERA.

This frightful scourge of the human race is at the present moment devastating portions of central Europe sufficiently near to this country to awaken the attention of our sanitary authorities; so that when the plague does reach this country, as it most assuredly will, it may not find us unprepared, as on the occasion of its last awful visitation. It is advancing from Poland in two directions, viz. north and west.

In Prussian Silesia, to the city of Warsaw, and all along the Polish and Russian frontier, the progress of the disease is rapid and its mortality great. In the village of Landsberg, in Silesia, the official report, confirmed by the chief president of the province, states that there had been, up to the 17th inst., 246 cases, which is nearly 25 per cent of the whole population, and that of these, 109 cases, or 10 per cent. had proved fatal, 62 had recovered, and 75 were still under treatment. The last return is to the 19th. The total number of cases to that date had been 267, of which 114 were fatal; 84 were cured. In the village of Krzyszawowitz, two miles from the town, the proportion has been still greater, as 49 per cent. of the population has been attacked.

In Gdrowa, from the 16th to the 20th, 71 persons had been attacked by the disease, of whom 36 had died: in all, up to the latter date, there had been 378 cases, of which 175 were fatal. The reports still give hopes that the pest is really abating, as the cases for the last two days had declined in number, though in those seized with it it appeared in a very malignant form. It is especially severe in the villages, where the proportion of deaths is still greater than in the towns. At Przygodzice, 70 persons, or full one-eighth of the inhabitants, had been carried off.

From Warsaw the accounts are equally deplorable. The police report of the 13th inst. shows that nearly half of the cases ended fatally. On the above date there were 550 persons attacked, of whom 244 died, 203 were recovered, and there remained under treatment 1483. The alarm among the population of the city increases.

At Pletschen, in Posen (Polish Prussia) the daily number of deaths in a population of 5000 was, up to the 20th inst., from 15 to 20. In Jarocin and Neustadt, from the 3d of July to the 14th of August, 147 persons had been attacked; 54 had died, 47 recovered, and 46 remained under treatment. Dobrzyca, Klonowo, and Philadelphia had been severely visited; up to the 14th of August, of 1500 inhabitants, 300 had been attacked; 68 cases were fatal, 11 only were cured, and there were 130 still under treatment. In all these places no medical man, and generally the insufficient medical assistance throughout all districts, increased the evil. A further return from Dobrzyca to the 18th, states that to that date there had been altogether 205 persons attacked; of whom 114 died, 93 recovered, and 98 remained under treatment. The disease was most virulent during the 15th and 17th. On the latter day there were 19 deaths, on the 18th only 12. The same report states that the epidemic has now appeared in the villages of Strzyzewo, Wilcza-Haniand, in Polish and German Kamnitz-Haniand, and in Karmin-Haniand, all in the frontier district of Posen and Poland. It appears also to be following the course of the Weichsel northwards to the shore of the Baltic, and in the marshy districts about Marienwerder it is raging with great severity. Three villages, Gnojau, Lichtenau, and Neuteich, have lost two-thirds of their inhabitants, though what proportion by death cannot be exactly ascertained, as all who could possibly do so have fled from the infected districts to the towns towards and on the sea coast, Dirschau, Dantzic, Elbing, and Marienburg. The last accounts report some fatal cases both in Elbing and Dirschau.

The Originating Causes of Asiatic Cholera.—A correspondent of the *North British Daily Mail* makes the following just observations on this subject: —"Reasoning from what happened in 1832 and 1847, Asiatic cholera will, in the course of a few months, penetrate to every works, visit Glasgow for the third time, to sweep into the grave thousands of its citizens. I believe it won't prove of material use towards the prevention of this fearful scourge, were it well understood that the two principal causes seem necessary for its production. The first is an unknown change in the constitution of the elements, or an unknown agent present with them, now, for the third time, moving steadily on from east to west—from Hindostan to Turkey, Russia, Poland, and Prussia, to the British Islands, and hence to America and the West Indies. The second factor seems necessary to fix the first in its transit, and consists in that miasmatic poison arising from putrifying animal and vegetable substances left exposed in the alleys and neglected receptacles for filth in over-crowded towns, and especially in those parts of them which are ill-supplied with water and incompletely drained. The first factor is a disease-producing condition of the human body, brought on by the employment of improper articles of food, especially such as lead to looseness of the bowels, and by the habitual use of intoxicating drink. The first of these factors may perhaps be beyond the limits of human control, but the second and third are, in a great measure, within our own power; certainly, indeed, we are bound by every motive we to put in operation our protective means against them early enough; and there can be little doubt that if either of them could be annihilated the first factor would pass over us without mischief. Cleanliness, then, and temperance are the preventives of cholera; dirt and drink beckon it and welcome it to the scene of its destructive dealings with human life."

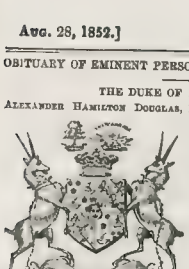
Treatment of Englishmen in the Austrian Dominions.—The *Allgemeine Zeitung* of the 14th, has a letter, dated Lombardy, August 8, with the following:—"An occurrence has just taken place here, which threatens to again disturb the good harmony existing between Austria and England, which has been re-established for some months. An English Lord, visiting Verona, was there caught in the act of drawing the fortifications, and as a punishment for his arrogance on being arrested, was imprisoned for a couple of days. The affair happened about six weeks ago. The English Lord" is a Mr. Newton, who, visiting Verona on pleasure, very naturally repaired to the ramparts, "Murray in hand." The Austrian sentry, seeing an Englishman there with a book in his hand, thought it proper to arrest him, as reasonably engaged in preparing a plan of the fortifications. Remonstrances were in vain. The Austrian guard conveyed the English gentleman to prison, where Mr. Newton was detained for five hours, during which time he was brought before the commissary, and his luggage was minutely searched. Of course nothing was found to compromise him; still he was taken to prison. The commissary ordered all out of the room on his speaking in English, the person on which he was arrested. He wrote to Marshal Radetzky, who referred him to the governor of the town, from whom he could, however, obtain no redress. Before being conducted to the place of confinement, he enquired where he could send to the hotel, or pass by it, to obtain some refreshment, not having had anything to eat for the last five hours. He was assured of being permitted to do so; but even when he was led from into a common prison, occupied by two other men—the one a deserter, the other a common culprit—and actually kept there without a morsel of food until the next morning. At the expiration of that time he was set at liberty as innocent of the charge. During all steps taken at Verona towards obtaining redress of no avail. Mr. Newton, on arriving at Venice, referred the matter to her Britannic Majesty's Consul resident there. He subsequently saw General Benedict, who behaved in a most gentlemanly manner, but seemed to believe that some insult must have been offered to the commissary. This was, however, by no means the case. Up to the present moment no redress has been obtained for this arbitrary imprisonment of an inoffensive British subject. On leaving Venice, Mr. Newton was stopped by the *employé* at the railway station, who knew him to have been under arrest at Verona on a charge of sketching the fortifications, his railway ticket was taken from him, his luggage again minutely searched, and he was detained beyond the hour of departure. The authorities refused to indemnify him for the loss of his railway ticket, or his detention.

The Prussian General, Von Wrangel.—From Berlin, under date the 23d inst., we learn that General von Wrangel had a narrow escape at one of the great reviews in South Russia, where he is at present on the special invitation of the Emperor. In leaping a ditch his horse fell and broke its neck; though it rolled completely over its rider in the fall, the General was unhurt, and set out the rest of the manœuvre.

The Sabbath.—South-Eastern Railway.—An effort is making by many of the clergy of Kent to induce the directors of the South-Eastern Railway to discontinue the running of trains on Sundays after half-past six in the morning, or before the hour of half-past five in the evening. A memorial has been presented to the directors on the subject, signed by about 100 of the clergy connected with the stations upon the line, and is approved and countersigned by his Grace the Archbishop, and two archdeacons of this diocese. Mr. G. F. Herbert, the Secretary, in a reply dated August 16, and addressed to the Rev. Ashton Oxenden, Pluckley Rectory, Kent, states that—"The memorial has been considered by the directors, and I am instructed to inform you that it will receive their further attentive regard."

OBITUARY OF EMINENT PERSONS RECENTLY DECEASED.

THE DUKE OF HAMILTON.



ALEXANDER HAMILTON DOUGLAS, Duke of Hamilton, Marquis of Hamilton, Marquis of Douglas and Clydesdale, Earl of Angus, Arran, and Lanark, Lord Hamilton, Avon, Polmont, Mackanshire, Innerdale, Abernethy and Jedburgh Forest, in the peerage of Scotland; Duke of Brandon and Baron of Dutton in the peerage of England; Premier Peer of Scotland, Duke of Chatelherault in France, Lord Lieutenant of Lanarkshire, Hereditary Keeper of Holyrood House, and a Knight of the Garter, was the elder son of Archibald, the ninth Duke, by his wife, Harriet, daughter of Alexander, sixth Earl of Galloway: he was born the 3rd October, 1767. His youth, after the period of education, he spent in Italy: he there acquired considerable taste, experience, and judgment in the fine arts; and throughout his long subsequent life he was a warm patron of art and of every artist who sought his aid. He first bore the courtesy title of Marquis of Douglas; and as such held a seat in the House of Commons for four years. He was returned for the ancient borough of Lancaster, in 1802, jointly with Sir John Hunt, defeating Mr. Fenton Cawthorne by a majority of 280. His career in the House of Commons closed on the 28th of May, 1806, when he was appointed British Ambassador at St. Petersburgh, in which capacity he remained at the Court of Russia till the month of July, 1812. Immediately before Lord Douglas proceeded to St. Petersburgh he was sworn in a member of the Privy Council. On the 4th of November in the same year (1806), he was called to the House of Peers in his father's barony of Dutton.

On the 16th February, 1819, he succeeded his father as tenth Duke. His Grace filled the office of High Steward at the coronations respectively of William IV. and her present Majesty. He was elected a Knight of the Garter in the year 1836. In politics his Grace was a Whig, and always held firmly to his principles. He was a consistent Liberal in times when being so brought but odium and suspicion. His high and honourable character, and his benevolent disposition, gained him general popularity. A trait of his private generosity deserves to be here recorded. His father had left all his personal property to his daughter, the Duchess of Somerset, to the exclusion of his younger son, the late Lord Archibald Hamilton, a man well known in public life and long a member of the House of Commons. The Duke, on being informed of this, immediately presented his brother with 20,000. The Duke's eldest sister was Lady Anne Hamilton, the well-known confidential friend and companion, throughout her trials and troubles, of Queen Caroline, the unfortunate consort of George IV. Some thirty years ago, during the unhappy and unbecoming scene which then agitated the public mind, Lady Anne Hamilton enjoyed no small amount of popularity. She died the 10th of October, 1846.

The Duke of Hamilton married, the 26th April, 1810, Susanna Euphemia, second daughter and coheiress of the late eminent author and architectural genius, William Beckford, Esq., of Fonthill Abbey, Wilts, and granddaughter of the William Beckford of Fonthill, who, though never in trade, and the representative of an ancient family, was an Alderman, and twice Lord Mayor of the City of London; and whose abilities and patriotic spirit achieved an honourable and memorable fame. The Duke of Hamilton, by his marriage with this lady (who survives him), has had issue an only daughter, who married, in 1832, Henry Pelham Clinton, now Duke of Newcastle, but was divorced from his Lordship in 1850; and an only son, his successor, William Alexander Anthony Archibald, the eleventh and present Duke of Hamilton, born February 19th, 1811, who married, 23d February, 1843, the Princess Marie, youngest daughter of the Charles Louis Frederick, reigning Grand Duke of Baden, by his consort Stephanie de Beauharnais, who was daughter of Claude, Count of Roches-Baritaud, the representative of a younger branch of the Beauharnais family. It is from this Duchess of Hamilton that the mother is cousin of the late Empress Josephine, and of her grandson, the President of the French Republic.

Alexander, tenth Duke of Hamilton, died on the 17th inst., at his mansion in Portman-square.

His Grace was the representative of two of the greatest houses in Europe—Douglas and Hamilton: the former by male, the latter by female descent. It is scarcely necessary to refer to the early glory of the Douglases: if a long line of illustrious ancestors, distinguished by the highest rank of honour, and connected with the most august houses in Christendom, can add importance to a name, there is not one in this empire more dignified than that of Douglas. The family has been connected with the first nobles of Scotland, England, and France, and it has intermarried no less than seven times with the royal houses of Scotland, and once with that of England. The martial and chivalrous spirit of the race is proverbial—

The Douglases were heroes every age.

The Hamiltons were second only to the Douglases in historic eminence. By the marriage of Sir James Hamilton, sixth Lord of Cadzow, with the Princess Mary, daughter of King James II., his descendants became next heirs to the Crown of Scotland.

Hamilton Palace was made, by the taste of the nobleman whose death we are recording, one of the noblest residences in Europe; and it probably contains a greater collection of precious curiosities and rare works of art than the abode of any man under the rank of a Sovereign. In what is really solidly valuable, it far surpasses Chatsworth as it is, and Stowe as it was. But the collection at Hamilton was the great work of the late Duke's long lifetime; and is the result of his exquisite taste, varied learning, vast wealth, and anxious search. The surrounding park is of great extent and diversified beauty: on one side it is bounded by the full sweep of the broad and majestic Clyde; while, at the distance of about two miles from the palace, it is intersected by the river Avon, which runs between two lofty and precipitous banks, dividing the hill crowned by the Chateau of Chatelherault from the grand old forest of Cadzow, the ancient residence of the family during the first centuries of its existence in Scotland.

CHIEF JUSTICE BENT.

JEFFERY HART BENT, Chief Justice of British Guiana, whose death has just occurred, and who, for nearly forty years, occupied the judicial bench in several of our colonies, and had the honour of holding the commission of four successive sovereigns, was the eldest son of Robert Bent, Esq. (a descendant of a very ancient Lancashire family), who, at one period of his life, was intimately and politically connected with Charles Fox and the leading members of the Whig side, to which party his son continued attached during his life. Chief-Justice Bent took a respectable degree at Cambridge, and was called to the bar by the Society of the Middle Temple, in 1806. His first judicial appointment was in 1814, when he was sent out to New South Wales as Chief Justice, upon the application for assistance from his brother, Ellis Bent, Esq. then Judge-Advocate, and sole judicial officer in that colony. Upon these two brothers devolved the entire task of modelling the judicial system of the then infant colony; and to Mr. Ellis Bent must be attributed the credit of its first legal constitution. Mr. Ellis Bent finally sank under the labours he had to undergo and the difficulties he had to encounter; and, upon his death, his brother, the Chief Justice, returned home. In 1819, or 1820, Mr. Bent was appointed Chief Justice of Grenada; and from that period to the time of his death, with the exception of two years' leave of absence, he continued to reside in the West Indies, in the exercise of his high legal functions. His last appointment was Chief Justice of British Guiana, which he obtained in 1836. During the lengthened period of thirty-two years he established for himself throughout the entire of our West India colonies, the very highest reputation as a sound constitutional lawyer and an independent and upright judge. While Chief Justice of Grenada, he carried many useful legal reforms, and acquired great and deserved popularity from the stand he made against the illegal interference of the Governor and Council with the liberty of the subject and the independence of the Bench. He was, in consequence, suspended by the then Governor. After a lapse of three years, and a lengthened investigation before the Privy Council, the Chief Justice's conduct was fully vindicated and approved of, and the colonial authorities were directed to reinstate him, and pay the arrears of his salary, amounting to £2000. These arrears, however, he never succeeded in getting.

Chief Justice Bent was uncle to the Right Rev. Robert Bent Knox, D.D., present Bishop of Down, Connor, and Dromore; his Lordship's father, the Hon. Charles Knox, late Archdeacon of Armagh, having married the Chief Justice's sister. The Chief Justice, through his mother, who was of the Hart family, claimed descent from Lord Cheney.

DR. HERBERT MAYO.

THIS gentleman, a distinguished member of the medical profession, and the author of some popular and esteemed works on medical science, was formerly senior surgeon to the Middlesex Hospital, and Professor of Physiology at King's College, London. He wrote, among other books, the following: "Outlines of Human Pathology and Physiology," the "Philosophy of Living," and a well-known work on the truths contained in popular superstitions. His death occurred on the 15th inst., at Hadwellbach, near Mayence, on the Rhine.

WILLS.

The will of Silvestre de Souza Telles, a merchant of Lisbon, was proved in the Prerogative Will Court on the 11th of August, by his widow Donna Leocadia Sanguina de Souza Telles, the sole executrix, the property in this country being estimated at £50,000. Having no children, he has left to his godson, who resided with him, a large amount of his property, and has bequeathed liberally to Catholic charities; he directed that he might be conveyed to the grave by men from abroad, from the mendicity almshouses, who shall be paid, and a distribution of alms made to all poor persons present thereat; 100 masses to be said for his soul in the presence of his body, both on the day of his death and interment, 300 rees being given for each mass; and, in continuation, 500 masses for his soul, 100 for his father, 100 for his mother, and 100 for all his other relations, 200 rees being given at each mass.

The late Lord Wenlock's will has just been proved in London; his Lordship having died possessed of personal property in this country amounting to £40,000. The will had been first proved in York, at the early part of this month (August), and was respectively granted to the Baroness Wenlock, his relict, for the use and the residue of the personalty; and at her demise the two younger sons and the daughter are to receive each an annuity of £1000 out of Sulinglieat and Kelfield. The present Baron holds the estates of Wheldrake and Yarum, and to his heirs is entailed all other real estate, whether acquired by profession or purchase.

LARGE CHARITABLE BEQUESTS are left under the will of the late Miss Abigail Fratten, formerly of the Row-road, Marylebone, but latterly of Pembridge Villas, Bayswater, which will be laid in the following proportions, for the demise of the annuitants under the will: -To the Society for the Propagation of the Gospel amongst the Jews, £2000; Infant Orphan Asylum, Wanstead, £1000; Society for Maintaining and Educating Orphans of Clergymen, St. John's-wood, £1000; Vicar and Churchwardens, for the Poor, of Stendon, Herts, £1000; Metropolis Churches Fund, £300; Colonial Church Society, £300; Church Missionary Society, £300; Shipwrecked Mariners' Friend Society, £300; St. Pancras Female Charity School, £100; Brompton Hospital for the Cure of Consumption, £200; Society for Enlargement and Building of Churches, £200; Lying-in Hospital, Lisson-grove, £100; Mendicity Society, £100; Episcopal Floating Church on the river Thames, £100; Prayer-book and Homily Society, £100; Royal Sea-bathing Infirmary, Margate, £100; Blue-coat School, Westminster, £100; North London University Hospital £100; Bloomsbury Dispensary, £50, and to St. Pancras (General Dispensary, £50. The residue of her property to be divided in moieties, one to the Governors of Queen Anne's Bounty, the other to the corporation of the Sons of the Clergy, for the poor Widows and Sons of Clergymen. The personal estate paid a duty on £35,000.

CHURCH, UNIVERSITIES, &c.

THE NEW CONVOCATION.—The returns of the New Convocation have not yet all been received, and in many instances, where the Bishop has to select from those returned one or more to sit in the Convocation, we have not yet heard the final result. We shall print the list as soon as it is complete.

APPOINTMENTS AND PREFERMENTS.—The following appointments and preferments have recently been made:—*Rectories:* The Hon. and Rev. G. Colborne, to Dittisham, Devon. The Rev. Charles Frank Colchester, to Ockworth, Gloucestershire. The Rev. J. Farquhar, to Llanthewy-Skirrid, Monmouthshire. The Rev. H. J. Hutton, to Stoke Rivers, Devon. The Rev. F. E. Long, to Friars Portion, Tiverton, Devon. The Rev. Hardman Molineux, to Elmsett, Suffolk. The Rev. H. Nanney, to Firsby, with the vicarage of Orby, Lincolnshire, both in the county of Lincoln. The Rev. F. Thorpe, to Burton Overy, Leicestershire. The Rev. W. F. Wood, to Saddington, Leicestershire. *Vicarages:* The Rev. G. R. Bell, to Llantrisnent with Pertholey, Monmouthshire. The Rev. C. S. Calfin, to Minon-cum-Sutlingbourne, Kent. The Rev. R. Cooper, to Rushal, Norfolk. The Rev. J. Jones, to Newcru, with Pylleu, Pembrokeshire. The Rev. F. Neale, to Wootton, Beds. The Rev. J. N. White, to Walham, Norfolk. The Rev. George Griffith Williams, to Llanyody, Carmarthenshire.

TESTIMONIALS.—The following clergymen have recently received testimonials of esteem and affection:—The Rev. William Morrell Lawson, and Mrs. Lawson, on his relinquishing the curacy from his incumbency of Moseley Chapel, near Birmingham, from the congregation; the Rev. T. Scott, vicar of Weybridge, Northamptonshire, from the inhabitants; the Rev. Joseph Deans, vicar of Lamb, from the Sunday-school teachers of the parish; the Rev. J. C. Wood, curate of St. James's Church, Accrington, from the members of the female Bible class; the Rev. Harry Farr Yeatman, rector of Stock-Gayland, Dorset, from his friends.

NEW CHURCHES IN LAMBETH.—It is intended, as soon as the necessary arrangements can be made, to erect two new churches in the extensive parish of Lambeth, one to the south of Upper Stamford-street—probably in Thomas-street—to be dedicated to St. Andrew; and another in the immediate neighbourhood of the Victoria Theatre, probably in Gilbert-street. In both cases temporary churches have been erected for the ecclesiastical districts assigned, and clergymen appointed as incumbents. Liberal contributions have been made in aid of the erection of the proposed churches.

The Rev. John C. Miller, M.A., Rector of St. Martin's, Birmingham, has been appointed to an honorary canonry in the cathedral church of Worcester, by the Lord Bishop of that diocese.

An address, signed by the churchwardens and 730 inhabitants of St. Margaret's, Barking, Essex, has been presented to the Rev. Charles Henry Lipscomb, testifying their sincere regret that the rev. gentleman was about to be separated from them after having officiated at their church for a period of five years, during which his diligent, humane, and charitable execution of his sacred duties excited the gratitude and admiration of all.

The *Essex Gazette* says that the Right Rev. William Rowe Lyall, D.D., Dean of Canterbury, and Rector of Great Chart, has been seized with paralysis.

The Convocation of the Clergy for the province of Canterbury was duly prorogued on the 21st inst., by the Vicar-General of the Archbishop of Canterbury, pursuant to the Royal writ, until Friday, the 22d day of October.

CLERGYMEN OF COLOUR.—We read the following in the *Union*:—"A very rare occurrence in the annals of the Church of France took place on Sunday last, being Assumption Day. In the church of Notre-Dame des Victoires, Mgr. Pallegoix, Bishop of Siam, officiated, and was assisted by the Very Reverend Father Santa Maria, a negro of the Kingdom of Congo, who has for years been bought as a slave in the market of Alexandria by an Italian priest, has since taken holy orders, and is now on his way to his own country, in order to spread the light of faith among his brethren there. M. Lacombe, a young priest of the Seminaire du St. Esprit, and the son of a noble family of the kingdom of Congo, officiated as deacon. M. Mikalowitch, distinguished both for his virtues and talents, who, after having miraculously escaped from Siberia, where he was kept in irons, the marks of which he still bears, has sought a refuge in the above-mentioned privileged church, officiated as archdeacon. Tunic, on that velvet throne, surmounted by a rich canopy adorned with ostrich plumes, were assembled the churches of Europe, Asia, and Africa; and, but for a mistake, the church of America would have had its representative. At the foot of the pontifical chair sat two young negro children in the costume of their country, who, by their simple and modest demeanour, added to the general edification. The *fête* will be long remembered with pleasure by the inhabitants of that parish."

SUPERSTITION.—The belief in sorcerers still exists in the country districts of Gallicia, and a singular instance of it occurred a few days ago. An inn-keeper at Jarcelowitze had his horse stolen, and laid a complaint before the judge of the village, one Lewy. This man immediately went to a peasant named Tubitz, who possesses great reputation in the neighbourhood as a sorcerer. "Who stole the horse?" said the judge. The sorcerer reflected for a few moments, and then said, "It is the peasant Wurbner." Without more ado the judge had Wurbner arrested, and condemned him offhand to receive one hundred and twenty blows from a stout stick. The castigation was duly administered by four stout executors. A complaint was subsequently laid before the superior authorities, and the sorcerer, the judge, and the four men who executed the sentence were arrested, and are to be brought to trial. Wurbner, the accused, enjoys a high character for honesty, and possesses so much property as to render it very unlikely that he would steal.

HORRIBLE OCCURRENCE.—A poor woman, residing in the parish of Hunsingore, had occasion, one of the last few days, to leave her home and her two children for a short time. During her absence a pig entered the kite on, got at the youngest child (an infant in the cradle, and ate the flesh off one side of its face, as well as otherwise dreadfully mangling it. It is supposed that the little sufferer endeavoured to beat off the pig with its hand, the fingers of which had partly been eaten off.

LAW AND POLICE INTELLIGENCE.

ORANGE PROCESSION AT LIVERPOOL.—On Saturday last, fifteen respectable-looking men, who had been out on bail, were placed at the bar of the Assize Court of Liverpool, charged before Lord Campbell, with having unlawfully and riotously assembled on the 12th inst., for the purpose of an Orange procession. As a former Number of our Paper we noticed the fact of the meeting of a large body of Orangemen on the day in question, to celebrate the anniversary of the battle of Aughrim, in Ireland, notwithstanding the mayor had warned them by proclamation of the illegality of the intended procession. A large force of police patrolled the town on the morning of the 12th, and, by their persuasions and imposing appearance, aided by a deluge of rain, most of the Orangemen were induced to desist from their intention. A great number, who assembled near the monument of King William III., in the London road, refused to disperse on the warning of the police; and eventually many of them, including the prisoners, were taken into custody. On searching them some were found armed with loaded pistols, and with other weapons. Lord Chief Justice Campbell suggested that the prisoners should plead guilty. He said he had no hesitation in declaring that the processions were illegal, and always had been by the common law. The whole of the prisoners, with the exception of Thomas Nevill, who, it appeared from the statement of his counsel (Mr. Monk), was not armed on the occasion, pleaded "Guilty." Nevill was at once discharged, and the others were also allowed to depart on entering into their recognisances. Most of the Orangemen appeared adorned with the colours of their order. It was with much reluctance, and solely on the advice of the Lord Chief Justice, that they pleaded guilty.

THE WRECKERS AT THE NORE.—An investigation of considerable importance, arising out of the recent attack of the Southend boatmen upon the wreck of the *Newsom*, was brought to a close on Saturday last, the 19th inst., after three entire days' examination had been occupied in the magistrates' room at Rochford, when the leaders of the alleged wreckers were brought up on a summons, which had been issued at the instance of the owners and underwriters of the wrecked schooner. Their names are Henry Cellis, master of the *New Dart*; John Jomson, master of the *William*, of Southend; William Brown, master of the *Assistance*; Abraham Robinson, master of the *Hamburgh*; George Myall, of the *New Dart*; William Robbman, master of the *Susannah*; and William Robinson, master of the *Four Brothers*; and they were severally charged with committing the double offence of having, on the night of the 24th of July, "wrongfully carried away certain large quantities of stores and property from a stranded ship called the *Newsom*, then lying at the Nore sand;" and of "forcibly entering on board the vessel *Newsom*, without leave or consent of the persons in charge thereof." The bench composed the Rev. T. S. Scratton, chairman; the Rev. Dr. Eden, Bishop of Moray and Ross, in Scotland; Daniel Scratton, deputy-lieutenant of the county; the Rev. Calcutta White; and Mr. Jonas Taylor. The examination excited a vast amount of interest, as was evidenced by the crowded state of the court. Mr. Henry Horn, barrister of the Home Circuit, with Mr. Morgan, attorney of Maidstone, conducted the prosecution; and Mr. Pelham, the London attorney, in conjunction with Mr. Wood, of Rochford, appeared for the defendants. A considerable body of evidence having been given on both sides, the Court was cleared, and after some deliberation, the Rev. Mr. Scratton (the chairman), in a brief address, acquitted the defendants of the first charge,—that they had wrongfully carried away cargo. On the second complaint, however, the bench were unanimously of opinion that it had been proved, and that they had entered on board the vessel without the leave or permission of the persons in charge. They, therefore, sentenced each of them to pay a fine of £5, or be imprisoned one month. He trusted that the lenient course the bench had taken would not be lost sight of, and that it would act as a warning to the men to be more cautious for the future in their movements against the will of those in charge. Notice of appeal to the Quarter Sessions was given by Mr. Pelham and Mr. Wood against the decision of the magistrates at Rochford Petty Sessions, in behalf of the defendants. Acting under the direction of their solicitors, they refused to pay the penalty of £5 imposed.

A CLERGYMAN CHARGED WITH FORGERY.—In the previous Number of our Paper, we noticed the trial of the Rev. James Nisbett, recently the curate of Strawley, in the county of Worcester, having been charged before the magistrates of the Worcester police-court, by Mr. Hughes, a solicitor, with a forged order and bill of exchange for £1000, purporting to have been drawn by Richard Mitchell "in favour of the prisoner, accepted by the latter, and made payable at Messrs. Scott and Co., bankers, Cavendish-square, London. On Monday, during the examination of the Rev. James Nisbett, who was remanded from last week, was again brought up before the stipendiary magistrate, Mr. Sidebotham, when evidence of a documentary character was given by Mr. Sidebotham, the solicitor employed by the directors of the Nine Elms station of the South-Western Railway Company, as was alleged. The whole of the depositions having been read over, and the prisoner having declined to enter into his defence on that occasion, he was committed for trial at the next assizes for the city of Worcester for forging and uttering the bill of exchange for £1000, to Mr. Hughes.

FRAUDS UPON EMIGRANTS.—In the Sheriff's Court of Liverpool on Saturday last before Mr. Bliss, Q.C., Thomas Jones and Williams Wilcocks, were tried and guilty of defrauding three intending emigrants of various sums of money, upon the pretence of sending them to Melbourne, Australia, advertising themselves as such in several of the provincial papers. The prisoners were sentenced to be each imprisoned six months, with hard labour.

CHARGE OF FORGERY AGAINST A SOLICITOR.—On Saturday last a Mr. William Cooper Hodgson, an attorney of hitherto highly respectable practice, pursuing his profession in Parliament-street, in the City, was arrested on Saturday last, on a charge of having forged an I O U for £1000. The name of the party whose name he is alleged was forged was that of Mr. Prickett, who is the mortgagee of certain property in Hull. On Tuesday the magistrates decided to commit the prisoner to the borough sessions, and stated that they would allow bail, himself in £2000, and two sureties in £1000 each.

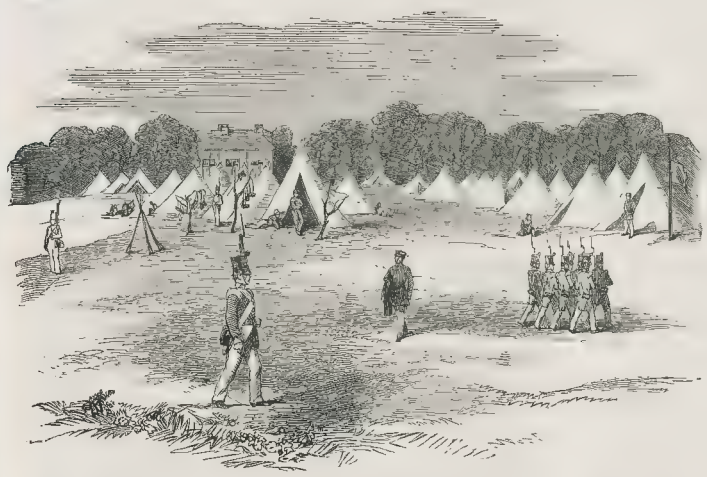
"THE LAW'S DELAY."—CHANCERY EXPERIENCE.—The cause of "Beckford *v.* Jaspar," begun above a hundred years ago, is now in a fair way of being wound up. The original plaintiff was Thomas Beckford, executor of one Jacob Pope, a merchant, in Madeira, and Edward Jaspar, also a merchant, as the original defendant. Jasper owed Pope £40,000, and Pope died in 1744, and in 1748 Beckford, his executor, filed this bill against Jasper, who died in 1754, he could put in an answer. The suit was revived against Jasper's executors, and in 1753 the cause was heard before Lord Chancellor Hardwicke, and referred to the Master to take accounts. In 1764 and 1772 further proceedings were taken, and £680 in Bank Stock and £55s. were ordered to be credit of the cause, which thus stood until 1851, when Mr. J. D. was admitted administration to Pope, the original testator, and revived the suit against Jaspar's representatives. The funds to the credit of the cause had, by accumulation of dividends, &c., amounted to £70,000. Waltham had to take out administration to five intermediate estates, and to pay £100 for the stamp duties. The case is now wound up by an order to pay the costs of all parties out of the funds in court, and to share the remainder according to the respective rights of the claimants.

ROBBERY OF PAPER FROM THE WAR-OFFICE.—William Clout, and William Dowding, labourers, were charged before Mr. Henry, the police-magistrate of the Queen-square police-office, on Wednesday, with stealing a quantity of stationery and printed papers from the War-office, where they had been employed; and Mr. W. C. Bushell, chesemonger, of 24, York-street, Westminster, and Mr. John Lady, of 9, Paris-street, Pimlico, a retired tradesman, were charged as receivers of the stolen property. After a lengthened inquiry, in which it was stated that a cart-load of this paper had been traced by the police, and which was afterwards found at the house of Mr. Lady and Bussell were alone permitted to put in bail for their re-appearance when called on.

At Bow-street police-office, on Wednesday, Thomas Gill Phibbs, son of a respectable tradesman, was charged before Mr. Henry by his father with embezzlement. The prosecutor, who appeared much affected, stated that the prisoner had frequently taken his money, and lost it at betting-flats and at betting-offices. He was a good workman, and thought he could not be done without. The magistrate remanded him for a week, and refused to admit him to bail.

On Saturday last, the visiting justices of the county gaol of Appleby, after a patient inquiry into the conduct of some of the prisoners on the previous Thursday, who had committed a gross outrage on the turnkey, with a view to their escape from the gaol, sentenced two of the prisoners, namely, Moore and Thexton, who had been convicted of felony—to be kept in irons, and to be flogged. The other transport prisoners taking part in the conspiracy were ordered to be continued in close confinement. Isaac Bird, the turnkey, would most probably have been murdered on the occasion, but for the prompt, but new practice into operation may cause some confusion in the business of the Court, and that thus the practice may become discredited. It has had a short trial. The committee, therefore, felt it to be their duty to call the attention of both Houses of Parliament to this, and prepared a clause for increasing the number of judges, which was moved in committee in the House of Commons, but rejected.

REWARD OF MERITORIOUS SERVICES.—A few days since in the presence of the Police Commissioners, Police-constables Bushbridge and Alexander, of the D division, received from Mr. Levy, of the Red Lion Tavern, City-road, a very handsome acknowledgment of the important service they had rendered on the night of the 11th of March, when his premises were almost entirely destroyed by fire. On that occasion Bushbridge rushed up stairs through the flames, at the imminent risk of his own life, to the bed-chamber, and succeeded in rescuing Mrs. Levy and her three children from destruction. To him was presented a silver watch, with an inscription to the effect, that it was a mark of respect for his courageous conduct in saving the lives of Mr. Levy and her children. To the other constable Alexander a silver snuff-box was given, with an appropriate inscription for his vigilance in the timely discovery of the fire.



THE ENCAMPMENT AT SIX-MILE BRIDGE, CLARE.

THE RECENT FATAL ELECTION RIOT AT SIX-MILE BRIDGE, CLARE, IRELAND.

The fatal riot between the peasantry and the military, which took place on the 22d of July last, during the recent election for the county of Clare, at one of the polling-places for the county, the village of Six-mile Bridge, on the borders of Limerick, has led to a lengthened investigation before the Coroner and a jury of seventeen persons, which was brought to a close last week.

The riot arose out of an attempt of a large body of the peasantry to rescue from the custody of a party of soldiers of the 31st Regiment of Foot, a number of voters who were being thus brought to the poll under military escort, to prevent their being tampered with by the priests or their fellow-religionist electors, who, indifferent to all apprehensions on the score of their landlords' disapproval, were voting and exerting themselves generally in favour of the Liberal candidates. The military escort, as it entered the village of Six-mile Bridge on the morning of the election, was closely pressed upon by the peasantry, and, as it is alleged, stones were thrown, some of the soldiers knocked down; and the attitude of the people was altogether of so menacing a character, that the soldiers, who in the *mêlée* became separated both from their officers and Mr. J. C. Delmege, the magistrate in command, fired, as it would appear, without orders, and, as they themselves allege, in self-defence. The result was that six men were killed upon the spot and that several were wounded, one of whom has since died. At the coroner's inquest, the result of which we noticed in our late edition of last week, strong party feeling was exhibited on both sides, and the evidence was of a very contradictory character, some of it tending to exonerate the soldiers altogether, and to throw the blame of it upon two Roman Catholic priests, the Rev. Messrs. Burke and Clune, who were present at the riot; while, on the other hand, there was evidence tending to show that the firing of the soldiers was unprovoked. This version of the case was that which obtained the credence of the jury, the majority of whom (12) returned a verdict of "Wilful Murder" against Mr. John C. Delmege, J.P., the magistrate who commanded the escort, and the following soldiers of the 31st Regiment, viz.: John Gleeson, James Postings, William Barnes, John Thompson, John Dwyer, James Sharpe, Thomas Clarke, and John Carter. The minority of the jury (5) were for acquitting Mr. Delmege, and returning a verdict of "Manslaughter" against certain soldiers whose persons were not identified. However, this latter, being nothing more than an opinion of the minority, had no effect upon the verdict. The soldiers and Mr. Delmege have since been lodged in Ennis gaol, to await their trial, bail for their future appearance at the assizes having been rejected by the Coroner.

During the investigation of the coroner's inquest, which lasted nearly three weeks, a large body of military belonging to different regiments, together with the soldiers of the 31st Regiment, who were implicated in the charge, and some constabulary, were encamped in a field adjoining the village of Six-mile Bridge (see Illustration); and immediately on the verdict being announced, the above-named soldiers were taken into custody, and marched off to Ennis gaol. The following morning the tents of the encampment were struck, and the various detachments marched off to their different quarters.

The law officers who have appeared in defence of the soldiers during the inquest are taking steps to have the Rev. Messrs. Burke and Clune, the two priests above referred to, prosecuted on a charge which they say they can prove against those clergymen; viz. "of wilfully and maliciously inciting, on the 22d of July last, the people to a riotous assemblage and attack on her Majesty's troops in the execution of their duty;" and they are also endeavouring to have the soldiers and Mr Delmege liberated on bail; but nothing definite in respect to either of these matters has yet transpired.

SCENE OF THE RIOT AT SIX MILE BRIDGE.

THE NEWCASTLE SCREW COLLIER, "JOHN BOWES."

The first experiment of the carriage of coals by iron steamers has just been accomplished with perfect success by the *John Bowes*, a new iron screw collier, just constructed by Messrs. Palmer, Brothers, and Co, of Newcastle-upon-Tyne; the launch of which vessel was engraved in the Illustrated London News of July 17. The result of this first trial has proved that ere long we shall see the coasting trade performed by screw steamers, and thus prevent the encroachment now being made by railways upon the coasting trade.

The change effected by means of steam as an auxiliary power is truly surprising. Thus the *John Bowes* commenced loading her cargo of 540 tons of coals at Sunderland on a Wednesday at noon, to enable her to sail by midnight; and she completed her passage from thence to the collier docks attached to the East and West India Dock Railway, at Blackwall in 48 hours, working only at half speed, in consequence of the newness of her engine. By means of the hydraulic cranes erected at the dock her large cargo was discharged into railway trucks in the incredibly short time of 18 hours, thus enabling her to leave the dock for the return voyage on Saturday night.

Another facility for dispatch has been secured by the application of water ballast, instead of the costly operation of the usual mode of balasting.

The old colliers, which, upon an average, have not more than half the capacity, require upwards of a month to effect the voyage, which has been accomplished by this steam-vessel in less than a week. The coals thus delivered will be conveyed by the West India Docks and Birmingham Junction Railway, and deposited in *dépôts* so constructed as to screen the coals and shoot them into sacks without manual labour, the coals being by such expeditious means taken from the pit to the consumer's store in the short space of four days. This expedition must necessarily secure reduction of price. Irrespective, however, of these advantages, the improvements will be the means of introducing a superior class of vessels into our coasting trade.

ARRIVAL OF THE "JOHN BOWES" SCREW STEAMER IN THE COLLIER DOCK OF THE EAST AND WEST INDIA DOCK RAILWAY.

THE NAVAL COMBAT ON THE SEINE, AT PARIS.

ANCIENT STONE FOUND IN ST. PAUL'S CHURCHYARD.

(To the Editor of the ILLUSTRATED LONDON NEWS.)

Clapham Park, August, 1852.

THINKING it may interest some of your antiquarian subscribers, I send you herewith the transfer of a rubbing taken from a sculptured

ANCIENT SLAB FOUND IN ST. PAUL'S CHURCHYARD.

slab, of ancient date, recently exhumed during the excavations for Messrs. Cook's new warehouses, on the south side of St. Paul's Church-yard. It was discovered at a depth of about 25 feet from the surface, and appears to have formed a grave-stone or landmark, the lower part having been bedded in the ground and only roughly hewn, whilst the remainder of the slab is neatly squared.

The material is a rather friable oölite, probably Bath. The dimensions, when complete, were 1 foot 10½ inches wide by 2 feet 4½ inches long; 10½ inches of the lower part being buried in the soil; the thickness was 4 inches at the upper, and 5 inches at the lower, imbedded, and roughly finished end. The exact size of the sunk panel containing the sculpture is 18½ inches by 18½ inches.

The faces of the sculpture itself are flat, and come up to the general surface plane of the slab; the interstices are sunk out to a depth of barely ¼ of an inch, giving of course a relief to that amount.

The whole of the sculpture had received a coating of deep indigo-coloured paint, still very evident in places; slight traces of red are also visible, but are possibly stains of iron oxide.

The extraordinary figure of the animal filling the panel will be understood by the drawing. I would call attention particularly to the horned head and spurred claws, the combination of which seems eminently fantastic. A smaller head on the model of the principal one will be observed towards the upper right hand of the panel. The meaning of the scrolls and details surrounding the main figure I am quite at a loss to conjecture. The whole composition looks very mythologic, or possibly heraldic.

The only inscription is found on the left-hand edge of the slab, and extends from the top to a little below the bottom of the sculpture panel. A transcript is appended to the front view of the monument. The characters, which are Runic, are deeply incised; and indicate great antiquity of execution for the relic.

The slab was, I believe, broken in excavating, and the missing portion in the left-hand lower corner (which would have been all below the ground line) was thrown into one of the concrete trenches.

I have directed a cast to be made of the slab as it exists, which I shall take the liberty of forwarding to the Society of Antiquaries, on their reassembling, conceiving that a double interest attaches to national monuments of an archaic age when discovered in the most ancient portions of our metropolis.

I am, Sir, your obedient servant,

JAMES T. KNOWLES, Jun.

THE PARIS FETES.—NAVAL COMBAT ON THE SEINE.

THIS mimic fight was fully detailed in our Journal of last week, at pages 142 and 143. We now engrave the scene with the gaily-decked frigate, *La Ville de Paris*, and the two attacking steamers; the Havre long boats; part of the Quai parapets, and the spire of the Invalides above; the President's splendidly decorated tribune on the Quai D'Orsay, &c., with the busy episodes of the sham fight.

DEPARTURE OF AN EMIGRANT SHIP FROM BARNSTAPLE.

ON the 18th instant the first vessel ever fitted out at Barnstaple as an emigrant ship was towed down the river, with a number of her passengers on board, and anchored in Appledore Pool, previous to sailing or Liverpool, where she has since proceeded, to take in the remainder of her complement. The new vessel is a clipper ship, named the *Lady Ebrington*, built by Mr. John Westacott, of Barnstaple, and commanded by Captain George Harris. She classes A 1 for fourteen years, at *Lloyd's*, and her registered tonnage is 400 tons. She is one of several vessels that have recently been built by Mr. Westacott, from models by Mr. Norman of Liverpool, and is pronounced by competent judges to be both in model and finish a very beautiful specimen of ship building. An immense concourse of spectators assembled to witness the departure of the ship and passengers from Barnstaple, thronging the piers and opposite banks of the river, and several rounds of artillery were fired in honour of the event. A large party of gentlemen breakfasted in her saloon after the ship came to an anchor in the pool. The *Lady Ebrington* is understood to be the first of a line of ships to be built for the North Devon Shipping Company.

DEPARTURE OF THE "LADY EBRINGTON" EMIGRANT SHIP FROM BARNSTAPLE.

STATUE OF THE LATE SIR ROBERT PEEL, AT LEEDS; BEHNES, SCULPTOR.—(SEE NEXT PAGE.)

THE PEEL STATUE IN LEEDS.

The inauguration of the bronze colossal statue, raised by subscription, to the memory of the late Sir Robert Peel, in the borough of Leeds, took place on Friday se'nnight, in the presence of a vast concourse of people. The site is an open angle, between the Court-house, the Coloured Cloth Hall, and the Commercial Buildings. The sculptor is Mr. Behnes, who, it is said, has received £1800 out of the £1750 which were subscribed in Leeds for the purposes of the testimonial. The design of the statue is good, and the likeness faithful. The right hon. baronet is represented as addressing the House of Commons, his left arm resting on his hip, and his right holding a roll of paper. The figure is 8 feet 6 inches high, and was cast in one solid piece at the works of Mr. F. Robinson, in Pimlico. It is the first instance in which so large a piece of workmanship has been moulded in one entire mass, and the experiment has been highly successful. The basement of the pedestal on which the statue is placed is of grey Aberdeen granite, and the shaft and mouldings of red Aberdeen granite, finely dressed, but not polished. The only inscription is the word "Peel," engraved in simple characters on the shaft. The summit of the pedestal is 11 feet 6 inches in height, and has been erected upon a foundation of 6 feet of concrete and 2 feet 6 inches of ordinary masonry. The area of the base is 12 feet by 10 feet 6 inches. The weight of the masonry is 37½ tons, and of the statue 2 tons, the total measurement of solid masonry being 370 cubic feet.

At twelve o'clock at noon a procession from the Court-house (headed by Mr. Read, the chief constable), of the chairman of the committee (Mr. W. Beckett, M.P.), the Mayor (Mr. J. H. Shaw) and corporation, the sculptor (Mr. Behnes), the committee, the borough magistrates, and the invited friends, having arrived at the site, a flourish of trumpets was sounded, a flag was hoisted on the top of the Court-house, a salute of artillery was fired, and amidst the enlivening strains of music from the band of the Yorkshire Hussars, the statue was uncovered, and was saluted by a loud and prolonged cheer from the vast concourse.

Mr. W. Beckett, M.P., then advanced to the front of a temporary platform adjoining, and delivered the inauguration address, in which he reviewed in eulogistic terms the political career of the late Sir R. Peel.

Amongst the gentlemen who were present on the occasion were the Earl of Harewood, Mr. J. H. Shaw (the Mayor of Leeds), Mr. Edmund Denison, M.P., Sir George Goodman, M.P., Rev. Dr. Hook (Vicar of Leeds), Lord West, Major Stuart, Captain Albany, Lieutenant Tinley, Fitzwygram, Dr. Logue, Lieutenant Boothby, Captain Featherstone, R.N., Captain Ward, &c.

In the afternoon a large party of the nobility, gentry, manufacturers, merchants, and tradesmen partook of a sumptuous banquet in the Music-hall in honour of the occasion. Mr. Beckett, M.P., in the chair—at which various appropriate toasts and speeches were delivered; amongst them, "The immortal memory of the late Right Hon. Sir Robert Peel," which was drunk in solemn silence.

At Montrose a similar event took place on the following day (Saturday last). The statue was erected by the subscriptions of the inhabitants; and, after a very able address from Mr. A. Foote, was delivered over in their name to the Right Hon. the Provost of the magistrates and town council, who were present on the occasion. The statue was executed by Handyside Ritchie, of Edinburgh, and is considered a very fine work of art. It stands in the High-street, opposite the house once belonging to the famous Marquis of Montrose.

CALENDAR FOR THE WEEK.

Sunday, August 29.—Twelfth Sunday after Trinity.
Monday, 30.—Abolition of Slavery Act passed, 1833.
Tuesday, 31.—John Bunyan died, 1688.
Wednesday, September 1.—St. Giles. Partridge shooting begins.
Thursday, 2.—Great Fire of London, 1666, O. S.
Friday, 3.—Battle of Worcester, 1651. Oliver Cromwell died, 1658.
Saturday, 4.—Riots at Manchester, 1830.

WITH THIS WEEK'S "ILLUSTRATED LONDON NEWS"
IS PUBLISHED A SUPPLEMENT, GRATIS.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, AUGUST 28, 1852.

A portion of the American press and people, aided and abetted for temporary and party purposes by one or two leading American statesmen, seems at present disposed to be pugnacious. Hardly has the great Cod-Fish Question been ended, if ended it be, than a new pretext for squabbling has been discovered. The Lobos, or Seal Islands, lying about forty miles eastward of the coast of Peru, form the subject of the new war of words. When these islands, long neglected, were found to contain large quantities of valuable guano, the Government of Peru at once laid claim to their sovereignty—and being a poor as well as a rapacious and deeply-indebted Government, it endeavoured to establish a monopoly. The British Government, on being applied to for information by a body of British merchants interested in the trade, acknowledged that the Peruvian claim was just and well founded. This decision was to some extent popular in England, because the English creditors of the Peruvian Government are not only great in number, but because they are naturally anxious for the often-promised and vainly-expected payment of their dividends. Bondholders are but bondholders; and it does not, of course, signify to them, in that capacity, if their good fortune and that of Peru, in possessing the guano islands, be turned to the disadvantage of all consumers of guano, by the monopoly price which Peru is likely to put upon the article. But the Americans, it would appear, do not admit the right of Peru to these islands. It is alleged on their behalf that they are so far from the mainland as to be the common property of the world; or, if that plea be untenable, that they are American by the right of prior discovery. In support of the second plea, they state, in a document signed by Mr. Webster, that "it is quite probable" that one Benjamin Morell, jun., the master of a New York schooner, "who visited these islands in 1823, may justly claim to be their discoverer." But this loose assertion, and the looser reasoning founded upon it, all fall to the ground. Geographical works published long previous to the alleged discovery by Benjamin Morell, jun., mention these islands; and some of them, moreover, make mention of them as Peruvian. One volume, published in London so early as 1705, says—

> Lobos is an island in the south sea of America. It lies in the southern latitude of six degrees twenty-four minutes, and five leagues distant from the main. 'Tis called Lobos de la Mar, to distinguish it from Lobos de la Terra, which lies nearer the main. Lobos or Lovos is the Spanish name for seal, of which there are a great plenty about these islands.

This is of itself sufficient to dispose of the American claim to them on the pretext of prior or first discovery. With regard to the allegation that these islands are the common property of the world, we only wish, for the sake of British agriculture and commerce, that they could be proved to be so. If the United States could profit anything by a free trade in guano with these, or any other islands, Great Britain would profit still more. But what the loud-talking party in America really desire, is not the free delivery of the Lobos Islands to the commerce of the world, but their appropriation by the United States. As far as British interests are concerned Peru may as well possess them as the Government of Washington. The agriculture of Great Britain and of the world will be none the worse, and the English bondholders will be all the better, for the confirmation of the Peruvian and the defeat of the American claim. But in neither case will this country be drawn into a dispute, though, for their own purposes, a noisy section of American politicians may bluster, as if a war with somebody or anybody was to grow out of these very simple and very intelligible circumstances.

If history be philosophy taught by example, what a lesson may be learnt from Smithfield,

> Which, like a toad, ug'y and venomous,
> Wears yet a precious jewel in its head:—

the fine old hard pre-eminently British gem, Consistency. It has always been a nuisance. It has, for ages, preserved to itself that character as jealously as if obstinate persistency were the brightest jewel in the civic crown. From the days when it was called a "rude rough place" for bull-fights and man-fights, to those when *Bardolph* bought his master's horses there, and when it was the great Roman Catholic fire-place for roasting heretics, down to the present time—when it tortures its victims by means of rusty-droves and spiked goads, or by a subtler destroyer than fire and sword, poisoned air—Smithfield has never been anything else, even by accident, than a nuisance. Like Belshaft's will, also, it has been not only consistent itself, but is the cause of consistency in others. There are members of the Corporation of London who cling to it with the desperate tenacity of certain wild animals when their meals of offal are in danger. With unswerving constancy they have defended and advocated Smithfield through—not good report, for that never existed—but through evil report: they have battled valiantly against public indignation. In the face of indisputable evidence, they still deny that Smithfield is, or ever has been, a nuisance; but declare, *contrà*, that a market for live oxen, calves, sheep, pigs, horses and donkeys—a market which is a rendezvous for drovers, horse-coupers, knackers, and costermongers; a market which is (because of its confined space) an arena for all sorts of cruelty; a market which congregates around it establishments for slaughtering, gut-spinning, bone-boiling, and fellmongering—that such a market is not detrimental, but improving, to a neighbourhood; that in the intervals of business it forms a charming promenade for wives and daughters, and makes a pleasant and healthful playground for young children; that the air, enriched with evaporating ammonia, has an effect upon the system decidedly fattening; that, in short, a live cattle market, with all its noxious concurrents, is, rather than otherwise, a blessing to a crowded district.

The public at large, however, which strongly differs from these opinions, despite the persevering constancy with which they have been urged for nearly half a century, has decided that Smithfield Market is a nuisance, and one that shall be no longer borne. The Smithfield Market Removal Act was passed; and the grim consistency of the lovers of the market was, it was supposed, utterly quelled. But it only slept. Deprived of their vested rights in the gigantic nuisance, the City Corporation caused it to be indignantly declared in Parliament that no inducement should tempt them to have anything whatever to do with any new market that was not in the densest part of the densest city in Europe. A merciful Legislature, however, gave them six months to repent; and on the very last day of that six months the City returned to its allegiance to King Dirt. An ancient, a revered, and profitable nuisance was not to be readily given up; and, although the act was passed expressly to abolish the gratuitous evils, and to mitigate the unavoidable nuisances of a live cattle market, by having it removed from too dangerous a proximity to human dwellings, yet the market committee of the city of London have determined to increase rather than to abate the nuisance by placing it—with an accession of detestable but unavoidable accompaniments—in the nearest and most crowded suburb they could find. In choosing the land which lies between Islington and Camden Town (known as Copenhagen-fields), they have acted precisely as if they had long successfully withstood an indictment for continuing an intolerable nuisance inside a man's house; but, having at last been beaten, had revengefully evaded the law by removing it into his garden.

That part of the Marquis Camden's property which has thus been threatened with invasion forms one of the handsomest suburbs of the metropolis. It joins the Regent's Park to the projected new Finsbury Park by means of a broad road flanked with picturesque detached residences. It consists entirely of handsome villas, which can never be converted into shops, or such edifices as are requisite near the boundaries of a live cattle market. The Islington limit of the proposed site is nearly as densely populated as the immediate neighbourhood of Smithfield is; and so closely do some of the new houses press upon it, that they must be pulled down to afford sufficient space. To show the tendencies of the district, it is only necessary to state that every foot of the ground to be bought by the City Market Commission has been already planned out to be covered with ornamental habitations of the best class; and one of the first steps of the Commission was to offer to the architect who had made the plan, a compensation of £3000 for the loss of his job. Copenhagen-fields is under two miles of direct distance from Smithfield; consequently, in order to reach it, cattle will be driven as dangerously through the streets, and the accumulation of sewage will have to pass under them, as heretofore. To crown all, that indispensible element, water, is so scarce that the present inhabitants complain of limited supplies. In short, to place a new metropolitan cattle-market in Copenhagen-fields will be utterly to evade the intention of the Smithfield Removal Bill, and to intensify the nuisance which the City magnates have ever so zealously and so successfully cherished and preserved.

Happily, to every step in the completion of this gigantic mistake the consent of a Secretary of State is necessary. That has fortunately only been given to the first step. Let us hope that it will be so far withheld as to strangle further active proceedings in the matter; and by causing the new market to be removed to a more distant and less deleterious site, close the History of a Nuisance.

Composition of Parliament.—The New House of Commons comprises the large number of 101 barristers and 18 attorneys returned. Of merchants, manufacturers, and wholesale dealers there are 99, and to these classes 20 bankers and 2 brewers; while of occupations more sparingly represented may be mentioned 1 architect, James Bell; 1 builder, Mr. Mears, Hums, Brady, and Michel. An exact estimate can scarcely be formed of the railway influence, but 11 of that interest are certainly present in the persons of Messrs. Glyn, Hudson, Waddington, Laing, M'Gregor, Chaplin, H. Brown, Cobbold, Cuthbert, Lawrence Stephenson, and Romilly. Smaller directors and endless shareholders will be found among all classes in the House. The army is fully represented by 67 of its members, while the navy can only count 13. The Irish peers present in the Lower House are Earl Annesley, Viscounts Barrington, Galway, Monck, and Palmerston, and Lord Hotham. Since the Reform Act not a Parliament met without some popular member being returned for two places, and having to take his choice between them. But no such occurrence marks the present Parliament. Knaresborough, however, has returned a superabundance of members, from the accident of equality on the poll; and death has occasioned three vacancies, in the cases of Messrs. Duncombe, Watson, and Granger. The closest contest has been Youghal, while in the large number of 167 places there was no contest whatever.

Registry of Vessels.—It has been deemed advisable to cause a case to be submitted to Dr. Addams Attorney and Doctor-General, who has given their opinion as follows:—"That the registering officers are bound to carry forward or continue on the certificate of registry endorsements of unsatisfied mortgages once recorded, until they are discharged, whether they be first, second, or subsequent encumbrances; and that any second or subsequent mortgagee might, if he sustain damage through the omission in question, maintain an action against the registering officers," and the authorities have, therefore, directed that the above opinion of the law officers of the Crown be communicated to the proper officers of the Customs at the several ports of the United Kingdom for their information and future government in the matter.

COURT AND HAUT TON.

THE COURT AT OSBORNE.

The celebration of the birthday of his Royal Highness Prince Albert, on Thursday, has been the chief feature in Court life during the past week. This event was marked with the customary rejoicings among the Royal household and dependents of the regal demesne of Osborne. In the morning a musical serenade was performed under his Royal Highness's windows, by the band of the Royal Marines; and in the evening a grand dinner party took place, at which a Royal and distinguished circle were present.

The regatta on Friday se'nnight was honoured with the presence of her Majesty, his Royal Highness Prince Albert, their Royal Highnesses the Princess Royal, the Princess Helena, and the Prince Arthur. On the same evening Duke George and the Grand Duchess of Mecklenburg, attended by Madame Jaffimovitch and M. Chrontschoff, arrived at a quarter before seven, on a visit to the Queen.

On Sunday last her Majesty, his Royal Highness Prince Albert, and their Royal Highness the Prince of Wales, the Princess Royal, and Princess Alice, attended divine service at Whippingham parish church.

On Monday the Earl and Countess of Derby arrived on a visit to the Queen. The Royal dinner party included the Earl and Countess of Derby, the Earl and Countess of Wilton, Baroness Speth, the Hon. Colonel and Mrs. Phipps, and Mr. Gibbs.

On Tuesday her Majesty and his Royal Highness Prince Albert, accompanied by the Earl and Countess of Derby, and attended by the Countess of Desart and the Hon. Mary Seymour, drove over to Carisbrooke Castle. The Royal dinner party on the same evening included their Royal Highnesses the Duchess of Cambridge and Princess Mary, the Earl and Countess of Derby, Viscount and Viscountess Sydney, Baroness Speth, Lady Suffield, and Baron Knesebeck.

The Court will leave Osborne at an early hour on Monday morning for Balmoral, travelling, as stated last week, by Basingstoke, Reading, Gloucester, Birmingham, Derby, York, Newcastle-upon-Tyne, and Edinburgh.

His Royal Highness Duke George of Mecklenburg-Strelitz arrived in town on Wednesday evening from Chatsworth, where his Royal Highness has been visiting the Duke of Devonshire since Tuesday last.

The Prince de Joinville and the Duke de Nemours arrived at Falmouth on Saturday last, and took up their residence at Dingley's Royal Hotel. After partaking of refreshment, the Princes and three of their *attachés* proceeded in an open carriage to Kalliness Cove, returning late the same evening to Falmouth.

The Prince and Princess of Capua and family are passing the season at Eastbourne, Su sex.

The Grand Duchess of Russia leaves this country, *en route* to the Continent, this week. Her Majesty's steam-packet *Fire-fly*, Master Commander Smith, was at Cowes on Thursday to embark the carriages and suite of her Highness, and to convey them to Dover; and on Saturday (this day) the *Fire-fly* will convey her Highness and suite to Ostend.

His Excellency the Portuguese Minister has returned to town from Germany.

The Duke and Duchess of Beaufort and the Ladies Somerset have left Beaufort House for the beautiful retreat, Llangattock, in Wales, where their Graces and family propose staying a few weeks, previous to taking up their residence at Badminton for the hunting season.

The Duke of Devonshire is seeing company at Chatsworth, where a large party, at the invitation of his Grace, are grouse shooting.

The Marquis and Marchioness of Douro are making a tour of the German baths, and are not expected to return before November.

The Earl of Granville arrived in town on Monday from the German Spas, and has since joined the circle visiting the Duke of Devonshire at Chatsworth.

The Count and Countess Worowzow Daschkau, accompanied by the Countess Irena and suite, and Prince Theodore Paskevitch, *aide-de-camp* to his Majesty the Emperor of Russia, arrived on Sunday last at Mivart's hotel, from St. Petersburgh.

Viscount and Viscountess Palmerston arrived at Holyhead, on Sunday afternoon, by the Chester and Holyhead Railway Company's steam-ship *Scotia*, from Kingstown. The noble Viscount and her Ladyship proceeded on to Bangor, where they passed the night.

Viscount and Viscountess Castlereagh has gone on a tour in Germany, and are expected to be absent about three months.

Lord and Lady Brougham have a select party at Brougham Hall. The noble and learned Lord purposes to stay at the Hall until after his birth day (or the 19th proximo), and then will go to Cannes for a few months.

Marriage in High Life.—On Tuesday last, the marriage of Henry Charles Silvertop, Esq., of Minsteracres, Northumberland, with the Hon. Edna Stonor, third daughter of Lord and Lady Camoys, was solemnised in the private chapel at Stonor, by the Rev. Thomas Witham, of Lartington-hall, Yorkshire, assisted by the Rev. Henry Birks, domestic chaplain.

Testimonial from the Prince of Wales.—A very gratifying testimonial was presented to Mr. Bullmore, boatswain of the Royal yacht *Victoria and Albert*, by his Royal Highness the Prince of Wales. The present consisted of a gold chain and chain, and was given under circumstances that reflected great honour on the recipient; her Majesty, his Royal Highness Prince Albert, Lord A. Fitzclarence, and several of the lords and ladies of the Court being present.

Mr. Stafford, M.P., the Secretary to the Admiralty, has forwarded a contribution of ten pounds to the fund for relieving the distress of the widows and orphans of those who perished in the *Birkenhead* steam ir'gat.

The children of the Royal Military Asylum, Chelsea, with their military band, visited "Wyld's Great Globe," in Leicester-square, on Wednesday afternoon. The boys were much gratified with their treat, and since the new system of education has been adopted, the children seem familiar with every "quarter of the globe." The little soldiers looked remarkably well.

The new lead mine discovered on the property of the Marquis of Downshire, in the county of Down, gives indications of a very rich yield, the ore found as yet proving to be of a first-rate quality. A company is at present driving a level across several parts.

We learn from Vienna, of the 20th inst., that the Emperor had granted pensions to a great number of officers and privates engaged in the Hungarian revolution.

The working-men in the principal towns in the county of Northumberland are collecting penny subscriptions for the purchase of a suitable testimonial to be presented to Sir George Grey, as a mark of their regard of his high personal character and political integrity.

"Dieu et mon Droit" was the *parole* of the day, given by Richard I. of England to his army at the battle of Gisors, in France. In this battle the French were defeated; and in remembrance of this signal victory, he made it a motto of the Royal arms of England, and it has ever since been retained. *From Notes and Queries.*

Mr. Feargus O'Connor.—This gentleman's health is rapidly improving under the care of Dr. Take, of whose *manes de santé* he is an inmate. Moderate diet and restriction from intoxicating liquors, together with abundant exercise, and the absence of excitement (political, pecuniary, and personal), have brought round this favourable result. As yet Mr. O'Connor has not been allowed to see his friends.

The Fire on board the "Severn."—The committee appointed by the Court of Directors of the Royal West India Mail Company, to inquire into the circumstances connected with the fire on board the *Severn* on her last homeward voyage, made their report, which has been submitted, as requested, to the Lords of the Admiralty. Having reviewed the evidence before them, they say that they "are of opinion that there are no means whatever of ascertaining the cause of such fire taking place; that it occurred in a very contracted space in the after run of the ship, where nothing was stowed but some tanks containing fresh water; that there was no communication between this place and the other parts of the ship, except by the hatches and grating leading to it from the principal saloon; that the company's printed regulations upon the prohibition of naked lights, the extinguishment of cooking fires and of all lights at fixed hours, for visitation of the ship every half hour during the night, for having a fire station bell and means prepared for extinguishing fires, appears to be carefully drawn, and (in the case of the *Severn*) to have been strictly executed." In reference to the efficiency the boats of the *Severn*, they state that they have found upon inquiry "that the *Severn*'s six boats were capable of carrying in safety at least 330 persons, being 30 persons more than that ship had on board during the voyage."

Extraordinary Robbery.—Charles Boadle Singleton, a boy about fourteen years of age, was on Monday committed for trial by the magistrates at Whitchaven on the charge of plundering the Whitehaven Junction Railway Company to the extent of between £80 and £100. One of the keys of the money drawer in the office, which was missing some time ago, was found in the possession of the prisoner, who was apprehended in the act of opening the drawer in question, and of helping himself to the money therein contained, upon one of his many clandestine afternoon visits to the place. Before the discovery of the real thief one of the clerks in the office had been dismissed upon suspicion of being the delinquent.

METROPOLITAN NEWS.

THE SHRIEVALTY.—Mr. Chandler, who was elected Sheriff of London at the last Common-hall, and who was known to have come forward most willingly as a candidate for the office, and was backed to a man by the longshore men at the election, has not only since fled his intention not to serve the office, but has already paid the £500 penalty. The excuse which Mr. Chandler has made to the friends who proposed him to the livery is, that the large business of the house to which he belongs will require his particular attention in consequence of the delicate state of his father's health, which has been for some time on the decline.

THE DUKE OF BEDFORD'S VENISON DINNER.—The customary annual venison dinner given by his Grace the Duke of Bedford to the inhabitants of the parish of St. Paul, Covent-garden, was celebrated on Thursday evening, at Richardson's Hotel, Farringdon-street. His Grace contributes towards this annual feast the solid and substantial donation of two fat bucks and two fat does, which were prepared and placed on the festive board, with their palatable accessories. On the present occasion about sixty-five of the principal inhabitants of the parish sat down to table, a little after seven o'clock. After the cloth was withdrawn, Mr. M. Hughes, the Duke's churchwarden, was voted into the chair, when the usual toasting and speech-making began.

ADMISSION OF THE PUBLIC TO THE HOUSES OF PARLIAMENT.—The following notice has been issued at the New Palace at Westminster: "The usual weekly distribution of tickets to the public will be discontinued until further notice in consequence of its being necessary to close the Houses of Lords during the recess of Parliament.—(Signed)—WILLOUGHBY DE EREsBY, Great Chamberlain."

CLOSING OF THE BRITISH MUSEUM.—Notice was issued on Wednesday that the British Museum will be closed to the public from Tuesday next, the 31st instant, until the 10th of September. Many great improvements and additions to the valuable collections of minerals, &c., have been made lately, and a better classification of the glass cases, so that by referring to the Catalogue there will not be that trouble as heretofore. The splendid library during the recess is to undergo a minute examination as to the proper classification of works and rare manuscripts which it contains—a desideratum that has been long wanting for the convenience of the various literary characters who frequent that national institution to refer to them. The magnificent bronzed and gilt gates at the front entrance are now entirely finished, and are considered a masterpiece of workmanship, not only by native visitors, but foreigners from all parts of the globe.

NEW NATIONAL GALLERY.—It is stated that the authorities have in its contemplation to purchase the extensive property of the Earl of Harrington, situated at Old Brompton, for the purpose of erecting a new National Gallery. The Government are said to be favourably disposed as to the site as a most eligible place for the building.

THE LAST OF THE CRYSTAL PALACE.—The Palace is now a desolate blank, and in a few days every portion of the upper part will be taken away, human trade of vans being engaged daily in the transfer of the materials to Sydenham. At the close of the week will come the "diggings;" and many unthought-of treasures are expected to be found. The flooring will have last to be taken up, and the most extraordinary prices have been offered for the privilege of searching the ground underneath, where it is expected many valuables will be found, as great room was afforded in the flooring of the Great Exhibition for valuables to pass through. The model lodging-house erected by Prince Albert are also demolished.

GREAT NORTHERN RAILWAY.—The twelfth half-yearly ordinary general meeting of the shareholders of this company was held at the London Tavern, Bishopsgate-street; Stephen Bird, Esq., a director, occupied the chair. The report, which was adopted, set forth a statement of the receipts and disbursements of the company to the 30th of June last, from which it appeared that the former, including a sum of £298,174 12s. 6½d., as per statement submitted to the half-yearly meeting upon the 31st of December, 1851, amounted, from the commencement of the company, to £295,719 3s. 4½d. The disbursements had been the same, and exhibited a sum of £1030 to the credit of the company, being a deposit in the hands of the company's bankers. The revenue for the present year to £2891 1s. 10½d., free from liabilities, with the exception of the costs of the pending law proceedings against the London and North-Western Railway Company.

EASTERN COUNTIES RAILWAY COMPANY.—The ordinary half-yearly meeting of the proprietors in this company was held at one o'clock on Wednesday, in the London Tavern, Bishopsgate-street; David Waddington, Esq., M.P., the chairman of the company, in the chair. In the report of the directors, it was stated that there was a net disposable balance of £73,006 18s., and out of this sum the directors declared a dividend of four shillings per share, which amounted to £68,276 8s., carrying forward to the credit of next year the balance of £4736 13s. After a warm and lengthened discussion, the report was adopted, and the ordinary business of the meeting disposed of.

FAREWELL CELEBRATION.—On Monday evening a crowded meeting of the inhabitants of Clapham and its vicinity was held at the parochial school-rooms, for the purpose of hearing from Mrs. Chisholm a statement with reference to the prospects of emigrants of the labouring class in the Australian colonies. The Rev. W. B. W. Bowyer, rector of the parish, presided. Mrs. Chisholm commenced the proceedings by describing the endeavours made by Mrs. Chisholm and her husband to promote the comfort and welfare of the working classes during their voyage to, and on their arrival in, Australia. She stated that during a few weeks £3000 had been forwarded to this country by persons who had emigrated to Australia, for the purpose of enabling their relatives to follow them to that country. Mrs. Chisholm then proceeded at some length the system of emigration she recommended, and with which the public are familiar, and expressed a hope that, as the subject had been taken up by one of the largest shipowners in London, measures would speedily be adopted for affording better accommodation to married emigrants. In the course of the procee tings it was stated that the rector had that evening received a letter cautioning him not to sanction the proceedings of Mrs. Chisholm because she professed the Roman Catholic religion. Mr. Bowyer stated that he had thought the manly and proper course was to show the letter to Mrs. Chisholm; that he considered that lady was entitled to the thanks of the meeting for the services she had rendered to Australian emigrants; and at his suggestion three cheers were given for her. It appeared further on this subject, both from statements made by Mr Samuel Sidney, and from Mrs Chisholm herself at the meeting, that the Chaplain of the Bishop (of the Established Church) of Sydney, New South Wales, had, from direct inquiry, satisfied himself that Mrs. Chisholm was not and would not be actuated by sectarian prejudices or predilections in the exercise of her benevolent exertions to improve the condition of the poor emigrant of whatever religious persuasion he might be. The actual state of the case, viz. Mrs. Chisholm's impartial and active benevolence, was appreciated by the meeting, which cheered cordially for her, and success to her undertakings, at the close of the proceedings.

THE PROPOSED WATER SOURCES FOR THE METROPOLIS.—On Saturday last a large party of scientific and literary friends, accompanied by several ladies, were entertained by Mr. F. O Ward at an *al fresco* dinner. On the gathering grounds near Farnham, from which it is proposed to draw the pure "bill top" water supplies for the metropolis. Amongst the guests invited were Sir Char es and Lady Fox, the Abbé Faylair, the Count and Countess Mansel, Mr. and Mrs. Monckton Milnes, Mr and Mrs. Coningham, Professor and Mrs Royle, Mr. and Mrs. Simon, Mr. and Mrs. Meehi, &c. Mr. Ward demonstrated in a popular quality of this "bill top" water, as compared with "valley bottom" by the application of the soap test and other chemical re-agents. The contrast this exhibited was most striking—the bill top water remaining brilliantly pellucid, while the earthy valley bottom water assumed a clouded appearance, exactly like that of the compound which schoolboys designate "skyblue." After witnessing these experiments, and tasting the cool fresh water drawn direct from the mouth of the main gathering tube, the party drove to Tilford-bridge, beneath which flows a perennial stream of equally pure water from the upland of trust, called the Hindhead, in quantity sufficient for the despotic supply of London, as Mr. Ward showed by reference to the engineering of Messrs. Ramsell, Bateman, and Clarke, the eminent hydraulic engineers. From Tilford a most picturesque and romantic drive, alternately through thick woods, over open turf, and down steep narrow lanes, brought the party to Waverley Abbey, amidst the ruins of which an excellent dinner was spread on the grass along "bright water jug" sparkling symbolically in the midst, surrounded by vessels of the same element in the stalks of the ice, from which cream also, and bottled-covered bottles, protruding pleasantly, divided the attention of the company. Mr. F. O Ward, on returning thanks for the proposal of his health, referred to the presence of the ladies as a token of the interest excited by the pure "bill top" water agitation, and an earnest of the success which at no distant period must crown the efforts of the sanitary reformers to bring about the desirable abandonment of the sewage-tainted "valley bottom" for ever supplies. He also mentioned the curious fact that six centuries ago the Cistercian monks, who inhabited Waverley Abbey (amidst the ruins of which they were then dining), had abandoned every Way, though flowing beneath their windows, and had resorted to a distant hill for pure so t water, which they collected and conveyed to the abbey in subterranean pipes, closely resemb ing those laid down on Hungerford for the supply of Farnha n, and recommended for the supply of the metropolis. Those ancient waterworks of Waverley, he added, were planned and executed, according to the old records, "with great pains and difficulty" by a monk called "Brother Simon," a name oddly enough identical with that of the present able City officer of health, who is now, six centuries later, strenuously advocating the adoption of a similar system for the supply of London. Mr. Ward concluded by expressing his earnest hope that such a "bright water jar" as embellished their repast might sparkle at no distant period on every table in London—from that of our Gracious Queen, who, amidst all the luxuries at her disposal, cannot yet command a draught of pure water—down to that of her humblest subject in the meanest alley of the metropolis. The day, which passed most brilliantly, terminated with music and dancing in the crypt of the old abbey.

FINSBURY GENERAL DISPENSARY.—The usual general quarterly court of the governors and subscribers to this charity was held on Wednesday evening, in the board-room of the institution, Woodbridge-street, Clerkenwell. The report, after stating that the number of patients admitted to the benefits of the charity was fully an average, called upon the public to come forward and support the committee in their endeavours to relieve the sufferings of the sick poor. A day having been appointed for a sermon to be preached on behalf of the funds of the dispensary, the meeting broke up.

ROYAL ORTHOPŒDIC HOSPITAL.—On Thursday the half-yearly meeting of this charity was held in the board-room, Bloomsbury-square; J. Nell, Esq., in the chair. The report stated that the average annual expenditure hith rto exceeded £2000, being at the rate of about £5 5s. each patient. The number of patients admitted during the past half-year was 895, being an increase of 228 on the previous half-year. The funds were on the increase, but were not fully adequate to the requirements of the hospital. The report was adopted.

CITY SOUP KITCHEN.—On Thursday this institution, which is situated in the new street leading from Ho born to Cle kenwell, known as Victoria-street, was opened by the Lord Mayor. The objects of this institution are of a similar character to those which have been established with such beneficial results in other parts of the metropolis; and, in addition to providing comfortable lodging for the houseless, and substantial meals for the destitute, combines the advantages of a free register for servants, a school for domestic training, free advice, &c. The interesting ceremony was witnessed by a large number of the benevolent individuals, to whom this and kindred ins itutions are mainly indebted for establishment and increasing success.

BUTCHERS' CHARITABLE INSTITUTION.—On Thursday this excellent society celebrated the birthday of its patron, his Royal Highness Prince Albert, by a festival to the pensioners, in the grounds of the almshouses, at Walham-green. The tables were well supplied with roast beef and plum-pudding, which the pensioners amply enjoyed; and the festival terminated with a ball, which was extremely well attended.

METROPOLITAN COMMISSION OF SEWERS.—A special court of commissioners was held on Wednesday at the Sessions-house, Newington-causeway; present, Mr. R. Ash (chairman), Captain Vetch, and Mr. Lawrence Hodges. The secretary reported that on the 21st of August the balance in hand was £3782, out of which payments were ordered to the extent of £1401, leaving an available fund of £2381. The Court then proceeded to hear summonses against defaulters on rates.

THE NEW CATTLE MARKET.—The anticipations of the intended new cattle market becoming immensely are already being realised. Lines of building are already marked out in the beautiful fields between Portess-terrace, Kentish-town, and the Highgate Cemetery, in such a manner that, in continuation of the new town along Maiden-lane, north of the Copenhagen-fields and the Brecknock Arms, brick walls will soon cover one of the most delightful spots near London. The magnificent view of Highgate from Portess-terrace will be spoil ed; and the scene ery—the most picturesque of all the metropolitan places of interment—edged in between town habitations. The futility of all that has been done by the Legislature on these subjects is thus made apparent by a single speculation, which will bring an extensive population close around the new market.

INCREASE OF BUSINESS AT THE POST-OFFICE.—In consequence of the recent extraordinary increase of duty at the Post-office, in St. Martin's-le-Grand, the messengers in the Inland-office, upon the middle scale of wages, have received notification from the Postmaster-General, of the intention of the Lords of her Majesty's Treasury to increase their salaries. A considerable number of additional messengers are also to be appointed, at £65 per annum. Some of the senior men in the London District offices have been informed, also, that a slight increase is to be made in their weekly pay. These increases, however, by no means affect the interests of the general body of these useful public servants, many of whom are much disappointed in consequence.

ST. PHILIP'S, BETHNAL-GREEN.—On Monday last, an excursion party of about 1000 persons, consisting of working men and their wives, with the teachers and elder scholars of the St. Philip's Sunday-school, accompanied by the clergy of the above district and the church wardens, proceeded by steamboat to the pleasant village of Kew, on the banks of the Thames. Refreshments provided in the gardens of Mr Maguire. The enjoyment of the excursionists was enhanced by the performance of an excellent band of music, and the day was spent in the most happy innocent amusements, unmarked by those excesses which, unfortunately, too often disgrace the pleasure of the working classes. The expenses were defrayed partly by the sale of tickets, and partly by private subscriptions.

LARGE ARRIVAL OF MERCHANT SHIPS.—On Sunday and Monday a fleet of merchant ships, numbering 346 sail, of all classes, came up the Thames, and were entered at the Custom-house, the aggregate tonnage of which amounted to upwards of 61,000 tons. Of this vast number, 192 were foreign and colonial ports, 124 were colliers, and 42 employed in the coasting trade, and from Ireland and the Channel Islands. By far the greatest proportion of the foreign arrivals are from Russian and Prussian ports, there being no fewer than 64.

WRECK OF THE OLD ADELPHI PIER.—On Wednesday one of the barges composing the Adelphi Steam-boat Pier, now used by the Gravesend and Margate steam-boats, came in contact with a large coal barge, and, with it a considerable portion of the bridgework necessary to the formation of the pier, and rendering it a complete wreck. Workmen have been employed in repairing the damage done to the pier, and a watchman has been placed there, as near as possible, the inconvenience which, as a matter of course, must arise from the untoward circumstance.

DESTRUCTIVE FIRE.—On Thursday morning, shortly before three o'clock, a fire broke out in the building known as the Royal Victoria Assembly Rooms, belonging to Mr. Moss Phillips, Beaumont-street, Mile-end-road, which in a short period of time destroyed that establishment, with its contents, including valuable chandeliers and paintings. They were, however, insured. The adjoining tavern was also seriously damaged.

STRANGE AFFAIR.—On Wednesday afternoon, a man, apparently an engineer, brought a boy about fourteen years old, in a state of insensibility, to King's Co lege Hospital, where he placed a sovereign in the hands of the porter that he had fallen down stairs, he instantly decamped. The latter hurried in a one of the wards for Mr Bridgwater, the house surgeon. On that gentleman examining the boy, was surprised in a dying state, there was no person present to say who he was, where he came from, or how his hurt was occasioned. The medical gentleman being guided by appearances, treated him for a concussion of the brain, but was unable to say if he laboured under any other injuries at the same time.

SUDDEN DEATH OF A SPORTING MAN.—On Tuesday last Francis Thibaut, aged forty-six years, who had been formerly a jeweller, printer, and tailor, but who was lately a sporting character, was found dead in his bedroom, No. 17, Broad-street, Golden-square. Deceased had recently come into about £600 worth of property. Death resulted from disease of the heart.

THE CONVEYANCE OF PATIENTS HAVING CONTAGIOUS DISEASES IN PUBLIC CARRIAGES.—The practice of conveying in public carriages patients having fever, small-pox, and other contagious diseases has often been reprobated by medical men, and shown to be a fruitful source of the spread of contagion; and the Board of Guardians of the Holborn Union, have therefore resolved upon discontinuing the practice, so far as relates to the conveyance of such patients from the Union Workhouse to the hospitals, and to provide a carriage for the special purpose. The same carriage intended to be provided will not exceed £6 or £7; and, as it will be drawn by men, the motion will be easier to the patients than cabs or omnibuses.

BIRTHS AND DEATHS.—The births registered in the metropolis for the week ending Saturday last were 1025, 500 males, 525 females; total, 1025. The deaths during the same time were: males, 581; females, 503; total, 1084. The official report states that the health of London is still depressed by the prevailing epidemic. 208 deaths were referred to cholera, 18 to diarrhœa, 16 to fever, the latter 16, of the former 176, were children under the age of 15. Two old people died of cholera, 19 of diarrhœa, which was also fatal to 13 persons of the middle age of life (20—60). Scarlatina, the most destructive disease to children, carried off 27 boys and 22 girls. Forty persons, comprising 25 adults, died of typhus, 4 only of measles, 13 of hooping-cough, 14 of small-pox. Within the last three weeks small-pox has declined. Consumption destroyed 140 lives, 81 males, 59 persons died of disease of the heart, 41 of pneumonia, 2 of bronchitis, 22 of cancer.

METEOROLOGICAL OBSERVATIONS.—The barometer at Greenwich was 29 770 inches, nearly four-tenths of an inch higher than it was in the preceding week, and it was nearly equal to the reading on the 30th of July, 1834. The mean daily temperature of the air was 61·8°, or 1° above the average; at the highest it was 73·5°, lowest 50·3° in the air; 94° once in the sun, 43° once on the grass. The temperature of the polluted Thames was, at the highest, 66·5°, at the lowest, 62·5°. The air, on the whole, was dry, for the dew point (54°) was 8° below the mean temperature, yet 1·91 inch of rain fell in the week. On Tuesday, the 17th, between seven and half-past seven P.M., there was a severe thunder-storm, and rain fell to the depth of 0·25 inch in five minutes. A second storm occurred about eleven P.M. The wind was variable and generally tranquil, for, on an average, it only moved at the rate of 57 miles a day.

THE INTERNATIONAL COPYRIGHT CONVENTION WITH FRANCE.—The NEW LAW LIBRARY, a small volume, containing some of the most every important subjects, by Mr. Peter Burke, the barrister, and author of other well-known works on patents and copyright, have just appeared. One of these treatises, "The Patents Law Amendment Act, 1852," and the "Internationally" details the recent statutory changes in our patent system, and connects them with the former law, as it still remains. The other treatise, "The Law of International Copyright between England and France, in Literature, the Drama, Music, and the Fine Arts," is produced both in French and English, and gives a summary of the copyright law of either country; and also full particulars of the International Convention, and the mode of obtaining protection under it, for the productions of authors, dramatists, composers, and artists. Both books are clearly and intelligibly written, and are likely to prove of much immediate utility; for, with such assistance, lawyers, and, more especially, those unlearned in the law may arrive at a ready comprehension of the patent and copyright legislation, the benefits of which some way or other come really home to every one.

NATIONAL SPORTS.

The *Turf* Calendar for next week, to make up for the lack of "features," makes a strong numerical show. The meetings, all provincial, and all of the second class, are thus arranged: Monday—Stourbridge and Eccles. Tuesday—Lincoln and Westbury. Wednesday—Morpeth. Thursday Stirling and Newport. Friday—Marlborough and Bridgnorth. Of the above, Eccles will occupy three days; Marlborough only one; the others will run two days each.

AQUATIC FIXTURES: Monday—Regatta at Southwark and Lyme Regis. Tuesday—Royal Northern Yacht Club Regattas at Rothsay, &c. Wednesday—Local Quay Regatta. Thursday—Lancaster Regatta.

CRICKET FIXTURES: Monday—All England Match at Thkeston; Match (United Eleven) at Newmarket; Match between the one-arm and one-leg Pensioners at Kensington Oval; and Broughton v. Leeds, Clarence, at Leeds; and a benefit match at Sunderland. Tuesday—Romford v. City Club, at Islington. Thursday—Match (United Eleven) at Gravesend; Nottingham v. Surrey, at Nottingham. Friday Broughton v. Rusholme, at Broughton.

TATTERSALL'S

MONDAY.—A tolerably full attendance and a large outlay on Daniel O'Rourke, Carscara, and Cinesa, for the events quoted underneath; the general business was flat.

LEAMINGTON STAKES.
7 to 1 agst Torpichorus.

ST. LEGER.

6 to 4 agst Stockwell	3 to 2 agst Songstress	13 to 1 Harbinger
4 to 1 agst Daniel O'Rourke	12 to 1 ——— Carscara	

DITTO.
12 to 1 agst Ornestes , 20 to 1 agst Cinesa

THURSDAY.—The decline of Songstress to 5 to 1, layers, was the only alteration in the St. Leger betting. No other race was mentioned.

EGHAM RACES.—TUESDAY.

The PRINCE OF WALES' STAKES.—Forest Deer (Sabin), 1. Miss Goldsmidt (Arthur), 2.

The KING JOHN STAKES.—Gossip (Pettit), walked over.

The SCRRET and MIDDLESEX STAKES.—Bilberry (G. Palmer), 1. Hesse Homburg (Pettit), 2.

RUNNYMEDE STAKES.—Azael (Barker), 1. Merry Peal (W. Abdale), 2.

RAILWAY STAKES.—Heroine (Flatman), 1. Woodlark (Hiett), 2.

WEDNESDAY.

The INNKEEPERS' PLATE.—Blood Royal (Hiett), 1. Heroine (Flatman), 2.

MAGNA CHARTA STAKES.—Pride (Sabin), 1. Twistneck. (G. Marp), 2.

The QUEEN'S PLATE.—Frantic (Flatman), 1. Dame Tattle (Hammond), 2.

The AMATEUR STAKES.—Bordeaux (Mr. L. Fox), 1. Reuben Bunnoo (owner), 2.

The EGHAM STAKES.—Amber Witch (Kendall), 1. Woodlark (Hiett), 2.

BARNET RACES.

The MEMBERS' PLATE was won, in two heats, by Mr. Smith's Mountain Dew (J. Smith) beating Flora M'Ivor and five others.

The GREEN MAN HANDICAP did not fill.

The FREE HANDICAP was won, in two heats, by Mr. Allen's Wee Mickey (Mr Fredericks) beating Gala and five others.

The LADIES' CUP was won, in three heats, by Fidgetty Girl (Bonnett) beating Flora M'Ivor and The Girl.

The BARNET HANDICAP did not fill.

The FREE HANDICAP was won, in three heats, by Flora M Iver (R. Sherwood) beating Brebs and five others.

The RAILROAD RACE was won by Gala.

DERBY RACES.—WEDNESDAY.

The PRODIGE STAKES.—Babette, 1. Rose of Harwick, 2.

The GRAND STAND SPAKES. f. by Herman Plaloff, 1. Don Carlos, 2.

The TRADESMEN'S PLATE.—Aaron Smith, 1. Weatherage, ".

The MAIDEN PLATE was won in two heats by Hafod, beating Lilar and two others.

THURSDAY

The CHATTWORTH STAKES.—Songstress, 1. Babette, 2.

The CHESTERFIELD STAKES.—Fog Circus, 1. Assault Ally, 2.

RADCLIFFE RACES.—MONDAY.

The HEATON PARK STAKES.—Audubon, 1 Game Tommy, 2.

The WILTON CUP.—Little Davie, 1. Mary Nobbins, 2.

The TWO-YEAR-OLD STAKES.—Enoch, 1. Young Norval, 2.

TUESDAY.

The STEWARDS' CUP.—Lough Bawn, 1. Babette, 2.

The RADCLIFFE ST. LEGER STAKES Day and Martin, 1. Lady Hesketh, 2

The FREE HANDICAP.—Imagination, 1. Evadne, 2.

COWES REGATTA.—The match for the Squadron Cup on Saturday last was broken off by the committee of the Club, when the *Mosquito*, *Arrow* and *Aurora* had nearly reached Dunnose, because the schooners engaged in the race were becalmed some miles astern, apparently without the prospect of a breeze. The match was appointed to be run afresh on Monday, and the same yachts, with the exception of the *Aurora*, in consequence of Prince Albert's Cup on Thursday so'night, contended for the prize. The signal gun was fired, and the yachts started precisely at ten o'clock from the station-vessel at Cowes Castle, and were their course to the westward. On passing Hurst Castle, the time for the four leading yachts stood thus:

	h.	m.	s.
Aurora	12	15	45
Arrow	12	13	0
Mosquito	12	15	30
Claymore	12	19	55

A breeze here sprang up, and the two leading yachts first catching it, they stood over to the Needles in good style, rounded under the yoke. The *Arrow* were took the lead, which she kept all along the back of the Wight to Cowes Roads, where the *Mosquito*, then about three miles astern, having passed the *Aurora*, got ahead of the *Arrow*, and the latter also, a few seconds round the *Aurora*, and kept the lead till off Osborne, when she was becalmed, and the *Mosquito*, running up with what wind there was, passed her, and rounded the flag-boat at Cowes at 10.11, the second gun greeting the *Arrow* six minutes later.

CRICKET.—On Monday last a match was played at Barton, between the clubs of King Edward's Grammar-school and the East Somerset Zingari eleven, in which the former won by ten wickets. Score—School, 69 and 3; Zingari, 21 and 34

FIFTEEN HUNDRED MILES IN A THOUSAND SUCCESSIVE HOURS.—James Jones, a young man about twenty-five years of age, commenced, on the 14th instant, at Holyhead, the serious task of walking 1000 miles in 1000 successive hours—one mile and a half each hour. He has undertaken to accomplish this feat for £100, subscribed by a number of persons in Manchester and Salford; the money to be forfeited, of course, if he fail. Jones, who belongs to London, has already accomplished the Barclay feat of walking 1000 miles in 1000 hours, which has so often in recent years been exceeded by our modern pedestrians, and by the same number. He is dressed in a jacket and vest, in a light-fitting flannel dress, and alternately walks in strong laced boots and light slippers of mixed leather and India-rubber. Up to the end of last week, Jones had walked 924 miles. The time necessary for his completing his arduous task will be six weeks all but eight hours. The general opinion is that Jones will win the prize.

SPEARING EXTRAORDINARY.—One day last week a gentleman in the neighbourhood of Lancaster who is remarkable for his eccentricities, went under the impression of spearing fish. He waded about for some time without meeting with any success, but at length he got his foot upon a fine flounder, which at all events he determined to secure. He poised his spear—his foot formed a most excellent mark—and with one vigorous effort he transfixed both the fish and his foot. There he stood, unable to move; the spear being a barbed one, he could not draw it out. He shouted for assistance, and his cries being at length heard, the blacksmith of a neighbouring village was despatched to his aid. It was a work of time, but eventually the prong of the spear was cut off and extracted. The unfortunate fisherman was conveyed home and placed under medical aid, but as last we yet been able to learn his recovery announced.

PROHIBITED JOURNALS.—Mr. James Hogg, an Englishman, was tried on Saturday last by the Tribunal of Correctional Police, Paris, on the charge of having introduced into France the prohibited political publication called the *Nouveau Bulletin Français*, first published in Brussels, but now in London. It was proved that on the 6th of July last the Customs officers at Boulogne discovered, in a case containing natural flowers, a false bottom, in which were 800 copies of the *Bulletin*. The case was addressed to Mr. Thomas, Hotel des Etrangers, Rue Vivienne, and the Customs officers allowed it to be forwarded. A few days after, Mr. Hogg claimed the box at the hotel. He was called on to say who he was, and a search was made in his residence. A list of addresses of different persons to whom, it is supposed, the *Bulletin* was to be sent, was found. The tribunal condemned him to six months' imprisonment, and 3000f. fine. The copies of the *Bulletin* seized were ordered to be confiscated.

PLEASURE.—English gentlemen (Messrs. Mansfield, Compres, and Thompson) have undertaken to go from London to Constantinople in their own boat. They arrived at Regensburg on the afternoon of the 10th, and excited much interest. Their little vessel is built of beautiful mahogany. It is 25 feet long, and rather more than three feet wide in the middle. It is exceedingly elegant. It is rowed by two of the voyagers, while the third steers. It shoots across the water with the rapidity of an arrow. It is so exceedingly light that two persons can with ease carry it out of the water.

Mr. Prince, of Glasgow, has left in the office of Messrs. Maclure and Macdonald, for the inspection of the curious, a fine gold cross and crown, set with emeralds, rubies, and Scotch pearls, supposed by eminent antiquarians to have belonged to Mary Queen of Scots.

THE BOTALLACK MINE CORNWALL.

ROYAL VISIT TO THE BOTALLACK MINE.

During last week Penzance and its neighbourhood were visited by the Duc de Nemours, the Prince de Joinville, Duc d'Aumale, and suite. Amongst the many objects of interest which attracted their notice in this locality, they were particularly struck with the celebrated Botallack Mine; and their descent into the interior to the depth of 150 fathoms below the sea level, afforded them the highest gratification: so interested did they feel, that they remained between four and five hours under ground. The Prince de Joinville was particular desirous to be made acquainted with the whole process of working; and having a miner's dress on, as had the four of the party who descended, he made use of the tools in some of the operations, and dug some copper from the lode, which he afterwards carried to the surface. The process of boring and blasting next engaged the attention of the Royal visitors; and at the 180 fathom level they were conducted, by means of a railway, in a small carriage, to a part of the mine extending more than half a mile under the sea. Having fully gratified their curiosity at a depth where very few but miners have the courage to go, they proceeded to ascend—a task at all times difficult, and very fatiguing, as it must be performed by means of perpendicular ladders, wet, dirty, and slippery. However, the distinguished party accomplished the feat exceedingly well, and arrived at the surface in perfect safety, presenting an appearance truly ludicrous, from being covered with red mud. Ablution in large tubs, filled with warm water, and the resumption of their own dresses, soon restored the gentlemen to their former appearance.

The Prince very liberally acknowledged the attention of the captains and men, and invited the purser, Mr. S. H. James, to dine with him and his friends the next day at Penzance.

After partaking of the hospitality of the counting-house, the Royal travellers left the Mine about nine o'clock in the evening, highly delighted with their excursion.

ROYAL ITALIAN OPERA.

SCENE FROM M. JULLIEN'S "PIETRO IL GRANDE."

We this week commemorate the production of this opera by an engraving one of its finest scenes—the review by Peter the Great at the battle of Pultava—which scene, however, was among those portions of the opera omitted after the first night. The superb costumes were designed for the theatre by M. Guerin, who has likewise furnished the drawing of the present Illustration. To the same artist is due the merit of having arranged the most characteristic dance in the piece, which was much applauded.

SCENE FROM "PIETRO IL GRANDE," AT THE ROYAL ITALIAN OPERA.—THE REVIEW AT THE BATTLE OF PULTAVA.

MEETING OF THE BRITISH ARCHÆOLOGICAL ASSOCIATION, AT NEWARK.

The ninth Annual Congress of the British Archæological Association, for the encouragement and prosecution of researches in the arts and monuments of the early and middle ages, commenced its meetings at Newark on Monday week. The attendance of members and visitors was more numerous than usual, and amongst those present were—His Grace the Duke of Newcastle, president of the association; the Earl of Scarborough, Lord Robert Clinton, M.P., the Earl of Lichfield, Sir W. C. Anstruther, Bart., Mr. W. H. Barrow, M.P., Mr. J. Evelyn Denison, M.P., Rear-Admiral Sir W. H. Dillon, K.C.H., and Lady Dillon, Sir Fortunatus Dwarris, F.R.S., Sir Oswald Mosley, Bart., the Venerable George Wilkins, D.D., Archdeacon of Notts; Mr. R. Monckton Milnes, M.P., the Mayor of Newark, &c.

BEAUMONT'S CROSS, NEWARK.

The members and visitors, to the number of 80 (including several ladies), having dined at the Clinton Arms, under the presidency of the Duke of Newcastle, the party adjourned to the Town-hall, where

The Mayor (Mr. Nicholson), on behalf of the corporation, presented to the Duke of Newcastle an address, expressing the congratulations of the municipal body to his Grace as president, and to the vice-presidents and members of the Archæological Association, on their visit to the town retaining so many monuments and traces of antiquity.

The Duke of Newcastle having offered his acknowledgments for the kind reception which had been given the association, and referred to the historical recollections of Newark, proceeded to address the members of the association at considerable length upon subjects of archæology, and the importance and interest attached to the science.

On the motion of Sir Oswald Mosley, seconded by Mr. Pettigrew, a vote of thanks was passed to the noble Duke for his interesting communication.

Mr. J. M. Gutch, F.S.A., then read a paper on Robin Hood and the ballads, and in the course of his observations, which occupied a considerable time, asserted that Robin Hood had a veritable existence as to name and country, and that, although of good descent, he served at one time as one of the porters in the King's chamber, but that he returned to a predatory life, and ultimately died at a good age, and was interred in the high road, where his grave was shown

THE GREAT HALL, NEWSTEAD ABBEY.—ENTERTAINMENT TO THE BRITISH ARCHÆOLOGICAL ASSOCIATION.

ST. MARY'S CHURCH, NEWARK.

INTERIOR OF SOUTHWELL MINSTER.

covered with a great stone, in order that travellers might go their way in safety, assured that they would not again be called upon to "stand and deliver."

At the conclusion, Mr. Pettigrew said that he had been requested by Mr. J. O Halliwell to read a paper which he had prepared on the era and character of Robin Hood. On the whole, Mr Halliwell was of opinion that Robin Hood was a mythical personage, and that the name Robin Hood was a corruption of Robin in the Wood.

Sir F. Dwarris, F.R.S., followed with an interesting paper on the Forest Laws, Courts of Custom, and the Chief Justices in Eyre north and south of the Trent.

The members of the Association paid a visit on Tuesday to Thurgarton Priory. The remains of Thurgarton Priory are beautifully situate in the grounds of Mr. Milward, whose residence adjoins. The priory was founded in the reign of Henry III., by William D'Eyncourt, and a portion of it still remains in tolerable preservation. The original shape was an erudite one, the nave and a portion of the centre aisle are all that now remains. There are three stalls to the left of the last window, beautifully executed in carved oak, of the period of Edward the Confessor. After the party had partaken of breakfast at Mr. Milward's, the train was again set in motion, and arrived in Nottingham at eleven o'clock. Here the members of the association were rejoined by his Grace the Duke of Newcastle, accompanied by his sons, the Earl of Lincoln and Lord Edward Clinton, and afterwards by the Mayor (Mr. W. Felkin), and the principal members of the corporate body

Upon arriving at the Exchange-room, the Duke of Newcastle, as president of the society, took the chair, and, in his address briefly alluded to the early history of the place, which he stated had annually elected a chief magistrate during an unbroken chain of 560 years, and had returned members to serve in Parliament for upwards of four centuries

After a few words from the Mayor of Nottingham, expressive of his gratification at the visit of the association, Mr. Pettigrew read an interesting and amusing paper on the family of the Peverils, of Nottingham. The association then visited the cellars of Mr. Crosland, now used as a wine vault. The cave or passage, which is cut in sandstone, is at a depth of 63 feet from the surface of the earth, and extends for a distance of 173 yards.

The party next proceeded to St. Mary's Church, a large and venerable cruciform edifice, but time did not permit them to make more than a cursory examination of the building. A small stone sculpture, supposed to represent a pope, assisted by two cardinals consecrating a bishop, and which was discovered below the flooring of the church during the progress of some repairs which were made a few years ago, excited considerable attention.

The party then visited the site of the old castle, to which they were accompanied by the Duke of Newcastle, who pointed out the various objects of interest, including King Richard's Tower and "Mortimer's Hole"—a subterranean passage, along which, tradition asserts, that Sir W. Eland, in 1330, conducted King Edward when he seized Lord Mortimer. There are few remains of the old castle, which stood upon a bold and precipitous rock, rising nearly perpendicularly on the south and west to a height of more than 130 feet, and whence an extensive and beautiful prospect of the country is obtained. The ducal mansion, which was formerly the residence of the Dukes of Newcastle, and which was erected on the site of the castle, about the reign of William III., was, it will be recollected, sacked and burnt during the Reform riots, and still remains as it was left after the conflagration—a mere roofless shell.

At two o'clock the party left Nottingham by railway for Newstead Abbey, where they were received in the library with great courtesy by Lord and Mrs Wildman. They were then conducted over some of the more interesting parts of the building, and the architectural beauties and peculiarities of the edifice were pointed out and explained by Mr. Ashpitel, F.S.A., one of the members of the council. The numerous and minute descriptions of the Abbey, which, besides those given by Byron himself, and its association with the great poet, have been elicited from able and eloquent writers, render any account of the building here wholly unnecessary.

Shortly after five o'clock the visitors assembled in the drawingroom, when a paper was read by

Mr. T. J. Pettigrew, F.R.S., on Newstead Abbey. The Abbey, he said, was one of thirteen priories which existed in the county of Notts at the time of the dissolution of the monasteries, and was a priory of Black Canons Regular, dedicated to God and the Virgin Mary. It was founded by Henry II., about the year 1170, and the priory was surrendered July 1, 1539. Henry VIII., by letters patent dated May 28, 1541, granted Newstead Abbey, with a large estate in the neighbourhood, to Sir John Byron, Knight, and his heirs. The present drawingroom was formerly the dormitory of the monks; the cloisters presented a most venerable appearance, and resembled those of Westminster Abbey, though upon a smaller scale. The Abbey was garrisoned in the reign of Charles I. by the Parliamentary forces, and held out for some time. Mr. Pettigrew, after stating that the family of the Byrons was to be traced from Ralph de Byron, mentioned in Domesday Book, as one of the followers of the reign of William the Conqueror, observed that, although many of its members had been distinguished in the military service of the country, it was to George Lord Byron, of our own time, that the name of the family was indebted for its age be oh fly attributed. With Newstead he late Lord Byron was indissolubly associated. In 1817 the Abbey most fortunately fell into the hands of its present worthy possessor, Colonel Wildman. Lord Byron and Colonel Wildman, it might be remarked, were together at Harrow School, and on becoming the purchaser Newstead the gallant Colonel received a letter from the noble Lord, expressing his satisfaction that the mansion had fallen into the hands of his old schoolfellow and monitor.

An adjournment then took place to the dining-hall, where the party partook of an elegant *dejeûner* that was provided for them.

On Wednesday, the members of the Association made an excursion to Worksop, and Cumber, the residence of the Duke of Newcastle. With the exception of a short visit to the ruins of the old priory church, there was little to see at ancient gateway, and a portion of the old priory church, there was little to see at Worksop to interest the antiquary. At Clumber the party were received by the Duke of Newcastle with the utmost courtesy and hospitality. His Grace escorted them through the reception-rooms of the mansion, which contain some fine paintings by Vandyke, Rembrandt, and others In the library several ancient manuscripts connected with the history of the family were exhibited. This fine collection of books includes the largest number of folio volumes to be found in any private library in the Kingdom. The usual meeting of the association was held in the Town-hall at Newark, in the evening.

Thursday was devoted to a visit to Lincoln and its cathedral, and the principal antiquities of the city; the members returning to Newark, where the evening meeting was held.

On Friday, after examining the ruins of Newark Castle, a large party of the members proceeded by special train to Southwell, about eight miles distant, to inspect the fine old Minster, or collegiate church, one of the oldest ecclesiastical buildings in England, and which, from its great antiquity, its noble proportions, and its architectural beauties, proved an object of extreme interest to most of the visitors. The entire length of the church is 306 feet, the length of the nave and chance, about 60 feet, and the breadth of the transept 120 feet. The original foundation of the church is attributed to Paulinus, the first Archbishop of York, about the year 630, and the north side and some other portions of the building are of Saxon architecture. The screen at the entrance of the choir displays much beautifully rich tracery in the regent Gothic style of the 14th century. Mr. Ashpitel, the architect, gave a description of the edifice, and pointed out its most remarkable beauties including the tracery in the choir, the five handsome carved organ screens, and the original stone covering of the chapter-house. It is conjectured that the original church had been destroyed by fire, and that the greater portion of the present edifice had been erected subsequently to the year 1110, in the general characteristics of the architecture being Norman. He referred to the disfigurement of the building by its present flat oak roof, which was erected about a century ago, and stated, amid the plaudits of his hearers, that it would speedily be replaced by a pointed roof, similar to that which formerly covered the church.

On their return to Newark a large party of the archæologists dined at the Town hall.

On Saturday morning the members and visitors of the Association were entertained at breakfast by the Mayor and corporation of Newark at the Town-hall. The Mayor presided. At the close of the repast the Duke of Newcastle visited in the "living-dog." Votes of thanks were then passed, and the business of the Association terminated

We have engraved Colonel Wildman's hospitable reception of the Association at Newstead; the Church of St. Mary, at Newark; and the Minster at Southwell.

We have also engraved the interesting Cross at Newark, known as "Beaumont's Cross." from tradition assigning it to the tribute of a Duchess of Norfolk to the memory of Lord Beaumont, who died northward of Newark, in the reign of Edward IV., and was carried for interment to the burying-place of his family, in a hearse. The cross is in the latest Gothic style: it was repaired (says the inscription) in 1778, and again in 1801.

Amongst other objects of interest, such as rubbings from brasses, &c., which were being round the walls of the Town Hall, we noticed a curious map of Notts, in two pieces, worked in tapestry, by Mrs Mary Eyre, in 1630 (every town and village is accurately marked with a representation of the church and principal building in each) It was exhibited by Mr. G. E. H. Vernon, M.P. for Newark, through the kind permission of his father, G. Harcourt Vernon, Esq., of Grove Park, from whose house this heir-loom was brought; and we understand that a transcript of the leading members of the Association was directed to this relic, by a paragraph which recently appeared in our Journal. A description of it by a gentleman of medieval industry has been given at length in the *Doncaster and Solemphan Gazette*, by a local antiquary, Mr. J. J. Piercy, of Retford.

ARCHÆOLOGICAL INSTITUTE OF GREAT BRITAIN AND IRELAND.—The members of the Archæological Institute of Great Britain and Ireland—a slater association by their own title, but meeting this session at Newark—assembled on Tuesday in Newcastle-on-Tyne, under the patronage of his Grace the Duke of Northumberland, and under the presidency of Lord Talbot de Malahide, F.R.L.S. The meeting at the Railway Station was first held, or as "The Reception Room," where the names of members were recorded, and information afforded as to the movements of the party during their visit. The mayor, aldermen, and councillors of the borough met at the Assembly Rooms, in Westgate street, at noon, to receive the members of the Institute, who arrived a little before one o'clock, headed by their president. The party then proceeded to inspect the various objects of interest in the town. The Norman keep of the castle is one of the few remains of Norman fortresses in this locality. It is stated on an eminence on the north bank of the river Tyne, and commands the approach to the town from the south by Tyne-bridge In the interior is the museum of the Antiquarian Society, which is rich in subjects of historical interest. The remains of the great gate erected in 1248 still exists in a good state of preservation. The parish church of St. Nicholas, rebuilt in the first half of the fourteenth century, the parish church of St. Andrew, formerly monastic, and containing a beautiful Norman chancel arch, were also visited in the course of the day. The town walls, with their ancient towers, or rather such portions of them as still exist, were inspected, and their historical associations noted. Other objects of interest in the town and neighbourhood also engaged attention. The proceedings of the day were terminated by a *conversazione* in the hall of the Literary and Philosophical Society. The historical session on the Wednesday morning, at 10 o'clock, in the theatre of the Literary and Philosophical Society, first under the presidency of the Rev Mr. Rayne, and afterwards of the Earl of Carlisle who arrived from Naworth Castle about 11 o'clock. There was a considerable attendance of members, including several ladies. Mr. J. H. Hinde, who formerly represented this town in Parliament, read an historical Memoir of Newcastle, and a paper, descriptive of the ancient trade of Newcastle, and of the interesting place, and the adjacent borough of Gateshead in Saxon times. His ascribed the origin of this great commercial community to the union of two towns or villes which were distinct from each other previous to the time of Edward I. One was called Pandon or Pandene, situated a little to the east of the town, in a small valley which retained its ancient name; and the other was the denominated Monkchester, a name which affords conclusive evidence that the place was built on the site of the Roman station, or the Norman Conquest He described Pandon as a spot where there were yet the remains of a castle which had been built in the time of the Heptarchy, and in which, after the departure of the Romans, the ancient British chieftains had kept their residences, protected as it was by the bulwark furnished by the Picts wall. Near to it, also, was a place named the Wall Knoll, which, he suggested, might possibly be a part of the site of the Saxon village called Ad Murum, associated with so many interesting events in the lives of the kings of Northumberland. An incidental reference to the export of beaver skins from Northumberland in former times, suggested that that animal had once been indigenous to that county. gave rise to an interesting conversation on the subject, in which Lord Talbot de Malahide and othe gentlemen took part, Mr. Hinde stating that in the *logs barycarus* of Scotland beavers skins was specially mentioned as an article of export, showing that it was of indigenous extraction. Mr. T. J. Taylor followed, with an elaborate paper on the archæology of the coal trade, principally during the 14th century, which he occasionally illustrated by a reference to diagrams. An interesting contribution was also read by Mr. Thomas Sopwith, on the ancient lead workings in England.—[Next week we shall fully report the proceedings, with a series of illustrations.]

THE THEATRES.

ROYAL ITALIAN OPERA.

One of the greatest houses of the season was that of Thursday, for the tenth representation of Meyerbeer's "Huguenots." It was curious to find such a rush for stalls and boxes at so nearly the closing night of the campaign. Owing to the presence of Madame Castellan being commanded at Osborne by her Majesty, Madame Bosio undertook the part of *Margarita d'Anjou*. Grisi, Mario, Tagliafico, Polonini, and Marini exerted themselves strenuously in their various characters. Costa was warmly greeted after his temporary absence from the orchestra.

Verdi's "Ernani" will be presented for the first time this year tonight (Saturday), with Mdme. Bosio, Marini, and Signor Negrini. The subscription nights will terminate next Tuesday, but it is proposed to have one additional representation on the following evening (Sept. 1st.), when the curtain is to fall on the doings of 1852—a summary of which will be published in our next impression.

CREMORNE GARDENS.

For the amusement of his patrons, Mr. Simpson, the proprietor of these gardens, has been careful to provide with variety, but without any of a powerful character. "Variété" and in doing so, consults not only his own interest, but lays the public under obligation. This latter, however, on the present occasion, he calls on them to discharge by the payment of an extra shilling entrance fee. But even in a "mad-ness" of this sort there should be a "method;" and we decidedly object to the equestrian balloon ascents of M. Poitevin. We have no right thus to make victims of the inferior creatures; and the exhibition is a grave offence against morality, that demands the interference of the Home Office. All right-minded persons are that of one opinion on the point, and however dangerous that opinion may be to M. Poitevin, the aëronaut's interests, we hope that it will be authoritatively enforced. With regard to the other amusements, such as those which are supplied by Madame Vestris and the Oriental, Spanish ballets, Devant's contortions, concerts, serenades, fireworks, and similar indescribable splendours, which must "be witnessed to be appreciated," we desire to speak in terms of high commendation.

GUILD OF LITERATURE AND ART.—On Friday week an application was made to the magistrates at Manchester, on the part of Mr. Charles Dickens, for a license for the exhibition of theatrical performances by the Guild of Literature and Art, in the Free Trade Hall, in that town, for nine days only—viz. the 3rd to 11th September next. The application was opposed by Mr. Knowles, the proprietor of the Theatre Royal, Manchester, on the ground that it would form a precedent on future occasions on behalf of objects of a similar nature, and that that would be injurious to the theatres. The magistrates, however, decided in favour of Mr. Dickens's application, and granted the license.

THE STATUE OF TITIAN IN VERCELLI.—The dreary monotony of Venetian life experienced a brief interruption on the 7th instant, the day appointed for unveiling the statue of Titian in Vercelli. In a deserted piazza, in a quarter of the city beyond the Rialto, the least frequented by strangers, stands a beautiful church of Gothic mould, dedicated to St. Maria del Frari. A recognised favourite of Titian in early days, and most conspicuous in the most sculptural that the glory of Venice is indeed departed, for within these silent halls are the monuments of dukes, senators, and saints, whose great deeds earned for them an epitaph and a block of marble when Venice was a power and not a by-word. Among other tributes to genius in that pantheon is the marble monument to Canova; and on the 17th instant one to Titian was placed there. It is the work of Professor Zandomeneghi, and is highly spoken of. It was undertaken some twelve years ago by order of the Emperor Ferdinand, and is said to have cost a mint on line. The ceremony of inauguration was performed in the presence of the Austrian authorities, civil and military, and a large number of spectators.

GENERAL HAYNAU IN BELGIUM.—This unfortunate military commander, who, after having made his name a by-word of scorn and hatred throughout the civilised world for the atrocious cruelties which he perpetrated in Austria, Italy, and Hungary, during the recent revolutionary wars there, has been of late discarded by the Austrian Court, and become a wanderer in foreign lands, has been the cause of a great deal of excitement in Brussels, and a most popular hatred in Brussels. On Sunday evening last, shortly before nine o'clock, he paid a visit to the public gardens, where a promenade and concert were going on at the time; he was immediately surrounded by a crowd of from 1,000 to 1,500 persons. It being apparent that a demonstration was about to take place. General Chezal, of the Belgian service, who was in the gardens, went up to the old marshal, and held into conversation with him, hoping by his presence to overawe the rising feeling. A few moments passed and no manifestation took place, the crowd meanwhile increasing very rapidly. M Fetis, one of the gardens, caused the orchestra to play two favourite pieces, in the expectation that the attention of the crowd would be withdrawn from his uneasy guest; but in vain. Hisses were heard, then some very opprobrious words were addressed to Haynau, as to his share in the Hungarian war, while the majority of the multitude cried, "Turn him out, turn him out" M. Chezal essayed to address the people and assuage the storm, but was not heeded to; and the tumultuous excitement rose still higher. Meanwhile messengers had been sent to the police-station and barracks, and shortly the officers arrived, together with a file of soldiers. A number of arrests took place, and the latter parties, with the presence of chezal and Haynau, were released immediately. After this, Haynau remained some little time at the concert, guarded by a knot of Belgian officers, and followed by the spectators in all his movements from the garden to the street, where he got into a hackney coach, and returned to his hotel, escorted by a strong body of the municipal guard. Haynau is about 60 years of age, and is a man of middle height

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

It is understood that Parliament will not be called together for "despatch of business" before Thursday, the 11th of November, when it will be assembled for a short session before Christmas, of four or five weeks, unless something important and unforeseen shall occur in the meantime, and will then be adjourned for the Christmas holiday.

His Grace the Duke of Northumberland has decided upon building a bridge over the Coquet, a short distance below Warkworth Hermitage, to enable the inhabitants of Warkworth to reach the common by a shorter than the present route.

John Johnes, Esq., Judge of the County Court, and Recorder for Carmarthen, has kindly and liberally presented £20 ("being the first fruits of his office as Recorder") to the Carmarthenshire Infirmary.

A gentleman in the neighbourhood of Berwick procured a few grains of wheat taken from an Egyptian mummy, and from one of these which he planted he has reaped a stalk which has no less 23 branches, and from another, which was selected as an average of the whole, upwards of 60 grains were taken.

A few days ago, Sarah Cope, aged six, living with her parents at 61, Dudley-street, London, was looking out of a second-floor landing window, when she fell over, pitched on her head on the stone pavement beneath, and died on Saturday last.

The number of Wesleyan Dissenters, in the present year, in Great Britain appears, from the official reports of the conference, to be 281,363, being a decrease as compared with the previous year, of 20,964. In Ireland, 20,040.

We read in the *Vienna Gazette* of the 17th inst:—"The court-martial sitting in Vienna has sentenced Maria Swoboda, clothes-maker, to fifteen blows with rods and fourteen days' confinement in irons, for verbal and actual injury of the offence of public security."

The *Stamford Mercury* relates that while George Harrison was shooting deer in Blatherwyke-park, on firing at one fine buck, another, equally good, also happened to be in a line. The bullet passed obliquely through the head of both, and two deer lay dead close together from the effects of one shot.

The *Devonshire Chronicle* states that a few days ago a young shark, about four feet long, was taken alive at the confluence of the Taw and Torridge. It was taken to Barnstaple, and exhibited to the curious at one penny each. It was purchased by Mr. Fraine, gunsmith, with the design of "stuffing" the skin.

The *Newcastle Journal* cautions the public against forged Bank of England notes, which in some instances have been passed away in that town during the past week by strangers, men and women.

The accounts from Ireland generally represent the potato crop as recovering from the disease which affected it lately. The representations are favourable of the condition and promising abundance of the crops of all sorts.

A very valuable coal mine is said to have been just discovered on the property of a gentleman named Brodin, in the county of Cavan, Ireland, and the coal having been scientifically examined, found to be of a superior quality.

The Tribunal of Correctional Police last week condemned a butcher, of Versailles, named Silfe eau, to 5f. fine and costs, for having offerd for sale in the market a calf aged less than six weeks.

On Sunday morning the starch manufactory of Mr. J. Gardner, in Belfast, was completely destroyed by an accidental fire.

It is stated that the garter vacant by the demise of the Duke of Hamilton will be conferred on the Duke of Northumberland, the First Lord of the Admiralty.

A pamphlet called "Les Nuits de St. Cloud, ou les Deux Cours," has been seized by the police at Brussels, on the complaint of the French Minister; and a judicial prosecution has been commenced against the publishers.

The agents of the London Electric Telegraph Company have obtained leave to break the ground in the Devonport streets, for the purpose of laying the wires of the telegraph to the Admiralty Office on Mount Wise, so as to complete the communication from London to that point.

A gentleman named Burnham, of Heavitree, was struck dead by lightning during the thunderstorm that visited Exeter and its neighbourhood on the last week, and several persons were more or less scorched by the electric fluid.

From a field of oats, belonging to Mr. James Wright, farmer, Kilnford, parish of Dunconald, in Scotland, two stalks were found to measure in height the one six feet ten inches, the other seven feet. The grains of one ear were accurately counted, and found to amount to 148.

The *Giornale di Roma* announces that four suspension bridges are to be constructed over the Tiber, viz. at Rapetta, San Giovanni de' Fiorentini, Ponte Sisto, and Ponte Grande. A company has undertaken the work, on condition of exacting a moderate toll.

Some workmen, whilst recently excavating the ground at Solopisi, near Prague, came on the skull of a hippopotamus, partly petrified, and about four and a half feet in length. This curious article has been deposited in the palace of Prince Schwartzenberg, at Czakowitz.

Some children, who were recently playing on the banks of the lake of Morat, near Avranches, in the Swiss canton of Vaud, found about 100 ancient gold coins, including an English rose noble of the reign of Edward IV., a coin of Charles the Bold of Burgundy, and a Brabant coin of the year 1470.

The Earl of Derby has declined the invitation to be present at the dinner of the Royal North Lancashire Agricultural Society, to be held at Preston on Tour day next.

The Chancellor of the Exchequer acknowledges the receipt of a cheek for £5 from "A Catholic Priest," as restitution money.

The Earl of Burlington has acceded to an application from several sanguineous (or promises) to canvass within the walls of the old castle of Pevensey, in Sussex—the Anderi a of the Romans, and the prison of the poet-king of Scotland, the earlier and the better James the First.

According to a judicial journal of Berlin, the sentences of death in proportion to the population have, during the last five years, been as one to 250,000 in England, one to 200 000 in Ireland, one to 200,000 in Bavaria, one to 72,000 in Sweden, one to 70,000 in Prussia, and one to 120,000 in Spain.

The *Aberdeen Herald* says it is confidently reported that the state of Mr. Macaulay's health is such that his medical attendants have advised him to refrain from making any public appearance whatever. Under such circumstances it is not unlikely but there may be another severe contest for the representation of Edinburgh in Parliament.

A Northumberland paper states that the books of a grocer who failed the other day, prove that he lost no less than £30 per week by selling "cheap sugar."

Lismore Castle, on the banks of the picturesque Blackwater, in Ireland, was last week partially destroyed by fire, which accidentally broke out on the premises.

The latest shipment of cotton grown by way of experiment for Manchester is now on its way to Mr. Hugh Fleming, Manchester Commercial Association, for sale, from Colombo, Ceylon. It consists of fifty-five bales shipped by the *Waterloo* by order of the Court of the Directors of the East-India Company.

The import of foreign grain, cheese, &c., into Liverpool for the fortnight ending 18th August, 1852, amounted to 271,866 bushels wheat, 6726 bags ditto, 73 782 barrels flour, 4316 sacks ditto, 99,047 bushels Indian corn, 28 836 sacks ditto, 58,069 bushels oats, 7849 bushels barley, 22,120 bushels beans, 40 bags ditto, 800 bags ditto, 800 boxes cheese, 40 boxes ditto.

The *Belfast Whig* of Monday states that Mr. W. S. Crawford is about to be made the defendant in no fewer than twenty-five actions for libel, at the suit of as many landed proprietors in Down, whom the late member for Rochdale assailed in a recent letter respecting the election in that county.

The present summer has been more than usually favourable for the honey harvest. Three cags of honey have been taken within the last five weeks from one cottage hive in the garden of Dr. Whitehead, of Crayke, in Yorkshire. The gross weight of the cags was 42½ lbs., the produce of 11½ lbs. of virgin comb, and an ample supply of honey was left in the old stock.

A Freehold Land Society, called the British Freehold Land Society established at Manchester in March, on the same principle as the National, has succeeded so well that already 1300 shares have been taken up. The managers have purchased an estate at Didsbury consisting of nine acres, giving slightly over £400 per acre for the freehold, and are dividing it into 185 allotments.

The following gentlemen have been elected bondholder trustees of the Birkenhead Dock Trust, viz. John J. Goldsmith, Bart.; Lionel Ames, Esq., The Right Hon. St. Albans; Samuel Holme, Esq., Liverpool; Alfred Williams and the Rev. William Hawks, Bath.

A Canadian paper records the death of Mr. Charles Boucher, of Berthier, district of Montreal, at the advanced age of 106. He had been married three times, and had sixty children. He leaves to deplore his loss 44 nephews, 66 grand-children, 13 great-grand-children, 28 nephews, 70 grand-nephews, 9 great-grand-nephews, and a large circle of friends, who assisted at his funeral, which took place on the 12th of April with great solemnity.

CHESS.

TO CORRESPONDENTS.

S. J., Northampton—Your present explanation differs materially from the former. As you now put the case, Black is unquestionably bound to capture the B1 Bq., and, as he cannot do so with his Kt, he must take it, whatever the cost, with his Q as an Rt.

REBELLION, JOHANNES, L. H. A., Lower Sydenham—Your solutions are both accurate.

RUSTICUS.—We cannot afford room for your letter, but we are quite ready to acknowledge that our experience fully bears out the truth of your assertion, that, while chess clubs and chess amateurs have multiplied most gloriously throughout the country during the last half-dozen years, the quality of the provincial play has not been found to be in that increase. This is partly owing to some of the best men from the county having taken up their abode in the metropolis, but the chief cause of the falling off in that mental keenness to defeat, which produces intense application, is to be found in the habit of giving odds at the hands of stronger ones, and thus deprives all parties of that constant practice which is indispensable for the attainment of excellence.

J. R. S., of Stuttgardt—The new version shall be examined and reported on

MATH. DUO.—In the position given B can only evicently draw the game, if he chooses, by perpetual checks.

SUBSCRIBER.—Your problem is four moves across impracticable. Suppose at his second move Black play Q to Q B 7th, instead of P to Q 6th, how would you proceed?

J. J.—It is no element of teaching a piece you say "Jacobite," or "I adjust," your adversary cannot compel you to move that piece

ARBITER.—See the solution we give below

LATUS FAMILIAS.—We rejoice to find that our exertions to do away with the pernicious practice of playing Chess for sums of money in the ruder classes are likely to be completely successful. To say no more on the subject of the many ills, worthless persons whom the system recovers, it is discreditable to a scientific recreation like Chess that it should be made a medium for petty gambling

SOLUTIONS of PROBLEM No. 446, by Mons. Damiano, Gregory, Albert, J. E. Ernest, Harlequin, Lorenzo, B W P, May-fly, J. S. D, M. E H, Pollo-Chess, are correct. All others are wrong

SOLUTION OF PROBLEM No. 447, by Dereveon, Fish, Major, B W F, are correct. All others are wrong

SOLUTION OF PROBLEM No. 446.

(White playing First.)

WHITE.	BLACK.	WHITE.	BLACK.
1. Q to K 4th (ch)	K takes B	2 B to K 6th (ch)	K to K. 4th
2 K to K R 6th (ch)	K takes R .	4. Kt mates.	

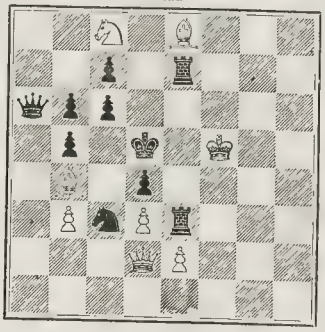
(Black playing First.)

BLACK.	WHITE.	BLACK.	WHITE.
1. Q to Q B 8th (ch)	R takes Q	3. R takes Q R P (ch)	K to Kt sq
2. B takes Q Kt P (ch)	K takes B	4. Kt mates.	

PROBLEM No. 448

By E. B. C., of Princeton, United States.

BLACK.



WHITE.

White, playing first, to mate in five moves.

CHESS IN RUSSIA.

(Allgaier Gambit.)

Spirited Rifle Gambit played by Prince Ourousoff, the elder, against Mr. Bird, of Moscow.

WHITE (the Prince.)	BLACK (Mr. B.)	WHITE (he Prince.)	BLACK (Mr. B.)
1. P to K 4th	P to K 4th	13. R to K B 4th (c)	Kt takes B
2 P to K B 4th	P takes P .	14. P takes Kt	Q takes Q (ch)
3. Kt to K B 3d	P to K Kt 4th	15 R takes Q	B to Q B 4th (ch)
4. P to K R 4th	P to K Kt 5th	16. K to K 2d	Kt to K R 4th
5. Kt to K Kt 5th	P to Q 4th (a)	17. R to K B 7th (ch)	K to Kt 3d
6. P to Q 4th (a)	P to K B 3d	18. Kt takes K P (d)	B to Q Kt 3d
7. Kt takes K B P	K takes Kt	19 Kt to Q 6th (e)	P to K Kt 6th (ch)
8. Q B takes P	P takes P	20. K to R sq	P takes Kt
9. K to Q B 4th (ch)	K to K 2d	21. Q R takes P (ch)	Kt to K B 3d
10. R to K 5th (ch)	K to K B 3d	22. Q R takes Kt (ch)	K to K 4th
11. Cast ou	B to K 2d	23. R K to K Kt 7th	K takes P
12. Kt to Q B 3d	Kt to Q B 3d	And White gave mate in three moves.	

(a) Discouraged by his previous defeats at this opening by Prince Ourousoff, Mr Bird in the present instance seeks ways to maintain that system of defence rec mmended by Po sman, who discovers (erroneously, in the opinion of Major Jaenisch and other authors) at the move 3 (Black) P to K B 4th.

(b) This move, the invention of the Prince Ourousoff has not been foreseen by Polerio, and, we mention only—5 (White) P to K 5 th or P takes Q P, or P to Q 3d

(c) White sustains its attack with great ability. From first to last every move tells.

(d) Strong, but not as strong, we apprehend, as K R takes Q B P, threatening not only to win the Bishop, but to give mate by R to K B 7 th (ch), in the course of four moves.

(e) Ingenious, since whether Black take it or not, he has an escape.

CHESS ON THE CONTINENT.

Brilliant *partie* recently played at the Brussels Chess Club; M. de Rives giving the Pawn and move to *Mr. Allix.*

(Remove Black's K B Pawn from the board.)

WHITE (Mr. A.)	BLACK (M. de R.)	WHITE (Mr. A.)	BLACK (M. de R.)
1 P to K 4th	Kt to K B 3d	15. Q R to K sq	Kt to K 4th (c)
2. P to Q 4th	Kt to K B 3d	16. Kt to K 6th	B takes Kt (ch)
3 B to Q B 4th	P to K 3d	17. B takes R (d)	Kt to K B 6th (ch)
4. Kt to K B 3d	P to Q B 4th	18. K to K R sq	Kt takes Q
5. P to Q 3th	P to K 4th	19. B takes Q	R takes B (e)
6. Kt to Q B 3d	P to Q 3d	20. Kt takes B	B to Q 2d
7. P to K R 3d	Kt to Q 2d	21. P to Q B 4th	B to K B sq
8. B to K 3d	B to K 2d	22. R to Q 3d	P to K R 3d
9. Castles	Castles	23. Kt to K 6th	R takes Kt
10. Q Kt to K 2d	Kt to K Kt 4th (a)	24. P takes B	R to K B 5th (f)
11. R takes Kt	B takes Kt	25. P to K 5th (g)	R to Q 5th
12. P to K B 4th	B to K R 3d	26. P to K 7th	K to B 2d
13. Q to Q 2d	P takes P	27. P takes P	
14. Kt takes P	Q to K Kt 4th (b)	And Black surrendered	

(a) The attack now commenced by M de Rives is maintained with uncommon spirit, and leans to some extent on the defence of Queening Pawns.

(b) Very well played, be it this and the next move of Black

(c) At the first view, this appears to be the winning move in the game; but, on examination, it is found to be part of a very beautiful combination, by which Black deserves to have won the day.

(d) If he had taken with the Rook or King, or moved his K sq to R 3d, Black would have won with out much trouble.

(e) We should have preferred either taking the Kt with the Q Bishop, or taking the K Bish p with the Kt, and we feel we must select case M de Rives would have won a Pawn since the Knight

(f) B ack's difficulty is to preserve his Kt, which White threatens to win by R to Q sq, next move. It is quite clear he was guilty of a mistake in this instance in move in taking the adv ersary's Q Bishop.

(g) Mr A. s plays the termination very cleverly; after the advances of this Pawn, we doubt if Black could in any way retrieve himself, for if he had answered with Kt P takes P, then

WHITE	BLACK.
26. P to K 7th	K to B 3d
27. R takes K P	K to Kt sq
28. B to K Kt 6th (ch), and wins.	

CHESS ENIGMAS.

No. 756.—By E. B. C., of Princeton.

White. K at K B 5th, R at Q B 3d, B at Q B sq, P at Q B 2d.
Black · K at Q 4th.

White to play, and mate in five moves.

No. 757.—Composed by Signor Anneri, of Rome.

Black: K at Q B 5th, Q at K sq, Bs at K R 4th and 7th, Ps at Q Kt 6th and Q K 3d.

White to play, and mate in four moves.

NAVAL AND MILITARY INTELLIGENCE.

The Duke of Wellington has during the last ten days been actively engaged in completing the necessary preliminaries for the formation of the militia in Hampshire and the Tower Hamlets, over which districts the noble and gallant Duke is Lord Lieutenant.

Enrolment of the Berkshire Militia.—The Right Hon. the Earl of Abingdon, the Lord-Lieutenant of this county, has recently held a meeting of the deputancy in order to carry into effect the Militia Act. The Lord-Lieutenant was himself present, and there was a large number of the Deputy Lieutenants, of whom were the Earl of Craven, Lord Barrington, M.P., Sir J. Conroy, Sir R. G. Throckmorton, Colonel Blagrave (of the Berks Militia), Major L. L. Gower (of the Berks Militia), Major Court, &c. The noble and venerable chairman (the Lord-Lieutenant), on opening the proceedings, said it was very desirable that the quota of 483 men for this county should be raised by voluntary enlistment, to avoid the unpleasantness and inconvenience of the ballot, and that the force should be prepared for training and exercise as early as possible in the month of October. The views propounded by his Lordship met with general concurrence, and the meetings of the Deputy-Lieutenants for the several divisions of the county, to receive the returns from the different parishes were fixed upon. The number required of for this county is on an average about two to each parish, and already we have heard of several having volunteered for the service. The meeting of the Lieutenan y was adjourned until the 17th of September.

East York Militia.—A meeting of the East Riding Lieutenancy was held at the Court-house, Bever ey, on Saturday, the 21st inst., to receive the returns of the constables, from all the parishes and townships in the Riding, of the number of volunteers who have offered to enlist in the militia. The Earl of Carlisle, the Lord Lieutenant, was present. The number of men required is about 800. Notwithstanding the inducements held out by placards, setting forth the advantages of enlistment, and circulated in every parish, it appears that the total number of volunteers who have presented themselves is just twenty-seven. Nine of them are from one small town (Cherry Burton), who expect to be made sergeants. Beverley has only furnished one. Throughout the whole of North Holderness, a large agricultural district, not one volunteer has been found. Voluntary enlistment in the East Riding has failed.

The enlistment of young men for the Dorset Regiment of militia is progressing favourably, and it is the general opinion that the required number will be raised without resorting to the ballot.

Manning the Navy.—A committee of flag officers and captains, consisting of Admiral Sir William Parker (chairman), Rear-Admirs. Fanshawe, Captain the Hon. Richard Dundas, Captain Peter Richards, and Captain John Shepherd are now sitting at the Admiralty, Whitehall, for the purpose of considering the best plan to be adopted for the purpose of supplying the Royal Navy with efficient and able-bodied seamen whenever an emergency may arise to call for their services.

The Inspector-General of Cavalry has, by his Grace the Commander-in-Chief's desire, been directed for the future to inspect all regiments of cavalry in the United Kingdom, and not those only which are quartered in Great Britain, as heretofore.

Model Fire-arms.—A party in the West of England has purchased and imported from Belgium a parcel of single and double-barrelled guns and pistols, which are intended to be sent to Birmingham in order to see if they cannot be made there equal in quality and finish for the same price, as to cost of manufacture, as abroad, for to a ultimate purpose of sale to parties emigrating to America or elsewhere, from this country.

New Iron War-Vessels.—A plan has been recently submitted to Government and private ship-builders, by Mr. L. Arman, of Bordeaux, and Mr. J. J. Brandy, of the Canal Iron Works, Limehouse, with the view of obviating the objections which at present exist against iron vessels, owing to their accumulating unfitness for war purposes, and that when employed in warm climates they very soon become foul on the surface—an incrustation of weeds and shells being speedily formed, which very seriously retards the speed of the vessel; and in consequence of the material itself being liable to very rapid deterioration, steps being necessary, well-authenticated cases of iron vessels that have been employed for only a few years within the tropics, where outward plating and frames, when exposed to the action of the water, is found entirely changed in character in many parts, and converted into a sort of plumbago, easily cut with a knife, and without any strength or tenacity. Mr. Arman proposes to remove these objections by building vessels of the most approved modern lines for speed, the outer frame of timber, and within the outer frame build one entirely of iron, and proportionally lighter than if built entirely of iron. The French Government have ordered the building of a corvette at Rochfort, to be named *La Mojave*, with auxiliary engines of 220-horse power, the specimen Mr. Arman built for the well adapted for the mercantile service of this country, but it is not probable the Admiralty will order any vessel to be built where iron plating is used, as the splinters from it would be most destructive to the crews when splintered by 32-pounder shot, except Mr. Arman can show by experiment that his iron is protected.

Court Martial at Chatham.—Lance-corporal William Maurice Jackson, of the Royal Sappers and Miners, was tried on Monday, by a district court-martial at this garrison, for desertion in December, 1847. Lieut.-Colonel Walker, 95th Regiment, was president. The prisoner surrendered himself to a corporal at Woolwich on the 12th inst. Evidence was given of his desertion; and the prisoner, in his defence, said what was not correct. He stated that he accused a sergeant who had the management of the sergeants' mess that he was a defaulter, and that the sergeant threatened to place him under arrest, and to bring him to a court-martial. He called witnesses to character, and a very excellent character was given him. The court found him guilty. The sentence must be confirmed by the Commander-in-Chief before it can be publicly known. The prisoner has a wife and family, and was in business in London as a printer. His friends are very respectable, his father is a merchant at Liverpool, and the principals are a banking firm at the Isle of Man.

The Accident on Board the "Castor and Pollux."—John Castle, the seaman who had his arm blown off on board the *Retribution* steamer, while at the was saluting the Queen at Antwerp, has been taken to the Portsmouth Hospital. The Queen has sent £25 for him, and her Majesty's steamer *Retribution's* crew have subscribed £5. A seaman of the *Retribution*, on board which Castle was sent, in unloading the foremost guns, in order that Castle might not be ill-carried, also had one of his arms blown off.

Sir James Graham, Bart., visited the Plymouth dockyard last week, also the works at Keyham, with Commodore Seymour. The hon. baronet has son appointed as midshipman on board the *Trincomalee*, under orders for South America.

Captain John Edward Wallcott (1822), M.P. for Christchurch, one of the most distinguished, but neglected, senior officers of the navy, has received at the hands of the Duke of Northumberland the good-service pension of £180 per annum.

The *Greenock*, 10, iron screw steam-frigate, fitted with engines of 350-horse power, has been sold by Government to the Australian steam Screw Shipping Company, for the purpose of being employed in communicating between Great Britain and the Australian colony, now rising into great importance since the discovery of gold fields in that quarter of the world. The chief engineer, who by the Company if he will enter their service, and still continue chief engineer of the *Greenock*.

MEETING OF THE ROYAL AGRICULTURAL SOCIETY AT GALWAY.

(From our own Correspondent.)

The long-talked of Galway cattle show has at length taken place According to previous arrangements, His Excellency the Lord Lieutenant, with the Countess of Eglinton, accompanied by his private secretary, and an aide-de-camp, left the Castle on Wednesday morning (last week), o'clock, where the Sligo carriage of the Company (an exceedingly handsome structure) awaited his coming. Immediately the special train started, having a second carriage, bearing the chairman, chief engineer, contractors, Dargon, Esq., and some few of the directors, attached to it, and ran the distance in little more than an hour.

Upon arriving at the Terminus at Galway the journey having been accomplished in much less time than was expected), the preparations for the reception of his Excellency were not completed, and as a result, the Viceregal entrance was little more than a private one.

When the period for receiving the addresses had arrived, a positive scramble took place amongst the deputies. His Lordship received them in the presence of his Countess and staff, but deferred answering them until he had seen Galway Bay. At three o'clock his Excellency and suite visited the show-yard, where he remained for some time, and returned shortly before six; at this hour a larger gathering of the people had assembled, who received his Lordship respectfully, though not very enthusiastically.

On Thursday his Excellency visited Queen's College to receive the address of the president and professors, and was pleased to make a most ample reply, stating his great anxiety for mixed education, as well as expressing his admiration of the present national education system, which he looked upon as the best; his Excellency adding that he trusted that nothing would interfere to mar its usefulness.

It is much to be regretted that this visit took place during the vacation, when all the students and most of the professors are from the College.

We give a Sketch of the President reading the address in the Examination Hall of the College, surrounded by the professors and a fashionable circle of Galway belles.

A drive of some hours to the public institutions next took place; and at five o'clock, attended by the Lord High Chancellor, the Duke of Leinster and a long train of nobility, his Excellency proceeded to the

THE ROYAL AGRICULTURAL SOCIETY'S MEETING, AT GALWAY.—RECEPTION OF THE VICEREGAL PARTY

dining-hall, temporarily fitted up in a portion of the railway terminus, under the direction of Mr. Cheyne. The dinner was graced by the attendance of a number of ladies who had obtained the privilege of admission. Her Excellency a little after nine o'clock honoured the banquet with her presence, shortly after which, owing to indisposition, the Viceregal circle took their departure, when the company soon broke up.

Next morning (Friday), from its being announced that his Excellency had intimated his intention to view the Bay, and the *Geyser's* steam being seen getting up, so early as six o'clock the crowd began to collect; and at two o'clock, when their Excellencies arrived at the pier, every available spot from which a view could be obtained, was fully occupied, and the air was filled with hearty Irish cheering. Upon entering the steamer's gig, a salute was fired from the ship in the bay, to the delight of the Galwegians, unaccustomed to these things. Their Excellencies, after receiving the address of the Harbour Board, and enjoying a short sail, returned ashore, and were driven to a small steamer. A portion of the route, from the landing pier to the basin wherein this tiny craft lay, chanced to be the fish market; and through this not very odoriferous *locale* their Excellencies had to be driven—nay, even to walk a portion; but then, had it not been so, one of the greatest treats in Galway, that of seeing the Cladagh men and women in their homes, would have been lost.

Having gone on board the *O'Connell*, amidst the sounds of music and cheers of the people, deputations and addresses were presented from the Cladagh, as also from the other societies connected with that side of the town. After his Excellency had inspected the industrial productions of the youthful portion of the strange people, the steamer entered the dock for the first time, amidst the cheers of thousands.

Here a long procession was formed of the fishing-hookers and other boats belonging to the Cladagh, with those of the Board of Works and private parties in the town, headed (as of old) by the *O'Connell*, and took its way towards the first gate, which closed, to raise the Viceregal party's boat to the level of Lough Corrib, as engraved above. Here a fine view was obtained of the Lord Lieutenant and his Lady. The steamer wended its way up to the Castle, from which a Royal salute was fired, and afterwards put about on its downward progress.

At six o'clock their Excellencies arrived at their residence; and at eleven the Countess, leaning on the Duke of Leinster, entered the ball-room; immediately after which dancing commenced, and was kept up with spirit to a late hour.

Upon his return, the Earl and his party stopped at Athlone, to inspect the bridge and other public works in that town; and, after partaking of an elegant *déjeûner* prepared for him by the directors of the railway (to whom all praise is due for their untiring exertions to raise Galway to the position which nature seems to point out she ought to hold), arrived safely in Dublin.

To the secretary and officers of the Railway Company our special thanks are due, for their kind attentions to our Artist and Correspondent

PRESENTATION OF THE ADDRESS TO THE LORD LIEUTENANT, AT QUEEN'S COLLEGE, GALWAY.

THE "GREAT BRITAIN" STEAM-SHIP LEAVING PRINCE'S PIER, LIVERPOOL, FOR AUSTRALIA.

DEPARTURE OF THE "GREAT BRITAIN" FOR AUSTRALIA.

About three o'clock on Saturday afternoon, this splendid screw steamship, Captain Mathews, weighed her anchor in the Sloyne, and steamed gently down towards the mouth of the Mersey; her passage being watched with intense interest by crowds of enthusiastic spectators, who had stationed themselves on the Liverpool side. Steam-boats and other craft, gaily dressed with flags and streamers, and filled with people, were moving about in all directions, while the ferry-boats were crammed with passengers, who preferred the Cheshire side of the river as a point of view. The deck of the *Great Britain* was crowded with passengers, to take farewell of old England. Several tug-boats hovered round the leviathan; at intervals guns were fired from the *Great Britain* herself; from the *Arctic*, which lay in the Sloyne; and from Mr. Parry's pleasure gardens at Seacombe, while an almost uninterrupted series of hearty cheers resounded from the steamer, the neighbouring boats, and the piers. At length the fort was breasted, and after firing a salute the smaller vessels fell back, and the *Great Britain* sped on her way with upwards of 630 passengers and a very heavy mail.

The *Great Britain*, at the time she left the river, was drawing 22 feet of water. The quantity of coal taken on board is about 1400 tons, chiefly Welsh, with a small quantity of anthracite and patent fuel, as an experiment. There is enough to steam the whole distance without stopping; but, lest anything should occur, she will call at the Cape of Good Hope to replenish her supply, and take in live stock. It is expected that she will reach the Cape in about twenty-five days, whither ships have been dispatched with coals to wait her arrival. After staying there two or three days, she will proceed to Melbourne and Sydney, and it is confidently expected that she will reach the former place in fifty-six days from England; whereas double that length of time is considered an average voyage for a sailing vessel. The *Great Britain* is fully equipped to resist any attempt to attack the vessel that might be made, for she is mounted with six heavy deck guns, and arms and ammunition for 100 men. The crew of the *Great Britain* consists of about 130 persons in all.

DEPARTURE OF THE "BALLENGEICH" EMIGRANT SHIP FROM SOUTHAMPTON.

In our Journal of last week, we described the very interesting proceedings on Wednesday, at a farewell group meeting of passengers to Australia, by the *Ballengeich*, from Southampton, freighted on the colonization plan founded by Mrs. Chisholm. We now engrave the scene of the farewell, with Mrs. Chisholm addressing the assembly. We also add an explanation of the circumstances which led to the chartering of the *Ballengeich* for the voyage.

Several vessels have already been sent out upon the family-group scheme devised by Mrs. Chisholm, most of the emigrants having received loans from a society, which they have undertaken to repay. Hitherto, the great points for emigrant departure have been London and Liverpool; but as the impulse to emigrate spreads through the country, other ports put forth their claims to participate in the advantage; and among them Southampton, with its obvious advantages as a starting-point. More than one vessel has already sailed from the port; but it was reserved for the *Ballengeich*, a fine ship of about 800 tons burden to be the first vessel that should carry out a number of emigrants on Mrs. Chisholm's principles, and under her auspices, who had all, with trifling exceptions, paid their own passage-money. The history of the chartering of this vessel is curious. Some years ago the Government agents connected with emigration wrote to the South-Western Railway for tenders to convey emigrants on their line down to Southampton; but other influences prevailed, and the bulk of the emigrants continued to be sent from the Thames. The matter dropped for the time, but some time afterwards Mr. Wyndham Harding, the secretary of the South-Western Railway, proposed to the Directors that they should start a vessel from Southampton, at the same time pointing out the advantages that would accrue to the line from the establishment of that port as a point of embarkation for emigrants. The directors, however, declined to interfere, as not properly coming within the sphere of their duties; on which Mr. Harding undertook the task at his own individual risk, and engaged the *Ballengeich* to take out passengers on Mrs. Chisholm's plan; that lady not only affording encouragement, but giving valuable personal assistance to carry out the project. It is gratifying to add that the risk of the spirited projector formidable as it might appear in the first instance, has turned out to be merely nominal; all the berths having been engaged at the moderate fare fixed of twenty guineas. There are about 250 emigrants—men, women, and children—in the *Ballengeich*, and the accommodation provided is the same throughout the ship. There is no distinction between cabin and steerage passengers; thus completely realising the idea of family emigration.

Wednesday week was the day fixed for hauling the *Ballengeich* out of the docks, the emigrants were all assembled on board for the first time and were attended by numerous friends who had come to bid them fare-

THE "BALLENGEICH" EMIGRANT SHIP LEAVING SOUTHAMPTON FOR AUSTRALIA.—MRS. CHISHOLM'S FAREWELL.

well. Besides this, the knowledge of Mrs. Chisholm's presence, personally to superintend the final arrangements of the emigrants, induced many persons to assemble in the docks, so that in the course of the afternoon a crowd of some thousand people had assembled on board and around the vessel. In compliance with a generally expressed wish, Mrs. Chisholm addressed the assembly; and as it was impossible, in the crowded and confused state of the ship's deck, that she could have been heard to advantage if the crowd remained on board, an arrangement was made by which the audience were ranged on the quay, alongside which the lady addressed them from the ship's poop, and bore special testimony to Mr. Harding's disinterested and spirited conduct; and Mr. Harding subsequently detailed the steps which he had taken in engaging and fitting out the vessel.

COUNTRY NEWS.

The Liverpool Chamber of Commerce.—On Monday afternoon the quarterly meeting of the members of the Liverpool Chamber of Commerce was held at their offices, Exchange-buildings; Hugh Horsby, Esq., president of the council, in the chair. The report, which was unanimously adopted, alluded to the Parliamentary committee which sat towards the close of the last session, and recommended that the head board in London should consist of not more than five commissioners, one of whom should sit in Parliament, and at least one should be a man of large practical commercial experience. It was also recommended that the collector, comptroller, and head in-pector at each of the chief ports should form local boards, with power to dispose of all cases of dispute arising within the jurisdiction of each, where the sum of property in dispute may not exceed £100, reserving a right of appeal to the head board in London, or to the Lords of the Treasury. In order to afford increased facilities for the transit of goods, it recommended that power should be given to the local boards to decide on the nature and extent of examination of goods which would be necessary on application being made to them. The practice of requiring vessels of small size to procure a license to go beyond given distances from the coast was recommended to be abolished, inasmuch as it is no longer applied to coasting vessels, the smaller craft, swift steamers, or foreign vessels of a like description. The council again urged attention to the hardship of making owners and employers of ships responsible for the acts of their servants in smuggling, or other infractions of the Custom-house laws, even when such acts can be proved to be beyond the control or cognizance of the owners or employers. The report dwelt upon the necessity that exists for every possible facility being given to the expansion of the export trade, and it recommended that power should be given to and which of late has been considerably diverted to London. Allusion was also made to the corn trade, especially in regard to the excessive charges incurred at the ports on the importation of grain, and a recommendation was to be considered that the local boards to decide on the nature and extent of examination of goods which would be necessary on application being made to them. The practice of requiring vessels of small size to procure a license to go beyond given distances from the coast was recommended to be abolished, inasmuch as it is no longer applied to coasting vessels, the smaller craft, swift steamers, or foreign vessels of a like description. THE WAVERLEY NOVELS, by SIR WALTER SCOTT, Bart.

To be completed in Twenty-five Monthly Volumes.

No works of imagination of the same extent have ever been received with favour equal to that which has been bestowed on the Waverley Novels. Since their first publication not fewer than a Hundred and Twenty Thousand Copies have been sold in this country, and as many more in the United States. The s have been published in a great variety of forms to suit the taste of the public, but they have long wanted an Edition in Octavo, to range with the Standard Books usually arranged in Libraries. This want it is proposed to supply by means of the LIBRARY EDITION which will consist of Twenty-five Volumes, demy 8vo, to be published Monthly. The Printing, however, will proceed more rapidly, so that those who desire to complete their sets before the termination of their periodical issue, will have an opportunity of doing so a considerable time before the regular publication of the last volume.

Each Volume will contain a complete Novel or Novels, illustrated with a Frontispiece and Vignette, painted and engraved by the most eminent Artists of the day. The Library Edition will contain all the latest corrections of the Author

A. and CHARLES BLACK, Edinburgh; Houlston and Stoneman, London.

Testimonials received for ladies, to which department (if preferred) Mrs Smart will attend. For terms, &c, apply to Mr Smart, as above.

BINDING the ILLUSTRATED LONDON NEWS.—The Volumes of the Journal bound in embossed cloth, gilt edges, at 5s per volume. Post-office orders payable to Mr. MATTHEW CLOVER, CLOVER'S BINDERY, Late M. C Rowland, Book-binder, 16, corner-place, Lincoln's-inn fields, London.

HIS GRACE the DUKE of WELLINGTON. —Messrs SAMUEL ALCOCK and Co have the honour to announce that they have just published a highly finished PORTRAIT in PARIAN MARBLE of his GRACE the DUKE of WELLINGTON, after a design by ALFRED DOWNING DRURY. The Model represents the Duke as seen seated in the House of Lords. In addition to the singularly-striking resemblance that has been attained, there is in the artistic treatment of his subject a calm dignity of repose, and a truthfulness in keeping with the high personage portrayed, and which cannot fail to raise itself upon the most extensive and close familiarity with the features of the illustrious Statesman. Messrs S. A. and Co. have made arrangements with the China and Glass Dealers throughout the United Kingdom, through whom alone copies of the work-ize can be procured.

HAIR MEMENTOS.—ARTIST in HAIR.—DEWDNEY begs to invite attention to any part of the Kingdom a BOOK of SPECIMENS for Two Postage Stamps. He also beautifully mounts in fine gold, Hair Bracelets, Brooches Rings, Chains, &c, in the most moderate. DEWDNEY, 24, Frederick-street, London.

RIMMEL'S TOILET VINEGAR is far preferable to Eau de Cologne as a Toilet requisite, for the Bath, the Toilet or Ball, a reviving scent, and a powerful disinfectant. Sold by all Perfumers and Chemists and by 24 Regent-street, 96, Cornhill, and 128, Strand.

GLENFIELD PATENT STARCH, used in the Royal Laundry: and WOTHERSPOON'S steam-made CORFECTIONS, by appointment to the Queen and Royal Family.—Glasgow: R WOTHERSPOON and Co., 46, Dunlop-street. London, Wotherspoon and Co., 44, King William-street, City; and sold by all grocers and druggists.

THE CORAZZA SHIRT.—CAPPER and SWAITHING have great satisfaction in announcing that they can recommend after fitting with the Corazza, or any other form of shirt, by sending measure to Leicester. Lengths required—round the chest, round the waist, round the wrist, & the height of the throat from the collar. Prices—Corazza shirts, 42s; linen fronts, 36s; wrists 6s to 12s each; good Linen shirts, 10s to 25s each; additional charge for fine linen shirts, from 5s to 25 each.—26, Regent-street, St. James's, London.

FOULDS'S RENASHIRTS "differ from other shirts in the shape and design [illegible] they are sold by [illegible] Manufacturers and Shirtmakers, and [illegible] Agents throughout the Kingdom. They are [illegible] with the principles in strict accordance with the requirements of the day, for the quality of the fine cambrics and mode of self-measurement, sent free per post.—RICHARD FOULDS, 10, LONDON-place of 162, Regent-street.

ROGERS'S IMPROVED SHIRTS, 26s, 32s 6d, and 37s 6d the Half-Dozen, are cut upon a new and improved principle, and combine the slightest degree of expansion at the smallest cost. Satisfaction is guaranteed, or the money will be returned.

ILLUSTRATED PRICED LISTS, with full particulars and directions for self-measurement, gratis and post free; and, if required, patterns of the new Oriental Shirtings, at 24s the half-dozen, post free on receipt of four stamps.

ROGERS and CO, Improved Shirt-Makers, 59, St. Martin's-lane, Charing-cross, London. Established 80 years.

THE ROYAL EXHIBITION.—39, Albemarle-street, Piccadilly. Valuable newly-invented, very small, powerful Wheatstone-pocket Glass. Invaluable to Sportsmen, showing minute objects at a distance of from four to five miles, which is found to be invaluable to Sportsmen and to Sportswomen, Gentlemen, and Gentlewomen TELESCOPES, possessing such extraordinary powers, combining the Double, with the Single Object Glass, showing Jupiter's Moons, Saturn's Ring, and the Double Stars. They supersede every other Glass, for all times. Also, a very small pocket, Shooting, Military purposes, &c. Opera and Race-course Glasses with wonderful power, a minute object can be clearly seen from one to twelve miles distant.—Invaluable newly-invented Spectacles.

DEAFNESS.—NEW DISCOVERY.—The ORGANIC VIBRATOR, an extraordinarily powerful, small, newly invented Instrument for Deafness, entirely different from all others, to surpass any thing of the kind that has been produced, or probably ever can be produced. Being of the same colour as the skin, is not perceptible; it enables deaf persons to hear distinctly at church and at public assemblies; the unpleasant sensation of ringing noises in the ears is entirely removed; and it affords all the assistance that possibly could be desired. 8 and 9 BOLSOVER, Aurists and Opticians, 39, Albemarle-street, Piccadilly.

NEW MUSIC, &c.

THE ANTIDOTE. Popular SONG.—"Say what's the antidote shall be."
Published by SCHOTT, Regent-street.

PIETRO LI GRANDE.—Just published, the whole of the Music, Vocal and Instrumental, from Jullien's Grand Opera, Pietro Li Grande, as performed at the Royal Italian Opera, Covent-garden. JULLIEN and Co, 214, Regent-street, and 45, King-street, London, and all musicsellers.

LES TROIS ANGES, Valses Brillantes. By LINA LAMERT. Just published, Beaufil illy illustrated in colours by BRANDARD. Price 4s.
JULLIEN and Co, 214, Regent-street; and all Musicsellers.

FORGET THEE! New Song, composed and sung by MR T. WRIGHTON. The words are touching in the extreme, and only equalled by the melody. When sung for the last time by the admirers of Frank Matthews. Also, by the same author the popular song, "Ride a Race to Welcome Home." Price 2s each, postage free.—BRAHAM and CO, 23, Bishopsgate-street Within.

SPOHR'S FAUST, 2s.; Bellini's Romeo and Juliet, 3s.; Auber's Masaniello, Spohr's Jessonda, and Fazy d'her's pieces, with Overtures and Airs, each one shilling. LA PANSA. A solo, the Pianoforte, Fragments, Lucia, and Favorita 6s each. Chabbell Offices, 67, Paternoster-row. Ask Augr. Novo.

THE OLD CHIMNEY CORNER. By J. M. JOLLY. This beautiful composition might tempt the very "Orchan on the Hearth" to mingle his chirp with the music of its strains. The joys of the fireside and domestic scenes are well described in the words, and the music is in unison with the lively perpost-free for 2s.—J WILLIAMS, 123, Cheapside.

THE LAUGHING GALOP, by HENRY FARMER.—"This is one of those felicitous morceaux which at once acquire public favour. At our instruments society immediately secures the reign, and has been encored in every performance. It is admirably arranged for the piano-forte, and will be found a welcome in the drawing and concert-room."—Vide Review, June 19th, 1852. Price 2s 6d.
J. WILLIAMS, 123, Cheapside.

OH! CHARMING MAY. Written by P. H. HATCH. Composed by G H RODWELL. Sung by all the public singers. This song, of whom 30,000 copies have already been sold, is the most popular of the day, and second demand to any original popularity. Price 2s, cent post free. Arrangements of the air for Piano, Solo and Piano, Flute and Piano, and concertina.
J WILLIAMS, 123, Cheapside.

THIS NOT FINE FEATHERS MAKE FINE BIRDS.—Mr ALEXANDER LEE announced that this popular Song, written by GAVESTON, remains for 9s of the publishers, 123, Cheapside. Price 2s, post free. The words and music, a composition of striking originality.

THE SPIRIT of GOOD, Cavatina, written by Mr ALEXANDER LEE; sung by Miss POOLE, at the Haymarket Theatre this and Public Concerts with the greatest success. This is the last popular composition of the above celebrated and lamented composer. Post free 18 stamps.
J WILLIAMS, 123, Cheapside.

THE ABBOTSFORD POLKA. By J. G. JONES, Bandmaster 93rd Lancers "Is a theme for a waltz, all polkas."—Vide London paper Price 2s. Also Jones's Bracken Ball, Ipswich, Harewood, Grosvenor, Caroline, Rose, and Goodnight Polkas, and Military Schottische. "Jones's dance music, from its melody, good time, and correct harmony, is the favourite Band parts of the Abbotsford are now in all Polkas are published.

ROYAL ACADEMY OF MUSIC.—The next SUMMER VACATION terminates on MONDAY, AUGUST 30.

The EXAMINATION of CANDIDATES for admission will take place at the Institution, on THURSDAY, the 9th SEPTEMBER, at Two o'clock, and every succeeding Thursday at the same hour.

Two KING of the ROMANS Scholarships, each of the value of £50 per annum, will be awarded for competition in October next, to be continued for annually, at Christmas. To any one proposing to enter on the Pay List at the Academy in October who will be under Fourteen years of age on the 1st of January in the ensuing year, the Subscribers receive their Majesties Royal Letters Patent, dated the 29th day of October, 1830.

By order of the Committee,
Royal Academy of Music, Tenterden-street, J. GIMSON, Sec.
Hanover-square, August 21, 1852.

PEACHEY'S NEW PIANOFORTES for HIRE, of (first-class manufacture) every description and price thereon from Fifteen Shillings per month, with the option of purchase. Terms (pamphlet free).—G PEACHEY, Maker to the Queen, City of London Pianoforte Manufactory, 74, Bishopsgate-street Within, opposite the Queen's Head.

GREAT DECORATIVE AND MUSICAL ATTRACTION.—LAMBERT'S PIANOFORTE.—To be DISPOSED OF by TICKET, 210 CHANCES at Five Guineas each, the splendid Carved and Gilt Cottage Pianoforte (exhibited by Mess s Lambert and Co at the Crystal Palace. This Piano, so universally admired at the time as a unique and slightly-varying cottage, is now offered for sale by a system of combination by lottery, among whom were six of H Bishop, Sir G Smart, and the Grand Prize Medal awarded at the Colonial Exhibition, among the large number exhibited has since been regilt and more highly finished by Mr Smart, as the case, being beautifully ornamented and profusely gilded. It is constructed on the "Patent Resonator" principle (invented by Mr Lambert, who is the inventor), and has been pronounced, by competent authorities, to be one of the most successful efforts in the application of that principle. Tickets, price ONE GUINEA each; and any person taking ten tickets, or procuring ten subscribers, will be presented with an additional ticket as a bonus. Tickets forwarded by post on receipt of Post-office order, made payable to Messrs Lambert and Co, 17, fortman-street, Portman-square; at the Office, Old Cavendish-street. Terms for Piano may be read at the Music Warehouses, as above.

MOST healthfully situated FREEHOLD HOUSE FOR SALE, on the outskirts of Reading, Berks, within the Parliamentary Walk of the Great Western Railway Station, and 10-½ minutes' ride by omnibus of London, containing a twenty-two and a-half-feet sitting room, and nine others; also an in-door water-closet, and pretty garden, commanding one of the most delightful views in the country, and, notwithstanding the height and dryness of the situation, possessing a supply of good water, a so a fountain in the garden. Apply to Mr JENKINS, 112, London-street, Reading, Berks.

TO ANGLERS.—CHARLES FARLOW, Fishing Tackle Maker, 191, Strand, invites Anglers to inspect his vast Stock of SALMON and TROUT RODS, and a silver pair for the rare capture of river fish. Catalogues forwarded by post gratis

ANGLING.—G. LITTLE & CO., Fishing Rod and Tackle Makers to the Queen, Prince Albert.—They request all Anglers an inspection of their manufactories at 10 Jermyn-street, which for the last fifty years has been in the trade. They can also supply their unmanufactured stock, which is the largest and best four in London. Wholesale lists of prices and retail price books gratis.

GLOVES, GLOVES.—CO-OPERATIVE AGENCY. Just received from the two principal glove-makers of Paris, Grenoble, and Zurich, 3000 dozen Ladies Kid, of the finest French pair, tastefully stitched and perfumed, one pair or any size or colour sent on receipt of two postage stamps to any part of the kingdom.—ADDRESS—BAKER and CHISP, 21, Regent-street, corner of Maddox-street.

BONNETS, CAPS, HEAD DRESSES, &c. &c.—PARISIAN MILLINERY DEPOT.—To ensure a perfect fit, and the most recherché taste in the above articles, combining with the strictest economy. We are now selling the most fashionable and the most becoming Bonnets that can be procured in Paris, Lace, Blonde, or Fancy Caps, 12s 6d to 30s 6d; Leghorn, Tuscan, Rice, and every other description of Bonnet, Caps, Head Dresses, &c., equally cheap, and the largest stock in London to select from, at CLARKSON'S PARISIAN HOUSE, No 20, Cranbourne-street, near to Economy House, No. 45, Charing-cross, and Swan Yard, Leicester-square. Country and Straw Establishments in the Kingdom.—Proprietors, S. WOOKEY and Co.

BENNETT'S MODEL WATCH is a combination of all the recent improvements for performance, taste, and economy, and is adapted to the wearer of the most delicate or perfect time. In a fancy case, from four sovereigns; in gold hunting cases, five sovereigns. BENNETT, manufacturer to the Royal Observatory, Board of Ordnance, Admiralty, and the Queen, 65, Cheapside.

JONES'S £4 4s. SILVER LEVER WATCHES, and £5 5s GOLD LEVERS, at the Manufactory, 338, Strand, opposite Somerset House are warranted to keep time more than half a minute per week. The great reduction in the price of gold watches has induced numerous purchasers or any other house, for these advertised at lower prices are foreign work, or the component parts of a first-class Order, payable in 20 Monthly Payments, or will be sent free. Jones's Sketch of Watches, gratis.

T. COX SAVORY and CO, WORKING SILVERSMITHS 47 Cornhill, London. The best wrought Silver Fiddle Pattern and Double Thread Pattern, [illegible] per ounce; the [illegible] which a reduction [illegible] per ounce. The following are the prices [illegible] at the same price per ounce:

	Fiddle Pattern.			Double Thread Pattern.		

GIGANTIC TELESCOPE JUST ERECTED AT WANDSWORTH COMMON.

THE CRAIG TELESCOPE," AT WANDSWORTH COMMON.

DURING the past three months, the construction of a building on Wandsworth-common, for the reception of a monster achromatic telescope, has been rapidly progressing, and is, with the telescope itself, now nearly completed. This great work is under the superintendence of William Gravatt, Esq., F.R.S., or the Rev. Mr. Craig, vicar of Leamington. The site, consisting of two acres, has been liberally presented by Earl Spencer, in perpetuity, or as long as the telescope shall be maintained.

As this gigantic instrument should have some distinctive name, the various friends of science who have been admitted to view it, have denominated t the "The Craig Telescope;" considering, as the Duke of Northumberland's name has been handed down in connexion with the Cambridge refractor—so, also, the originator, in fact, of this 85 feet focal length achromatic telescope, with an object-glass of two feet aperture, and already capable of doing marvels, should have his name associated with a work completely novel in all its parts, and, we are happy to add, entirely of English workmanship. All other large achromatic telescopes of any pretensions are foreign. The Duke of Northumberland's telescope is foreign; the Oxford telescope is foreign; Sir James South's telescope is foreign; in fact, these instruments were merely purchased by English money. Not so, the present instrument, by far the largest achromatic telescope in the world. In the retired study of a country clergyman, the idea of this instrument struck him, and having made in his own peculiar way his calculations, the result was a fixed determination to carry them out, which he has more especially shown in the choice of his engineer, for many were those he had to reject, after looking into their plans of mounting his telescope. He has selected Wm. Gravatt, Esq., F.R.S., whose name, we believe, Mr. Craig is more desirous to connect with this wonderful telescope than his own.

The powers of this Telescope, as a measuring instrument, are unapproachable by all others. It separates minute points of light so distinctly that its *space penetrating* qualifications will render it, as a discovering instrument, one of a most superior order. It resolves the Milky Way, not simply into beautiful and brilliant "star dust," to use the language of astronomers, but actually subdivides it into regular constellations. We thus, in what at best was heretofore separated into minute points of light, can now behold counterparts of our own Orion and Cassiopœa, our Greater and Lesser Bear; and, also, evidently adorned with the most gorgeous colours.

The Telescope is perfectly achromatic: Saturn exhibits itself with milk-light whiteness. Now that the instrument is adjusted, Mr. Craig wishes the planet Venus to be examined, for he hopes to settle the question as to whether she has a satellite or not; and we need not say what an advantage the solution of this fact would be to science. The moon is a magnificent object, and perfectly colourless, so that the observer can behold her mountains and rocks with a vivid distinctness, that makes us long for clear weather to bring the whole of the powers of this marvellous instrument to bear upon our planet. On a favourable evening, were such a building, for instance, as Westminster Abbey in the moon, this Telescope would reveal all its parts and proportions.

The central tower is of brick, and 64 feet in height, 15 feet in diameter, and weighs 220 tons. Every precaution has been taken in its construction to prevent the slightest vibration, which can still further be provided for by loading the several floors, and the most perfect steadiness will be thus ensured. By the side of this sustaining tower hangs the telescope. The length of the main tube, which is shaped somewhat like a cigar, is 76 feet, having an eye-piece at the narrow end, and a ducap at the other: the total length in use will be 85 feet. The design of the ducap is to prevent obscuration by the condensation of moisture, which takes place during the night, when the instrument is most in use. Its exterior is of bright meta: the interior is painted black. The focal distance will vary from 76 to 85 feet. The tube at its greatest circumference measures 12 feet, and this part is about 24 feet from the object-glass. The determination of this point was the result of repeated experiments, and minute and careful calculations. It was essential to the object in view that there should not be the slightest vibration in the instrument, and Mr. Gravatt has made the vibration at one end of the tube neutralise that at the other. The ironwork of the tube, which is a splendid specimen of English workmanship, was manufactured by Messrs. Rennie, under the direction of Mr. Gravatt. The tube rests upon a light wooden framework with iron wheels attached, and is fitted to a circular iron railway at a distance of 52 feet from the centre of the tower. The chain by which it is lowered is capable of sustaining a weight of fifteen tons, though the weight of the tube is only three. Notwithstanding the immense size of the instrument, it can move either in the azimuth, or up to an altitude of 80 degrees, with as much ease and rapidity as an ordinary telescope, and from the nature of the mechanical arrangements, with far greater certainty as to results. The slightest force applied to the wheel on the iron rail causes the instrument to move round the central tower.

All the optical work has been executed by Mr. F. Slater, of Somers-place West, Euston-square. The two lenses, one of flint and the other of plate glass, are thus used:—The plate-glass lens has a positive focal length of 30 feet 1½ inch; its refractive index is 1516. The flint-glass lens has a negative focal length of 49 feet 10½ inches; and the refractive index of this glass is 1638. These two lenses, placed in contact, are used in combination, and constitute the achromatic object-glass, the focal length of which is 76 feet to parallel rays—that is, to all celestial objects.

CEDAR TREE STRUCK BY LIGHTNING.

THIS magnificent cedar, which had for centuries stood in the grounds of Park-place, Henley-on-Thames, was struck to the ground by lightning on the 21st ult., and has since attracted thousands of visitors. The tree is a remarkably large one, and with the branches on the ground, as struck by the flash, covers about an acre of ground. It has been surrounded with a railing to preserve it from the curiosity of the spectators, many of whom took away portions of the prostrate giant as a souvenir of the storm.

CEDAR STRUCK BY LIGHTNING, AT HENLEY-UPON-THAMES.

MR. J. R. HIND.

ON Sunday night, at 11h. 30m., this indefatigable astronomer discovered, at Mr. Bishop's Observatory, Regent's Park, another planet—this being the sixth planet Mr. Hind has detected during the past five years; "a sufficient proof," observes Mr. Hind, in his letter announcing the discovery, "that the members of the planetary system must be far more numerous than was formerly supposed. It is in the constellation Aquarius, and will be readily seen with a telescope of a very ordinary power. In brightness it equals a star of the ninth magnitude, and appears to have the same yellowish tinge that has been noticed about Pallas, Melpomene, and others of the same group of planets. At 11h. 35m. 38s., Greenwich mean time (August 22), its right ascension was 22h. 22m. 29.7s., and its north polar distance 97 deg. 32m. 14s.; the diurnal motion in right ascension is 53 sec. towards the west, and in N.P.D. about 5 min. towards the south."

We take this fit occasion of presenting our readers with a Portrait of Mr. Hind, and an outline of his valuable contributions to astronomical science.

J. R. Hind was born at Nottingham, May 12, 1823, where his father was engaged in the staple trade of the town, viz. as a lace-manufacturer. He received his education chiefly at private schools in the neighbourhood; but, as regards astronomy, he is entirely self-taught. From the time he was six years of age he devoted every spare moment to the reading of astronomical works; and even at four years of age, we are assured, on every clear night, his great delight was to gaze at the stars. In November 1840, at the recommendation of Professor Wheatstone (to whom Mr. Hind had been introduced by Mr. W. Carpmael, of Lincoln's-inn), he was engaged as one of the assistants in the magnetical and meteorological department of the Royal Observatory, Greenwich, by Mr. Airy, the Astronomer Royal; and he continued in this appointment till June, 1844. In the interim, Mr. Hind availed himself of the fine astronomical library attached to the Observatory, to perfect himself in the methods of calculation employed by the best authorities at the present day; and having always had a leaning to cometary astronomy, Mr. Hind occupied himself in determining the orbits of those bodies as they were

MR. J. R. HIND, OF MR. BISHOP'S OBSERVATORY, REGENT'S PARK.—FROM A DAGUERREOTYPE BY CLAUDET.

discovered, and in deducing more accurate orbits for some of the older ones. His first attempt at calculation was an ephemeris of Bremicker's comet of 1840, published in the Greenwich observations of that year. In June, 1844, on the recommendation of the Astronomer Royal, Mr. Hind received the appointment of observer at the private Observatory of George Bishop, Esq., South Villa, Regent's Park, to which the subject of our memoir is still attached. Previously to joining Mr. Bishop, however, Mr. Hind was engaged for three months under Mr. Airy, at Kingstown, near Dublin, on the Government expedition for determining chronometrically the longitude of Valencia.

We subjoin a list of discoveries, cometary, planetary, and stellar, since Mr. Hind's connexion with the Regent's Park Observatory:—

I. COMETS.

1. A comet, 1846, July 29, which was found about two hours earlier by De Vico, at Rome.

2. A comet, 1846, October 18, of which only one observation could be procured, owing to the cloudy weather which prevailed all over Europe.

3. A comet, 1847, February 5, afterwards visible to the naked eye in full daylight, only a few degrees distant from the sun's limb, as, in fact, Mr. Hind had predicted it would be.

II. PLANETS.

1. The planet *Iris*, 1847, August 13.
2. The planet *Flora*, 1847, October 18.
3. *Victoria*, 1850, September, 13.
4. *Irene*, 1851, May 19.—The name, derived from the Greek word *Ειρηνη, Peace*, was given by Sir John Herschel, to commemorate in the heavens the Great Industrial Exhibition of All Nations, at that time just opened in London.
5. *Melpomene* 1852, June 24, named by the Astronomer Royal.
6. A planet, 1852, August 22, not yet named.

III. STELLAR ASTRONOMY.

The remarkable new star in Ophiuchus, 1848, April 27, which became visible suddenly, as a conspicuous fiery star, to the naked eye, and so continued about one month; after that it gradually declined, and now shines as a star of the eleventh or twelfth magnitude. Mr. Hind has discovered fifteen new variable stars, one of which has a period of nine days only, and resembles the well known star Algol in its variations; and Mr. Hind is believed to have been the first to point out the great predominance of the red colour in variable stars, and the cloudy dull appearance which some of these exhibit about their maxima.

To this list should be added three nebulæ which had escaped previous observers.

Mr. Hind was elected a Fellow of the Royal Astronomical Society in December, 1844, and has held the honorary office of foreign secretary six years. In November, 1847, he was elected a corresponding member of the *Société Philomatique* at Paris; and in May, 1851, was chosen to succeed the late Professor Schumacher, as a corresponding member of the National Institute of France.

The King of Denmark has presented Mr. Hind with a gold medal for the discovery of the comet of February, 1847; and Mr. Hind has received three medals and prizes from the Academy of Sciences at Paris for his planetary discoveries; besides a public testimonial from the Royal Astronomical Society of London. The Government have lately conferred upon Mr. Hind a pension of £200 per annum.

Mr. Hind has computed at least seventy orbits for planets and comets during the last ten years; in addition to various other calculations scattered through the volumes of the "Astronomische Nachrichten," and the publications of the Astronomical Society and Paris Academy of Sciences.

Mr. Hind has published a treatise on the "expected return of the great comet of 1264 and 1556," which body engaged much of his attention when very young; and a small work upon planetary astronomy, entitled "the Solar System."

London: Printed and Published at the Office, 198, Strand, in the Parish of St Clement Danes, in the County of Middlesex, by WILLIAM LITTLER, 190, Strand aforesaid.—SATURDAY, AUGUST 28, 1852.

VISITS TO PICTURE GALLERIES, AT HOME AND ABROAD.

I.—THE DULWICH GALLERY.

THE agitation of the question regarding the intended New National Gallery, which must shortly come on for definitive settlement, naturally directs attention to the nature and condition of the various collections of pictures, both public and private, in England and the most frequented parts of Europe, with a view to critical examination not only of the pictures themselves, but of the arrangements of the galleries in which they are displayed. Interesting as the former branch of inquiry undoubtedly is to all lovers of art, the latter is a subject of still greater importance in its immediate practical import, affording the only safe guide for those who would judge of the site and style of building best adapted for a similar purpose in this country. We have already committed mistakes enough in this matter, and we almost tremble when we recollect that one more such mistake as that in Trafalgar-square will probably be the last that will be permitted to our generation, and will remain irreparable.

In order to throw what light we can upon so interesting a field of research and observation, we propose to undertake a critical tour amongst the principal picture galleries of Europe, and to report the results of our observations to our readers, accompanied with Illustrations, not only of particular pictures, but, in cases where we consider it desirable to do so, of the galleries themselves.

In commencing with the Dulwich Gallery we may observe, that although it pretends neither to a high rank nor great antiquity amongst European collections, it is interesting in this country both for the manner in which it was acquired to the public use, and from the fact that it was the first public picture gallery founded in this country.

The history of this collection is curious, and appeals to the sentiments in various ways. In the first place, in common with almost every other collection or great individual picture in the world, its story is bound up with the fate of Empires and Princes, and tells of the strange vicissitudes of both. It was during the last twenty years of the last century that a French gentleman of the name of Desenfans, who was partly a teacher of languages, partly a merchant, and partly a picture-dealer, was commissioned by Stanislaus II., the last of the Kings of Poland, to make a collection of pictures for him, which the troubles of the French Revolution, in which the nobles hastened to get rid of all their valuables which they could turn into money, afforded peculiar facilities for doing. The aim of Stanislaus was not merely selfish; he wished, besides adding to his own collection, to found a gallery for the use of his subjects, and particularly with a view to the promotion of a school of art amongst them. His object being utility, his instructions were, that original and superior pictures of different schools should be purchased, but that extravagant prices should not be given; and, particularly, that the pictures should not be submitted to any process of cleaning or renovation before he saw them.

M. Desenfans was in the midst of acting upon these instructions, when, to the shame of all Europe, the partition of Poland took place; and after the death of the unfortunate Stanislaus, in 1798, the Emperor Paul, of Russia, refusing to make good the purchases of his dethroned victim, the pictures were thrown upon M. Desenfans's hands. Under these circumstances he had recourse to the auction-room, where, however, having made himself unpopular amongst the artists of the day, by some observations introduced into the catalogue, reflecting upon the weaknesses and jealousies of the profession, he was disappointed of obtaining a fair bidding for the greater number of them; and a few only of the best having been sold, the rest were bought in.

On his death, M. Desenfans bequeathed the whole of his collection of pictures, with other property, to Sir F. Bourgeois, a lover of the arts, and himself an artist, rather as an amateur than a professional, and whose works considered as those of an amateur, never rose beyond the point of respectability. Sir Francis, however, like a fond parent, thought otherwise of them; and in order that after his death his collection, including his own works, should remain undivided, he resolved upon bequeathing them to some permanent public body or institution for the use of the public. He first bethought him of the British Museum, but abandoned that idea upon consideration that the trustees would have the power to part with any pictures they might not think it desirable to retain, in which category he foresaw the possibility that some of his own works, fifteen in number, might fall. In this dilemma he applied to his friend, John Philip Kemble for advice, who recommended Dulwich College (founded, as our readers may recollect, by Alleyn, the actor), as a proper depository for the collection. Accordingly, acting upon this advice, Sir F. Bourgeois bequeathed his pictures to the fellows of Dulwich College, on condition that they should be held available to the public, together with £10,000 to erect and keep in repair a suitable building for their reception, and £2000 to provide for the care of the pictures: a noble example, which we are proud to see has found some worthy imitators in our own day.

Sir F. Bourgeois died on the 8th January, 1811. After his death, the present Gallery, consisting of five rooms of moderate dimensions, was erected from designs by Sir John Soane, and opened to the public in 1812.

The pictures in this modest Gallery (360 in number), although intrinsically by no means of first-rate excellence, are of importance as being the only collection of any considerable extent of the German, Dutch, and Flemish schools of the 17th century open to the public. Thirty years ago, indeed—before we had a National Gallery, and before the private galleries of our nobility and gentry were enriched by the accession of some of the choicest

"COWHERDS AND CATTLE, IN EVENING."—LANDSCAPE, PAINTED BY CUYP.—FROM THE DULWICH GALLERY.

gems out of foreign collections—the Dulwich Gallery was in much higher repute than it is at present: having from the first occupied a position which a wider acquaintance with the history and resources of art has taught the public to question. If we go back to an earlier period—that of the latter end of last century—when M. Desenfans was occupied making this collection of pictures, we shall find that the knowledge of art in this country was then very inferior to what it is at present, and the collections of pictures existing amongst us very different from what, since the dispersion of the great continental collections, they have become; and we can well imagine that, in executing the commission entrusted to him, he, to the best of his ability, faithfully obeyed his instructions to procure "original and superior pictures of the different schools." He did his best in the market that was then open to him; and it is no blame to him that, as is now conceded, the collection he formed, or at least the bulk of it as we see it, does not comprise a single picture in any of the schools which may be considered first-rate, either in regard to individual excellence, or as a specimen of the style of the master. It is chiefly rich, as already suggested, in works of the German, Dutch, and Flemish schools; but even in these it is outdone by several specimens in the Queen's gallery, and in the Bridgewater, Grosvenor, Peel, and other private collections. Out of eighteen attributed to Rubens there is not one which can be accepted as a fine specimen of that master. The best of the number is the "Samson and Delilah;" but even this is conceived and executed in the coarsest style of the artist, and, in the words of Mrs. Jameson, has been "horribly maltreated. No less horribly maltreated has been the "Venus and Mars," which Sir Francis Bourgeois absolutely mutilated by an alteration, the traces of which are plainly visible. By Rembrandt we have two good portraits, in his more careful style, and the charming picture, "A Girl at a Window," so well known by numerous engravings; but there are no specimens of his more vigorous efforts, such as the "New Merchant," in the National Gallery, nor of his grander inspirations, of which "The Woman taken in Adultery," also in the National Gallery, may be accepted as his *chef-d'œuvre*. We cannot join in the extravagant praise bestowed by the lady critic already quoted upon the "Jacob's Dream," which we do not consider at all worthy of this great master's genius. Of thirteen attributed to Van Dyck, the "Charity" and the "Madonna," both repetitions of well-known works, are the most remarkable. Of his masterly portraiture we have no really fine specimen. Of Teniers, Ostade, Wouvermans, Vandervelde, and Berghem, there are several; some, particularly those attributed to the first-named, being of but second-rate merit, whilst amongst the others are fair examples of the respective masters. There are also two delicious specimens by Pynaker, and a village scene by Hobbema, breathing a dewy freshness and pastoral repose. Of Karl Dujardin there are several specimens; of some of which the genuineness als questionable; there are, also, a Paul Potter or two, four Gerard Douws (two doubtful), and a sprinkling by Wynants, Both, Ruysdael, and others, of various degrees of note and merit. Lastly, there are nineteen Cuyps, which are amongst the chief gems of the collection, and of which we shall speak further presently. On the other hand, we have to remark the absence of one or two masters of original and remarkable genius, who must always occupy a distinguished position amongst the artists of the seventeenth century, and who, by their individual exertions, did much to emancipate the art of their country from the trammels of precedent by which its province had hitherto been more or less restricted, and to give free development to an entirely new and fertile field of study. We allude in the first place to Jan Steen a genuine creator in his way—adding to the burlesque character of Ostade and Brouer an action more or less developed, and defining in the personages a relationship of interests, which invested an otherwise vulgar and unattractive assemblage with life and purpose. Of the story-telling Jan Steen, there is no example in the Dulwich Gallery. Neither of that master of the higher department of "genre," Terburg, the painter of "genteel comedy," as Jan Steen was of the broad farce of life, have we anything. Metzu and Mieris, labourers in the same school, are also absent. These deficiencies are the more to be regretted, as the masters in question brought the resources of a new school of art to bear upon a practical purpose; and set the example of a class of works which have since everywhere become popular, and nowhere more so than in England.

Indeed, the Dutch and Flemish schools have always experienced great encouragement from English collectors, who, in some instances, have advanced to the recognition and reward of genius before it was appreciated in the country of its birth. Hobbema offers an example of this fact; his works had little value at home till the English began to admire them and pick them up. So also with Cuyp: Lebrun says that the English master was the first to appreciate his pictures, which, however, did not bear any considerable value till long after his death. Mr. Smith, in his "Catalogue Raisonné," states that, on reference to numerous catalogues of sales in Holland down to the year 1750, he finds no instance of any picture of Cuyp selling for more than thirty florins—not quite £3 sterling! Mr. Smith proceeds to say:—"Soon after the period above named, a gradual advance in their value took place, in consequence of the repeated demand for them by English and French dealers; and, at the sale of the celebrated collection of M. Van der Linden Van Slingelandt, in 1785" (more than a hundred years after the artist's death), "public opinion was unequivocally pronounced upon their merits by the payment of prices in some measure commensurate with their beauty; but which have since been in many instances, more than quadrupled." Walpole, also, writing to Sir Horace Mann (May 1, 1774), says:—"Sir George Colbroke, a citizen, and martyr to what is called *speculation*, had his pictures sold by auction last week. A View of Nimwegen,' by Cuyp, which he had bought very dearly for seventy guineas, sold for 280 guineas." Since that time, the prices of this master's works, in common with many others of distinguished and unique merit, have gone on increasing in a compound ratio. The picture of "Huntsmen Halting near Herdsmen," which fetched £173 in 1755, was purchased by Lord Ashburton for £1300. Sir Abraham Hume had a Cuyp which cost him £1800; another at Petworth was sold for £1060.

Of the nineteen specimens of this delightful master, and all of which are undoubted originals, some are very beautiful indeed, although not one of them is considered to be equal to that belonging to Lord Ashburton, already mentioned, nor to one in her Majesty's gallery, nor yet to one in the Bridgewater gallery. The pictures at Dulwich are as various in size as in style; some being three or four feet wide, others less than a foot; some glowing under the broad sunny atmosphere in which this charming master so delighted, others darker and cooler in tone, and restricted to the details of horses and other cattle, in the painting of which he excelled. Of the first class of works, that which we engrave is, upon the whole, the very best in the gallery. It is numbered 169 in the catalogue, and measures about 3 feet by 4 feet. It represents a landscape with a broken foreground, entirely bare of trees, and exposed to the broad pervading beams of the setting sun, which has just sunk below the horizon on the left. In the centre are two shepherds, one of whom is lying down, and two cows, one also reposing. The latter are drawn and painted with all that truthful character for which Cuyp in such subjects stood unrivaled; but more wonderful even than the predominance of the animals themselves, is the manner in which the sun-rays glance from their backs, and the aërial medium which is introduced between them and the background, which is very delicately treated. The whole scene, as far as the eye can reach, across the level valley, and up into the sky, is suffused with golden light, breathing of peace, of tranquility, and of a soft languor, in which the care and strife of the external world are forgotten. This picture, notwithstanding the scorching rays of the real sun, to which it has been subjected, is in very fair condition, but we cannot say the same of some of the others, which have suffered greatly from the effects of the climate. This is particularly the case with No. 50, representing two shepherd boys keeping sheep and goats, painted in a free sketchy style, and the surface of which, besides being extremely dirty, has been cracked and raised into lumps by the heat of the sun acting on the varnish. So also, in No. 89, a "Landscape, with cattle and figures," the mimic sunny effects intended by the artist have begun to succumb to the jealous attacks of the real monarch of the sky.

But it is not Cuyp alone who has suffered from similar causes. Two Berghems (Nos. 200 and 209), asremarked by Dr. Waagen, and confirmed by our own observation, are injured in the distance and sky, and a "Bal Champêtre," by the courtly Watteau (No. 210), is almost defaced by the cracking of the varnish, aided by dirt. A "Jupiter and Europa" (230), attributed to Titian, but of which we have seen a much finer repetition in a private collection, is in an equally bad plight, from the latter cause. We could mention other cases, but it would be an endless and unwelcome task: we would, therefore, merely express a hope that something may be done to restore this interesting collection to a condition in which it may be viewed with advantage and pleasure by the art-public of an improving age.

The Gallery itself, built by Sir John Soane, is not well adapted for the purpose intended. The roof is too low; the sky-lights do not admit the light in sufficient volume, nor diffuse agreeably what they admit. The consequence is, that some of the pictures are burned up with the sun's fiercest rays, projected upon them; whilst others, in th lower parts of the rooms and in the corners, are not lighted enough for a satisfactory examination of their details.

Before taking leave of the subject, we would suggest that the present restrictions upon the admission of the public might be abolished with advantage. The Gallery, by the injunctions of the generous bequeather, is open to all who choose to apply, without fee or favour, the only restriction being that intending visitors shall apply for tickets to one or two specified parties, respectable printsellers in London, or to one other party named, resident at Croydon. At Dulwich, where the dispensing of tickets would be most naturally looked for, and would be most convenient, no tickets are to be had. Surely this precaution is unnecessary, and implies, moreover, a reflection upon the public as a body, which might as well be spared. When the British Museum and the National Gallery are thrown freely open to all comers in the very heart of a crowded metropolis, without the slightest damage or inconvenience resulting, what possible danger can there be of an unruly mob marching down to the secluded village of Dulwich to molest or alarm the respectable curators of the Bourgeois collection? Another regulation also appears pasted up upon the walls of the gallery, and repeated in conspicuous type on the front of the catalogue, which we should recommend the trustees, if only for their own sake, to rescind without delay, as one much behind the spirit of the age. It is this—"The trustees have ordered that schools and children under fourteen be not admitted." Those who have witnessed the conduct of schools and children much under fourteen at the various exhibitions of science and art in the great metropolis, and have observed the intelligence and delight manifested by them at all they saw, will feel and acknowledge the injustice and cruelty of this act of prohibition passed against the rising generation by the Fellows of Dulwich College.

Literature.

Napoleon le Petit. Par Victor Hugo. Londres Jeffs. Bruxelles: A. Mertens. (Napoleon the Little. By Victor Hugo. London: Jeffs. Brussels: A. Mertens.)

Sufferers are privileged to complain. Exiled and plundered, denied the pleasure almost necessary to his existence of living amidst those who love and admire him, and whose applause always waited on the exercise of his talents, Victor Hugo is one of many victims of the political revolutions of France. A deputy and a Republican, he was one of the most sturdy opponents of Louis Napoleon, and one of the leaders who unsuccessfully endeavoured to make head against him on December 2. Hopelessly defeated at Paris, he is now carrying on the war then begun. The conflict is one of world-wide interest. Nominally it is between Victor Hugo and Louis Napoleon; really it is between the pen and the sword. The master of language enters the field against the master of the army, and is confident of future, if not of immediate victory. At Paris the sword is completely victorious; at Brussels, and at London, where the sword cannot reach, the pen seems carrying all before it. M. Victor Hugo is here master of the field; but his opponent there, entrenched in the supremacy of power, disregards his blows, and quietly, but inexorably, like fate, pursues his own work to its end. Exhibiting contempt for his assailant, by inquiring if great and conscious poets are not unmoved by malignant critics; or sitting, as M. Hugo describes him on the night of December 2d, "a statue in a little room on the ground-floor, at the Elysée, close to the splendid gilt saloon, where as a child he was present at the second abdication of the Emperor, with his elbows on a table, his feet on the fender, and invariably and phlegmatically replying to all tales of failure here and there from the single *aide-de-camp*, General Roguet, who was allowed to enter, "Let my orders be executed," he is the same marble-like man. Whatever may be the ultimate judgment of mankind, to whom both appeal, and who will be as inexorable with the Prince President, as he was on the 2d of December; at present he treats, and will treat, M. Hugo only with silent contempt. Clothed in the impenetrable armour of his own nature, he will take no trouble to shelter himself against shafts that can never reach him. The effects on the world will be different.

Victor Hugo's book, as might be expected from the title and his sufferings, is a severe attack on Louis Napoleon. It sketches the life and character of the man, and with a kind of Michael Angelo power depicts both with terrible features. There is scarcely a remarkable scoundrel in the history of the world from whom Victor Hugo does not skilfully borrow a lineament for his portrait. This constitutes the staple of the work; but, though powerfully done, it is too long, and contains too many similar features to be perfect. It is bitter beyond anything that we recollect. It is like Junius, but outdoes him in invective. We feel the poignancy of the sarcasms at every line, but we also feel that the artist, who is always repeating his blows, and sharpening his tools to make them more effectual, is less an indignant patriot than an outraged man. His labours remind us rather of the intemperate decisions of Judge Lynch than of the solemn condemnation by a chief justice of a great criminal. A vast wrong has been done, but we are not sure that the real criminal has been seized, and every step that is taken not been fairly tried. M. Hugo, one of the sufferers, is scarcely impartial, and his vehemence perpetually brings before us the offended author, where we desiderate above all things the calm and the unimpassioned judge. He was engaged in the warfare, and his testimony, therefore, is not to be relied on. That more than 1200 persons were killed in the streets of Paris on the occasion of the *coup d'etat* we cannot believe; but M. Hugo's contribution to the history of that great event will always have considerable value. They form the narrative part of the volume, and consist of numerous graphic, and sometimes most horrible, recitals. They are narrated on the credit of eye-witnesses, or on his own authority, and many of them will be read here with an appalling interest, greater even than that M. Hugo appears to take in them. Was there ever anything more disgustingly horrible than what he describes as having occurred on December 5 at the cemetery of Montmartre?

"A large space unoccupied till then was used for the temporary interment of some of the slain. The bodies were partly thrust into the ground, and the heads left out, in order that their friends might recognise them. Most of the feet, too, were above ground. The crowd flocked thither and pushed against one another. You trod amidst sepulchres and felt the loose earth yielding to your weight: you were walking on the belly of a corpse. You turned in another direction: boots, wooden shoes, women's slippers were sticking out of the earth—they belonged to the head, which your pressure on the body had put in motion." M. Hugo quotes, as his authority for the statement, the great sculptor David, now exiled and proscribed, who says about forty persons were so buried. Amongst these were noble heads of young men still impressed with courage; in the midst was a poor woman, a baker's servant, who was killed, carrying bread to her master's customers; and by her side was a young and handsome girl, who sold flowers on the Boulevards."

Several similar if not equally horrible scenes are described by M. Hugo; and, with proper sifting, this part of his work will supply some valuable materials for history. But, mingled with the invective and the narrative, there is some political philosophy of a high order. It commences with a description of France before the first revolution, unsurpassed, if not unequalled, for pungent brevity. In a very few lines it affords an ample justification of a people, the "prey first of wolves, and then of vermin," bursting into revolution, and in the name of liberty committing unheard-of cruelties and crimes. He sketches the principles of political power, and gives with pictorial clearness in four lines—

A standing army,
A centralised Administration,
A salaried clergy,
An irremovable magistracy—

an explanation of the great obstacles to liberty in France. To that we have nothing to object; but to say, that the last principle—though perfectly correct in France, where the magistracy still forms a very powerful corporate body—does not apply to England, where the irremovability of the judges is one guarantee, as against the power of the Crown, for the liberties of the people. This part of the book, though the least in size and least graphic, is the most worthy of the attention of reflecting politicians, and for them it will have a permanent interest.

A very great question is, in fact, very eloquently and forcibly opened by M. Hugo, but it is doubtful whether he sees its full import. He justly condemns the massacre in the streets of Paris as a terrible violation of the principles of morality. In common with many writers, he tests the acts of politicians by the same rules. By them he condemns the whole conduct of Louis Napoleon. By them, therefore, according to M. Victor Hugo, the conduct of politicians, as well as other men must be regulated and judged. But the principles of morality are not the principles of government. They do not preside at its formation. They lay down no rules for Constitutionalism or Despotism, they prescribe nothing regarding Monarchies or Republics, limited or universal suffrage. They no more sanction the power of the Legislative Assembly than the power of the President; no more justify a war than a massacre, the execution of an individual for conspiring against a Republic, than shooting down a population in the streets to give effect to a tyranny. The safety or aggrandisement of a state, however organised, is no principle of morals. Government, then, and systems of policy are not founded on moral principles, and by moral principles they must not be tried. Now, M. Hugo, throughout his work, condemns the acts of the President as contrary to moral principle; his eloquence carries us along with him, and thus unconsciously, perhaps, he opens one of the greatest questions that ever engaged the attention of earnest thinkers. Does society, do individuals not require for their guidance and government some laws and regulations besides and beyond, and overruling, those moral principles to which he confidently appeals? Do they not require government organised on the principle of providing for the public welfare often by the sacrifice of individual interests? Practically, M. Victor Hugo's book answers that question negatively; practically, his conduct and the conduct of all his countrymen answer it affirmatively; and therein lies his error and his misfortune. He requires his opponent to be guided strictly by the principles of morality, on which the Republic itself was not founded. Of all the people of Europe, the French, and of all Frenchmen, the politicians have in all that relates to policy, most persistingly ignored moral principles. Restrictions on industry and locomotion; taxation to give an ascendancy to particular classes, whether professors or olergy; one large body of men armed to keep in awe the rest: the whole system of Government in France sets at defiance all moral principles. The French, therefore, and with them, M. Hugo, have lost the right of complaining of any one solitary act of Government, or of one person administering it, merely because it violates moral principles. The whole system which they approve does that, and it is by approving of the system that one man getting hold of it has power to inflict on them the injuries of which they complain. Does the world complained of answer the purposes for which Government is organized in France? and, according to present experience the answer seems—yes.

To the greater question opened by M. Hugo, to which we have adverted, he will, both by what he says and by what he suggests, attract the attention of his countrymen, and his book will have considerable effect in bringing forward that better condition of society in France which he confidently and joyously anticipates: though we may safely predict that it will not come in the form and shape which he expects. In spite of the poet's boast, we are all, as far as society is concerned, less foreseeing than the lamb, and not only do we "lick the hand prepared to shed our blood;" we sharpen the knife and nerve the arm that is to do the deed. A deeply-cherished desire of national aggrandisement, which M. Hugo probably shares with his countrymen, has maintained in France all her tyrannies.

Our Iron Roads: their History, Construction, and Social Influences By Frederick S. Williams. London: Ingram, Cooke, and Co.

(First Notice.)

Next to the invention of printing, railways must be regarded as the mightiest engine of modern civilization. When Gutenberg, Faust, and Caxton had perfected their discovery, human advancement seemed to proceed at a geometrical rate of progression. When the railway system became matured, civilization reached an electrical stage of development. Free intercourse promoted kindly feeling, and the Penny Postage satisfied a need of the time, and knit together the social ties which bind man to man. A freer interchange of ideas, and more perfect means of inter communication pointed the way to greater freedom of commerce. A powerful feudal aristocracy opposed the change, but railways had given such concentrated force and vigour to public opinion, that the demands for Free Trade became irresistible. A further development of the capabilities of the railway system was seen in collecting together all objects of art and science in one central spot, and in bri ging vast masses to view them there. The Crystal Palace owed its origin and success to railroads. The brilliant prosperity of the first Great Exhibition has been followed by the inauguration of a palace which is destined to become one of the wonders of the world, a treasure-house of the human intellect, in which every art and every science shall collect its choicest trophy and prepare for further triumphs. The New Crystal Palace is the latest manifestation and product of railway enterprise. All England—nay, the civilised world—is ready to stand sponsor for the child. Let us not forget the claims of the parent.

The history and social influences of railways constitute a theme which to the thoughtful observer, possesses all the fascination of romance and all the grandeur of an epic. The author of this work has chosen a most favourable moment for bringing under our view the narrative of man's proudest conquest over time and space. At the moment we are writing, a thousand fire-horses are harnessed to excursion trains. The denizen in towns seeks health upon the sea-shore, or regales his eye with the verdure of meadows and the golden beauty of corn-fields. The rural population seek the life and bustle of the town, its antiquities, and its museums. The operative of the manufacturing district visits the enchanting scenery of the Lakes: in the land of cloud and mountain he soul communes with the Infinite. The dweller in villages is brought to some great Gothic cathedral; and there, amid pillared aisles,

And twilight saints, and dim emblazonings,

he interrogates the tomb of king and knight, and lives anew in the fervour of mediæval piety. What delights for the wearied spirit! What healthful influences for the fainting and languid frame! Shall we forget that we owe them to our Iron Roads? They have immeasurably increased the sum of human happiness; they daily and hourly contribute to human advancement. What they are doing for the British islands, and for the mighty continents of America, they will soon accomplish for Europe. Agencies so colossal deserve their historian.

Great mistakes were made in the outset of railway undertakings. The Government offered no facilities. The Legislature heaped obstructions

in the way. Peers and landed proprietors made a market of their parliamentary influence. The money which ought to have been laid out in *bond fide* construction was spent in bribing people in high places. Hundreds of thousands were wasted in the gulf of parliamentary contests. The nation looked on unmoved, absurdly deeming that the extravagant outlay in obtaining acts of Parliament, and in buying off opposition, concerned nobody but the shareholders. Foolish public! Our author states that the waste of capital directly and indirectly in the formation of railways has been estimated at not less than *twelve millions sterling*, apart from the loss which has been incurred in the support of unsuccessful bills, and the maintenance of unsuccessful opposition If the Government had interposed to protect the promoters of English railways from extortionate charges and wasteful parliamentary expenditure, our railway boards might have left the traveller to select the class of carriage most suitable to the length of his purse, instead of seeking to drive him, by the studied discomfort of the cheaper class, into the higher-priced carriages. If the Continental traveller, fresh from the nicely-cushioned, glass-windowed second-class carriages of France and Belgium, should feel inclined to complain of the high fares, hard seats, and unglazed windows of the second-class carriages of some of our own lines, let him think of a thousand pounds a day wasted in a committee-room. If he should go to sleep with Mr. Williams's book in his hand (an unlikely event), and should awake with a stiff neck or a sore throat, he might chance to re-open the book at that memorable instance where an exorbitant demand of £44,000 having been made upon a railway company for compensation, the jury sworn to do justice between the parties, awarded the amount of £873 to the proprietors of the land in question. Then, reading on a little further, he might begin to see some dim connexion between his sufferings and the past course of railway legislation. Sums of £35,000, £40,000, £90,000, £100,000, and £120,000, have frequently been paid by railway companies ostensibly in the purchase of ground, but really in order to buy off the opposition which—in some cases feigned, and in others real—was offered to the passing of the bill. The parliamentary costs of the Brighton Railway averaged nearly *£5000 per mile*, which is not surprising when we remember that its promoters had to contend with three or four other companies during two sessions, and that for fifty days the company were spending £1000 a day before the parliamentary committee. The parliamentary and surveyors' expenses of the London and Birmingham line amounted to £72,000, a sum which would have to be multiplied several times over by the expenses of parliamentary contests in which the directors have been engaged since the original line was made. If the public could have seen the deep personal interest which every one of them had in arresting this wanton expenditure, they would have demanded the enlightened interference of the Government. The error was in considering the preliminary and parliamentary expenditure of railway companies as matters affecting the proprietary alone.

If we were to remind the reader of the doings in Palace-yard and in the lobbies of her Majesty's Palace at Westminster during the "railway session," he might ask what business it was of his? Let our author describe the scene, and let us see if we cannot "point a moral"—"Cabs rushed in and out of Palace-yard in fearful haste; clerks and witnesses tumbled over one another in their hurry; while the yard was thronged with anxious groups of engineers, surveyors, and shareholders, waiting for the meetings of committees. Lobbies and ante-rooms were besieged by crowds of railway projectors, parliamentary agents, and others connected with the great subject of the day; and the approaches to the committee-rooms were every now and then blocked up by sturdy porters and messengers struggling under the weight of ponderous maps, plans, and sections. Among the spectators, gazing with a sort of listless interest upon the scene in Palace-yard, let us suppose there is a poor woman with her infant child. Tell her that she had anything to do with that exhibition of mad excitement and extravagance, and that it might one day cost her child its life, and her incredulity would have been more clearly manifested than her astonishment. Yet, let this woman's husband go to Derby in pursuit of work. Suppose him taken ill there: he writes for his wife, who pawns everything she can raise money upon, and hastens, with her child, to the bedside of her dying husband by the first train she can hear of. She will be ushered into an open third-class carriage, which has the property of always meeting the rain from whatever quarter it may come. "On these occasions the carriages are a species of horizontal shower-bath, from whose searching power there is no escape. If the traveller turns his back to the rain he finds the nape of his neck filled with water; if he faces it his pockets are turned into wells." How many people have been killed by exposure to the weather in these open third-class carriages no inquiries by the most searching Parliamentary Committee could ever ascertain. How many painful and lingering diseases have been contracted, to say nothing of catarrhs, rheumatism, and the minor miseries of cold and neuralgia, we are still less likely to know. But in future we shall be able to "put the saddle on the right horse." For ourselves, if we should ever get wet through in a South-Eastern Railway carriage, we shall think of their solicitors' bill of 10,000 folios and £240,000. In like manner a passenger who might be frost bitten and frozen up in an open carriage upon the London and York line, might come to burn with indignation, if he reflected that this might be the company that spent half a million of money in preliminary expenditure before they turned a single sod; with which money, if they had it now, they might be able to give third-class passengers a covered carriage as comfortable as those upon the other side of the channel. If it cost the London and Birmingham, and the Great Western Railways £6300 per mile for land and compensation alone, and if upon three other lines the expenditure for the same items averaged not less than £14,000 per mile, who is to blame? How much of my lumbago ought "a Constant Reader" justly to bear for not having written to the *Times*, and raised his voice into a scream against the senseless extravagance of the railway mania? And how much of it, on the other hand, ought fairly to be borne by the Minister of the day or his President of the Board of Trade? His lumbago the "Constant Reader" most vehemently bewails and protests against. But if he possessed the power of awarding his pains and aches to the authors of his sufferings, he should hesitate to allot to the directors more than a few surpri-ing twinges. The great proportion he should deal out impartially among the leading public men of the day—the bell-wethers of the Parliamentary flock—who looked on and saw millions wasted, and did not reflect that the public at large, and above all, the industrious classes, would suffer from their *laches* and their ignorance.

When we are told by the author, of the fabulous gains made by Parliamentary counsel, agents, solicitors, and engineers, during the railway mania, we listen without envy, because we remember the price at which these shining counters were purchased. The men who sought to do three years' work in five months are not the men they were before 1845, and never will be. They are paying the penalty of their violation of natural laws. Many a good constitution was shattered beyond the power of restoration in that short but insane struggle. Surveyors and levellers were tempted by rates of remuneration varying from six to fifteen guineas a day, to defy Morpheus and his poppy draughts; engravers and printers laboured night and day, and grudged the time given to needful refreshment. Engineers and their assistants, during the month of November, went to bed about once a week, and held six hours sleep to be an expensive and almost sinful luxury. The famous Dr. Owen used to say "he would freely renounce all the learning he had attained in late hours to recover the health he had lost by them." What Dr. Owen used to say of his learning, a chorus of barristers, agents, engineers, and engravers would be tempted to say of the gold of 1845. It neither blessed those who gave nor those who clutched it. It was wealth in that came "too unadvised, too sudden" Next, perhaps, to railway engineers, counsel of eminence in parliamentary committee-rooms were the hardest worked beings of that railway session: "often they had to rush from one committee-room to another before they had said half they wished in advocacy of the views of their clients, because their presence was demanded elsewhere." Fees of £200 or £300 a day rewarded them for their ubiquity. Sir James Scarlett used to think £16,000 a very good year, but Mr. Austin is said to have made £40,000 a year during three success ve years! "The Hon. John Talbot is known to have received more than £12,000 a year; and juniors who never obtained £200 a year at Westminster Hall, made £3000 or £4000 during those three years before committees. Many heavy items of the receipts of principals were enjoyed as retainers merely to prevent their appearing on the other side." Two at least of the counsel named by the author purchased their vast gains too dearly, in the opinion of their friends and families. One was reduced to a state of complete physical prostration, which it was painful to witness; and the marble which is to commemorate the virtues of the other, and his untimely death from disease of the heart, is while we write under the hands of the sculptor.

The whole subject of railways is, however, so vast, that we cannot expect to do justice to it within the limits of a notice like this. While recommending the work, in the meantime, to all who desire to have a clear idea of the rise, progress, and present state of the railways of Great Britain, we reserve for another and concluding article the consideration of many points of social and general interest, which we have not room at present to touch upon, or even to advert to.

CORNEILLE and HIS TIMES. By M. GUIZOT. Bentley.

We look upon this book as a kind of companion to that on Shakspeare, reviewed in our last supplement. It is a reprint, with corrections, of a work written forty years ago; and the opinions are a reflex of that, rather than of the present time. This is the writer's own account of his production. We could have well wished that we might have been supplied with a critique on such a theme that would have presented such an author's mature conclusions. But we must take what we have with the implied reservations

Corneille deserves to be ranked as the Æschylus of the French drama. He has the stern vigour and the powerful execution of the poetic initiator: not the grace of the second, in order and time; nor the flexibility that adapts itself to popular tastes, of the third. He is of the first-class, and ranks among the more sublime writers of the world, rather than the more beautiful, or useful. Simple, grand, direct, the ideas of Corneille, like those of his Greek prototype, are, as it were, flashes of inspiration: they come and go, awe and elevate during their transition, but hide their essential causes in the rapid passage of effects that despises examination. They demand admiration, not criticism.

The life of Corneille is connected with the impulses which directed French taste towards dramatic literature, and the establishment of the French theatre. The history of its earliest efforts is indeed identified with its biography. The caterers for the public dramatic taste of the time, such as it was, had ceased to seek to edify: they now endeavoured to amuse. Tragedies in seven acts were frequently performed, having no regard to the unities of time or place; comedies were much fewer in number. From this rude cradle, however, French dramatic art arose; and grew to rapid maturity. M. Guizot particularly draws our attention to Hardy, the founder of the Parisian stage, and precursor of Corneille, as a great and irregular genius, to whom foreign critics have not done justice. His faults, he tells us, were those of a man whom the necessity of providing for his own subsistence, and for that of a troop of comedians, sometimes compelled to furnish two thousand lines in twenty-four hours. Hardy's talent, he adds, "knew no other shackles than that of poverty; fecundity was all that was expected from him, and never was a duty better fulfilled." He produced 600 dramatic pieces, all in verse; many of which were composed, learned; and performed within three days. Corneille was taken by one of his friends to see his mistress;—it is said that the poet supplanted his introducer, and shortly after wrote a comedy on the subject. Hardy's works presented him with a model. Beyond that and his common sense, as he tells us, he had no rules. "Méliter," says he, "was not written in conformity to the rules, for I was not then aware that there were any rules." This was a happy ignorance for Corneille: it compelled him to begin with the impulses, and trust to them for spontaneous production, the excesses of which judgment would learn in time to regulate. One rule, however, he made for himself—unity of place. The success of the work was astonishing; and Corneille thereby threw poor Hardy into the shade. That success was due to its comparative truthfulness and nature, which, for its day, were extraordinary: in ours it seems deficient in both these attributes. The criticism to which "Mélite" was subject revealed to Corneille the rules of art as they were then understood, and taught him that his more learned auditors expected that the action should be limited in time to twenty-four hours. The comedians required more events and effects. To please all parties, Corneille wrote a second piece, "Clitandre." These and four other similar dramas commended the new dramatic poet to Richelieu, and anon we find him working under the Cardinal's orders with Colletet and Bois-Robert; who, with L'Etoile and Rotron, were then engaged in the joint composition of dramatic pieces for his Eminence.

All this while Corneille knew nothing of tragedy; but Mairet's "Sophonisbe," produced in 1623, disclosed to the new dramatist a new world. Two years after, his own "Médée" appeared; which, crude as it is, contains promise of greater excellence. After this effort, Corneille never felt happy in comedy; and, indeed, the very next year, produced his "Cid," by which his fame as a tragic poet was established; notwithstanding that by this time the poet had incurred the animosity of Richelieu, on the causes of which M. Guizot ingeniously speculates; but which may naturally be accounted for in the fact that Corneille had won an independent position as a poet, and was thereby inevitably placed in personal opposition to his former master, whose liberality, indeed, he yet continued to enjoy. The Academy, forsooth, was called in to decide the dispute, and only the "more embroiled the fray." On the performance of "Les Horaces," however, Corneille's success was quietly acquiesced in by all parties; the poet had outlived envy, and what he wrote now bore with it its own authority. "Cinna" and "Polyeucte" followed—the last a truly beautiful play, and remarkable as being Christian both in subject and sentiment.

It is not our intention to go through the whole of Corneille's life or pieces, but to content ourselves with such types of both as may be most pregnant of reflection, and best show the spirit of his times and genius. We must be satisfied with references, allusions, and hints. The reasonable limits of an essay require obedience, for they operate as laws. But justice may be done in few words, when well-selected by taste, and preserved sacred from vanity.

Corneille, though the father of French tragedy, was, in M. Guizot's opinion, not its lawgiver. Be this as it may, he was undoubtedly a man of genius, who, if his scenes are rather related to admiration than to the passions of pity and terror, the sterner dramatic elements, nevertheless soars a lofty flight, and, as we have already suggested, stands, in reference to Racine, as the sublime to the beautiful. In Voltaire, as in Euripides, we find the tragic spirit utilised, and reduced to purposes exclusively theatrical and stage-bound. This, in all countries, seems to be the natural dramatic development; and we shall best understand the rank merited by Corneille by considering him as the head of the series, the links of which we have named. Neither of the three merits the honour exclusively of being the tragic lawgiver; but the practice of the three must ever be taken into account by every one who has any pretension to emulate their renown.

Moral power and grandeur are the elements in which Corneille's heroes and heroines live and breathe. Thereby they are somewhat isolated from ordinary sympathy. The pathos is derived from the noblest sources, and the audience has to rise to its spring. Its tendency is to elevate. There is something Æschylean, Promethean, about it. The vulture and the rock are the images of the agony, and the solitudes of air and sea the regions in which its sorrows are uttered without restraint. It is, in a word, the ideal, apart from the actual.

And it is thus, even in such a descending series, that the human race has been educated. The field of experience has always been the last cultivated. For the high imaginings of Corneille, the French stage is now engaged in illustrating the conflict of sensations—the summit of abstract power is forsaken for the humbler vale where human weakness is recognised, expected, pitied, and humanity itself is regarded under the form of imperfection, not that of inflexible virtue. For Corneille's force of soul are now substituted imbecility of motive, and the feebleness of vulgar passions. The fancy is changed into sensibility; and all is on a lower scale—a level where men, no longer aspiring to be angels, think themselves sufficiently human so long as they sink not into brutes. And this, indeed, is the popular region: for here the audience see themselves reflected in the actors; the weak-minded and the frail-hearted sympathise with their stage-images, and dignify the prosaic copy with the name of the imitation of nature.

To this eloquent work on Corneille, M. Guizot has added some interesting essays on Chapelain, Rotron, Scarron, and Pierre Corneille, the father. To the last, letters of nobility were granted in January, 1637, for his magisterial services in the neighbourhood of Rouen, then infested with banditti, composed of the famishing population that lived in the forests. This circumstance gave to Corneille himself a social distinction, which it is assumed was to the advantage of the poet. At any rate, he received gifts and pensions from Richelieu, Mazarin, the King, and other persons in possession of power and patronage. Thus was secured the leisure requisite to the production of his immortal dramas. At the latter part of his life, however, these stipends were irregularly remitted, and he was frequently in poverty. But this inconvenience seems to have been from time to time remedied; it was never entirely forgotten that Pierre Corneille had rendered his country and his name illustrious by his genius.

OBSERVATIONS on the SOCIAL and POLITICAL STATE of DENMARK and the DUCHIES of SLESWICK-HOLSTEIN in 1851, &c. By SAMUEL LAING, Esq. Longman, Brown, Green, and Longmans.

The war in Holstein which must be fresh in the recollection of our readers, attracted the attention of all Europe to that part of the Continent in 1850, and drew Mr. Laing thither in 1851. The country, however, is, for the Anglo-Saxon race, more historically important than temporarily attractive. It is unquestionably the first known home of their ancestors, and is full of interest for an English traveller. Mr. Laing's previous works have gained him a high reputation as a shrewd observer, and he seems peculiarly well qualified to make the most of the subject. His former visits to the Continent—the fruits of which he gave to the world under the title of "Notes of a Traveller"—made him well acquainted with all the northern parts of Europe. His mind is well stored with antiquarian and other lore, which he readily applies. He has had much experience, having reached that time of life (upwards of sixty years) when the peasant proprietors of Jutland, as he informs us, generally give up their farms to their sons, and retire from active labour; and he has had a partial acquaintance with the country from his early youth. He was at school at Kiel, the chief town of Holstein. He is no dandy traveller, and can rough it, living at peasants' houses as the peasants live, and making his way into remote places totally inaccessible to those, otherwise active and intelligent, who cannot easily get beyond the limits of the stage-coach, the steam-boat, or the railway. He mixes with the people of the countries he visits, and tells us of their social habits and manners. His book, however, is not travels, nor a narrative of personal adventures, though some are noted, but "observations" on matters of great interest. Besides informing us of what he sees, he indulges in long dissertations. In nearly 400 octavo pages he describes the social and political condition of the inhabitants of the Danish dominions (those of Holstein being Germans), including notices of farmers' labourers, agriculture, theatres, literature, government, the war in Holstein, &c.; and he discusses questions of free-trade and education, the literary, religious, and social character of the Germans, their language, institutions, &c. The subjects, though cognate, are multifarious, and we can only state of one or two of them what Mr. Laing says.

Of the German system of education as a political contrivance, Mr. Laing is known to be a determined opponent, and he renews his attack on it in the present volume. On the literary Germans he is very severe. He lashes with stern satire their exertions to get up a factitious nationality, to which, according to him, nature has denied an existence. The want of a common language—High Dutch or the written German being in essentials distinct from the Platt or Low Dutch spoken by the people; which, again, is very different in North and South Germany, and different in every province, is one impediment. The general fertility of the country—each district, and almost each farm, supplying each tribe, and almost each family, with all the necessaries of life, and giving no occasion for interchange—is a more effectual bar to amalgamation. Though not disposed to sanction all Mr. Laing's arguments—for the written language in almost every country in Europe is, or has been at some time, distinct from the spoken language of the book of its people; and it may be equally said of almost every country in Europe, as of Germany, that every district may suffice to supply the rude wants of its people—certain it is that the Germans have been divided into distinct and often conflicting tribes from the times of Tacitus. That, however, was the early condition of all the nations with which we are acquainted. Civilisation gives new and common wants, promotes intercourse and uniformity, and gradually amalgamates tribes and nations. The process has latterly been very observable in Germany, where, within half a century, nearly forty separate and distinct states have been consolidated into seven or eight; and where the demand for a national union, and the certainty that some of the smaller states—such as the two Hesses and Baden—must be swallowed up by the larger ones, is shadow what is to come. The literary men and the political reformers may have been too hasty in giving effect to their ideas, they may have been betrayed by the sudden outbreaks in France and Germany into rash and violent courses; they may, of which Mr. Laing fiercely accuses them, have provoked an aggressive and unjust war against Denmark; literary men turned into politicians, and politicians using the press as literary men, to promote personal aggrandisement, may have been, as he repeatedly asserts, ambitious, incapable, and unprincipled; still, we cannot sanction his conclusion, that there is no better foundation for the desire of German nationality than the diseased vanity of the professional and literary classes. From looking chiefly at some evils with which literature, in common with all things human, is tainted, and overlooking the much larger preponderance of good, Mr. Laing has acquired a strong aversion to the literary guild in Germany; and he describes the battle of Idstedt, in which the Danes defeated the Germans, as the most important of the age, because it prevented that guild from establishing itself as a great political Popedom.

Bookselling in Germany comes in for a share of his condemnation. "German booksellers exchange cart-loads of rubbish with each other at the Leipsic book fairs. They will publish any thing, because their profit depends not on the sale of one work, but on their power of exchanging it for copies of a better work. The good work gives currency to the bad, and a vast number of Germans make a living as authors without more intellectual merit than the paper-stainer whose productions adorn the walls of your parlour. The system fills Germany with crude and fantastic works, and robs the meritorious author of his fair reward." In Denmark, however, as in England, Mr. Laing thinks each book sells according to its merits, and publishers, he declares, cannot "maintain such a class of literary paper-stainers as fill the Leipsic book fairs with their exchangeable ware." Mr. Laing is hardly fair to the Germans, and speaks of the continual production of many worthless books, which takes place in every part of Europe, as peculiar to Germany.

As to the war, he is a decided opponent of Prussia and the German Bund; and the view he gives of that deplorable contest, its origin, its progress, and its end, places the proceedings of the Danes in the most

(*Concluded on page* 174.)

HER MAJESTY AND THE INFANT PRINCE ARTHUR—FROM A PAINTING BY WINTERHALTER.

ON WINTERHALTER'S PORTRAIT OF HER MAJESTY.

I.

Behold the fairest sight on earth,
A matron pure and mild—
The tenderest name, the sweetest birth—
A mother with her child!
The light of love pervades her face,
And sanctifies her dwelling-place.

II.

And is this she—so bright and meek—
Is this the mighty Queen—
With soft full eyes and placid cheek,
And aspect so serene?
Is this the Sovereign of the sea—
The great, th' invincible, the free?

III.

Are these the fragile hands that wield
The firmest sceptre known?
Is this the fairy form revealed,
That fills earth's loftiest throne?
And with the shadow of her robe
Belts all the climates of the globe?

IV.

No charm that in the poorest homes
Breathes happiness around,
Is absent here; where'er she roams
She carries holy ground:
And, were she humble as she's high,
Love were alike her destiny.

V.

Oh, subtle power of gentleness!
Oh, strength of feeble hand!
Oh, bright example sent to bless
And elevate our land!
Thou need'st no armies in defence—
Thou hast them in thine innocence!

VI.

Great Queen! sweet lady! woman true!
Fair mother! tender wife!
May blessings, like the heavenly dew,
Fall daily on thy life!
For thee the nation's prayers ascend—
Its child, its guardian, and its friend.

VII.

Our prayers are grateful; for we know
Hadst thou, our peaceful star,
Not dawned amid impending woe,
And clouds of coming war,
That civil discords might have broke
In lightnings round our British oak.

VIII.

While nations not so blest as we,"
Tost in a whirl of grief,
Fought for some spectral liberty,
Or sanguinary chief,
We prized the gift our sires bequeathed,
And round thy brow our laurels wreathed.

IX.

While Anarchy prepared for fight,
And Tyranny grew strong,
We stood a model for the right—
A warning for the wrong;
And showed the realms, misdoubting still
The quiet grandeur of our will.

X.

We taught that theories were vain,
However high and pure,
That took no heed of toil and pain,
And patience to endure:
Or thought great Freedom's tree of power,
Sprang like a mushroom in an hour.

XI.

And if we've known a happier fate,
Although some praise be theirs—
The pious people, brave and great,
Made wise by many cares—
Not less the meed that's justly thine,
Supported by the Hand Divine.

XII.

Beneath thy mild, auspicious sway
The household virtues bloom,
And learning and the arts display
A light through Europe's gloom.
And wondrous deeds are daily wrought
That once seemed folly to have thought.

XIII.

Th' electric chain, whose mystic girth
Makes distance but a span,
And science covering all the earth
With benefits for man;
And countless triumphs to be borne
In the new dawning of the morn:

XIV.

All these, the annalist shall tell
As glories of thy crown,
And own, as we, thy name a spell
And omen of renown;
Victoria of the peaceful smiles!
Queen and enchantress of the isles! C. M.

*** The Illustration upon the opposite page is from a Print engraved by George Zobel, from a Painting by Winterhalter, and copied by permission of the publishers, Messrs. Colnaghi and Co., Pall-Mall East. The Picture has been painted for her Majesty.

OSBORNE, FROM THE PARK.

OSBORNE: VIEW FROM THE PARK.

This View shows the front looking towards the sea, and is an exceedingly picturesque one. The distant house, the grounds sloping down so as to form, as it were, a valley gently inclining seaward, and the exquisite taste in which all the grounds are laid out, render this part of the Royal demesne extremely beautiful. Below the terrace seen in our Engraving, is another reached by flights of steps, and, like it, laid out in parterres of choice flowers, and having fountains, statues, and all the elegant accompaniments which artistic refinements can suggest. The view from these terraces is extremely pleasing, having the sea, and the high grounds and shores of Hampshire for its boundary. Osborne, in all its characteristics, though not a regal *palace*, is truly a regal *home*.

THE ENTRANCE LODGE TO OSBORNE.

Our second Illustration of Osborne is one with which many of our readers are probably familiar. It is the Entrance Lodge to Osborne, and is on the road from East Cowes to Ryde. It is unpretending in its general style, but partakes of the same finished simple elegance which pervades the other architectural features of Osborne.

OSBORNE.—THE LODGE.

Continued from page 171.

favourable light. With discussions on these kinds of subjects there are mingled some descriptions that have a double interest for us, as they relate to the homes of our Saxon ancestors, and the present condition of our relations, the descendants of these Angles, who remained at home. They are the freshest and best parts of Mr. Laing's book, and we shall give, in an abridged form, a brief outline of a small portion of them.

The long, low peninsula, which separates the Baltic from the North Sea is still inhabited almost exclusively by peasant proprietors, like the yeomen of Kent, and other parts of the south of England. There are yet to be found the customs of Gavelkind, by which all the children share alike the property of the father; and of Borough English, by which the youngest son inherits the estate, in preference to the elder brothers. They hold their lands of no feudal superiors, and possess rights and privileges unknown amongst the same class in the greater part of Germany. On both sides of the Elbe, too, as far west as the Ems, are "Landes" which constitute true, but little and happy republics, preserved amidst a feudal nobility, and in Denmark under a despotic sovereign—both of whom have been taught by the valour of the peasants to respect their rights. From such little republics grew up, in the middle ages the mighty Bremen, and the mightier Hamburg, with the other Hanse towns which became great, to fall into servitude, while the "Landes" preserved their freedom. In them, the judges and all the functionaries of the district are still chosen by the people, including those who expend, as well as those who collect, funds for the administration of justice and the affairs of the church. The country in which these models of some of our oldest and best institutions still exist is English all over. Divided into small irregular fields of various shapes and sizes, surrounded by hedges, and hedge-rows crossed by foot paths, with stiles; the farm-houses standing single and apart, while the shopkeepers and others are gathered into a hamlet around the village green; duck ponds, English-like castle, people, pigs, houses, fields, make this a slice of old England. It is a mirror in which we may yet see what England was. It is the more true, for in no other part of the Continent are such features common.

While we detect in Jutland a representation of our early social life, we see also the difference which thirteen or fourteen centuries have brought forth in the two countries. There the bulk of the people yet live on the land in roomy dwellings; and the labouring classes, not more numerous than are required, are well fed and well taken care of. It is a striking difference that the dangerous classes who here are, or were, only to be found in our crowded manufacturing and town districts, and amongst the poor and uneducated and the houseless, are found on the Continent and in Sleswick-Holstein, as in other parts of it, among the over-educated classes. They consist of younger sons, brought up to no business, with refined tastes and cultivated faculties, with no higher object in life than that of filling some small Government office. The applicants are more numerous than the places, and the many continually disappointed makes them dangerous to the public tranquillity and to social order. With various difference, Jutland is to us what England is to the inhabitants of the United States; and they may still find, as well as we, in the huge farm-houses, the sporadic dwellings and the little republics on the borders of the Elbe, the germ of the social and political life of all the Anglo-Saxon tribes. Our descent from them is more mythical than the descent of the Americans from us; and we require the striking resemblances found in the countries on the Elbe and in England to confirm the ancient history, and to establish as that the story of "Hengist and Horsa," names which signify respectively a horse and a mare, is anything better than a fable. Mr. Laing's observations have, in this respect, a very considerable antiquarian and historical value.

The Germanic portion of the population of Denmark, Mr. Laing calls a light-headed, light-hearted people, or as their own language better expresses it, a "leichtsinniges volk," with quiet, yet deep feelings, ready to sacrifice at the moment life and fortune for any object in which they are much interested, but incapable of acting except under nervous excitement, and incapable of a steady adherence to any cause. The Anglo and Danish portion of the population are more grave and earnest, with more good sense and sound judgment than the Germans. The Danes pay more attention to business, and are more successful. There is some foundation for this opinion. The school system is less objectionable, according to Mr. Laing, in Denmark, than in Germany, and is far superior to that of England. Though secluded from much intercourse with other countries, literature and literary taste are extensively diffused throughout Jutland, and Mr. Laing is surprised to find in small towns of 2000 or 3000 inhabitants, not only excellent schools, but public libraries, dramatic societies, theatrical representations, concerts, and balls. Such information is pleasant, as satisfying us that the Anglo-Saxon race has in it the genius as well as the strong element of civilization, though here in England its cultivation is yet much in arrear.

Mr. Laing drops unexpectedly at Kiel into a theatre in the open air, on a Sunday evening, expecting it to be a Mormonite or Roman Catholic congregation, and finds more four or five thousand persons of different classes, but all respectable, enjoying the representation. Such a spectacle on that evening gives him much to reflect on. In Denmark, as in other parts of the Continent, noblemen, military officers of the highest rank, and functionaries in high positions, go with their wives and families to twopenny tea-gardens and skittle-grounds, open-air concerts, and merry-go-rounds, not to patronise or be stared at, but to sip coffee, listen to music, and be amused. In Hanover, Mr. Laing saw the Royal family, including the grim King Ernest himself in such a place, which was not regarded as an extraordinary occurrence. If this kind of free intercourse and life of amusement diffuse through all classes refinement of manners, they create a distaste for those earnest and manly pursuits which lead to national greatness.

Mr. Laing touches on an immense variety of subjects—from breeding carp to the late revolution. His style is vehement and redundant, rather than lively and terse; but whether he be severe with the Germans, or all gentleness with the Anglo-Danes, his remarks always suggest topics for inquiry and reflection, and give a great deal of information.

The HISTORY of PHYSICAL ASTRONOMY, &c. By ROBERT GRANT, F.R.A.S. Robert Baldwin, Paternoster-row. 1852.

Astronomy has, unquestionably, ever been the most interesting and sublime of the physical sciences; but its interest and sublimity are, in an extraordinary degree, augmented by the discoveries of modern times, and by the adoption of a correct view of the form and motions of the sidereal heavens. It is curious that, exactly in proportion as the truths established by astronomical study are remote from the business of men, in that proportion they are apt to become more engrossing to the mind, and more full of charm, and wonderment, and delight for the imagination. It is not the higher astronomical knowledge, for example, which is necessary for the purposes of navigation; nor is it easy to point out what ends of external, vulgar, and practical usefulness that higher knowledge can ever subserve, in the life of men. It will give them, indeed, an idea such as no other inquiries could possibly convey, of the atomic littleness of this whole globe; but in what way can that branch of study, than which there is nothing more enchanting in all astronomy—the ascertainment of the distance, of the bulk, and of the orbit of suns and stars—in what way can this knowledge affect mankind and that careering abode in which they are whirled through space? If the earth was as a ship which men could steer, the study would be what is called practical and necessary. At present it has no lower or meaner tendency than to make men adore the inconceivable might of that Hand, whose 'work the heavens are."

The book before us is not a system of astronomy, nor is it in one sense of the word scientific. Yet without a considerable knowledge of mathematics, the reader will be deprived of much of the interest of the perusal. It is a very ably written history of the efforts made in all times by successive sages to read the illuminated volume above our heads, and to reveal the physical mysteries of the firmament. It traces the progress of the science, through the darkling guesses and enormous mistakes of early cosmology, up to the full light of the discoveries and correct systems of our own day. It contains a notice of the principal astronomers that have ever lived, of their discoveries, their errors, and their labours.

One of the most interesting portions of the work is the account of the persevering and long fruitless efforts to get the parallax of certain stars. There are, no doubt, other means of making at least an approximate calculation of the distance of a star; but the parallax, if it can be obtained, is the most satisfactory. A hint thrown out by Galileo, but on which neither he nor any man of his day ever acted, led long afterwards to practical results. Among the earliest of the stars whose parallax was ascertained, was *a* Lyræ; and its distance from the earth was found to be 800,000 times greater than that of the sun, which, as every one knows, is 95,000,000 miles away. The mean value of the parallax of a star of the second magnitude was established by M. Peters at 0.116", which places the star at such a distance, that its light, travelling at the rate of 192,000 miles in a second, takes 25 years to reach our earth. The light of others, though the speed of light is what we have mentioned, takes 138 years to arrive. These are the smallest stars visible to the naked eye. As to those brought to view by powerful telescopes only, the light which some of them sent off to us when Sesostris sat upon the Throne of Egypt is still on its way, and will not be here for some centuries; and through a forty-feet reflecting telescope you may see certain faint nebulæ, the light of which, according to Herschel, must have occupied about two millions of years in careering through space, before it reached the ken of man.

A very curious reflection naturally arises in the minds of those who ponder a little while over the facts to which we have so cursorily alluded—a reflection touching upon the frontier, as it were, of a still higher, though far less definite science—that of metaphysics. A phenomenon is noticed, in which time and space appear to be fused and confounded into a single and almost identical idea. And yet the most approved definition which metaphysics can furnish of time is that it is change; no more certain attribute can be predicated of space than that it is unchangeable and eternal. How can they be at all made convertible terms? Astronomy effects, at least virtually, this startling union of two things so essentially dissociated; and a word will show how. We have seen that there are stars, now visible to us, whose light has occupied a prodigious time in travelling to our vision. Let us select one which is not, by many degrees, among the most remote; one of those whose emitted rays take four thousand and some hundred years to come to the earth. Suppose that we had sight vigorous enough—the sight of an angel—to discern what was taking place upon the surface of that distant orb, what we should behold would, of course, not be what is now taking place there, but what took place at the time the light from it departed. Reverse the case: suppose a living being, who saw with corporeal eyes like our own, but sufficiently vigorous, to be stationed upon the surface of that globe, and to be examining our own earth—would he behold us, the London, the Paris, the Rome now existing? No; though now looking upon the earth, he would see it not as it now is. London for him would not have yet laid its foundation-stone; even Rome would be virgin of one single building. England would not be to him even "a weather-beaten isle in a no-thern sea," with a sparse population of painted savages wandering amid forests, the very timber of which rotted long ago, and is now volatilised among the elementary gases. America would have no Washington or New York—not even the to-day ruined cities of Indian Mexico—but would present one huge tangled sylvan wilderness, without a human inhabitant. He would probably behold the great ark resting on Mount Ararat, and Noah and his family descending, in the garb of which the ancient Hebrew costume is but a modern copy, from its ribbed interior. To see us as we now are, if he kept his station, he would have to wait for some four thousand five hundred years. But suppose further, that, with the wings of an angel, or the speed of thought, he could suddenly transport himself to some still remoter orb in the illimitable depths of space; he could then select a spot from which, on looking back at this globe, he would behold it just issuing warm from the hands of the Creator. He could, by traversing the distance of *space*, overtake the flying past of *time*, and gaze upon Adam in the primeval garden. On the other hand, by approaching our globe with equal rapidity, he could meet the light which it emits, and which thus bears upon its face picture after picture of the past of the world, were upon wave of a sea of representations of the history of mankind, rolling for ever to a still remoter distance in the universe. According to his station, such an observer would be met by the spectacle of a different era, the drama of a different generation. We have proved what we said; that, in one sense, astronomy reveals to us the strange truth that time and space are one. It is thus that even *physically* can be made intelligible the sublime proposition that for the Almighty there is everywhere in his own home and house; and there are parts of space in which the past is present, even to eyes using light as their medium of vision present, not as a remembrance, but as a spectacle.

But we have dilated too far, if we did more than thus barely allude to a few of the facts which astronomy valuable addition to scientific literature, in its noblest department.

MONEY and its INFLUENCE. A Tale. Wertheim and Macintosh.

This very interesting story of domestic life is a translation of one of Hoffman's "Tales for the Young." The title is admirably sustained in every point and incident. A poor artist, in a village in Germany, is reduced to poverty by the necessities of a sick wife, when he seeks assistance from his rich employer, but is haughtily repulsed empty-handed, though with his soul full of high resolves in case he himself should ever acquire wealth. Meeting with a stranger who loses a purse of money in the forest, which he restores to the loser, and is liberally rewarded for his honesty; when the interview leads to the discovery of a fortune inherited by the weaver from his brother a merchant in Calcutta. The weaver has undergone years of adversity, but now passes the stronger trials of prosperity: his newly-acquired wealth puffeth him up overmuch; he exceeds in hardness of heart his former employer, and spurns from his door the very man who had helped him to his good fortune. Not so, however, his son, who is full of gratitude and generosity. piety and filial love, and courageously risks his life to save his father from his burning factory, and from the hand of an assassin; for the oppressed weaver has now become the oppressor of the whole village, and is hated at every turn. Adversity darkens over him, but tempers him to a better state. He had his trial of wealth, and abused it; he returns to his old cottage, which he had left for a newly-built mansion; he again enjoys labour, seeks to wash out the recollection of his misdeeds with tears of repentance, lives in competence, is reconciled to his benefactor, and becomes possessor of the real treasure he possessed in his son. The story is beautifully told, and is imbued with religious feeling throughout. The publication has, therefore, been most appropriately undertaken by a lady, to aid a sacred object—the rebuilding of Queen Charlotte's Hospital, now in the hundredth year of its establishment; and we are happy to learn that the profits from the sale of the work have already benefited the building-fund of this excellent institution. The translation of "Money and its Influence" is gracefully executed; and the story deserves to be extensively read for its intrinsic merit, as it unquestionably will be in aid of the Charity it is intended to subserve. By the way, in subject and treatment, the book is admirably adapted for school and parochial lending libraries.

Music.

THE MUSICAL SEASON.

AMONGST the acquirements of education, music has now become almost a necessity; its cultivation has been carried amongst professors to the highest degree of perfection; and amongst amateurs, the union of literature and music is found to be a consistent and dignified pursuit, filling up leisure moments with elegant amusement, and relieving the hours of graver cast of thought; but owing to the extraordinary progression of music in this metropolis, the desire for excess and exaggeration has in proportion vastly increased. The quantity of music heard in London throughout one single season is somewhat awful, and fatigue and languor attend the over-excitement of the faculties, at listening to so many musical exhibitions, the mere record of the names of which will astound the most inveterate lover of sweet sounds. For the admirers of the music of the south, there are two Italian Opera houses; for English opera, or rather for Italian, German, and French operas with English executants, there have been two theatres open; for madrigals and glees, there are two English Glee and Madrigal Unions, besides the two Madrigalian Clubs, the Catch Club, the Glee Club, the Abbey Glee Club, the Round, Catch, and Canon Club, and the Melodists; for oratorios there are the two Sacred Harmonic Societies, and the Cecilian Society; for the antiquarian amateurs there are the Bach and Purcell Societies; for the orchestral connoisseurs there are the two Philharmonic Societies and the Amateur Musical Society; for Classical Chamber Music we have the Musical Union, the Quartett Association, the Beethoven Quartett Society; besides the annual *soirées* and *matinées* for the same class of music of Sterndale Bennett, Molique, Lindsay Sloper, Brinley Richards, Neate, Lucas, Dando, Billet, the Réunion des Arts, Society of British Musicians &c.; then, for purposes of charity, there are the annual performances given by the Royal Society of Musicians, the Royal Society of Female Musicians, the Choral Fund, the Choir and Benevolent Fund. As the majority of the above operatic or concert meetings the programmes contain too many pieces, too many singers, and too much noise, and are too great a strain on the ear to confer unmingled enjoyment. The lustre of names and authorities is too paramount, and natural sensations are forced to give way to the influence of fashion and notoriety. The extreme luxuries of art, are to be found in the tranquil attributes of music, and not in the exhibition of thundering stage effects, or in the schemes of monster concerts. Art and artistes will be benefited by being warned of the perils of preternatural excitement, the reaction of which may produce an apathy in the public mind calculated to freeze the springs of healthy action, and cause a listless indifference for everything really good and great in music. The total want of a national opera to compete with the grandeur and the excellence of the Italian establishments is a great misfortune for art progress in this country. The high prices and large receipts of the two Italian Opera Houses enable the directors to roam over Europe, and to import the vocal celebrities of each capital, and the really pre-eminent instrumentalists are sure of a profitable visit to the British capital in the height of the season. Of late years, however, a very remarkable change has taken place in the reception of foreign *artistes*. It is quite useless to think of coming here with a few letters of introduction and recommendation, unless talent little short of genius stamps the passport of the bearer. This change in the fortunes of speculative vocalists and instrumentalists has arisen mainly from the marked advancement of art in England, slight and scarcely unobserved as have been the gradations of amelioration year by year. These very minute differences in every successive season within the last quarter of a century have revolutionised music in London. M. Fetis, the historian, who some twenty years since wrote most disparagingly of the state of art, has retracted since his visit to the Great Exhibition. In reviewing the large interregnum between the two trips, the extension of the boundaries of art development, both in theory and practice, has been liberally admitted by him. Our improvement is not to be ascribed so much to the treatises and essays on music, which most assuredly have little contributed to our stock of knowledge: but it has arisen from the great increase in the numbers of cultivated amateurs, who have thus spurred on professors to improve in executive. The musicians of twenty years since would have little chance of competing with their polished and experienced brethren of the rising generation. Our native artists travel in these days, and seek to advance their social position by acquiring foreign languages and general knowledge. Practical players must achieve something beyond mere note reading; unless they can combine sentiment with sound, their executive skill will prove of little avail. The performer must be the scholar as well as the musician. In this refined age, the intellectual interpretation which stamps the executant with individuality is the grand desideratum, and it is general literature which is thus achieving so much for music. The advantage that it enjoys over the sister arts is, that melody will awake emotions in the most uninstructed hearers, and hence its generalising influence; the ear that is utterly deaf to scientific combinations, will experience the most intense delight at listening to a simple tune. The natural charm of the human voice is irresistible; and the love for the ballad school has such a permanent hold on the affections of our country, that not even the voluptuous influence of the Italian Opera has been able to extinguish the feeling. In concerts, at which the southern singers and their music predominate in the programmes, a ballad by an English vocalist will frequently carry off the honours, by a spontaneous demand for its repetition; and amidst the changes and convulsions of nations, it is curious to observe how the leading characteristics of the ballad style have been preserved, almost as distinct and peculiar as the language.

From the variety of schools exhibited during a London season, it is evident that taste is more diversified than in any other European capital. But if you can hear the finest performances in the world here, you stand, also, a fair chance of listening to the most execrable ones. We have got too much into the "express" system of music—the railroad speed. To listen to a certain quantity, during a given period, is absolutely frightful. Still, with all the indications of the ruling passion for excess and exaggeration, we must be grateful for the healthy demonstrations of the public taste during the musical season. In the Italian lyric drama there has been much gain; the patrons protest, if the scores of operas be not conscientiously adhered to, they are indignant at senseless interpretations to gratify the inordinate ambition of *artistes*; they no longer relish the introduction of the sensual ballet between the acts of a lyric tragedy. The star system is in its last agonies, and the beauty of an *ensemble* is more and more insisted upon. This is also an earnest desire exhibited by opera frequenters, compared with those of former times, to know the poetry of the music which is sung, to be thoroughly acquainted with the action of the drama, and to discuss earnestly and with intelligence its points of domestic or historic interest. The increased knowledge of the age is also strikingly displayed at our oratorio performances, which were, in the olden time, chiefly confined to an aristocratic society, but at which the mixture of all ranks of society is now particularly to be observed. Another most promising sign of the public appetite for the beautiful in art, is in the popularity of chamber classical compositions. The mental delights arising from this class of entertainment are fast spreading, and a most auspicious and important revolution will it prove eventually for our rising composers. It was Fashion in the olden time which exercised sole influence over opera; it was Fashion which had the oratorio under its sole control; it was Fashion which assumed to be the exclusive patron of classic music for the chamber; but who can fail to have remarked that Fashion has had its day, and that it is the public which will henceforth be the dictator of, and the cause of emulation in art progress.

Whilst the quartet, the trio, and sonata—cabinet pictures of musical story are making way in the hearts of the uninitiated in art's mysteries, the most astonishing fact of the musical season has been the extension of the appreciation of the elaborate symphony on the part of the general public. The symphony in music is what the epic is to the poet, and the historical picture is to painting. For the young musician it is the boldness of the eagle's flight "to the blazing sun." It calls into play all the resources of the orchestra, and is the highest order of instrumental inspiration, combining breadth of design with sublimity of effect, and exacting from the composer a profound knowledge of the properties of the constituent parts of a band. The symphony admits not of the light and trivial; it must bear a character of solemnity and gravity, and yet must be of all-pervading power, without noise, from the masses of sound. The time occupied in the execution of a symphony exacts, in order to fix the attention of an auditory, that there must be unity of design, a continuous flow of melodious imagery, moving in "liquid sweetness" and rich, gorgeous, and picturesque harmonies. The symphony is of comparatively modern date. Not a century has elapsed since the form was invented by Stamitz, of Deutschbrad, in Bohemia, but it was the elegant and fertile fancy of Haydn which first suggested the symmetry of construction of the modern symphony, and it has been Mozart, Beethoven, Spohr, Mendelssohn, and Berlioz, who have perfected the forms, and extended what were regarded as limits, as if it can be admitted for a moment that the finality doctrine can be applied to music, and that "forms" must be understood as meaning "fetters" to genius. It is something for this metropolis to boast of, that every season the Posthumous Quartuors of Beethoven, pronounced in former days to be wild, incoherent, and incomprehensible, and, above all, "unexecutable"—we pray pardon for coining a word—may be heard by admiring audiences, who find them perfectly clear, and logical, albeit full of breaks and surprises, because the players are intelligent, self-relying, courageous, and enthusiastic. It is something for this vast and much abused capital, in respect to "matters musical," to be enabled to prove to our foreign detractors that we have orchestras to expound the glorious Nine Symphonies of Beethoven, including the Choral one, to develope the majestic forcible images and strong colouring thereof with artistic zeal and ability; and, indeed, it is a subject of proud congratulation that, if we are in a position to find the executive, we are also in a condition to collect an auditory of thousands to listen with breathless attention to the colossal conceptions in the Choral Symphony of Beethoven, and to evince an enthusiasm compared with which the so-called *furore* of southern operatic audiences sinks into nothingness. It is not a select body of connoisseurs assembling year after year in the same locality, with whom a proper name becomes a bye-word as a safe emission of an opinion, but it is of the large miscellaneous public that we speak—it is the rapture expressed by ungloved hands that we have noted as one of the most remarkable signs of this season. It is but a very short time since that any prediction that a symphony, occupying upwards of an hour in the interpretation, would create unparalleled enthusiasm would have been laughed to scorn; but the masses have studied the effects of instrumentation, and can appreciate the grand and lofty touches of the master-mind. Composers who are conscientiously pursuing their art labours may find a moral in the present reception of the Ninth Choral Symphony of Beethoven, which has been called by eminent critics in their time, a "monstrous piece of madness," the "insane work of an expiring genius," the inspiration of a "deaf and decayed musician," a "collection of obstreperous roarings of modern frenzy," a "senseless discharge of unconnected musical instruments," &c. Who can read all these notices without feeling that there is indeed a day of retribution for neglected and libelled genius?

It is the cultivation of music by all classes of society which enables our audiences to be so quick and discriminative; and artists, in their turn, are compelled to be more careful in their studies, to come before their judges properly prepared to labour hard for the final polish. Our choral and orchestral executants, as well as the principals, are feeling the "pressure from without;" the amateurs are close upon them, and striving for mastery; the pupils have become performers, and the performers, to maintain their hold, must become masters. Multitudes of hearers, tutored in the appreciation of greatness, replace the limited number of *soi-disant* connoisseurs. The decay of monster concerts is at hand; the stimulants have been applied to excess, and the surfeit will be fatal at the suicidal speculation. This fact has been palpable during the present season; the schemes, containing forty to fifty pieces, with all the available talent, native and foreign, to embody them, have been precisely those which have been the greatest failures.

We have already referred generally to the doings during this musical season; but a reference to certain institutions in detail may claim attention at a future period; for execution, if not invention, has reached a pitch of perfection worthy of distinct enumeration, and special commentary, as well as the state and prospects of Music and Musicians in the country generally. The music of divine service, the oratorios, the lyric drama, the orchestral societies, the private and public concerts, the school of glee and madrigal singing, the practice of chamber compositions, &c., are all subjects of examination that cannot be dismissed in the limits of this notice.

Popular Science.

SCIENTIFIC BALLOON ASCENT.

On Tuesday, the 17th instant, an Ascent, planned by the Kew committee of the Council of the British Association, took place, in the great Nassau balloon, from Vauxhall Gardens. The balloon was provided with double sets of suitable instruments, in charge of Mr. Welsh and Mr. Nicklin, of the Kew Observatory, who were accompanied by Mr. Green. This was the first of a set of aërostatic expeditions for the determination of laws of change in the temperature and humidity as we rise in the atmosphere; other observations and experiments not being lost sight of. The ascent took place about ten minutes before four p.m. "The balloon," writes Mr. Welsh, "steadily rose, and continued rising till about thirteen minutes before five p.m., when we could rise no higher. The barometer indicated that we were about 19,500 feet above the earth; and the temperature, which was about 72 deg. at Vauxhall, had fallen to 7 deg. (25 deg. below the freezing point of water), or through 65 deg. of Fahrenheit's scale. From the earth the sky seemed about three-quarters covered with clouds—the lowest stratum being composed of detached masses of *cumulus*, an intermediate stratum of higher *cumuli*, and *cirro-stratus* and *cirro-cumuli* above all. The first of cloudy we passed very soon after leaving the earth at a height of about half a mile, the second seemed about two and a half miles high, but the highest cirro-stratous clouds were still above us at our greatest elevation, although apparently not very far. Near the highest point of our course, small star-shaped crystals of snow, or perhaps one-twenty-fifth or one-thirtieth of an inch diameter, were seen falling (possibly their apparent fall was due to the rise of the balloon). "Observations of the thermometer, hygrometer, and barometer, were taken at very short intervals during the ascent and the first portion of the descent, until it became necessary to provide for the safety of the instruments. Specimens of the air at different elevations were taken for analysis. The descent was accomplished with much ease about twenty-five minutes past five P.M., and the balloon secured with little trouble, near the village of Swavesey, in Cambridgeshire, about sixty miles north of London. This distance was passed over in about an hour and a half, showing that an immense mass of air was moving very rapidly from the south. Accounts received from various stations seem to show that this strong south wind was prevalent over a large portion of country."

COLOURS MOST FREQUENTLY HIT DURING BATTLE.

It would appear, from numerous observations, that soldiers are hit during battle according to the colour of their dress, in the following order:—Red the most fatal colour; the least fatal, Austrian grey The proportions are:—Red, 12; rifle-green, 7; brown, 6; Austrian bluish grey, 5.—*Jameson's Journal*, No. 105.

LEAP OF THE GRASSHOPPER AND THE FLEA.

Dr. Martin Barry, in his renewed Inquiries concerning the Spiral Structure of Muscle, observes:—"Muscle from the thigh of the Grasshopper having uniformly presented a relaxed state, it appeared to the author probable that such a state was not unconnected with the sudden muscular contractions required by this creature for its leaps. A sudden change from such a state of relaxation to that of extreme contraction must here take place with the greatest facility, and be combined with the manifestation of great power. This opinion having been mentioned to Professor Purkinje, the latter recommended the author to examine the corresponding muscle from the Flea, in which, from its enormous leaps, something similar would, he thought, be found. The author accordingly examined some of these, and had the satisfaction to find in them a degree of muscular relaxation even higher than that he had observed in the grasshopper. Similar conditions, no doubt, exist in other animals, but perhaps nowhere are they more remarkable and constant than in those just mentioned."

FOOD FOR THE SILKWORM.

The *Diario Mercantile* states that on a recent visit of the Duke and Duchess of Montpensier to Venice, the Royal and Imperial Commissioner of Agriculture presented them Teresa Tamor, who had produced silk from silkworms in sixteen days, by feeding them with the leaves of the centinode, which is identical with the common *Polygonum aviculare*, called in England knot-grass. These leaves are stated to be preferred by silkworms to those of the mulberry.

SALT AND THE DIGESTION.

While the late Dr. Prout, by a luminous train of research, threw so much important light upon the physiology of calculus, and other urinary deposits, he advanced at the same time our knowledge of digestion itself, by his discovery that the stomach in a healthy state always contains free muriatic acid. Hence, probably, the necessity of salt for all the higher animals.—*Professor Daubeny.*

COPPER MINES OF LAKE SUPERIOR.

At the Cliff Mine, three large steam engines are employed (1852), with 250 men; and at the North American Mine two engines, with 160 men. Most of the other mines, 40 in number, are assisted by steam-power. Three thousand miners are at work altogether, and the general population is fast increasing. Native copper is the principal object. Silver is also present, and occasionally in masses of considerable size. There are now in the Cliff Mine masses of pure copper within view, estimated to weigh 700 tons in the whole; and on the lands of the Minesota Company, one block weighed 250 tons. The copper shipped in 1851, was about 1600 tons, valued at £130,000. This copper is stated to be of great excellence in the manufacture of wire, ordnance, and ship sheathing.—*Dr. J. J. Bigsby.*

NEW PLASTIC MATERIAL.

A Parisian sculptor, M. Dathoit, has obtained an English patent for chemical combination of certain agents for obtaining a new product to be used in the plastic arts. The patentee combines with gutta percha oxide of zinc, amianthus, and sulphate of baryta, in conjunction with various colours. The gutta percha is first prepared and bleached by being dissolved in rectified naphtha, benzole, or sulphuret of carbon. When the compounds do not possess sufficient elasticity, caoutchouc is added. The gutta-percha being prepared, after filtration he places the solution in a still, adds the other ingredients, and stirs the whole well together. Heat is then applied until all the volatile oil is driven off, when the material is removed to the desired moulds. It is said to be suitable for numerous moulded works of art, tissues, or artificial flowers; it may be used as leather, when rolled into sheets, or it may be diluted with naphtha, or benzole, and employed as liquid paint.

THE BEST VENTILATION.

Dr. Arnott, in his "Evidence before the Select Committee on the Ventilation and Lighting of the House of Commons," is of opinion that there cannot be a perfect system of warming and ventilating, in a building having separate rooms, if there is a deficiency in respect to any one of the following six particulars:—1st Firstly. Means of moving through the building constantly the definite quantity of pure air known to be required. Secondly. Means of duly distributing this air to the different rooms and compartments. Thirdly. Means of properly diffusing the air in each room. Fourthly. Fit means of discharging the vitiated air from the room. Fifthly. Means of giving to the air the fit temperature. And lastly. Means of giving the fit moisture." Further, he thinks that the more the apparatus is rendered self-regulating, or independent of the constant watching and interference of attendants, the better it is likely to be, both as to performance and economy.

BELL'S REAPING MACHINE.

A Scottish Presbyterian minister (the Rev. Patrick Bell, now minister of Carmylie, in Forfarshire) puts together, in 1828, an adjustment of wheels and clasp-knives, so working, that, when pushed along a cornfield, it cuts down the grain as if done by hand, and far more cheaply and expeditiously. His brother, a farmer, improves upon and adopts this machine; and, for a dozen successive years, employs it in reaping his crops. The National Society gives the inventor a prize of £50, but makes little noise about it; and although, in 1834, several were in operation in Forfarshire, few of the supposed wide awake Scotch farmers thought of adopting it; but four of the machines were sent to New York from Dundee. Thoughtful, pushing emigrants, settlers in the North American prairies, saw, or heard, or read of these machines. The reaper was reconstructed, modified in different ways, by ingenious mechanics, was made by thousands for the farmers beyond the American lakes, and obtained a deservedly high reputation. Brought to London in 1851, the American reaping machine proved the main attraction of the United States department of the Great Exhibition. Hundreds of machines were bespoken by English cultivators, and all the while no one knew that the original model machine was at the very time quietly cutting its yearly harvest on the farm of Inch Michael, in the Carse of Gowrie. *Edinburgh Review.*

WILSON'S PATENT COMPOUND RAILS.

The object of this improvement is to produce a rail which shall approximate as nearly as possible to a continuous bar from one end of the road to the other; which is effected by making the rails in two vertical and longitudinal sections, with projections on one section, and corresponding depressions or grooves on the other. These half-rails are laid either on longitudinal wooden sleepers or cross ties, so as to break joints, and the parts are then firmly rivetted together. No chairs, clamps, nor plates are requisite for securing the ends of the rails, which are kept in their places by a simple hook-headed spike. This new rail has been in use for from one to two years, with perfect success, on portions of the New York and Erie, Philadelphia and Reading, and other lines of the United States.

GAS OVEN.

Messrs. Thompson and Attree have patented certain improvements in heating Ovens by ordinary Coal Gas, which is conveyed by a pipe to the back of the interior of the oven and there ignited. A supply of atmospheric air is introduced by passing the gas pipe through another pipe (one end left open to the air), which passes through to the burner. The gas-pipe is connected with the main by a union joint, to admit of its being withdrawn from the ovens when the latter is sufficiently heated. When gas cannot be conveniently obtained, naphtha or other combustable fluid may be used in its place, suitable burners being employed and means used to introduce air to support combustion.

BREAD-MAKING MACHINERY.

M. P. A. Lecomte de Fontainemores, of South-street, Finsbury, has patented certain improvements in apparatus for kneading and baking bread, in heating Ovens by ordinary Coal Gas, which is conveyed by a pipe to the back of the interior of the oven and there ignited. A supply of atmospheric air is introduced by passing the gas pipe through another pipe (one end left open to the air), which passes through to the burner. The gas-pipe is connected with the main by a union joint, to admit of its being withdrawn from the ovens when the latter is sufficiently heated. When gas cannot be conveniently obtained, naphtha or other combustable fluid may be used in its place, suitable burners being employed and means used to introduce air to support combustion.

the temperature. The bottom of the oven is heated by tubular flues under the moveable table; the sides by vertical flues, which lead from the fire-place to the top of the oven, where space is left for the heat to circulate over the whole of it. Above the top flue, which is formed by two plates of metal, the oven is covered in with earth except at one part, where there is fixed a receptacle to contain water for the service of the kneading apparatus, and this water is heated by the flames, &c., passing through the flue on top of the oven. A thermometer is applied to the exterior to show the degree of heat, and dampers are provided for the regulation of the heat.

VASTNESS OF ICEBERGS.

Dr. Sather and, in his "Journal of a Voyage in Baffin's Bay and Barrow Stra its" in search of the Franklin Expedition, describes, among the floating islands of ice in the Arctic Sea, an iceberg which was particularly noticed, because it never shifted its position, when others, of rather larger size, were drifting to and fro with the tides. "It was about 300 feet in height above the surface of the sea; and its perpendicular sides, which were nearly equal, were not less than two miles in length. The upper surface was horizontal, but very irregular, appearing as if it had been planted over with rough and irregularly conical eminences, packed closely together, and varying in height from twelve to twenty or thirty feet. The water lines at the level of the ice around it were also horizontal. There seemed to be no reason for any other opinion than this, that it had never changed its centre of gravity since it descended into the sea, and had become detached from the glacier which gave it birth. The cubic contents and weight of such a floating world are truly astonishing. This berg displaced upwards of eighteen thousand millions of cubic feet of water, while its contents must have been nearly twenty-three thousand millions of cubic feet, and its weight nearly five hundred and forty millions of tons."

THE FRANKLIN EXPEDITION.

M. Augustus Petermann, F.R.G.S., has just published a proposal for a Spring Expedition through the opening between Spitsbergen and Nova Zembla, as the best entrance into the Polar Basin, in some part of which M. Petermann still thinks Franklin and his companions may be found.

TO PRESERVE CUT FLOWERS.

Place and arrange the cut flowers in a vase or deep plate, filled with water; then cover the same with a glass, such as is used in apiaries, having a small hole at the top, as the air must not be entirely excluded, but sufficient ventilation given to allow the damp to escape. A dish of wild flowers thus placed has been kept more than ten days in perfect beauty, making fresh buds and expanding every day. These, without a glass, would be more difficult to keep fresh and without drooping than garden or greenhouse flowers, but not less beautiful, or worthy of care and attention.—*From a Correspondent.*

GENERAL DISTRIBUTION OF IODINE.

Mr. Stevenson Macadam, in a letter to Professor Jameson, states that the presence of Iodine in pearl-ashes leads him to believe that this substance will be found more generally distributed in the vegetable kingdom than it has hitherto been supposed to be; and this opinion is strengthened by the fact that he has found an appreciable quantity of iodine in the ashes of charcoal.

IMPROVED LUCIFER MATCHES.

Messrs. J. and E. Sturge, of Birmingham, are now manufacturing on a large scale, a new description of phosphorus for lucifer matches (called *Amorphous Phosphorus*), which possesses the following advantages over the old. 1. It involves much less risk of destruction of life and property by fire. 2. It is more suitable for matches intended for warm climates. 3. It is not poisonous in the solid form, since matches made with it are comparatively harmless, if sucked or chewed; and 4. It does not give off any noxious vapour at ordinary temperature. To prepare the new substance, ordinary phosphorus is melted in a peculiarly-constructed retort, and kept for some hours at a temperature of above 500° Fahrenheit. During this heating, the phosphorus combines with caloric and renders it latent, but does not otherwise undergo any chemical alteration. The original phosphorus is so combustible that it must be kept under cold water; when brought into the air it grows luminous even at the freezing point, and enters into a full blaze at a temperature of about 150° Fahrenheit. By the prolonged heating, it becomes a soft opaque mass, which is easily pulverised, and then forms an uncrystalline powder of a scarlet, crimson, purple, brown, or brown-black colour, so incombustible that it may be exposed in summer in the open air, and handled with impunity; nor does it grow luminous till it is about to enter into full combustion, at the temperature of 482° Fahrenheit. It is, further, so harmless to living creatures that more than 100 grains may be taken without doing them any injury. Although in its free state it is sparingly combustible, yet when it is mixed with the ordinary ingredients of lucifer matches, such as sulphur or sulphuret of antimony, and chlorate of potass, it kindles readily.

ELECTRO-MAGNETIC MOTIVE POWER.

A patent has been taken out by Dr. Kemp for an arrangement of machinery for the obtaining of a maximum power from numerous short strokes of Electro-magnetic Power, acting on one long piston-rod in the cylinder of a hydraulic press, thus neutralising the difficulty which is presented of the rapid decrease of force with the increase of the magnetic distance. This result is obtained by an arrangement of cylinders and pistons, in pairs, connected by levers, in such manner, that as one ascends the other descends, and forces water, in a continuous circle, through valves into a chamber in connexion with a long cylinder and piston, or hydraulic press, in connexion with the prime moving crank of the engine.—*Builder.*

EWING'S PATENT GLASS WALL, IN THE GARDENS OF THE HORTICULTURAL SOCIETY, AT CHISWICK.

EWING'S PATENT GLASS WALLS.

When the late Sir Robert Peel proposed his measure for the removal of the duty from glass, he wisely remarked, there was no foreseeing the limits of the novel application of this beautiful manufacture. The most recent of these is the use of glass in the construction of walls for the growing of fruits and plants, as well as the introduction of a new style of architecture. The variableness of the British climate, and the great disappointment in procuring, with anything like certainty, a crop of fruit from brick or stone walls, led Mr. Ewing to consider whether this could not be obviated by substituting hollow walls of glass and iron; and the invention has proved perfectly successful.

By constructing the walls of sufficient width to enter, they become hot-houses on the best principle, the trees they contain are completely surrounded by light and exposed to the action of the sun's rays during the whole of the day; they form a delightful promenade in our uncertain climate during the winter months.

The Illustration shows one of the Walls erected by the London Horticultural Society in their Gardens at Chiswick. Mr. Ewing has invented a simple method of opening the lights by machinery, by which means a lady can easily open the whole of the sashes on either side of the Wall at pleasure.

PHOTOGRAPHY.

ITS ORIGIN, PROGRESS, AND PRESENT STATE.

Concluded from the Illustrated London News Literary Supplement *of July* 31.

The production of positive pictures by the first operation in the camera was the next subject which claimed attention. A darkened photographic paper was washed with a hydriodic salt, and placed in the camera; there it was bleached by the solar radiations, and the image produced had the lights and shadows correct as in nature. Dr. Fyfe and Mr. Robert Hunt were the most successful operators. The latter gentleman published some papers in the "Philosophical Magazine," in September and October, 1840, on "the use of the Hydriodic salts as photographic agents." This variety of picture, and papers prepared for obtaining them, were sold by Messrs. Ackermann and Co.; and Sir John Herschel says, in the memoir already quoted, "a positive paper of this nature is actually prepared for sale by Mr. Robert Hunt, of Devonport." Such is the evidence which our researches enable us to give relative to the use of iodised paper, before the date of the calotype patent under which the extensive privilege of employing "iodised paper" was claimed. This Calotype patent is dated 1841, and involves the use of *iodised paper*, of gallic acid, acetic acid, and particularly *the development of a dormant image*. That we are indebted to Mr. Fox Talbot for the Calotype no one will deny; and that gentleman has now given his process to his countrymen as a free gift, which will be received with all due honour. The discovery appears to have been one of those which the world are fond of classing, much too commonly, under the term of accidental discoveries. We are not ourselves believers in accidents in science, since the mind of the observer must be previously prepared to receive and improve the fact observed, and this necessarily removes it from the condition of accident.

Mr. Talbot was engaged in a series of experiments with various chemical compounds, his object being to increase the sensibility of his preparations, and among others gallic acid was employed. Some papers upon which no impression was visible were thrown aside, and on these there were afterwards discovered well-defined images which had developed spontaneously in the dark. Investigation now established the important use of the Gallic acid, and the manipulatory details of the Calotype process undoubtedly were the invention of Mr. Talbot. When the early examples of these pictures were circulated amongst the scientific men of this country and of the Continent, they created no small sensation, although the pictures then produced were exceedingly inferior to those now obtained. Mr. Fox Talbot had an undoubted right to patent his invention, and appropriate to himself all the profits which might arise from any commercial transactions, either by himself or his licensees. The questionable character of this patent, as of the Daguerréotype patent, consisted, as it appears to us, mainly in its imperfect nature. Mr. Fox Talbot still reserves his right, as far as taking portraits for sale is concerned; but this can affect the public little, as the Daguerréotype and Collodion portraits are far superior to those produced by the patent processes. As specified, it is not easy to use the Calotype for portraiture, or, indeed, for any purpose requiring much rapidity of action; and it was not until the process was fully developed by Mr. Cundell, in a paper published in the "Philosophical Magazine" for May 1844, that much progress was made in this direction. In the same way, when Daguerre gave up his process to the French Government, it required a period of twenty minutes to produce a picture. In 1839, Mr. Towson published his views, and suggested the use of large lenses, and the adjustment required to bring the sensitive surface into the chemical, as distinguished from the luminous focus; and Dr. Draper, of New York, in 1840, by adopting these suggestions, obtained the first Daguerréotype portrait. In this year a vastly increased sensitiveness was obtained on the Daguerréotype plate by the discovery of Mr. Goddard, and of M. Claudet, that the iodine vapour, combined with bromine or chlorine, offered a chemical surface of the most unstable character, which was consequently disturbed by the slightest influence of the sun-beam. Thus, in both instances, the processes remained unprofitable as they came from the inventors. Eventually, by the scientific investigation of others, they are improved. The utmost obstruction was given to the progress of the art by the patents, since few parties were disposed to waste time in investigations from which they could reap no advantages themselves, and from which the public would derive no benefit. In 1844, at the York meeting of the British Association, Mr. Rt. Hunt published the use of sulphate of iron as a developing agent—now so commonly employed—and Dr. Woods, of Parsonstown, communicated his process called the "Catalysotype," in which the iodide of iron is an active ingredient. At that meeting the merits of these processes were fully discussed, Mr. Talbot being present, and acknowledging their importance.

The next step in the way of improvement was the use of albumen upon glass plates. M. Niepce de Saint Victor, published his mode of applying this organic body to glass, in the "Technologist," in 1848. The most successful operators with this material in this country are Messrs. Ross and Thomson, of Edinburgh, in whose views of that picturesque city we see realized the production of fine middle distances and those half-tones which it is so unusual to meet with in ordinary Photographs. An attempt was made to patent the use of glass in this country, but that was defeated by a well-devised application for a counter patent. Glass plates were first employed by Sir John Herschel, in 1840. By precipitating chloride, iodide, and bromide of silver on the glass, and obtained very well-defined images, and he then described the conversion of *negative* into *positive* pictures, which has not long since become the subject of a patent. Sir John Herschel's words are, "Exposed in this state to the focus of a camera, with the glass towards the incident light, it became impressed with a remarkably well-defined negative picture, which was direct or reversed, according as looked at from the front or back. On pouring over this cautiously, by means of a pipette, a solution of hyposulphite of soda, the picture disappeared, but this was only while wet; for, on washing in pure water and drying, it was restored, and assumed much the air of a Daguerréotype when laid on a black ground, and still more so when smoked at the back, the silvered portions reflecting most light, *so that its character had, in fact, changed from negative to positive.*"

We need not detail the peculiarities of the more recent patents of Mr. Fox Talbot: porcelain plates form the subject of one of them, but these we believe have never been employed; and the difficulties of their manufacture are so great that there is little probability of their ever being useful to the photographer. In the last patent we have a combination of the sulphate of iron and iodide of iron, producing a very decidedly instantaneous action. In a letter from Mr. Fox Talbot, published in the *Athenæum* of December 6th, 1851, we read;—"In the process which I have now described, I trust that I have effected a harmonious combination of several previously ascertained and valuable facts, especially of the photographic property of iodide of iron, which was discovered by Dr. Woods, of Parsonstown, in Ireland, and that of sulphate of iron, for which science is indebted to the researches of Mr. Robert Hunt. In the true adjustment of the proportions, and in the mode of operation, lies the difficulty of the investigations." Mr. Talbot concludes his communication:—"I venture to recommend it (this process) to the notice of your scientific readers." Here we have Mr. Fox Talbot's own acknowledgment that he is indebted to two experimentalists for his process; he admits that the only thing he has done is to adjust the proportions. In this way a most serious check has been given to investigations of the greatest value. Sir John Herschel stopped in the midst of a series of the most valuable researches on the chemistry of the sun-beam; and Dr. Woods abandoned his promising inquiry, after some angry letters between him and Mr. Talbot in one of the Irish scientific journals. We have now disposed of the processes which are in any way connected with the English patents, of which we hope to hear no more. Mr. Talbot has resigned the rights which the patent laws of this country allowed him to assume. Several of these patents would never have been granted had there been a scientific board to examine the merits of them, and test their originality. For a long time several gentlemen have been endeavouring to make terms with Mr. Talbot, and it is through their exertion that the patentee has been at length induced to make a reluctant surrender of his patents. They failed as a commercial speculation, as might have been expected they would do. Mr. Talbot made a great mistake; but now he has done his utmost to redeem that error by handing over to the public all his patents as a free gift. We hope the portraits will soon follow, and that the Talbotype, as the Calotype process should now be called, will, in its freedom, advance to its highest pitch of excellence in this country. The use of waxed paper by M. Le Gray involved no new process, although we believe waxed paper may be used for several processes beside the Calotype. M. Le Gray has published a work on his modes of manipulation. M. Blanquart Everard has published several papers in which we have that perpetration of injustice which no feeling of nationality can justify. If the Frenchmen refer to the works of Mr. Robert Hunt or any of the smaller manuals which have been published in this country, they will find the utmost credit given to them for their labours. We believe no modification which has been devised by the photographers of the Continent is mentioned without the name of the inventor or improver. Now M. Le Gray never mentions an English name in his books, and M. Blanquart Everard coolly appropriates Mr. Talbot's processes, and accepts the honours of the Academy as the reward for his audacity. We have no desire to return evil, we therefore acknowledge that, after Daguerre, Fizeau, Becquerel, Niepce de St. Victor, Le Gray, and Everard have been most successful investigators of Photographic phenomena. On the Continent, every improvement has its full value, is very readily appreciated, and it is soon in the hands of the most skilful manipulators. The consequence is that Photography puts on an entirely different feature in Paris from what it does in London. In London, the trade being centered, up to this time, in the hands of three licensees, who are under obligations of the most stringent kind, we are required to pay as many pounds for a picture as it costs shillings on the Continent. Wedgwood was the undoubted originator of Photography; and in this country, except in time, and that very much, as the originator of a most highly beautiful process, is Mr. Henry Fox Talbot.

We have said the Collodion process is not involved in any patent. It has no one agent in common with any of those included in the patents, except the iodide of silver, which has been shown was employed long previously to the Calotype patent. Every step of the manipulation is dissimilar, and the surface of collodion on glass is absolutely new. To the zealous investigations, therefore, of Mr. Archer, Mr. Fry, Mr. Horne, Dr. Diamond, and others, the public owes a debt of gratitude, as at least giving them one process for portraits which can be practised without fear of the law. The details of the Collodion process need not detain us, nor need we remark on the Chrysotype or the Cyanotype of Sir John Herschel, or the Chromatype of Mr. Robert Hunt, as these processes do not possess sensibility sufficient for use in the camera. We have sketched out the history in all truth of those processes which are available for the highest purposes of the art, and we have done so from the earnest desire we feel to place our readers in possession of the case as it stands, in all its fidelity.

The art of Photography has not, however, yet attained that point of excellence to which it must soon arrive. When some increase of sensibility allows of our diminishing the size of the aperture in front of the lens of the camera, and when we can operate with rapidity without actual sunshine, so as to avoid the contrasts between highly illuminated points and sombre shadows, and to obtain the middle tones and distances in their true degree of light and distinctness, we shall see effects while will far surpass those we now call beautiful.

With the advantages of the stereoscope, already fully described in the Illustrated London News, what may we not expect to see realised? Every scene hallowed to our memories by its associations with human progress, in all its varied phases, may be received before our eyes in all the truthfulness of nature. From the East we may copy the temples and tombs which tell the story of a strange but poetic creed. Assyria and Egypt may disclose their treasures to those who cannot travel to survey them, in such a form that all doubt of authenticity must vanish. The harmonious elegance of the remains of Greece, and examples of Roman art, may thus be easily collected and preserved; and every time-honoured fane of Europe may be brought home and made to minister to our pleasures—instructing and refining our tastes, and teaching all the mysteries of the beaut ful, b bind which, as under the shelter of a zephyr-woven veil, we may survey all that is good, and gaze upon the outshadowing of the Divine.

London: Printed and Published at the Office, 198, Strand, in the Parish of St. Clement Danes, in the county of Middlesex, by William Little, 198, Strand; aforesaid.—Saturday, August 28, 1852.—Supplement.

THE ILLUSTRATED LONDON NEWS.

No. 577.—VOL. XXI.] FOR THE WEEK ENDING SATURDAY, SEPTEMBER 4, 1852. [SIXPENCE.

PROPOSED NEW MODE OF LEVYING THE INCOME-TAX.

THOUGH a great many Customs and Excise duties, and some taxes, have been abolished in the course of the long peace which we have enjoyed since Waterloo was fought and won, yet no great branch of taxation has been entirely lopped off; and we are still subjected both to direct and to indirect, to local and to general taxation. We are still taxed in the price of what we eat and of what we drink, in what we buy and what we sell, in what we earn, what we inherit, and what we bequeath. Customs and Excise duties are still levied on more than four hundred articles in daily use and consumption; and the stamps and assessed taxes are still classed under more than thirty distinct heads. All these separate taxes are collected in different manners—some by dealers in the price of articles—others directly by tax-collectors, and all have different establishments—all are costly in the collection—all are sources of vexation and annoyance—almost all give rise to evasion, fraud, or smuggling—and all are redolent of fine and imprisonment, of dispute, litigation, trouble, and crime. There have recently been a consolidation of offices, a little diminution of expense consequent on the abolition of some taxes, and some lessening of vexation and trouble from the same cause; but in the main the gigantic system of taxation which grew up during the war, when statesmen looked about to find an article not taxed, and taxed it, still spreads its roots through every part of society.

The re-imposition of the Property and Income-tax in 1842, which had been impatiently cast off as an irksomé burden thirty years before, was in truth an extension of the old system. If that tax were necessary, in order to give freedom to industry, and to distribute the weight of the public burdens more equally, it has proved so vexatious and unjust, that throughout the ten years of its existence it has been continually complained of. In consequence of these complaints a committee was appointed in 1851, and renewed in 1852, "to inquire into the mode of collecting and assessing the tax, and whether any other mode, so as to render it more equitable, could be adopted." The results of its labour, visibly embodied in two thick octavo volumes of evidence, are a draft report proposed by Mr. Hume, though never discussed, for want of time, and a very elaborate and complete exposure of the inequalities of the tax, with the suggestion of a plan for levying it more equitably, so as to make the rate of taxation proportionable to the value of temporary and precarious, as well as of permanent, and well-secured incomes. The inquisitorial character of the tax seems much less to have engaged the attention of the committee than its pecuniary inequalities. Mr. Hume's plan is to levy the tax every year on the value of all the property in the country. Labour and skill he considers property, Because it would be more costly than productive to levy such a tax on all the members of the community, a minimum amount of income is proposed, below which the tax is not to descend, though it is broadly laid down that every person whatever should contribute in proportion to his property; and it is plainly indicated that the present £150 ought not to be the minimum. But on these two principles, that a minimum must be arbitrarily fixed, and that all who possess property above that minimum should be taxed, the plan is founded.

In its new form it is described as "a property-tax, in the strict sense of the word," and "every man is to be taxed in proportion to his ability." The measure of a man's ability is not to be, as by the present tax, the *amount*, whether net or gross, of his annual income, but the *value* which his net income would produce in the market. It is well known that every species of income has such a value, and that it is great in proportion as the income is secured for a shorter or longer period. Thus it is estimated that £1000 a year in Long Annuities, is worth £6,875; in Consols, £33,333; in land at thirty years' purchase, £30,000; in land for life, £16,667; in reversion in rents after a death, £16,666; in houses, £16,000. So an income derived merely from personal exertions of whatever kind—say an income of £1000, derived from the labour of a barrister—has a value in the market, though less than either of the other £1000's mentioned, each of which is secured by an act of Parliament, or by the possession of tangible property of a durable description. It is proposed, therefore, to call, as now, on each individual for a return of his income, and a statement of the sources from whence it is derived, his age, and other circumstances which bear on its probable duration; and on that return, by tables which are already in existence of the value of lives for other purposes, it is proposed to estimate the value of his income in the market. This is called capitalising incomes, and the tax is to be levied on the amount of capital, whatever it might be, which the incomes would yield at a rate of interest fixed by the law. Every man's age and circumstances differ from those of every other man; nevertheless, there are points of agreement amongst them which would permit them all to be ranged into classes or reduced to averages, and would also permit, it is supposed, an easy capitalisation of all incomes, and the levy of an equitable tax on each man's share of the property existing in the country. The draft report, however, admits "that it is impossible to ascertain with precision the value of each person's share;" but asserts that, from a return "in a more simple form than that now required, *competent* assessors, surveyors, and commissioners, without any vexatious inquisition, could determine the quota with sufficient accuracy" for the purposes of taxation. It recommends, therefore, "that the tax be assessed at one uniform rate upon *all kinds of property*—upon the present value of industrial incomes, as well as upon all external property, whether personal or real." Overlooking all the difficulties involved in carrying this scheme into execution, such as getting at the value of all kinds of property, and estimating it fairly, and such as compelling people to submit their pecuniary concerns to competent persons, let us ask is the principle so just,

FETE IN THE PARK AND GARDENS OF ROWOOD, WILTS.—(SEE NEXT PAGE.)

and is its application so important, that public opinion should be enlisted in its support? To these two points our remaining observations will be confined, though the subject invites us over a large field.

If we were to consider the mere sevenpence in the pound now levied as an Income-tax, and to suppose that the rate were not to be increased, we should come to the conclusion that such a vast change in the principle of the tax and in all its details, merely to raise £6,000,000 a year, while we continued to raise more than £50,000,000 by our other complicated systems of taxation, with all their cost and vexation, would not be worth while. But, though nowhere stated in the draft report, and barely hinted at in the evidence, it is abundantly plain that the plan is intended as a basis for one uniform and equitable system of taxation, which shall by-and-by supersede every other tax, enable us to sweep away customs and excise, assessed taxes, and local rates, and supply all the public wants by taking from each man a fair share of his property. Having a plan of guessing at the value of every individual's property—if not with mathematical precision, yet with a rough kind of average accuracy, nothing in such a case would be easier than to extend the seven penny rate to a shilling, or a five shilling one, and even to a twenty shilling one, if necessary, and levy by that one tax on property the whole sum annually required to pay the interest of the Debt, to support the army, the navy, and the administration of justice, and to provide for purposes of education, and of police, as well as for the maintenance of the poor. The public wants in the State of New York are all nearly supplied by one tax of that kind; and what is done there could with as much economy and convenience be done here. It is this possible, this contemplated application of the principle of the tax, which gives the plan suggested by actuaries—men skilful in financial calculations—and adopted by Mr. Hume, and supported by the most influential journals, an almost fearful importance, and which imposes on the public the task of scrutinizing it with the utmost care.

Although the principle on which the plan is founded is undeniable, that each person should contribute to the support of the State in proportion to the value of his property, and to the protection he receives from the Government, the wisdom of annually forcing every man to consider and debate that principle and its consequences is doubted by most politicians; and Mr. Hume's plan does not take the latter part of the proposition into consideration. On the contrary, it is assumed that the protection afforded by the State is precisely co-extensive and identical with property enjoyed. This, however, is not exactly the case.

Every man's ability is peculiar; and that must be a wise scheme which is most adapted to the peculiarities of individuals; and that an unwise scheme which disregards them. But, after laying down the principle that each and every man is to be taxed according to his ability, the proposed new plan immediately asserts that principle, and levies the tax according to certain averages and general rules. Because they are deduced from a multitude of cases they never can exactly fit any one, and thus the Procrustean bed of averages in which classes are to be laid, would not be of the same length as any one person, and in every individual case would be an injustice.

Taxation, however necessary, is inherently evil. From its natural and intrinsic qualities are cannot cleanse it; and, instead of promoting a plan which would render it easy for a Government to extend taxation to almost any amount, if submitted to, while it might provoke a discussion of first principles or resistance year after year, it would be more rational to fix the attention of statesmen on the paramount duty of lessening its amount. When reduced to a minimum sum, so that the bulk of the community will be convinced that it cannot be further reduced, and that no penny is unjustly exacted, or wantonly wasted, the problem of raising the revenue of states would be greatly simplified, and one uniform system of taxation might be much more easily adopted than at the present time.

FETE AT BOWOOD.

Bowood, the seat of the Marquis of Lansdowne, a mansion on a scale of great magnitude, and surrounded with grounds laid out with consummate skill and taste, is situated between Calne and Chippenham, and has just been the scene of an entertainment which has afforded great delight to the inhabitants of those towns and their localities. "It has ever been the care of the noble owner of Bowood," says the *Wilts Independent*, "to see those living around him, who are dependent on him or on those connected with him, treated with justice and humanity; and it has been his care and his delight as well to see their moral health, their religious wants, their social and physical comforts, and their intellectual culture sedulously attended to. This is only what the high character and exalted position, socially and politically, of the noble Marquis would lead any one to expect; nevertheless, it is not the less honourable to him. That the patronage of such a man should be given to the literary institution of a neighbouring town is not to be wondered at; for the Marquis of Lansdowne is not one of those who, enjoying the advantages and benefits of literature himself, would confine them to his own class, or do nothing towards extending them to others. On the contrary, he has ever been foremost in lending a helping hand to all those who are desirous of improving themselves, and of aiding in the improvement of their fellow-men, let their position be ever so humble."

With this conviction, the committe of the Calne Institution recently applied to the noble Marquis for leave to hold a *fête* in the beautiful grounds of Bowood Park, to this end, Mr. Spencer, his Lordship's head gardener, and a very active member of the committee of the Institution, made known the wishe of his brother members; Lord Lansdowne very kindly consented, and the *fête* accordingly took place on the 24th ult., under the especial patronage of the Earl and Countess of Shelburne.

Bowood is especially adapted for so recreative an occasion: its natural beauties are enhanced by artistic skill in the disposal of its woods, waters, glades, and groves. Seven thousand tickets were sold, giving admission to the pleasure-grounds, the Italian gardens, the Cascade; to all but the interior of the house and the fruit gardens. There were other 3000 persons who did not purchase tickets, but who contented themselves in that part of the park which was unreservedly thrown open to all. Thus, fully 10,000 persons were present, nearly the whole of them of the middle and working classes, yet no act of mischief or indecorum worthy of notice was committed.

The weather was fine, and the amusements very varied. "There were quoits, cricket, and archery. There was a boat race on the lake; and in the afternoon the hatches were drawn up, and the pent-up waters rushed down the rocks below, forming that cascade which is such a favourite feature of the place. There were fete-a-tete parties formed in various parts of the grounds; here a stately cedar, there a drooping sweetly-scented lime, and anon a spreading beech, or the curiously-leaved tulip-tree forming the centre of the party."—*Wilts Independent*

The exquisite gardens in high order. The numerous vases filled with bouquets, beds of geraniums, petunias, salvias, calceolarias, the mixture of flowers, and the magnificent single specimens; were examined and admired by the thronging crowds. Marquees were erected for refreshments. The Sax-horn band of the Shapcote family, and three other bands were stationed in different parts of the grounds.

Unfortunately, the Earl of Shelburne was absent, yachting; a change of wind preventing him returning home, as he intended. The Countess, however, was there, and the noble Marquis was present. He was prevented by gout from leaving the house; but, accompanied by his daughter-in-law, Lady Shelburne; his son-in-law, the Hon. J. K. Howard, and his grandchildren, he came upon the balcony, and from his chair was a pleased witness of the general festivity. His appearance elicited a hearty cheer, which he acknowledged by expressing the great satisfaction it gave him to see so many of his neighbours about him, and regretting that the infirm state of his health prevented his going among them and participating with them in their enjoyment. Hearty cheers were given for the Marquis, Lady Louisa Howard, Lord and Lady Shelburne. The Hon. Mr. Howard returned thanks.

Towards evening, the band played "God save the Queen;" immediately after which the house-bell announced a display of fireworks in the outer park, by Mr. W. Withers, of Devizes. The borders of the lake, and the rising ground beyond were selected for the exhibition. The pieces were extremely good, and the illumination of the large sheet of water, reflecting the rockets and shells in it, had a very pleasing effect. The fireworks over, the park was quickly cleared, and the vast multitude sought their respective homes, carrying there pleasant recollections of the day, and grateful for the kindness that had provided such a treat.

Great praise is due to Mr. Phelps, the steward, and Mr. Spencer, the gardener, for their unwearied exertions in the arrangements; and also to Messrs. J. N. Ladd, and George Harris, the secretaries.

The proceeds of the day, £335, have been appropriated to the fund of the Calne Literary Institution.

FOREIGN AND COLONIAL NEWS.

PARISIANA.

(From our own Correspondent.)

PARIS, September 2.

To the excitement of the *fête* of the 15th, the ball of the *dames de la Halle*, and the "humiliations," as the people, every ready with a *mot* to turn into ridicule themselves, and far more their rulers, styled the incomplete illuminations, has succeeded that of the *conseils généraux* and *conseils d'arrondissements*. The interest on the latter subject is, however, infinitely less warmly and generally expressed, if more deeply felt, than on the former, and the question of "to be or not to be" Emperor, is one that has been so often and so earnestly discussed within the last few months, that the public at large seems disposed "to take it easy," and leave "the powers that be" to settle it their own way. Meanwhile, they "keep on never minding," amusing themselves with all their hearts—the rich at their *châteaux*, their suburban villas, or the various watering-places; the *bourgeoisie* at Asnières, Passy, Auteuil, St. Germain, &c.; the poor and working-classes everywhere. Paris itself is comparatively empty, but if you want to see something of the manners of the bulk of its inhabitants, take railroad or omnibus to one of the aforenamed places on a *fête* day, and there you will see the Parisians, man, woman, and child, in all their glory.

At the Grand Opera, a brilliant success has been achieved by a *débutante*, Mdlle. Emmy Lagrua, in the part of *Alice*, in "Robert le Diable"—that part impressed for ever on our English hearts by the memory of its performance by Jenny Lind. Mdlle. Lagrua is an Italian, and bears in her appearance the type of her nation; her voice is fresh, pure, and of great compass; her expression just and powerful; her gesture, action, and costume admirable: in short, she is universally admitted to stand in the first rank of modern vocalists.

The Hippodrome, despite the uncertain weather, is ever the scene of rich marvels; the night *fêtes*, in particular, are brilliant to a degree, and lighted like what?—Nothing that we know of besides themselves. *L'homme à la boule*, *La Perche*, the equestrianism, the gymnastics, Madame Saqui, who, at seventy-six, performs miracles apparently beyond the reach of any age—all *that* we know by heart; but the *Sorcières de Macbeth*, who shall describe? Imagine a cavalcade of witches, demons, ghosts, all things that can "make night hideous," surrounding an "infernal machine," literally, which forms a car in the shape of a dragon, snorting flames and smoke. Devils dance and wave their torches, tortured sprits writhe and howl, "things that be not" rave, leap, crawl, in every imaginable contortion, and thus the devilish procession dallies, to the edification of the spectators, like a terrific nightmare, the effect of which is not easily dissipated.

A charming little book, "La Vertu de Rosina," has appeared in the series called the "Bibliothèque de l'Esprit Français," collected by M. Eugène Didier. It is from the pen of Arsène Houssaye, and is a perfect *chef-d'œuvre* of simplicity, purity, and pathos. The story of Rosina, driven from her home at the age of seventeen, by poverty, to seek a livelihood—her struggles, her temptations, her sufferings, her untimely death, all are drawn with a tenderness, a harmony, a vague melancholy that go direct to the heart-strings. No one more than M. Arsène Houssaye possesses the secret of this style of composition: from the simplest, even the most common-place, materials he forms a romance full of tender and touching interest. His pen seems dipped in tears.

A series of singular trials has been going on on the subject of magnetism; in the *audience* of the Tribunal de Police de Paris, of the 26th of August, no less than ten accused were brought forward, and all with one exception, were defended by M. Jules Favre. At the head of the list stood the name of Lafontaine, the one perhaps best known here and in England. Many extraordinary facts were certainly elicited, amid, of course, a much larger quantity of charlatanism and trickery.

Much and sincere regret is felt in the society of Paris, by the sudden and premature death of the Comte Antonin de Noailles, who for several years held almost undisputed the sceptre of personal beauty and elegance in that very fastidious circle. His health had for long been much impaired, but of late he had so far recovered as to be able to resume his usual habits, and was residing with his mother, the Duchess de Poix, at the Château du Val, in the neighbourhood of St. Germain. Descending the steps to enter his carriage which he had ordered to convey him to Paris, he fell senseless, and expired the same evening without recovering consciousness. The Comte Antonin de Noailles married some years since Miss Cornelia, who was possessed of a considerable fortune. The marriage was not a happy one, and his wife was absent at the time of his death. He leaves no children, having some time since lost his only son.

The following anecdote of Beethoven is interesting, as showing that, absorbed as he was by his art, he took considerable part in the political events of his time, and more especially in those of the French Revolution. "In 1802," says his friend M. Ries, "Beethoven wrote his Third Heroic Symphony. In this symphony he had in view Bonaparte. First Consul, whom he compared with the most celebrated Roman Consuls. I myself, as well as many other of his friends, announced to him that Bonaparte had declared himself Emperor; this the Château du Val, in the neighbourhood of St. Germain. curing itself, by covering its agents with ridicule that most fatal of all weapons, especially in quick-witted, laughter-loving France; and thus, as the Government of Louis Napoleon felt, the awkward and over-zealous exercise of their power by the petty despots of the provinces had nearly destroyed the efficacy of an instrument of authority which the more wily tacitians of the Central Administration in Paris are desirous to preserve unimpaired for future opportunities. M. Maupas, the Minister of Police, however, has intervened to set things right, and has issued an order in which he prohibits the Prefects of Departments for the future from sending warnings to any journal without his previous sanction. He has also appointed commissions of examination to look over the various country newspapers as they arrive each morning in Paris.

On Monday evening a new dramatic piece, named "Dominus Sampson," was represented at the Vaudeville Theatre, and gave rise to some political allusions. The story is taken from Scott's "Guy Mannering," and our old friend *Dominie Sampson*, as one of the leading characters, gives his name to the piece. The story in the novel is followed pretty exactly, and the principal actress sings some verses, the burden of which is contained in the words, "*Il reviendra, il reviendra!*" (he will return.) A portion of the public thought fit to see in this an allusion to the Count de Chambord, and applauded the words. Further on, the lost heir says to *Glossen*, when looking at the castle, from which he had been stolen when young. "Your motto, then, is '*Ma force est dans mon droit!*" (My might is in my right), these words being inscribed over the gate of the castle. "No," cries the other, "my device is, '*Mon droit est dans ma force*" (My right is in my might). This produced great laughter and applause. The motto of the Count de Chambord is, in fact, "*Ma force est dans mon droit.*" At the end of the piece the same actress repeats the air to the words, "*Il reviendra, Il reviendra,*" and again the audience applauded. Some persons wanted an encore, which others opposed lustily, and the air was not repeated. What made the whole matter more piquant was that M. de Maupas was present, and was the object of much attention, from the allusions of the piece. Its representation has been since prohibited. This is the first political demonstration in any theatre since the *coup d'état* of December last.

Mgr. Pallegoix, Bishop of Mallos and Vicar Apostolical of Siam, lately presented to the President of the Republic two young Siamese, who have come to France for their education. They presented the following address in their own language to the President:—

We, Xoru and Kso, natives of the kingdom Thai, prostrate ourselves before the sovereign France. We pray the Lord of Heaven to protect your Highness, so that you may govern this kingdom with peace and glory, and that he may accord you a prosperous life for a thousand years. (Terms used in Siam to express ardent wishes for the prosperity and longevity of Sovereigns.)

They then offered the Prince, one, a Japan box encrusted with mother-of-pearl, and the other, a book of Chinese pictures. The Prince, after smiling at the last expression of the address, caressed the young visitors, making them sit down by him. Mgr. Pallegoix then expressed from the King of Siam his felicitations on Louis Napoleon's accession to the place of President, and his assurance of friendship. The Prince having expressed some surprise that the King of Siam knew anything about him, was informed that his uncle's name was well known in Siam, and his picture to be found there frequently. The King, he said, would be much pleased to have relations of commerce re-established between France and Siam, as was the case in the time of Louis XIV. Mgr. Pallegoix then brought under the notice of the President his own desire to have a Siamese dictionary printed, the manuscript of which he had brought with him to France; the President promised to have the matter taken into consideration. At the termination of the audience, Louis Napoleon gave to each of the lads a gold pin surmounted by an eagle, holding in its beak a laurel branch adorned with brilliants.

The President of the Republic has sent a sum of 5000 francs to the Prefect of the Isère for the relief of the victims of the late inundation.

The works for the Crystal Palace in Paris are to be commenced immediately, and will be completed in two years. The contractors are Messrs. Ardouin und Co. The edifice is to serve the purposes of national expositions of manufactures, and for *fêtes* and public ceremonies.

The *Moniteur* contradicts the rumour of the French troops being about to be recalled from Rome.

As one of the means to be employed in reducing the army, the Minister of War has ordered that the privates who were drawn conscripts in 1846 shall receive their discharge forthwith. The thirty-six companies of the three regiments of Marines have been suppressed with the same object in view.

The "fusion" question is again upon the tapis, and it is said that the two branches are about to reconcile their differences, as they feel assured that the Empire will be proclaimed in December next.

M. Chambolle, ex-representative, has returned to Paris, being one of those included in the recent amnesty.

A new code of laws, having the sanction of the Prince President, has been drawn up for the internal service on board vessels of war.

UNITED STATES.

The fisheries question, according to the last accounts from New York, viz. August 21, may be regarded as peaceably settled. Those statesmen, whether in or out of the Government, who thought that they could with advantage turn the affair to account by making "political capital" out of it, with a view to the approaching Presidental election, having found that the subject was an unprofitable one for their purposes, have made a virtue of necessity, and assumed a conciliatory tone in reference to the conduct of Great Britain in the matter. In the Senate on the 14th ult., Senator Seward delivered a rather unexpected and somewhat important speech in reference to the question. It was seemingly an attempt to smooth over the difference between himself and the President on the matter. He had been previously in consultation with Mr. Webster and Mr. Crampton, and doubtless came under a full knowledge of all the circumstances of the case, and of the light in which it was then regarded in Government circles. He showed that England, so far from having increased her forces in the vicinity of the North American provinces, had actually reduced them by nearly thirty-three guns during the past twelve months. Speaking of the condition of English power in Canada and the British provinces, he bon. gentleman said:—

They have never, since the war of 1812, had so small a military force in those provinces as now. The Imperial Government has maintained hereto'ore some show of naval defences upon our lakes; but within the last six months it has broken up the whole naval force there, and now none whatever exists. While thus showing the supposed motives to peace on the part of Great Britain, I have not the slightest doubt that the interest and the instinct of our own people, the United States might aggrandize themselves by war, but they are at the same time satisfied by peace. I thank God that the peace of the world is largely subject to our own care, of these two great powers, and that while they have common dispositions towards harmony, neither has need of war to establish its character for firmness or for courage. Each has had enough of

"The camp, the host, the fight, the conqueror's career."

The only occurrences coming under the head of news in reference to the subject are gleaned from the St. John's, *New Brunswick*, papers, which state that the Bay of Fundy had been completely cleared of American fishermen. A rumour was current at Halifax that her Majesty's steamer *Devastation* had taken four prizes into Charlottetown. A letter from Boston says that Commodore Perry would return to New York with the steam-frigate *Mississippi*, in time to leave for Japan on the 1st of September.

A collision had occurred at Lake Erie, near Buffalo, between two steamers, by which 200 persons were drowned. The particulars are given in another column.

Destructive fires had occurred at Troy and Utica.

The Board of Health had reported 17 cases of cholera at Rochester, and 10 deaths during the 48 hours ending the 16th ult.

From California, the latest advices are dated San Francisco, July 16. The gold fields generally continued to yield well. The waters throughout the country were rapidly falling. Long canals were in progress of construction for conveying water to spots known to be auriferous, but unproductive from the want of it. One of the largest pieces of gold ever brought to San Francisco had been found at Viacita, Calaveras county. Its weight is upwards of 20 lb., and it was valued at 5,000 dols. It was found 60 feet below the surface.

Chinese continue to arrive in great numbers at San Francisco, upwards of 4,000 having landed within the fortnight ending the 16th of

July. They made their way at once to the mines, the hostility of the miners towards them having, in a great measure, abated.

The 4th of July was celebrated in San Francisco with great spirit by long procession, &c. Conspicuous in the procession was a long line of Chinese, richly dressed, and bearing a huge national banner of crimson silk, on which was emblazoned in golden embroidery the Royal dragon. They are said to have expended 12,000 dollars in getting up their portion of the procession.

In San Francisco the utmost order and quiet prevailed; in the interior, however, crime continued to exist, and numerous executions by the people had taken place. A detachment of United States troops, who were in pursuit of some Indians concerned in the murder of a party of miners on the head waters of the Merced, succeeded in surprising them, killing five, and taking 13 prisoners; they also destroyed their *rancherie* and provisions. Another party of the United States troops had also come in contact with the Indians on Cow Creek, for having stolen 19 mules, and 15 of the Indians were slain. Murders and robberies by the Indians were of every day occurrence in the vicinity of Canon Creek; 57 murders, and robberies to the amount of 20,000 dollars, having been committed within a very short time.

A duel had taken place between Mr. J. Nugent, editor of the *San Francisco Herald*, and Mr. J. Cotter, alderman of that city, by which the former had received a compound fracture of the thigh, and it was feared amputation would become necessary.

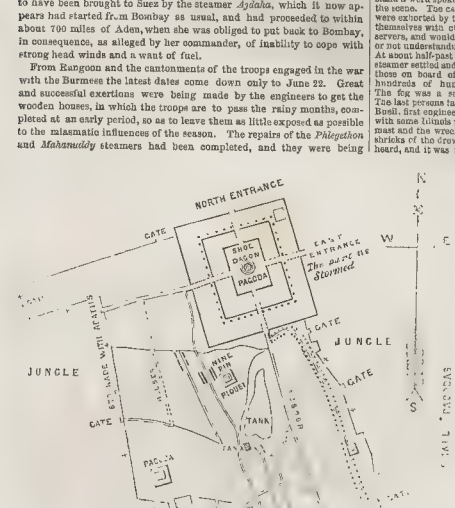
It was reported in San Francisco that a fire had broken out in George Town, El Dorado County, and that the principal part of the town had been consumed. The city of Sonora was fast recovering from the ravages of the late fire.

The crops throughout the whole of California were producing an astonishing yield.

INDIA.

Advices by the Overland Mail, dated Bombay, July 24, and Calcutta, July 12, have been received this week, from which we learn the cause of the missing June mail not having arrived at its appointed time. It was to have been brought to Suez by the steamer *Ajdaha*, which it now appears had started from Bombay as usual, and had proceeded to within about 700 miles of Aden, when she was obliged to put back to Bombay, in consequence, as alleged by her commander, of inability to cope with strong head winds and a want of fuel.

From Rangoon and the cantonments of the troops engaged in the war with the Burmese the latest dates come down only to June 22. Great and successful exertions were being made by the engineers to get the wooden houses, in which the troops are to pass the rainy months, completed at an early period, so as to leave them as little exposed as possible to the miasmatic influences of the season. The repairs of the *Phlegethon* and *Mahamuddy* steamers had been completed, and they were being



PLAN OF THE FORTIFICATIONS AT RANGOON.

rigged and stored for service. The barracks were nearly finished, and the 18th Royal Irish was to occupy them immediately. Rangoon and Bassein were nearly rebuilt, and the markets thronged with traders and sellers, who were punctually paid their own prices for their goods—and the people were delighted at our presence. The Burmese soldiers had re occupied Pegu the moment we left, and had behaved with even greater barbarity than on the previous occasion towards the people, who fled in all directions whenever they could manage to escape. The *Proserpine* had reached within forty miles of Prome, having captured 100 large boats laden with grain for the army; most of these Captain Brooking was compelled to destroy—the remainder he sent down to Rangoon. He had surveyed the river all along, and will act as pilot when the fleet moves up. General Godwin and Colonel Thompson, of the 40th, had been unwell: the former was about to visit Bassein and Martaban, and the latter Moulmein, for a little change of air and scene. General Godwin has applied for 12,000 men to enable him to leave large garrisons in Rangoon, Martaban, Bassein, and Pegu, which is to be again occupied for good. He has asked for a light field battery, two troops of horse artillery, two regiments of cavalry, four of European and six of native infantry.

Lord Dalhousie, the Governor-General, intended to proceed to Rangoon in the *Feroze* steamer, which was daily expected at Calcutta. The object of his Excellency in visiting the seat of war was to have a personal interview with General Godwin, and learn from him what he wanted to enable him to renew the war with such vigour as to ensure its speedy termination. It is extremely probable, too, that the proclamation annexing Pegu to our dominions will be issued by Lord Dalhousie at Rangoon.

From India Proper we learn that the north-west frontier is quiet, and it is stated that the Mohmunds, seeing the folly of attempting to oppose us, have decided on conciliatory proposals, and that a meeting of the leading men was about to take place to arrange matters. But whether they were sincere in their professions, or are merely anxious to remain unmolested in their hills until the season for operations again comes round, it is impossible to say. Sir Colin Campbell, who has commanded at Peshawur as brigadier for a long time, and who has had frequent contests with the Mohmunds and other frontier tribes, has thrown up his command, owing, it is believed, to some differences with the local political authorities. He is spoken of by those under him as an able, energetic, and indefatigable officer. It is believed he will be succeeded by General Roberts. The Punjab generally enjoys such tranquillity that the minor rebel leaders who have hitherto been prohibited from going more than two or three miles from their houses, have, in consideration of their good behaviour, been permitted to have unrestrained liberty within the districts in which they are respectively residing. Negotiations are on foot with the hill tribes, which will probably restore peace and tranquillity to that troubled frontier.

HAVANNAH.—From Havannah, in the Spanish West India Island of Cuba, news has been received to the 14th ult. which state that great excitement prevailed, in consequence of the arrest and daily committal to prison of a large number of creoles, including women. A quantity of powder and ball cartridges had been discovered in the Calza de San Lazaro, and in the houses of some persons of note. Assassinations and robberies, attended with frightful atrocities, prevailed to a great extent in the suburbs of the city. A correspondent, writing from Havannah, says:—"That you may not be mistaken with regard to our new Captain-General, I inform you of the fact that about 500 negroes from Africa have been landed at Cortgosa, in this island, and that two ounces (34 dollars) per head were paid for winking at the business."

HAYTI.—Advices from Hayti, in the West Indies, to the 8th ult., state that the plague continued to rage at Port-au-Prince. The disorder is described as a rotting of the stomach, which takes place in 24 hours, if not checked. A new commercial law, of a very stringent character, had been proclaimed by the Emperor. By it all original invoices must be certified as well as the manifest, and if the cargo does not compare with them a heavy fine is imposed, provided the amount does not exceed 5000 dollars; should it do so the vessel is to be seized and confiscated.

STEAM-BOAT COLLISION IN THE UNITED STATES.—GREAT LOSS OF LIFE.

The accounts received from the United States this week, make mention of a frightful catastrophe, attended with the loss of no less than 200 lives, which took place on the morning of the August, at an early hour on lake Erie, near Buffalo.

At about two o'clock in the morning, the paddle steamer *Atlantic*, came into collision with the screw propeller *Ogdensburg*. A dense fog prevailed at the time, and, as the numerous passengers on board the *Atlantic*, composed chiefly of Norwegian emigrants, were unable to see the exact nature of their danger, they were greatly alarmed, and several leaped overboard. The captain endeavoured to restore confidence, and the steamer kept on her course, the officers hoping to be able to reach port, although the boat was leaking badly; the water, however, gained rapidly on them, despite the efforts of the crew, and by the time they had proceeded about two miles from the spot where the collision took place, it was found that the vessel was rapidly sinking, the fires in the engine-room being extinguished by the water. The emigrants, who could not understand a word spoken to them, by their cries and terror added to the horror of the scene. The cabin passengers, and all who could be made to understand, were exhorted by the captain and officers to remain in the cabin, and provide themselves with chairs, settees, beds, &c., all of which were patent life-preservers, and would keep them up in the water. Numbers, however, unheeding, or not understanding the advice given them, rushed overboard to certain death. At about half-past two o'clock, amidst the wild shrieks of the passengers, the steamer settled and sank. The propeller had kept in the wake of the *Atlantic*, and those on board of her did all in their power to preserve the lives of the hundreds of human beings who were now seen struggling in the water. The fog was a sad hindrance to their efforts, but about 100 were rescued. The last persons taken from the boat were Mr. Gwinn, clerk of the boat, and Mr. Bissil, first engineer. The steamer had then sunk all but her stern, and they, with some Icelandic passengers, were clinging to a rope attached to a floating mast and the wreck, being up to their shoulders in water. As soon as the shrieks of the drowning passengers were hushed, the voice of a little boy was heard, and it was then first discovered that a child, about eight years old, was also clinging to a rope a short distance off. The Life fellow, talking to himself, was saying, "Oh, I can't hold on much longer! If papa was here he would hold me up." A man from Illinois, a fine, powerful fellow, immediately moved a long rope, and seized the boy as he was about to sink. He held him for some time, and called out to Gwan to come to his relief, as he was nearly exhausted by the weight. Gwan made an attempt to reach him, but in vain. At that moment the boat of the propeller, headed to the water's edge with rescued passengers, passed, and Gwan hailed them, and entreated them to save the boy. Mr. Blodgett, first mate of the *Atlantic*, who was on board, jumped out, and swam to the rope, took the boy off, and returned the boat. He was thus saved. The little fellow was with his uncle, who was drowned. The next boat from the propeller took off the clerk, first engineer, and the *Illinois* passenger. The rescued passengers were conveyed to Erie, where on landing they assembled together for the purpose of returning thanks to God for their deliverance. About 200 persons, out of 500 on board, composed chiefly of poor emigrants, perished. Among the list of missing is the name of Mrs. Cornwell, sister of Elihu Burritt.

THE RECENT FATAL RIOT AT SIX-MILE BRIDGE, IRELAND.

Another man, named Michael Melony, having died of his wounds which were inflicted by the unequalty of the soldiers of the 31st Regiment, in the recent fatal conflict at Six-Mile Bridge, county Clare, Ireland, an inquest has been held on the body, which has resulted in a verdict of "Manslaughter" against the eight soldiers who were identified as having fired upon the mob on the occasion in question, as noticed in our columns last week. One of the jury was for finding "justifiable homicide," and two for "wilful murder," as in the case of the former inquest on the matter. The coroner announced he would admit the soldiers to bail, and would follow the example of the Queen's Bench by fixing the amount at £20, and two sureties of £10 each. Lieut-Colonel Douglas and William Gibson, Esq., J.P., being the bail.

The eight soldiers who had been confined in Ennis gaol on a charge of murder, by the coroner's former jury, have been since discharged on bail, and have joined their regiment at Limerick.

The Rev. Messrs. Burke and Clune, the priests who are alleged to have urged on the people to attack the soldiery, have had proceedings commenced against them by the Attorney-General, with a view to their being prosecuted on the charge of seditious riot, and inciting to an assault on the Queen's troops when in discharge of their duty. On Tuesday they were held to bail, by Mr. O'Brien, stipendiary magistrate at Six-mile Bridge, to appear at the ensuing assizes, when they are to be tried for the riot. The sureties were, each of the rev. gentlemen to bind himself in the amount of £100, and two others in £50 each.

It is also understood that the *Anglo-Celt* newspaper is to be prosecuted for a libel against the Government on the same subject.

LARGE GOOSEBERRY.—A fine specimen of the variety Loudon, of the extraordinary weight of 36 dwt. 18 gr., gained the prize of £1 1s. for the best single berry, open to all England, at the Vine Inn (Birmingham) Gooseberry Show, on the 5th ult. It was grown by Mr. John Flower, Stoke, near Stone, Staffordshire.

The clearances from the port of London for the gold colonies of Australia during the week ending Saturday last show an increase in the number of vessels, which consisted of five to Sydney, of an aggregate of 2089 tons; and four to Port Phillip, of an aggregate of 1767 tons. There were also three to Adelaide, Swan River, and Hobart Town, respectively, of a joint capacity of 963 tons. The shipments of British manufactures, English and Scotch goods general ly, have been very large, and the number of passengers has also been considerable, although the press of emigrants is not quite so strong as it was a month or two back. Probably the total for the week was from 1000 to 1200. The increase of wages in all parts of England is, doubtless, now in some degree counteracting the movement.

A letter from Wiesbaden of the 22d, states that the disease in the vines has exhibited itself with great severity in the whole of the Rheingau. In some districts two-thirds of the plants are attacked. What is remarkable is that cabbages, beetroot, turnips, &c., in the neighbourhood are also affected by a disease before unknown.

An old woman died at Shenfield, in Essex, a few days since, who had been receiving parochial relief for many years. At her decease it was found she had property by her to the amount of nearly £1000!

VINEGAR AND ITS ADULTERATIONS.—From the last report of the Analytical Sanitary Commission, published in the *Lancet*, as recording the results of microscopical and chemical analyses of the samples of vinegar purchased by all classes of the public, it appears, with regard to vinegar and its adulterations, that out of 28 samples, purchased at the houses of various retailers in all the most parts of the town, and the producers of almost every maker of any note by whom the entire metropolis and its suburbs are supplied, only four out of the above number were free from sulphuric acid or oil of vitriol; that 24 were adulterated with this powerful corrosive poison; that it was also combined in a small quantity in five that in three it was present in considerable amount; that twelve contained it in very considerable amount; and that in seven it was present in immense quantity. To a portion of the samples, annexed, the names of the parties selling and the makers of the adulterated articles, together with the names of the makers (unfortunately only four), and vendors of the pure article. The fact of the vinegars on these four makers being found to be entirely free from sulphuric acid or oil of vitriol is regarded as most important, inasmuch as it proves most conclusively that the use of that highly objectionable acid, even in small quantities, is not necessary to ensure the preservation of vinegar, and shows that its addition is needless, rather be the purpose of increasing its apparent strength. The report concludes by publishing a letter from Mr Fletcher, solicitor, of Bermondsey, showing how unsafe it is to purchase vinegar for themselves, by a very simple process, sufficient vinegar for the table, and for the purposes of pickling, by adding sugar, treacle, and water, to certain known quantities of sugar paste, and thus make themselves independent of dishonest manufacturers.

MEETING OF THE ARCHÆOLOGICAL INSTITUTE, AT NEWCASTLE-UPON-TYNE.

IN our Journal of last week, we chronicled the proceedings of this very interesting session up to Thursday; but omitted to state that Mr. E. Sharpe read a paper on Tynemouth Priory; Mr. Dobson, architect, read a paper on the Lady Chapel of the Priory; drawings of the roof, &c., of which, by J. W. Archer, were exhibited. Mr. Woodman, of Morpeth, read two papers: 1. The Historical Traces of the Knights Templars in Northumberland, and on a Preceptory at Chiburn; 2. The Bye-laws of the Cordwainers' Company at Morpeth, *temp.* Edward IV. The Rev. C. Hartshorn read an interesting paper on the Castle at Alnwick. In the afternoon a party of the members visited Newsworth Castle, and were hospitably entertained. In the evening the Association dined at the Assembly-rooms, Westgate-street. In the evening a paper was read on the "votive monument of Kloster Neuberg, near Vienna," by the Rev. J. M. Traherne; and on "Northumbrian Sepulchral Arms," by Mr. G. Tate; after which the party repaired to the Norman Keep, the different parts of which were described by the Rev. J. C. Bruce.

The Concert of the Philharmonic Society closed the proceedings of the day.

On Friday the Archæological party left Newcastle by especial train for Warksworth, where their attention was first attracted to the celebrated Hermitage, and next the Castle. (See Illustrations.) The Castle was described by the Rev. Mr. Hartshorne. The church, the chancel of which *is* of the Norman period, was likewise examined and detailed. The archæologists next visited Alnwick Castle, and were conducted round the exterior of the castle, which was described by the Rev. Mr. Hartshorne; after which the party adjourned to a magnificent repast; and the museum being opened to the visitors, an inspection of its rare Egyptian, British, and Roman contents afforded high gratification; among others, a relic of singular interest, the shield found on the battle-field of Shrewsbury, and attributed to Hotspur, attracted marked attention.

The party then proceeded to Hulne Abbey, accompanied by the Rev. Mr. Hartshorne, who described its details; and others accompanied Mr. Dobson (architect), and under his guidance examined the fine gateway, the only remains of Alnwick Abbey; after which they returned to Newcastle.

Saturday was devoted to an excursion to Durham. An interesting paper on the history of the Cathedral and Monastery of Durham was read in the Bishop's library, by the Rev. James Raine, who afterwards conducted his visitors round the Cathedral and Castle.

A large party of upwards of three hundred ladies and gentlemen then sat down to a handsome entertainment provided by the liberality of Archdeacon Thorpe. Another party was conducted to Usher College, a fine architectural specimen, about four miles from Durham.

On Sunday the Archæologists attended divine service in the ancient and singularly beautiful church of St. Nicholas, when a sermon suitable to the occasion was preached by the Rev. Dr. Cox (vicar).

On Monday the Archæologists left the central terminus at half-past nine, visited Hexham, passing Prudhoe Castle (see the Illustration).

Hexham, the first point in the route of the day is celebrated for its Priory Church, which we intend to engrave.

Leaving Hexham, the party continued their excursion to Bardon-mill, and thence to Chesterholme, a sequestered spot on the edge of a vast tract of moor land, which is traversed by the Roman Wall. There the Rev. J. C. Bruce, who has attracted to himself considerable celebrity by his investigations in connexion with the Roman occupation of Britain, entered upon an explanation of the various antiquities of the locality. The objects of interest at Chesterholme are, the camp of Vindolana, or hill of arms; a Roman road, with a *militarium* still standing; and several altars and inscribed stones derived from the station. The party left Chesterholme for Housesteads, accompanied by Mr. Bruce, and preceded by a guide and a Northumbrian piper. The first object of curiosity in their way was a Roman milestone, upwards of six feet high and nearly two feet in diameter, on the line of the ancient Roman road which skirts the northern rampart of the camp of Vindolana, and on the very identical spot probably where the soldiers of Agricola or Hadrian placed it.

Continuing their course north-westward, and crossing a fine military road, intersecting the whole county of Northumberland, which was constructed shortly after the rebellion of 1745, the party arrived at a place called Peel Crag, the first of a series of basaltic hills or cliffs facing the north, along the edge of which the Roman wall runs east and west for several miles. This was the first view they obtained of the wall, and they pursued it for that distance over a wild region, and, with the able assistance of Mr. Bruce, closely examined its various characteristics.

The excursion terminated at a place called "Housesteads" the Borcovicus" of the Roman soldiers—which, from the completeness of its remains, was styled by Stukeley, in the vehemence of his admiration, "the Tadmor of Britain."

The proceedings of the day terminated with a lunch provided in a marquee, at Housesteads, by Mr. Clayton, the town clerk of Newcastle. The Earl of Carlisle accompanied the party throughout the entire five on foot, as did Lord Talbot, and several other persons of distinction.

On Tuesday, August 31st, the remains of the church of the Venerable Bede, at Jarrow, excited considerable interest on account of evidences exhibited of its structure, which indicate that a portion of the walls are those of the original edifice, partially destroyed by the Danes, and restored by the Monks of Durham, after the Conquest, when the tower appears to have been added. A Saxon inscription is built up in this part of the church, and remains perfectly legible. From Jarrow, the Archæological party proceeded across the Tyne to the Priory Church, at Tynemouth, where an able description was given by Mr. Dobson, jun., a gentleman whose recent survey of the whole remains enabled him to furnish a very accurate illustration of the Norman Church, together with the buildings of the 13th and subsequent centuries. After this the company adjourned to the Lady Chapel. (See the Illustration.)

Mr. J. W. Archer has succeeded in decyphering the defaced inscription on the base of the niche over the west doorway. It "proves to be "Oswynus Rex," and affords an interesting association with the ancient saint and King of Northumbria.

A handsome collation was set before the party by Captain Andrews.

On Wednesday, September 1, a valuable paper was read by the Rev. J. C. Bruce on the Roman station of Benwinium, now in course of excavation, and that gentleman exhibited a collection of coins, bronzes, and other curious articles found there, after which Mr. Turner read a paper on the ancient topography of Northumberland; and at one o'clock the concluding general meeting took place. Lord Talbot de Malahide now announced that steps had been taken towards carrying out an object mentioned at the opening meeting; viz. that of procuring the sanction of Government for a modification of the law of treasure-trove, and a petition to both houses of Parliament, with that view, was read to the meeting, and left for signature. The customary votes of thanks were then passed; and thus terminated the proceedings of probably the most interesting congress ever held by the Institute.

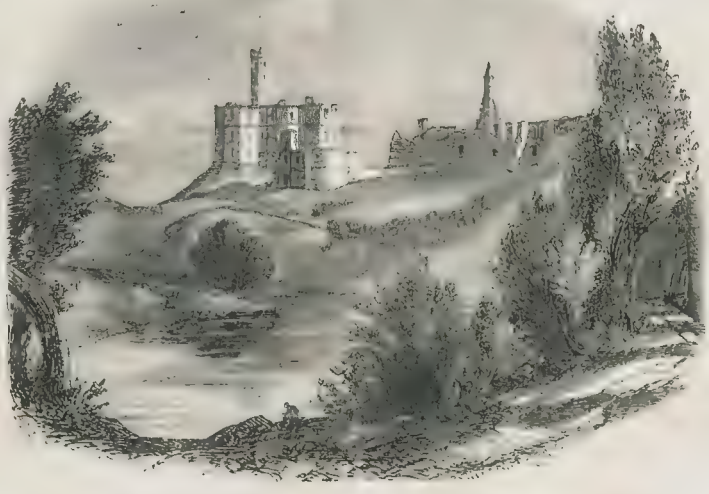
THE ILLUSTRATIONS

WARKWORTH CASTLE AND HERMITAGE.

Warkworth Castle, supposed to have been founded about the eleventh century, stands about seven miles south-east from Alnwick, and belongs likewise to the noble family of Percy. On its forfeiture by the first Earl of Northumberland, it was granted to Roger de Umfranville by Henry IV., who reduced it after a siege of eight days. It was restored to the Percys by Henry V., after which it underwent frequent forfeitures to the Crown, and came into the possession of different nobles in succession, until the reign of Queen Mary, who, in 1557, restored it with all the honours and estates appertaining to it, to Sir Thomas Percy, afterwards Earl of Northumberland, whose descendants have held it

MEETING OF THE ARCHÆOLOGICAL INSTITUTE, AT NEWCASTLE-UPON-TYNE.

without interruption to the present time. About a mile from the Castle is the celebrated Hermitage of Warkworth, whose fame is widely extended, through the poem of the Hermit of Warkworth, written by Dr. Percy Bishop of Dromore, and a member of the noble family whose name he bore. The Percy family maintained a chantry priest to reside in the hermitage, and to perform mass in the chapel. By existing records, dated December 8, 1532, the last who held this appointment is understood to have received an annual stipend of twenty marks, with pasture for cattle, a garden, and other perquisites. The hermitage contains a small chapel hewn out of the rock, eighteen feet long, and about eight feet in width, with a groined roof in resemblance to the Early English style of architecture. The roof rests on semi-hexagonal columns projecting from the walls. At the east end is an altar at an ascent of two steps. It is lighted by a window at the south end, under which is a recess containing a tomb, with the recumbent figure of a female, at the foot of which is a figure as if in meditation, the head reclining on the right hand, and the other hand placed across the breast. The hermitage contains other apartments, probably of a domestic character; and over these is a garden, to which access is gained by a winding stair cut in the rock. The hermitage is supposed to have become the retreat of one of the Bertram family in the thirteenth century.



WARKWORTH CASTLE.

PRUDHOE CASTLE.

Prudhoe Castle, the ancient baronial seat of the Umfranvilles, who held it from the Conquest until about the year 1381, when it came into possession of the family of Percy. The Castle stands upon an eminence overlooking the Tyne, about twelve miles west from Newcastle. Its lofty position is supposed to have originated the title of Prud-hoe, or height. The keep, with some of the towers, and the gate, still remain, forming a beautiful and stately feature in the fine scenery of the Tyne. His Grace the Duke of Northumberland took his title of Lord Prudhoe from this building in 1816.

THE HERMITAGE, WARKWORTH.

REMAINS OF PRUDHOE CASTLE.

LADY CHAPEL, TYNEMOUTH PRIORY CHURCH

The praiseworthy exertions of Captain Andrews, commandant of the garrison at Tynemouth, in clearing the whole basement of the nave and transepts of this noble ruin, have invested it with increased interest, and attracted a remarkable degree of attention on the part of numerous visitors, besides forming one of the chief features of attraction to the members of the Archæological Institute, among the many fine vestiges of antiquity with which the county of Northumberland abounds. In association with those operations, the Lady Chapel, at the east end of the Priory Church, has been opened, after having served for many years as a gunpowder magazine, and the details of this small but remarkable edifice rendered legible by the removal of white-wash and other disfigurements which it had undergone at the hands of the Ordnance authorities. A short time since the floor of the chapel was cleared to the original base, and in the course of this operation many bones were found, some of which were of extraordinary size; and below the level of the floor was discovered a cist containing bones, popularly supposed to be those of Oswin—Saint and King—who being buried at Tynemouth, his remains were translated to Jarrow, but afterwards restored to their original resting place. Recently the parish has committed this chapel to the hands of Mr. Dobson, architect, who, with a view to its future restoration, for the purpose of a burial chapel, has caused the bosses on the roof to be carefully scraped, and the windows, which had been built up, to be opened.

The roof contains fifteen large bosses. Upon the central boss is a representation of the Godhead enthroned in judgment, the feet resting upon an orb. On each side of the principal figure are two angels; those at the base sounding trumpets, and those above holding labels, the inscriptions on which are effaced. On the rim of the boss is inscribed, "In die judicii libs. nos Dne." Twelve of the other bosses, on three transverse lines, contain effigies of the Apostles, the name of each inscribed on the rim, with the invocation "Ora pro nobis." Another, at the eastern extremity of the centre line, contains the figure of our Lord bearing the cross and banner, and, kneeling at his feet, Mary Magdalen, with a pot of frankincense: the inscription, "Rabboni, Magister"—"Noli me tangere," on the rim, indicates the passage represented. The boss at the other extremity of the same line contains the figure of John the Baptist, bearing a lamb. Each of the Apostles bears his peculiar symbol, together with a scroll; St. Peter a key, St. Paul a sword, St. John the Evangelist a pen, &c. Twelve minor bosses, six on either of the lines north and south of the centre line, contain the following devices, viz. the sacred monogram traversed by the spear and mace of the Crucifixion, surmounted by a crown. A monogram of the name of the Virgin, MARIA, surmounted by a crown of *four-de-lys*, the sun inscribed on the rim Ihu Mercy, a star (*stella Matutina*) a fetterlook within a crescent on a shield, a badge of the Percys, a monogram of P. L. on a cross, the emblem of the five wounds of the Crucifixion, the monogram of P. L. repeated, a head supposed to represent the first person in the Trinity, a rose (*rose mystica* of the Virgin), a cross of Calvary, with a crown of thorns and a knotted scourge on each side of the base, and a group of trefoils, the symbol of Trinity in Unity. On each side of the door, at the west end of the chapel, are two shields bearing arms, that on the south the bearing of Vesey (or, a cross, sable), the other, quarterly, the bearing of the ancient Dukes of Brabant (or, a lion rampant, azure), borne quarterly by the noble family of Percy; and the bearing of the family of Lucy (gules, three lucies or pikes). There are grounds for the belief that this chapel was founded by one of the family of Percy, and in collation with this shield, the monogram P L, which is nearest to it, and repeated on the other side (read as Percy and Lucy), together with the Percy badge of the crescent and fetterlock, the only armorial badge in the roof, seem to offer strong corroboration of this interesting fact. Over the door is the figure of the Holy Virgin, crowned and enthroned as Queen of Heaven, kneeling; at her feet is the founder of the chapel, bearing a label, the inscription on which has been defaced, apparently by violence, together with the inscription on the base of the ogee niche in which the figures are represented.

INTERIOR OF THE LADY CHAPEL OF TYNEMOUTH PRIORY CHURCH.

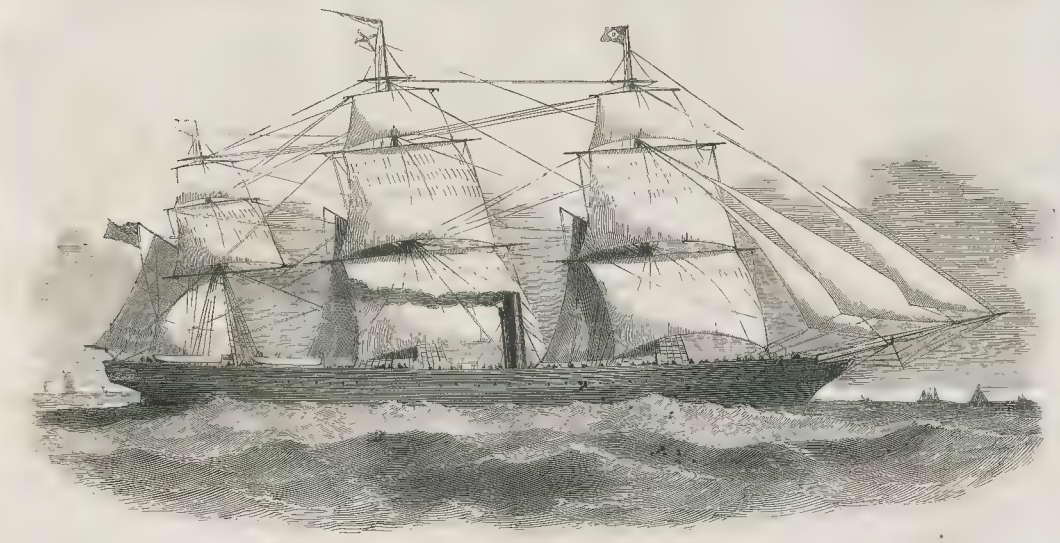
At the four corners of the roof are the emblems of the four evangelists, viz; the eagle of St. John, the angel of St. Matthew, the bull of St. Luke, and the lion of St. Mark, bearing scrolls—the former being defaced, the latter bearing the names of the evangelists Mark and Luke. Over the oriel window at the east end is the sacred head of Christ, with a nimbus, the hair being tied in fillets in a peculiar manner.

There are three windows on each side of the chapel, five of which were built up by the Ordnance authorities, the three on the north have exposed—one of them retaining its details perfect, the others more or less mutilated. It is remarkable, that two of those windows on the north side have never been perforated, the mullions, &c., being cut out of the solid masonry, which fills the aperture.

The chapel is entered by a descent of three steps eastward of the high altar of the Priory Church, the floor being two feet below that of the church. At the east end, under an oriel window, part of the wall has been cut away, probably for the insertion of an altar, and under this is a small aperture, which may have served the purpose of an ambrey for the books and vessels dedicated to the service of the Virgin. A string course has surrounded the interior, upon which four columns have terminated on either side, but these have been ruthlessly hewn away for the more convenient stowage of gunpowder casks. The dimensions of this small but interesting, and, in some respects, unique building, are, in length betwen the walls, 18 feet; and in breadth 12 feet. At the east end, on the exterior, is the sacred monogram, on either side of which were shields, supported by cherubs, bearing the arms of the Abbey of St. Alban's (azure, a cross, saltire, or), to which Tynemouth Priory was a cell, and those of the Priory, Tynemouth (three crowns), but those have been removed.*

The Lady Chapel, by its style, which exhibits some features belonging both to the Decorated and the Perpendicular styles, would appear to have been founded in the latter part of the fifteenth century, but there is no certain date for the period of its erection. In the year 1336 the new Chapel of Our Blessed Lady within the Priory is mentioned in the chertulary, but this date is supposed to refer to a building erected some time prior to the present remarkable edifice.

* In the north wall forming the Priory bounds, next the sea, is built in a shield bearing a cross saltire, probably belonging to one of these compartments.



THE NEW AUSTRALIAN STEAM-SHIP "CLEOPATRA."

THE NEW AUSTRALIAN STEAM-PACKET "CLEOPATRA."

This noble iron screw steam-ship will leave the Thames to-day, for Port Philip and Sydney.

The *Cleopatra* was originally intended for the Brazilian trade by her owners, Messrs. M'Kean, M'Clarty, and Co., of Liverpool: she was built in the Clyde, by Alexander Denny and Brother, of Dumbarton. Her engines were manufactured by Tulloch and Denny, also of Dumbarton. Her burden is 1800 tons, and her engines are 300-horse power. Her extreme length on spar deck from taffrail to main stem, is 235 feet 4 inches; breadth of beam, 32 feet 6 inches; and depth of hold, 27 feet. Her engines are of a different construction from those of the *Great Britain*, having the lever multiplying power; while the *Great Britain's* are on the oscillating principle. She is ship-rigged (full frigate). She contains accommodation for 120 first, 120 second, and 60 third cabin passengers, and everything is provided in the vessel for the first two classes. The third class of emigrants are only required to furnish their own beds and bedding. The rates for each class are:—First cabin, varying from £80 to £65; second, £40; and third, £25. The saloon is roomy, light, and well ventilated, and fitted up with much elegance and taste, the panels being ornamented with pictorial subjects from Shakespeare's dramas, brilliantly executed on glass. The vessel is fitted with six water-tight compartments; and an artificial refrigerator, with the newest improvements, is being provided, capable of condensing 1000 gallons of salt water *per diem*, and rendering it perfectly fresh. There is also constructed below the water-line in the fore-peak a large safe, encircled with ice and saltpetre, calculated to preserve fresh meats for three weeks or a month. In fact, nothing has been wanting in the entire arrangements of the ship to secure the comfort and safety of the passengers. With regard to her speed, it is estimated that with anything like a favourable breeze she will make between 12½ and 13 knots an hour. In her run from the Clyde on trial as far as the Spit Buoy, off Margate Sand, she averaged 10½ knots without sails, fair steaming. The total value of the vessel is upwards of £40,000. Her cargo of goods amounts to 600 tons, and she also carries 600 tons of coal. She is commanded by Captain H. E. Cumming, formerly of the *Geneva* and *Livorno*, Mediterranean screw steamers, and carries an experienced surgeon. She will leave Plymouth on Tuesday, and is expected to make the passage in 60 days.

FETE IN MOUNT BOONE PARK.

The recent return of Sir Thomas Herbert, K.C.B., one of the Lords of the Admiralty, as a representative of the borough of Dartmouth, was celebrated on Wednesday, the 25th ult., in a manner somewhat novel among election festivities, namely, by a pic-nic in an elevated portion of Mount Boone Park. The company consisted of about 4000 persons, among whom were the principal of the neighbouring gentry. Tables were provided for about 2000 guests, who simultaneously sat down to partake of "a good cup of tea and a slice of cake." Sir Thomas Herbert was, unfortunately, prevented by his official duties from attendance at this tribute of respect to him. Lady Seale, of Mount Boone, presided, in a rustic chair erected for the purpose, and was supported by the houses of Holdsworth, Davenport, Hunt, Studdy, Clarke, &c. Sir Henry Paul Seale, Bart., was loudly cheered on arriving at the ground, and, after a brief address on behalf of Lady Seale, expressive of her pleasure at presiding over so happy a meeting, the Rev. Daniel Cooner having said grace, the refection commenced, the gentry attending upon the company in a most efficient manner. About 3500 partook of tea; and afterwards, with the assistance of two bands of music, kept up the merry dance to a late hour, returning to the town (a distance of a mile and a half) in procession. Our Sketch of the festival, taken from an elevated position, shows the entrance of the Channel, with the harbour, a portion of the village of Kingswear, and the tower of Townstyle Church on the right.

During the repast, the ground was also crowded with company, besides those sitting at the tables; and a band was placed in a rustic orchestra at each end. Rustic seats were provided for the principal gentry at the head of the table—a *dépôt* for the cakes and creams, &c., in the centre. The decorations were most profuse, flowers being obtained from all quarters, and strung into a variety of devices. The words "Herbert" and "Church and State," in dahlias, graced the entrance, and the whole scene was very effective.

We understand that the rustic chairs will be preserved by Sir Henry Seale, as a memorial of this extraordinary gathering.

There was a considerable quantity of cake and eatables left, which were divided amongst the deserving poor of the several parishes of the township on Saturday last; the lists for this purpose being provided by the clergy.

FETE IN MOUNT BOONE PARK, DARTMOUTH.

CALENDAR FOR THE WEEK.

SUNDAY, September 5.—Thirteenth Sunday after Trinity.
MONDAY, 6.—Marshal Blucher died, 1819.
TUESDAY, 7.—St. Enmundus. Dr. Johnson born, 1709.
WEDNESDAY, 8.—Nativity of the B. V. Mary.
THURSDAY, 9.—St. Sabastian stormed, 1813.
FRIDAY, 10.—Hougo Park died, 1771.
SATURDAY, 11.—Thomsen born, 1700.

ASTLEY'S THEATRE, OPEN EVERY EVENING, with an ENTIRE EQUESTRIAN PERFORMANCE.—Mr. SYKES's American Wonders, having caused the greatest sensation ever heard of within the walls of any theatre, will perform every night until further notice. Likewise the Brothers ASCHIM, on La Perche, who are nightly hailed with unbounded applause, will go through their pose in feats every evening, in conjunction with several new artists who have been engaged for the occasion, making, in all, the largest Equestrian Company in the world.—Doors open at half-past Six, commence at Seven. Box-office open from 11 till 4 daily.

LOVE'S ENTERTAINMENTS.—These celebrated ENTERTAINMENTS will be given on SATURDAY, SEPT. 4, at DOUGLAS; Sept 6, at Blackpool; Sept 7, at Lytham; Sept 8, at Scarborough; Sept 9, at Beaumaris; Sept 10, at Bangor; Sept 13, at Blackpool; Sept 15, at Shrewsbury; Sept 22, at Malvern; Sept 23, at Cheltenham.—Begin at Eight

DISTIN'S CONCERTS.—Mr. DISTIN and SONS will perform on the SAX HORNS at the following places:—MONDAY, SEPTEMBER 6 th, BRADFORD; 7 th, York; 8th, Scarborough. Tuesday, Mrs. Theodore Distin and Miss Willy.—All communications to be addressed to H. DISTIN, 31, Cranbourne-street, Leicester-square, London.

MONT BLANC.—Mr. ALBERT SMITH has the honour to announce that his Ascent of Mont Blanc will CLOSE for the season with its 230th representation on SATURDAY EVENING, SEPTEMBER 11 and re-open with several interesting additions, on Monday next, the 13th instant, in the same room, with Mr. Albert's newly-re-embellished, and some alterations and improvements made, which it is hoped will continue much to the comfort of the general audience.—Egyptian Hall, September 1 1852

GALLERY of ILLUSTRATION, 14, REGENT-STREET.—The Grand Moving Diorama, Illustrating the WELLINGTON CAMPAIGNS in INDIA, PORTUGAL, and SPAIN, concluding with the BATTLE of WATERLOO, is now exhibiting Daily, at Three and Eight o'Clock. Admission, 1s; Stalls, 2s 6d, reserved seats, 3s. Doors open half an hour before each representation

THE GROTTO in OATLANDS PARK cannot be viewed on any other day, nor at any other hour, than SATURDAY, SUNDAY, and MONDAY, at One o'clock precisely.

ROYAL POLYTECHNIC INSTITUTION.—LECTURES: By J. H. PEPPER, Esq., on the Australian Gold Districts. By Dr Bachhoffner, on the Patent Paraffine Gas Fire; and on the Mode of Preserving Fresh Provisions. By Mr. Crease, on Morrall's Patent Needles. By George Buckland, Esq., on Music, with Vocal Illustrations, assisted by Miss Blanche Younge. A Ascent of Mont Blanc, Dissolving Views, &c. &c. Admission, Schools and Children under ten years of age, Half-price.

ERRATUM.—At page 110 of last week's ILLUSTRATED LONDON NEWS, the Dance, in "Pistol Grande," is not by the Artist there stated, but by M. Asaandre.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, SEPTEMBER 4, 1852.

"LIKE begets like." In the moral as in the physical world we every day see that this ancient saying is a true one. As one falsehood is invariably the father of a numerous progeny, so in like manner one great truth in due time "multiplies and replenishes the earth." Free Trade is a truth of this kind. It is no longer impugned by the wise, and scarcely by the foolish. It is daily making converts in the most unexpected quarters, and leading to results which were not anticipated even by those who were its first precursors and founders. The farmers of England are awakening to the conviction that, if Free Trade be good for the whole people in the particular article of corn, it may be also good for the agriculturists in all other articles. If the world will have the cheap loaf, why, say the farmers, should not we have cheaper sugar, cheaper tea, and cheaper wine? Free-traders reiterate the question, and the cry is so rapidly extending, that the probability seems to be, that, however zealous the Manchester men and the shipowners generally may have been in insisting upon untaxed corn, their zeal will be surpassed by that of the agricultural classes, in their efforts to obtain the same privilege, or right, with regard to all other articles that civilised men require. The wholesome and much-needed leaven is leavening the whole lump. Not only have the agriculturists been imbued with it, but it has extended even to the shipowners—a class that has hitherto been firmly wedded to the doctrine of Protection. The shipowners of Sunderland have at last been converted to Free Trade, if we may judge from the report of a committee of themselves, appointed by themselves, to inquire into the circumstances which depress, or are supposed to depress, the powerful and important interest to which they belong. The grievances of the shipowners are duly set forth, but they no longer propose a return to Protection. On the contrary, the Sunderland shipowners, formerly the very ultras of Protection, are now ultras Tories on the other side. The grievances which they allege all admit of a Free-Trade alleviation, but of no other; and in their demands for redress, as well as in the manner in which they state them, they will meet with general sympathy and approbation. They demand if British navigation be made free to all the world, that it be also made free to the British shipowner; that he may be no longer compelled to purchase dear labour at home, when it is to be had cheaper abroad; that the pilotage system, and that of the corporation of the Trinity House generally, be entirely reformed; and that the port and harbour dues levied by some favoured ports be utterly abolished. It is, indeed, a monstrous grievance that towns like Ramsgate, Dover, Whitby, and some others cited by the committee, should have the power to demand taxes from vessels which do not enter them, and which, in some cases, do not pass so closely as within forty miles. The barbarism of the proceeding is so gross that the wonder is not that shipowners should revolt against it, but that they should have borne it so patiently and so long. But in this, as well as in other instances, the shipowners are on the right track, and they will find public opinion with them in their efforts to secure for their industry the freedom and fair play which are necessary to its proper development. The farmers will also profit by the same kind of wisdom, and become reconciled to public opinion and the public interest.

THE "reign of terror" has been paramount this week in the entertainments of the people of London. It would appear as if we were fast retrograding to the diversions and amusements of the Roman circus, in which the greatest amount of excitement was created by the most savage display of brutality. The combatants of the Olympic games and the gladiators of the Roman period disappeared before the force of public opinion, even in barbarous ages. Tournaments, with all their courtly pomp and heraldic interest, fell, because humanity was outraged by the exhibition. The more modern science of pugilism, and the various tortures to which animals were subjected in bull-baiting, dog-fighting, cockfighting, &c., have been gradually sinking into disrepute, or are extinct; but it has been reserved for the ingenious managers who cater for the million at public gardens to revive the morbid desire for the cruel, the monstrous, and the terrible—the unfortunate characteristic of a restless populace, eager for novel sensations and strange sights. It is curious to watch the degrees of excitement by which curiosity is piqued. A pony is first sent up in a balloon with its feet attached to a platform. Next the platform is dispensed with, and the pony becomes a colt, with a jockey thereon. Then the colt is changed into a "high mettled charger," on the back of which a "lady" ascends into the regions of air. Afterwards the animal for suspension is a bull, in order that Madame Poitevin may make a mythological ascent as Europa. Cruelty first, and indecency afterwards, is sufficiently logical; but let us see in what manner bipeds are treated as well as quadrupeds.

"Another week of excitement and attraction," says a play-bill now before us. "The Trapeze again—the marvel of the world! This wonderful feat, unparalleled in the annals of aërostation, will be achieved for the third time by M. Henri Buisiay, or, as he has been styled by all Parisian philologists, 'the original and only Antipodean aërialist.' M. Buisiay will appear, *suspended by one leg only*, on a *single* rope, from the car of that new and elegant aërial machine, the 'Sylph' balloon, which will be steered in the realms of air by the 'Van Diemen of the Clouds,' the 'Columbus of the Skies,' Mr. Henry Coxwell."

The proprietors add to this unique announcement, "No advance in the price of admission!" a delicate innuendo against the managers of Cremorne Gardens for charging their auditory double to see M. and Madame Poitevin torture their animals. Fortunately for the latter, there is a Society for the Prevention of Cruelty, and it will be for the magistrates to do their duty; but, as regards the bipeds, specialties must be warned that if the law will not admit of a remedy, they stand a fair chance of the formation of a censorship, which would prove anything but beneficial for their interests. Much is urged in favour of the voluntary principle, as a defence for these exhibitions; and we are gravely assured that one man suspended by his heels to a wooden roller, or "trapeze" (quadrilateral figure, whose four sides are not equal, and none of its sides parallel), by ropes from the car of a balloon, with another man holding on to the hands of his comrade upside down, cannot incur any risk, as they "know their business." Without citing the numerous cases of fatal balloon ascents and of circus accidents, the American papers just received contain the news of the death of a well-known acrobat. Sands, who was in the habit of walking on a ceiling with his head downwards, and who performed this feat once too often. The masses regard these exhibitions as the Englishman who went two hundred nights consecutively to see Van Amburgh in the lion's den, at the Parisian Theatre, looked upon the sight, merely, with the notion that a catastrophe might occur; and it is on this unnatural excitement that reckless and greedy managers strive to feed, to the neglect of intellectual and rational amusements.

COURT AND HAUT TON.

As will be seen on reference to another portion of the paper, her Majesty, the Prince Consort, and suite left Osborne on Monday, for Balmoral—the quietude of which the Royal party are now enjoying.

On Monday, August 30th, her Majesty and his Royal Highness Prince Albert gave their annual *fête*, in honour of the Prince's birthday, to the labourers and workpeople employed on the estate, and their wives; also to the seamen and men of the Royal yacht, the Coast Guard and Trinity House, and the detachment of the 88th quartered at Cowes.

Their Royal Highnesses the Duchess of Cambridge and the Princess Mary visited her Majesty in the afternoon, and remained to witness the rural sports. The whole party afterwards entertained at a substantial banquet of roast-beef, plum pudding, &c. The sports then commenced.

We are happy to state that Lady Palmerston who had been seriously indisposed last week, is now much better.

The Marquis of Anglesey has left Cowes Castle for Beaudesert, county of Stafford. The noble Lord is in the enjoyment of excellent health.

The Marquis and Marchioness of Douro have left London on a tour in Germany.

OPENING OF THE MANCHESTER FREE LIBRARY.—The opening of the Manchester Free Library took place on Thursday, if not with pride, pomp, and circumstance, at least with manifestations of deep interest. The building was surrounded by an immense crowd at an early hour, and long before the commencement of the proceedings the library was filled with ladies and gentlemen of the first respectability. The chair was taken by Sir J. Potter, and among those present were the Earl of Shaftesbury, the Earl of Wilton, Mr Charles Dickens, Sir E. B. Lytton, Mr Bright, Esq., M.P.; H. M. Milnes, Esq., M.P.; the Bishop of Manchester; W. M. Thackeray, Esq.; C. Knight, Esq.; and many other gentlemen eminent either for their attainments or their position.—[We shall illustrate the meeting next week.]

MONEY ORDERS.—The following notice has been issued by the Postmaster-General:—"Minor money-order offices will be opened at the undermentioned places on the respective dates named—Kidlington, Oxfordshire, Sept. 1; Saltash, Cornwall, Sept. 1. N B—Postmasters are informed that Callington is now served from Plymouth instead of Tavistock. The list of money-order offices must be corrected accordingly."

THE DUBLIN EXHIBITION.—Mr. Roney, the secretary of the Great Exhibition to be held in Dublin next year, left town on Saturday last, for Paris. Mr. Roney is provided with strong letters of recommendation from the Count Walewski to the Ministers of the Interior and of Commerce, and from the Royal Commissioners to Baron Dupin, the president of the French Commission to this country. He has also introductions to the Duc de Persigny, Secretary to the British Embassy at Paris, M. Salladrenes de Lamornaix, and to other influential persons in France who were identified with the Great Exhibition of 1851.

IMPORTATION OF FOREIGN REPRINTS OF ENGLISH BOOKS.—An Order of Council, dated August 18, sets forth that her Majesty, in pursuance of the powers granted her by the 10th and 15th Victoria, has directed that an act passed by the Legislature of St. Vincent, authorising the importation into that colony of books, being foreign reprints of books first printed or published in the United Kingdom of Great Britain and Ireland, in which a copyright exists, whereby due provision is made for securing the rights of British authors in the said island, shall remain in force and take effect, and the acts of the Imperial Parliament relating to the importation of such books shall be suspended so far as regards the said island.

THE NEW HOUSE-DUTY.—A return to Parliament has just been issued, showing the number valued at £20 and upwards, the number of those which pay house-tax at sixpence and threepence in the pound, with other information on the same subject. In England and Wales there are 179,284 houses charged at sixpence; and in Scotland, 6377. The amount of duty in England and Wales is £300,182 15s. 2d.; and in Scotland, £5298 11s. 9½., making £305,471 10s. 11d. at sixpence: while at threepence in the pound there are 252,213 houses in England and Wales, producing £105,304 4s. 6d.; and in Scotland, 24,693 houses, producing £38,340 17s. 1d.; making the threepence duty £201,545 1s. 9d. The total amount of duty is stated at £707,018 12s. 8d. The return, which was obtained by Mr Geddes, contains the number of houses in some of the principal towns rated at £10 and other sums.

GOVERNMENT EMIGRATION TO AUSTRALIA.—In consequence of the numerous applications at the office of her Majesty's Colonial Land and Emigration Commissioners in Park-street, Westminster, from artisans and agriculturists for a passage to our Australian colonies under the Government regulations, the commissioners on Tuesday concluded another contract for three first-class vessels for the conveyance of passengers to Victoria and New South Wales, either from Deptford or Plymouth, the ships to be ready to receive the emigrants as follows: For Melbourne, on the 4th of October; for Sydney, on the 6th of October; and for Melbourne, on the 11th of October. The following ships have also been contracted for to convey emigrants to the undermentioned ports during the current month:—For Hobart Town, on the 8th inst.; Perth, on the 13th inst.; Port Stephen (Sydney district), 15th inst.; and Adelaide, on the 20th inst.; to take them on board at Deptford, and sailed at Plymouth. Last month the commissioners took up from 16 to 20 ships for Government emigrants, amounting to upwards of 3000, consisting chiefly of agricultural labourers and a few mechanics of the trades most required in the colony; but a certain number of young single women of good character, who will be provided with situations immediately on their arrival. The present and next month will be the last the commissioners will send out ships this year, although they have upwards of 20,000 applications entered on their books from nearly every part of the country and different trades, so that they will be obliged to confine themselves to those most wanted by the colonists. Besides the Government emigration there are from 25 to 30 vessels entered to sail in the course of the month from the St. Katharine's, London, and Westand East India Docks, with bona-fide seekers to the "Gold diggings."

CHURCH, UNIVERSITIES, &c.

ST. PAUL'S CATHEDRAL.—The Bishop of London has appointed the following gentlemen to be special preachers at St. Paul's Cathedral, for the present month:—Thursday, Sept. 2 (London burnt), the Rev. James Edwards, M.A., chaplain to the Lord Mayor; Sunday, Sept. 5, the Rev. William Calvert, M.P., rector of St. Antholin, Watling-street; Sunday, Sept. 12, the Rev. Dr. Rice, Head Master of Christ's Hospital; Sunday, Sept. 19, the Rev. R. Harvey, M.A., rector of Hornsey, and prebendary of St. Paul's; Sunday, Sept. 26, the Rev. J. Mosley, Lord Radwell, M.A., rector of St. Edmeburga, Bishopsgate.

NEW COLONIAL BISHOPRIC.—Arrangements have been made for the formation of a bishopric in the Mauritius whose it is at present under the ecclesiastical jurisdiction of the Bishop of London. The Society for the Propagation of the Gospel in Foreign Parts has contributed £3000 towards the formation of the new see.

APPOINTMENTS AND PREFERMENTS.—The following appointments and preferments have recently been made:—*Honorary Canonry:* The Rev. John C. Miller, rector of St. Martin's, Birmingham, to, in Worcester Cathedral. *Sinecories:* The Rev. T. V. Dupre., to Mongewell, Oxon. The Rev. Charles Terry, to Harleston, Suffolk. *Vicarages:* The Rev. Frederic Fitch, to Cromer, Norfolk. The Rev. H. Cunliffe, to Sandhal.

TESTIMONIAL.—The following clergymen have recently received testimonials of esteem and affection:—The Rev. John Underwood, curate of Maveyn-Rulware, Staffordshire, from the parishioners. The Rev. W. P. Hopton, curate of Bayford, Hertfordshire, from the parishioners of that parish. The Rev. Charles Henry Lipscomb, from the parishioners of Barking. The Rev. J. F. Simpson, curate, from the congregatcm of Holy Trinity Church, Whitehaven, on his departure.

TESTIMONIAL TO THE LADY OF SIR BENJAMIN HALL, BART., M.P.—At the close of the public examination of the Welsh Educational Institution at Llandovery, last week, the students presented to her Ladyship a testimonial of their esteem, accompanied with a suitable address in Welsh. Lady Hall replied in Welsh, and expressed her conviction that many of the youths then before her would, in the course of a few years, reflect lustre on that locality, and would become a body of enlightened and learned Cymri who would do honour to the country of their birth.

LONDON CITY MISSION.—On Wednesday afternoon a general meeting of the executive, and other supporters of the above excellent society, was held at their office, in Red Lion-square, Holborn, for general business. The report for the past year gave the following account of its operations:—The total number of visits paid by the 250 missionaries employed during the year amounted to 1,176,585, of these 100,713 were to the sick and dying. Meetings held in the houses of the poor, for prayer and familiar expounding of the scriptures, 21,303. The readings of scripture in visitation 358 581, showing that portions of the scriptures are read to the poor very nearly 1500 times every day. Number of books distributed, 1,760,000; tracts and books lent, 777 other disorderly persons have been reclaimed from open and gross iniquity. Three hundred families have been induced to commence family prayer. The income of the society for the year ended amounted to £22,216 17s. 4d., but to pursue its operations for the current year with increased efficiency, the committee are making strenuous exertions to add to their funds not less than £5000.

ST. MARY'S CHURCH, TORQUAY.—On Tuesday morning the Right Hon. Sir John Patteson, late one of the Judges of the Queen's Bench, the Ven. Archdeacon Froude, and a large number of the clergy, assisted in the laying of the foundation-stone of the new chancel of the parish church of St. Mary's Church, South Devon. Amongst the most liberal contributors to this noble work were the Marchioness of Bath, the Countess Somers, the Countess Kilmorey, Lady Mary Arnold, Lady Caroline Courtenay, the Bishop of Exeter, &c.; and an anonymous donor has contributed the sum of £1000. After the usual prayers had been said, the Holy Communion administered, and some further services performed, Sir John Patteson laid the first stone—he and the Rev. Alexander Watson, M.A., Vicar of the Church of St. Mary, saying together "In the faith of Jesus Christ, we place this corner-stone; in the name of God the Father, and the Son, and God the Holy Ghost. Amen." Several prayers were then offered, and the benediction was pronounced. Immediately after the ceremony was over, a substantial dinner was provided for 100 widows and aged women in the Almshouses, by the kind exertions of three ladies, who undertook to attend receive "portions" at their houses. In the evening a supper was given to the workmen employed in the building.

OPENING OF A SCHOOL AT ELTHAM.—On Saturday last one of those pleasing scenes, so characteristic of our amiable character, took place at the pleasant village of Eltham, in Kent, by the opening of a new infant school, the gift of the inhabitants of Eltham, and more particularly characterised by the great liberality of two of the inhabitants—Richard Mills, Esq., and John Lambert, Esq. The scholars met at three o'clock at the old school-house, where there is also a national school for boys and girls of a more advanced age, and in the presence of the worthy curate of the parish, the Rev. Mr Shaw, assisted by the Misses Mills, the Misses Shov, and other ladies, prizes were distributed to the scholars. The three schools were then marched, headed by part of the Artillery band, accompanied by divers flags, to the new school-room, which that morning had been most tastefully ornamented by *bouquets* and garlands of flowers. The room and the building were immediately filled by the principal inhabitants of the village and the neighbourhood, when the worthy curate gave a very impressive oration and blessing on the children and the building. The hymns being sung, a charge was also given by the rev. gentleman to the children, in which he endeavoured to impress upon them how much they had reason to be thankful for having the means of education so bestowed upon them. The children then gave a number of rounds of cheers for their patrons; and, each being provided with a penny, were again marched down the town to the curate's dwelling, accompanied by the band and the ladies and gentlemen. In the fields adjoining the house, a marquee was erected, where plum-cake and tea were provided for children. After a variety of amusements and dancing until half-past seven, a brilliant display of fire-works terminated the day's pleasure. *From a Correspondent.*

NEW INVENTION.—In the early part of this year the barque *Eros*, of Sunder and, Captain Brodeur, in her passage to Ceylon, and about 1600 miles from that port, found the water in the sea-tank, owing to a leak from the pump. The carpenter was ordered to fit wooden hoops to the cooling coppers (holding four gallons each), with a plug in one as feeder, and another valve—in the other lid, a common brass tap, from which he placed a musket barrel. Having cut off the breech, and placed the musket barrel within a perk cask filled with water, it acted as a condenser, and by that simple means they were able to distil 10 gallons a day, and distilled the entire 1600 gallons—and thus were enabled to terminate their voyage in good health.

From the Society Islands accounts to the 26th of May state that the long-disputed question regarding the sovereignty of those islands had at length been settled by the recognition of the elder son of Queen Pomare as King of Raiatea, her second son as King of Imahina, and her daughter as Queen of Borbolelo. A matrimonial alliance was in contemplation between the latter and Prince Alexander Obrenitch of the Sandwich Islands.

Private letters from Paita, in Peru (South America), under date the 31st of July, state that when intelligence reached that city containing the information that vessels had set sail from the United States for the Lobos Islands to collect guano, the prefect of the department of Del Norte, residing in Piura, ordered the garrison at the islands to be reinforced, and opposition made to all attempts to take guano without the consent of Peru.

Private letters from Valparaiso to the 4th of August state that the cholera was fast disappearing from the Isthmus. The existence of extensive and rich gold mines on the Isthmus have been placed beyond doubt, large quantities having been sent from Chese to Panama and Europe. On the Rio Annagada, a river of the Atrato, about two days' journey from Quibdo, rich mines are said to have been discovered.

Capt. J. Turner, *alias* Corfield, of the 77th Regiment, was on Monday sentenced by the Magistrates of Cirencester to six months' imprisonment with hard labour, for obtaining money by means of fraudulent representations, from Lord Sailoun, Lord Faumure, and other noblemen, and also for having attempted to defraud the Marquis of Worcester by similar practices.

EXTRAORDINARY SHIPMENT OF GOLD.—Intelligence has been received by the Overland Mail of the dispatch from Port Phillip, on the 27th of May last, of the regular trader *Medway*, belonging to Messrs. Marsh and Elridge, with a full cargo of wool, and the extraordinary quantity of 65,051 ounces of gold. The *Medway* may be looked for about the middle of the month.

The *Newcastle Journal* states that the herring fishery on the coast of Northumberland has of late been more than usually productive, on some occasions the take of herrings having been so great as to break the weight of the nets brought on them. They have been selling at about 9d. a hundred. At Newbiggen, on Saturday morning last, upwards of 400,000, falling about 800 barrels, were brought into the bay, and immediately disposed of to a curer.

THE CHOLERA IN PERSIA.—We have intelligence from Tabreez to the 31st July. Cholera-morbus of the most malignant type is raging in its vicinity, as well as at Scoldoos and at Sheg Bonas, notwithstanding the presence of unusually cold weather. In and about Oroomiya, upwards of 30,000 souls have been carried away by the epidemic. At Sook Cox, which is ten hours' distance from Oroomiya, and has a population of 6000 souls, as many as from five to six were carried to their graves. The American missionaries, who now form a colony some two score strong, have retired to a mountain retreat at bear, two and a half hours' distance from town, leaving there only, as this own request, Dr. Wright, whose assistance to the sick and dying merits much praise. Colonel Williams and the other Commissioners in Persia, who are at work on the frontier question, were on the plain of Oroshney, five hours south-west of Oroomiya on the 21st July, when Samuel Khan, on the afternoon preceding, entertained them at a grand farmashé jurd Key Kaj, or dance tournament. Many of the Oozhnuccese were coats of mail, and helmets with waving plumes, giving them a most war like appearance compared to the Persian cavaliers.

POSTSCRIPT.

MEETING OF THE BRITISH ASSOCIATION.

(From our own Correspondent.)

BELFAST, Wednesday, Sept. 1.

The twenty-second meeting of this Association commenced its sittings in Belfast (the "Irish Athens") this day, under the most favourable auspices. The attendance of members, the lists of papers to be read, and the fact of the attendance of the Lord Lieutenant at many of the principal sections, will contribute to render the present meeting one of the most interesting and successful of any which the Association has yet held.

The rooms of the Queen's College are appropriated to the reading of the different papers, and the board-room of the Ulster Railway has been placed at the disposal of the Association for the purpose of a reception-room, for supplying lists and prices of lodgings, addresses of members, and other information which may be required with respect to the business of the meeting.

The actual business of the meeting commenced this evening, consisting of the opening address, delivered by the Vice-President, Colonel Edward Sabine. The address was delivered in May-street Church. The attendance, notwithstanding the unfavorable state of the weather, was exceedingly good, and the address was most warmly and enthusiastically received

The report of the proceedings of the council during the past year was presented by the Secretary, in the course of Wednesday.

LATEST FOREIGN NEWS.

FRANCE.

Our advices of yesterday (Friday) from Paris inform us that the *Presse* has been warned for the second time on account of M. de Girardin's reply to M. Granier de Cassagnac, in which he tells the latter that he has calumniated France and fled. The *Liberté* of Arras has been also warned.

The Municipal and Departmental Commission exercising the functions of the Council-General of the Seine has convoked for a meeting next session for the 3d of November next, to close on the 17th The Councils of Arrond esement for the same department are to assemble on the 23d of November for the second part of the session, which is to be five days.

Alfred Salomons had arrived in Paris for the purpose of negociating with the French Government the repayment of the deposit made by the ancient Bordeaux and Cette Railway Company.

BALLOON EXCURSION BY LOTTERY.—On Monday next the visitors to the Royal property, Vauxhall Gardens, will have the opportunity of making an aerial excursion gratis. Six seats are to be disposed of by lottery amongst the visitors on that day, when the fortunate possessors of a prize will have the choice of a voyage amongst the clouds, free of cost.

FATAL EFFECTS OF PATENT FUEL BALLAST IN EMIGRANT SHIPS.—Charterers of emigrant ships, finding that patent fuel sold to great advantage in the Government dockyards, have for some considerable time past adopted the plan of ballasting their vessels with it; and as the noxious effluvia arising from it, especially in warm climates, have proved very fatal to the emigrants, Mrs. Chisholm, the benevolent foundress of the Family Colonisation System of Emigration has been exerting herself to put a stop to the nefarious practice which thus deliberately sacrificed human life to the purposes of pecuniary gain, recklessly as the slave dealer consigns his human cargo to the fate. agonies of the "middle passage." Finding, however, that publicity, by putting the emigrating classes on their guard, is the only argument likely to be productive of advantage to the case, Mrs. Chisholm has addressed a communication to the papers, in which she shows, on the very best authority, be it medical and official, the baneful effects on the health of the emigrants, and the comparatively high mortality even, amongst them, arising from the noxious exhalations sent forth by the patent fuel.

Recent accounts from California state that there has been great mortality on board the steam-ships *S. S. Lewis* and *Independence*, on their passage from the Isthmus of Panama to San Francisco, fourteen persons having died in the former, and twelve in the latter vessel. Their deaths were attributed to the disease induced by a three weeks' stay at San Juan del Sud, and in consequence of being left without shelter of any kind during the rainy season. Of the passengers by the *Northern Light*, from New York, there were twenty from exposure at San Juan del Sud, and fourteen on the passage thence to San Francisco.

At the Cumberland Infirmary, Carlisle, on Saturday last, Wednesday, [illegible] all, about 701 [illegible] for some [illegible] desti[illegible] powers [illegible] of whom [illegible] space.

METROPOLITAN NEWS.

LONDON HOSPITAL.—A quarterly court of the governors of this charity was held, on Wednesday, at the hospital, Sir Edward Buxton, Bart., in the chair. The report of the committee of management stated that during the last quarter 1044 in-patients had been discharged; of whom 574 had been cured, 401 relieved, and 61 had died. The in-patients in the hospital at the present time amount to the number of 331, and the out-patients on the books to 2081. The report also stated that the financial condition of the institution was satisfactory.

ST. MARK'S HOSPITAL.—The ninth anniversary festival of the subscribers to the auxiliary societies in aid of the funds of this charitable institution, better known as the Fistula Infirmary, was celebrated on Monday evening, in the large dining-hall at the Highbury Barn Tavern. Mr. H. Martin presided. The number who sat down to dinner was not less than 150, chiefly composed of those who had received the benefits of the charity. After the cloth had been removed, and the usual loyal and patriotic toasts given, the chairman, in proposing the toast of the evening, "Prosperity to St. Mark's Hospital," gave some vivid illustrations of the beneficent operations of the charity. A liberal subscription was made, amounting to above £14; Mr. Sheriff Cotterell heading the list with five guineas.

MERCHANT-SEAMEN'S ORPHAN ASYLUM.—The half-yearly election of orphans for reception in the above meritorious institution took place on Monday, at the Asylum, Bow-road. At present 78 boys and 38 girls are receiving benefits from the charity. Five boys and three girls were elected in addition on Monday. The boys, who are regularly drilled under a military drill-master, went through their exercise to the satisfaction of a crowded company. The proceedings terminated with a short address from Captain Nelson in support of the institution.

THE ELECTRIC CLOCK IN THE STRAND.—On Wednesday, for the first time, the new electric dial, which has been erected by the Electric Telegraph Company, on the front of their West-end station, No. 448, Strand, and now completed, commenced working. It is placed in the centre of the carriage-way, or rest, that separates the Strand, Adelaide-street, Duncannon-street, and Hungerford Market. Being a new experiment, it will be satisfactory to parties coming from the West-end towards the City, or going from Temple-bar westwards, and of the other two faces of the dial, one is opposite Hungerford-street, and the other Duncannon-street and Adelaide-street. A small dial is illuminated by a strong electric light. This dial has a very elegant appearance, being in a tastefully worked bronzed case: at the top of it is a gilt ball. The hands of the clock are gilt, and the hours distinctly marked in large figures.

BRITISH ELECTRIC TELEGRAPH COMPANY.—At a meeting of this company, held at the offices of the company, Royal Exchange, the report of the directors was agreed to. After giving a history of the works of the company since the last annual meeting, the document goes on to say, "that, in three or four months' time, the company will have in full operation an important district of telegraphic communication; and, looking at the very economical manner in which the company's affairs have been managed, and the comparatively small sum of the lines now under construction, your directors feel justified in believing that the company's property, even as it now stands, will, when the whole shall be in regular work, yield a fair return for capital." The balance sheet shows a total receipt from the commencement of the undertaking of £23,815, and a total expenditure of £20,006 up to the 30th of June last, since which period the secretary stated a call of £5 per share had been made and paid.

GENERAL STEAM NAVIGATION COMPANY.—The fifty-fifth half-yearly meeting of the shareholders of this company was held on Tuesday, at their offices, 71, Lombard-street; John Wilkins, Esq., in the chair. The report of the directors, and a statement of the accounts for the half year ending the 30th June last, were read to the meeting, and unanimously adopted by the proprietors. A dividend of five per cent was then declared, and the cordial thanks of the proprietors voted to the chairman and directors for their zealous services in the management of the company's affairs; after which the meeting separated.

TAXES ON KNOWLEDGE.—A meeting was held on Wednesday night, at the Shoreditch Tavern, Pentonville, when a society was formed, under the title of the Finsbury Knowledge Tax Repeal Association. The object of the society is to obtain the repeal of the newspaper stamp, and of the advertisement and paper duties.

CUSTOMS REFORM.—On last Saturday notice was publicly given at the Custom-house "that the commissioners will be prepared in any case of seizure in London under the customs, upon application being made to them in writing, and where the owner of the goods, &c., may be aware of such a course, to appoint one of the members of the board to take the evidence on oath of the merchants or other parties claiming the property, on the one side, and of the declaring officers on the other, reported by them of any witnesses that may be necessary for the proper investigation of the case, and to report the same for the board's decision, agreeably to the practice now observed in cases of complaints of merchants and others against officers." A notice was also published to the effect that "the board have issued directions to the officers of customs of the United Kingdom that whenever they seize or stop a vessel, boat, or goods, they are to furnish the master, owner, or other person, on demand, a written notice specifying the grounds of the detention." On Wednesday notice was given by the Board of Customs "that arrangements have been made for the examination and delivery overside, by the officers of the water-guard, of sundry free goods and goods subject to the low rate of duty, imported in bulk or in bags, and oils in casks, provided the importers shall be desirous that the goods shall be so delivered." Full particulars in regard to these arrangements, and the conditions upon which the delivery will be allowed, may be obtained at the offices of inspectors-general of waterside and wateryard, surveyors, &c

AUSTRALIAN EMIGRATION.—Meetings of various societies, formed for this purpose, and of bodies of emigrants on the eve of their departure for the gold fields, have been numerous during the week. Amongst the former, there was a meeting on Monday of the "Emigrants' Aid and Transit Society," for the purpose of giving information to intending emigrants. Of the latter there was a meeting on the same evening, of a large body of emigrants belonging to the congregational denomination who are about to sail in the *Hyderabad*. They were addressed at considerable length by Dr. Lang, who is well known for his long connection with the Australian colonies.

CITY IMPROVEMENT.—(From a Correspondent.)—The churchwardens and authorities of the parish of St. Peter-upon-Cornhill, have lately effected a considerable improvement in the demolition of some very unsightly sheds which had encumbered the graveyard of that parish for, as we understand, the last 170 years, and by enclosing the site with a substantial iron railing, in unison with the other portion of what was until lately the burial-place of the parish, but which will henceforth present a much more sightly and pleasing enclosure, being laid out as a garden, and planted with trees and shrubs, altogether imparting a very different appearance to the much-frequented thoroughfare from Cornhill to Gracechurch-street. We believe, however, that this public good has not been carried out without much legal difficulty and risk, but we should hope that the manifest improvement to the neighbourhood will disarm all contending parties from any further intention of contesting the matter in the law courts, where we believe these sheds have already exhibited some 70 or 80 years ago.

DEATH FROM EATING CHAMPIGNONS.—A few days ago the potmen at the Princess Victoria, Starch-green, Hammersmith, were poisoned by eating some champignons, a species of mushroom, which had been cooked at the public-house by a lad named George Turner, and well seasoned with pepper and salt. Although Turner and a third party partook of the meal, they did not suffer any illness in consequence. Upon making an autopsy, Mr. Keen, surgeon, found the stomach highly inflamed by the champignons—and which inflammation caused death. He, however, was of opinion that the cause of the eating of them would not have proved fatal, had not deceased led a wild, dissipated life.

ELECTION OF SHERIFF.—On Monday a common-hall was held "for the election of a fit and able person to be one of the Sheriffs of this city, to serve together with John Carter, Esq. and alderman, Sheriff of the county of Middlesex, for the year ensuing, in the room of Benjamin Coandler, jun., Esq., who has paid his fine to be excused from serving the said office; when Mr. Croll was unanimously elected to fill that office.

CLOSING OF THE NATIONAL AND VERNON GALLERIES.—Notice was issued on Wednesday at the National Gallery, Trafalgar-square, and the Vernon Gallery, Marlborough House, St. James's, that both of these fine collections of paintings will be closed to the public during the vacation, which commences on Saturday, the 11th instant, and will be re-opened to visitors on Monday, the 25th of October next, when they will be admitted, as usual, gratis, on Mondays, Tuesdays, Wednesdays, and Thursdays.

CREMORNE GARDENS.—On Monday night, Madame Poitevin ascended from Cremorne-gardens on the back of a ball, which was suspended beneath cords from the car of a balloon in which M. Poitevin was seated. The ball, on being lifted from *terra firma*, appeared to struggle very hard; but was soon undiscernible to the wondering spectators. After performing many curious movements on the back of the ball, the lady ascended into the car, and for the remainder of her aerial voyage enjoyed the companionship of her husband. With reference to a previous statement from the same gardens where a pony went up instead of a ball, an application to the magistrate of the Westminster Police Court, on behalf of the Royal Society for the Prevention of Cruelty to Animals, for summonses against Mr. [illegible] Simmons, and Mr. Simpson, the proprietor of Cremorne-gardens, was granted on Tuesday last; but, however, [illegible] appeared.

PREVENTION OF STREET BEGGING IN THE CITY.—On Monday, six men, under the appellation of "Street Guardians," and a superintendent, were placed on duty by the committee of the City Soup Kitchen and Refuge, opened last week by the Lord Mayor, who is president of the institution, in Victoria-street, Holborn-bridge. These men have been engaged for the express purpose of preventing street-begging within the city of London. The committee, in furtherance of their [illegible] properly in [illegible] applied.

FIRE AT BLACKWALL.—[illegible] considerable amount was [illegible] premises of Messrs. Wigram and Co., the [illegible] the iron was not much [illegible]

SHOCKING ACCIDENT.—Harriet Boxell, a servant girl in the family of Mr Kennedy, 40, Caremont-square, Clerkenwell, while in the act of cleaning the windows a few evenings ago, was, in consequence of the falling of the balcony, precipitated into the street. In her descent she fell upon the iron railings in front of the house door, and the point of one of them entered her back under her right shoulder, where she was suspended. With some difficulty, as the rail was barbed, she was got off, when it was found that the point of the rail had entered the posterior part of the chest, broken some ribs, and part penetrated the lungs. She was removed to St. Bartholomew's Hospital. Hopes of her recovery are entertained.

BIRTHS AND DEATHS.—The births registered in the metropolis during the week ending last Saturday were—753 boys, and 745 girls; total, 1498. The deaths registered during the same period were 980; being less by 104 than the number registered in the previous week. Of this number 508 were males, and 472 females. 701 of the deaths occurred in the districts north, and 279 in the districts south of the Thames. Scarlatina is still prevalent, having destroyed the lives of 81 children. Fever was fatal to 39 adults and 16 children. Diarrhœa was fatal to 107 children, 8 persons in the middle of life, and 10 of the age of 60 and upwards. It is gratifying to observe the sudden decline of the deaths from diarrhœa from 208 to 120; 15 deaths from cholera are registered, including 11 children and 4 adults 10 males and 5 females died of the disease—12 on the north and 3 on the south side of the Thames. The death of a labourer's wife, of "Asiatic cholera," aged 34 years, in Rotherhithe, after 15 hours' illness, is the most remarkable of the cases.

METEOROLOGICAL OBSERVATIONS.—The barometer stood on an average at 29.955 inches, and on some days was above 30 inches. The mean heat of the thermometer in the shade was 64.9 deg., or 4 deg. above the average. The dew-point was 6 deg. lower. The height of the thermometer was once 104 deg. in the sun, 46 deg. in the shade on the grass. The mean temperature of the polluted waters of the Thames was 67.5 deg. and 64.4 deg. The wind blew N.N.E. and S.W., at the average rate of 52 miles daily. One-tenth of an inch of rain fell on one day. No electricity was shown during the week.

NAVAL AND MILITARY INTELLIGENCE.

THE MILITIA.—The Lord-Lieutenant of the county of Hertford has recently issued a notice that 477 ab e-bodied men, resident in the county, between the ages of 18 and 35, or if discharged from the army after three years' service, then under the age of 45, and being of the height of five feet four inches or upwards, are required for the militia Parties desirous of enrolling themselves as volunteers will receive 10s. bounty on entering, 10s. at the end of the first training, and a further bounty of 2s. each month afterwards, until he shall have received the full sum of £6. The churchwardens of the parish of St. Mary, Islington, have issued a notice to the inhabitants, stating that the Lord Lieutenant of Middlesex has called their attention to the act of last session, by which it is enacted that volunteers may be raised to serve in the militia, and that the bounty, not exceeding £6, is given to each volunteer; and urging upon the inhabitants that the opportunity thus given to anticipate and prevent the inconveniences of the ballot, should not be neglected, it being so obviously the interest of every parish to avoid the great expense, as well as the annoyance, attendant upon a ballot; and calling for the co-operation of the parishioners in carrying out the enlistment of volunteers. The quota of men to be furnished by the parish is 246.

DEPTFORD ROYAL NAVAL SCHOOL.—A special general meeting of the members of this corporation was held on Wednesday, at the School, New Cross, Deptford—Admiral Sir W. Bell in the chair—to consider the propriety of authorising the council to erect on a portion of land belonging to the school a chapel contiguous thereto, and to fit up the same with all things necessary and proper for the performance of divine service. A resolution in favour of the erection of the chapel having been adopted, the chairman stated that their President (Vice-Admiral Bowles) had subscribed £1000, the Committee of the Patriotic Fund £500, the Duke of Northumberland £100, Captain Gladstone £410, Admiral Beaufort £50, Admiral Sir Thomas Hastings £500, Admiral Ogle £50, Captain Sir R. Grant £50; which, with a number of smaller subscriptions, made a total of £2053 9s. 6d. The estimated cost of the chapel was £2000. A vote of thanks was then given to the chairman, and the meeting separated.

THE COST OF THE HERMESE EXPEDITION up to the last of July has been for the Bengal forces alone as follows:—Commissariat, £58,000; ordnance, £60,000; marine, £59,000; general charges, £60 000; total, £233 000. To this is to be added the cost of the troops in extra batts, marching, allowance, &c., in the supposition of more numerous Madras contingents, and of the Bombay ones, and these items will swell the amount incurred, up the 1st of July, to at least £500,000.

CONSTABULARY FORCE, IRELAND.—The number of county inspectors is 37 sub-inspectors 248, head constables 334, constables 1707, acting constables 200, sub-constab es 9695; total of all ranks, 12,381. Number of horses, 352. Annual expenditure, £484 175 10s. 6½d. At head-quarters there are the inspector-general, the deputy and assistant inspectors-general, one receiver, one surgeon, and one superintendent-surgeon. The proportion of the expense of the force charged on the fund dated Irish Fund for 1851 was £495,322 9s. 9½d.; the amount borne by counties, cities, and towns, £34,723 9s. 3d.

FRENCH RIFLES.—The celebrated gunmaker, Devisme, of Paris, whose fire-arms were so much admired at the Great Exhibition, has lately sent over to this country a model of the rifle supplied by him to that crack French regiment, the Chasseurs de Vincennes.

LAUNCH OF A LARGE SCREW STEAMER.—On Monday was launched from the premises of Messrs. Chas. J. Mare and Co., of Orchard-yard, Blackwall, for the Eastern Steam Navigation Company, a beautiful specimen of naval architecture, named by Miss Major, a daughter of one of the directors of the Company, the *Hydaspes*. She is to be employed in conveying the mails to the East Indies, via the Cape of Good Hope. Many directors and their friends were afterwards sumptuously entertained by Mr. Mare at the Brunswick Hotel. The following are the dimensions of the *Hydaspes*:—Length between perpendiculars 160 feet; length of keel for tonnage, 180. The engines of the *Hydaspes* will be of the same power as her sister vessels, which up to this moment have done their work so efficiently.

THE "DUCHESS OF KENT" STEAMER.—On Saturday last a conclusive effort was made to bring the wreck of this unfortunate vessel beyond the limits of low water, and which met with partial success, for though the position in which it was sought to place her was not wholly attained, yet there appears every probability of achieving that object before she now lies in will be her resting place till broken up. The wreck now lies close to the shore, about 200 yards west of the pier at Grays, and at low water nearly the whole of the hull is visible, presenting the appearance of a complete wreck, and was yesterday an object of much interest to the numerous passengers on the river.

It is currently reported that the Governorship of Newfoundland, vacant by the appointment of Sir J. G. Le Marchant to Nova Scotia, will, by special commission, devolve upon Colonel Law, at present commanding the forces on that island. Colonel Law is an old Waterloo officer. Mr. Crowder, the Colonial Secretary, is at present administering the government.

NEW BARRACKS ON THE NEILGHERRY HILLS.

THE 18th of June, a day of glorious import in the records of the British army, was very appropriately appointed by his Excellency Lieutenant-General Sir Richard Armstrong, K.C., Commander-in-Chief at Madras, for laying the foundation-stone of the Barracks to be built at the new cantonment at Coonoor, Neilgherry.

His Excellency, attended by a numerous staff, arrived on the ground at eleven o'clock, and was received by a guard of honour from the detachment of her Majesty's 84th Regiment at the station

The officer commanding the 84th Regiment, and the Right Rev. the Lord Bishop of Madras, at half-past eleven, to the site. He was received with the usual military honours by the detachment of her Majesty's 84th Regiment, drawn up on two sides of the plateau prepared for the building, and the union jack was hoisted at the flag-staff

The Lord Bishop then offered an appropriate prayer. His Excellency deposited in the ground one of each of the coins of India in circulation, and a parchment with the following inscription:—

On the 18th day of June, in the year of our Lord 18 and in the fifteenth year of the reign of her Most Gracious Majesty Queen Victoria, the first foundation-stone of the new Barracks on the Neilgherry Hills was laid by

His Excellency Lieutenant-General Sir Richard Armstrong, K.C.B.;

assisted by

The Right Reverend Thomas Dealtry, Lord Bishop of Madras;

in the presence of

Colonel Pratt, C.B., Adjutant-General of her Majesty's forces;

Colonel Faris, C.B., Deputy Quartermaster-General of her Majesty's Forces;

Lieutenant-Colonel [illegible], Deputy Adjutant-General of the Army;

Lieutenant-Colonel Reid, C.B., Quartermaster-General of the Army;

Major Balfour, [illegible]

Captain C. F. Seymour, R.M.'s 84th Regiment, Commanding the Detachment;

Captain France, Executive Engineer;

Captain Reidy, Assistant Executive Engineer;

[illegible] Dart, Acting Governor of Madras,

[illegible] Members of Council.

The foundation-stone was lowered and declared to be laid. His Excellency then [illegible] the iron, [illegible]

The [illegible] our [illegible]

[illegible] deta hment fired a *feu de joie*, and gave three

THE ROYAL PROGRESS.—ARRIVAL OF HER MAJESTY AT SWINDON.

cheers for her most gracious Majesty the Queen, and three more for his Excellency, and the ceremony concluded.

His Excellency and staff, also the Lord Bishop of Madras, with Sir William and Lady Burton, and the visitors, afterwards adjourned to breakfast.

Before leaving the cantonment his Excellency inspected the temporary barracks, and also went to see the two oxen roasted whole for the men's dinners, and at about two o'clock P.M. all returned to Ootacamund.

VISIT OF HER MAJESTY TO SCOTLAND.

THE ROYAL PROGRESS.

The Queen, accompanied by his Royal Highness Prince Albert and the Royal children, and attended by the members of the Court, has proceeded this week on her customary autumnal visit to her residence at Balmoral, in the Highlands.

The Royal party embarked on Monday morning at ten o'clock, at Osborne, on board the *Fairy* tender to the Royal yacht, Commander Crispin, which was soon under way for Portsmouth, followed by the *Elfin* despatch boat. The run through Spithead was very beautiful the morning being a delightful one. There were no ships at that anchorage to fire a Royal salute, but on the *Fairy* approaching Portsmouth Harbour a salute of 21 guns was fired by the garrison from the platform battery, which was soon followed by a similar mark of homage from the broadsides of the *Victory* flag-ship and *Neptune*, 120, ordinary *dépôt* ship.

CEREMONY OF LAYING THE FOUNDATION-STONE OF THE NEW BARRACKS ON THE NEILGHERRY HILLS.

In running up to Clarence-yard the crews of the men-of-war manned yards and vociferously cheered her Majesty, as did also those of the boats of the ships in commission and the coast guard, which lined both sides of Clarence Creek.

The Royal standard, indicating her Majesty's arrival, was hoisted at Clarence-yard at eleven o'clock, where her Majesty was received by the Naval Commander-in-Chief, Admiral Sir Thomas Briggs, G.C.M.G.; the Lieutenant-Governor, Major-General Simpson; Admiral Superintendent of Portsmouth Dockyard Prescott, C.B.; Captain Superintendent of Clarence-yard W. H. Johnstone; the commanding officer of the 85th Regiment (which furnished the guard of honour); Captain Lord Adolphus Fitzclarence, G.C.H.; the flag and staff officers of the port and garrison; and John Davies, Esq., Master-Attendant of Clarence-yard. The band of the 85th Regiment was in attendance, and played the National Anthem on her Majesty's landing, the guard of honour presenting arms. The guard was commanded by Major Blackburn, Captain Ward, Lieutenant Ward, Lieutenant and Adjutant Thompson, and Ensign Blosse.

Her Majesty immediately proceeded to the Royal train in waiting, and at 11 15 started on her journey *viâ* Basingstoke and Reading. The Earl of Malmesbury, Secretary for Foreign Affairs, who is the Secretary of State appointed to be in attendance on her Majesty on the present occasion, joined the Royal train at Bishopstoke. At Basingstoke the Court changed carriages for the Great Western line to Reading, for Gloucester.

ARRIVAL AT SWINDON.

The Royal train arrived at Swindon at 1.44 P.M., when her Majesty, his Royal Highness Prince Albert, and the Royal children, together with her Majesty's suite, alighted and proceeded to take refreshment.

The station (see Illustration) was very handsomely decorated with evergreens and flowering plants, chiefly contributed by Viscountess Barrington, from the adjoining family seat, Beckett House. The workmen in the employ of the company were out in great numbers, and contributed to the general display.

After the delay of about half an hour the train again proceeded, passing through the romantic scenery of the Stroud Valley to Gloucester, where it arrived punctually at a quarter-past three o'clock.

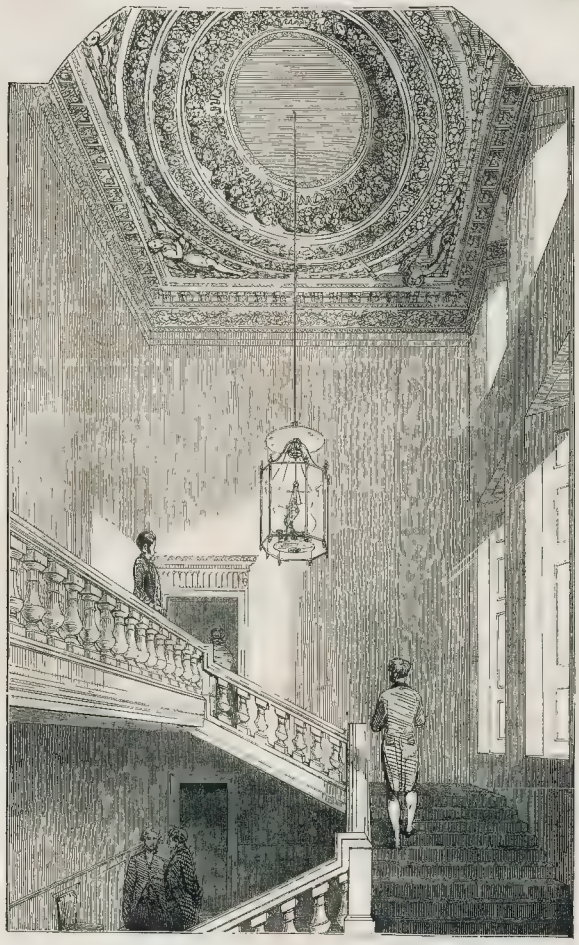
At all the stations along the Royal route crowds of spectators had assembled to give a cheer and a passing tribute of welcome to her Majesty. "The valley of Stroud," through which the line of railway passes from Swindon to Gloucester, is well known to travellers and tourists as presenting a continuous series of lovely landscapes. The valley is almost in the character of a mountain gorge, with a brawling stream in the bottom which partially furnishes the motive power for the numerous cloth and fulling mills of the district; the quality of the water, too, being peculiarly adapted for dyeing purposes.

At Gloucester the day was observed as a general holiday: the railway station was gaily decorated with flags, evergreens, and flowers, and as the Royal train entered the station, a military band which was drawn up on the platform played the National Anthem. Here the Royal *cortège* made a stay of about a quarter of an hour, during which the Mayor, in the name of the Corporation of Gloucester; and the Bishop of Gloucester and Bristol, in the name of the clergy of the diocese, had the honour of presenting two loyal and dutiful addresses to her Majesty. At half-past three o'clock the Royal party took their departure on the Midland Railway for Birmingham. No stop was made until the arrival of the train at Bromsgrove, where grand preparations were made for the reception of the Queen. The station and buildings were almost hidden with a profusion of flowers, flags, and evergreens. The Queen's Own Worcestershire Yeomanry Cavalry, under the command of Colonel the Hon. E. H. Clive, were in attendance; and a park of artillery fired on her Majesty's approach. The arrival platform was set apart for the reception of Colonel Clive, Lady Harriet Clive, and other members of the Clive family; the Right Hon. Sir John Pakington and Lady Pakington; and other distinguished members of the noble and commoners' families. On the train stopping for water, and for the purpose of having a second engine attached to draw the train up the Lickey incline—a steep gradient, 1 in 37—Lady Harriet Clive advanced, and presented bouquets of flowers and some beautiful fruit for the Royal children, which was graciously accepted.

The departure from Bromsgrove took place at twenty-two minutes past four, and the Royal train entered the London and North-Western station at Birmingham at a few minutes before five o'clock. Here were drawn up to receive her many hundreds of the principal inhabitants, the members of the corporation occupying the most central position; in the background was stationed a detachment of the Scots Greys; and flanking the Royal train in the opposite direction was a corps of the borough police. The entire length of the platform was covered with scarlet cloth. On it, to receive the Sovereign, were the Mayor (Henry Smith, Esq.); the Recorder, M. D. Hill, Esq., Q.C.; Colonel Reid, the commandant of the district; Captain Wynyard, of the Scots Greys; Mr. Newdegate, M.P.; Mr. Scholefield, M.P.; Mr. Spooner, M.P.; Admiral Moorsom; the Hon. and Rev. Grantham Yorke, the rural dean; J. F. Ledsam, Esq., a director of the London and North-Western Railway; Aldermen Lacy and Marineau; beyond the barrier was nearly every member of the town council. A crowd of ladies in full dress gave to the scene a very brilliant appearance.

As the Royal train drove in, the bands struck up the National Anthem, and the company, uncovered, cheered the Sovereign heartily. Lord Malmesbury immediately stepped from the carriage, and the Mayor advancing, his Lordship presented his Worship to her Majesty, who rose and graciously bowed. His Worship then presented a dutiful address, which her Majesty graciously accepted.

After a stay of a few minutes, the Royal train again moved off *en route* for Derby, amidst the cheers of the crowded assemblage at the station. At Derby her Majesty passed the night in the Midland Hotel, where a suite of rooms were superbly fitted up for the accommodation of the Royal party. The arrival at Derby took place shortly after six o'clock. More than usual care was taken in the decoration of the railway station, not less than 1000 jets of gas being lighted on the occasion, together with the initial letters "V. R." over the door of the station. The seats on the platform were covered with crimson cloth, and the pavement with rich carpeting. Crowds of elegantly-dressed ladies and



THE GRAND STAIRCASE AT HOLYROOD PALACE.—(SEE NEXT PAGE.)

OPENING OF THE WEST CORNWALL RAILWAY.—THE PENZANCE STATION.—(SEE NEXT PAGE.)

gentlemen thronged the station, amongst whom were the Duke of Devonshire, the Lord-Lieutenant of the County, General Arbuthnot &c.; a guard of honour, composed of two companies of the 77th Regiment, being also in attendance with their band, together with a troop of the 8th Hussars, several troops of yeomanry, a company of enrolled pensioners, and the militia staff of the county. Immediately on the train stopping, the Mayor was presented to the Queen by Lord Malmesbury, and she received the address very graciously, bowing repeatedly to the mayor. The Duke of Devonshire was recognised by a cheerful cheer and a most graceful reception, and the Royal pair appeared highly delighted with their reception. On her Majesty making her appearance at the front of the station, she was received with a volley of cheers from the populace outside the barriers, and was similarly greeted on alighting at the Midland Hotel—the band playing the National Anthem. The scene was altogether an exciting one, and apparently pleased both Queen and people.

In the evening Derby was right loyally joyous. The clashing of bells —the sound of music—gay parties promenading the streets—the waving of innumerable banners—greeted the eye and ear at every turn.

The Royal party dined at the Midland Hotel; the Duke of Devonshire and General Arbuthnot had the honour of joining the dinner party.

On Tuesday morning Her Majesty left Derby at nine o'clock, and arrived at York at a quarter past eleven A.M., where, during a stay of a few minutes, some of the directors of the York and North Midland Railway, and of the York, Newcastle, and Berwick Railway paid their respects to her Majesty. The Royal train reached Darlington soon after eleven o'clock, and at a quarter past twelve, where the usual loyal reception was given to the Sovereign, by the assembled population, the local authorities, &c. A basket of fruit from the gardens of the Duke of Northumberland, at Stanwick Park, and a beautiful bouquet from the Grange Nursery Gardens of Mr. Harrison, were presented to her Majesty. The Royal *cortège* arrived at Newcastle at half-past one o'clock, where the Royal party partook of luncheon; and after a short stay, during which her Majesty obtained a most enthusiastic reception, again proceeded northwards, arriving at Edinburgh at a few minutes past five o'clock.

Her Majesty alighted at St. Margaret's temporary station, which is about a mile out of the Edinburgh and Glasgow Railway proceeded in one of the Royal carriages, drawn by four horses, by the Queen's Drive to Holyrood Palace. Her Majesty was received upon the platform, on alighting, by the Sheriff of Edinburgh; Major-General Napier, commanding the troops; and the other civil and military authorities.

For some time after her Majesty had entered Holyrood, a great crowd remained in the neighbourhood, in the expectation that the Queen and Prince Albert would drive out, as they had done last year. Their expectations were partially gratified; in about half an hour Prince Albert, with the Prince of Wales and Prince Alfred, drove through the town, preceded by Mr. List, of the county police. They went along the Regent-road, up the North Bridge, the High-street, the Dean Bridge, Moray-place, George-street, Princes-street, and so back by the Regent-road to the Palace again, thus obtaining a view both of the old and new town, its most picturesque and its most modern buildings. Among the objects of interest which attracted his Royal Highness's attention was the equestrian statute of the Duke of Wellington, by Mr. Steele, the sculptor, lately erected in front of the Register-office; and at this point his Royal Highness remained for some little time.

During his Royal Highness's drive the Queen and the Princesses walked in the garden attached to the Palace, known as Queen Mary's garden.

In the course of the evening Major-General Napier was honoured with an interview with her Majesty.

On Wednesday morning, at eight o'clock her Majesty left Holyrood, and entered the train at St. Margaret's station, on her way north. The road through the park was lined, as before, with the Highlanders and Dragoons. But the morning was wet, and the early hour prevented any great crowd from being present on the occasion.

Soon after eight o'clock all was ready, and the train started for the north, by way of Stirling. The Royal party arrived at Cupar Angus at ten minutes past 11 o'clock, where they partook of some refreshment in the station. They then took carriages, and proceeded by the Spittal of Glenshee, where luncheon was served, to Balmoral, which they reached at seven o'clock in the evening.

THE GRAND STAIRCASE, HOLYROOD PALACE.

THIS Staircase is not a portion of the *old* building at Holyrood, the ceiling being of the same character with those in the State apartments occupied by her Majesty, and which we illustrated in our Journal of October 12, 1850.

The ceiling is deeply panelled in circles, with heavy festoons of flowers in the sunken panels, and rich floral borders around them. In the spandrils are figures of Fame, Peace, War, and Sovereignty, extremely well modelled, and the whole of the decorations of the ceiling and the frieze on the wall are wrought in stucco, and, as they all differ in the minutiæ of the designs. These, like the ceilings in the state rooms, were executed by travelling workmen, who certainly deserve credit for their manipulative skill, though in some points their taste is somewhat doubtful.

The walls of the staircase are now quite plain; probably it was intended that they should be ornamented by the painter's art. The entrance to this staircase is the angle of the quadrangle, and it leads immediately to the throne and other state-rooms.

WEST CORNWALL RAILWAY.

THE portion of this new line of railway between Redruth and Truro or rather, as far as about a mile westward of Truro, having been completed and inspected, and the warrant from the Railway Commissioners obtained for its use for passengers and traffic, the portion of the Truro-road station to Penzance, was formally opened on Wednesday, the 24th ult., amidst great public rejoicing. Penzance abounded with arches of evergreens, intermingled with flowers and with appropriate devices. Numerous bands of music were in attendance, and those of the Benefit Societies attended with their banners and emblems. About noon, the *cortège* started, and were joined by the corporate body, preceded by their serjeants at mace and constables, and attended by the borough justices, county magistrates, and the town and neighbourhood, to the number of 2000 of inhabitants. The whole body moved on to the railway station, and there awaited the arrival of the twelve o'clock train from Truro; the bands playing appropriate airs.

At half-past eight in the morning, a special train left Penzance, with R. Pearce, Esq. (Mayor of the borough), R. V. Davy, Esq., and others of the local directors and shareholders and friends, from Truro; where they met the chairman of the board, H. O. Wills, Esq., of Bristol, and other directors, and proceeded forward, and joined a board meeting; and at 12 o'clock they proceeded in carriages to the Truro-road terminus, whence they started for Penzance at about a quarter past twelve; and notwithstanding a delay of nearly an hour at Cambourne, waiting the arrival of upwards of three trains, they arrived at the Penzance terminus in less than two hours and ten minutes—the distance from Cambourne to Penzance, nearly fourteen miles, being run in twenty minutes. From Cambourne westward there were triumphant arches and other festive decorations at various points on the line; and the station and the streets of Penzance seemed a mass of flags and evergreens. On the arrival of the train, it was saluted by the *Sylvia* revenue cutter, Captain Stewart; the vessel being dressed in colours. A procession, headed by the mayor, was then formed, and was accompanied by music and flags, and joined by the Freemasons and Odd Fellows, in their handsome costumes. On their arrival at the Guildhall, an address was presented to the chairman and directors of the West Cornwall Railway, and he then addressed the assembly upon the event of the day; and Mr. Wills, the chairman of the board, having replied, loud cheers were given for the directors, and the meeting broke up.

The event was celebrated by a dinner to the labourers, on the Western Green; and by a banquet given by the mayor to nearly 120 gentlemen, at Ball's Hotel. Other dinners took place at the hotels and inns; and illuminations, balloons, and fireworks terminated the fest.vities.

The new line of railway thus auspiciously opened is nearly eight miles and a half long from the Truro-road Station (which is about a mile from the town of Truro) to the Redruth Station; and near.y nine miles to the point west of Redruth, where it joins to the line that was opened to the public in March last, from Redruth and Penzance The line from Truro to Redruth runs almost throughout low cuttings and on shallow embankments. There are four wooden viaducts. One at Penwethers, about half a mile from the Truro-road station—about 350 feet long and 40 feet h gh: one at Backwater, 300 feet long and 44 feet high. The fourth is west of the Redruth Station and crosses Penryn-street; it is 300 feet long and 62 feet high; and affords an excellent bird's eye view of Redruth town and neighbourhood.

ART-UNION PRIZES.

THE pictures selected by prizeholders in the Art-Union Society for the present year have been on view during the present week at the Rooms of the Society of British Artists in Suffolk-street. They are 144 in number, and have been drawn in the following proportions from the Exhibition Galleries of the season:—Royal Academy, 39; British Institution, 10; Society of British Artists, 45; National Institution, 30. Including one water-colour piece; the two Societies of Water Colour Painters, 20. The amount distributed in prizes was £6449, out of a total subscription of £12,903; but in several cases the prize-holders having added to the amount allotted to them, to the extent of about £400, the total amount distributed amongst the artists of the day may be set down at nearly £7000. It was not to be expected that such an amount, apportioned into nearly one hundred and fifty lots, should do much for the promotion of art in its highest departments; it is rather to the multiplication of pictures, than the elevation of art, that encouragement afforded in this way must tend. It remains to be seen whether, eventually, the very extension of a taste for pictorial works amongst the general community may not eventually re-act favourably upon art itself. We think probably it may; but at present we have no evidence of such being the case. The works selected by the prize-holders, with two exceptions, are of the class of landscape or "genre," the former by far preponderating; and by no means comprise the best, even of the average stock of the Exhibitions of the year. The two exceptions in the grand or historical line are Cornelius's picture of "Our Saviour and the Woman of Samaria," from the Royal Academy, which, with many faults, both in composition and colouring, exhibits merit of intention; and H. W. Phillips's "Magdalen," also from the Royal Academy, a production conceived in a grand and severe spirit, and treated with becoming solemnity.

Amongst the rest we note two or three pleasing landscapes by Boddington, 3. W. Allen, H. B. Willis, &c.; two of Harlstone's "Spanish Girl" subjects; Campbell's interesting little picture of "Denise" and O Neill's "Foundling," (which last two have been engraved in this Journal); T. Brooks's sentimental production entitled "The Mother's Dream" (over the death-bed of her child); Danby's "Lake Leman;" Collin's not the less charming picture of "May in the Regents' Park," which we well recollect noticing when on view in the great room in Trafalgar-square; and a remarkably cheap dish of fish (under the title of "A Scene on the River's Bank"), by H. L. Rolfe, purchased by the Mechanics' Institution of Downham-market, for £10

There are also exhibited in the rooms, specimens of the statuettes in bronze, and Parian engravings, &c., which have from time to time been produced as prizes for the members. The subscription, as already stated, was £12,903, being higher than in any previous year since 1847.

NATIONAL SPORTS.

THE Turf Calendar for next week looks well for sport in the provinces; but with the exception of Warwick, which promises bountifully on paper, and is certain to be "up to the mark," we see nothing likely to draw with the cognoscenti. The fixtures stand thus:—Monday —Beadle. Tuesday Warwick and Whitehaven. Wednesday —Newport, Weymouth, and Rochester. Thursday Airdrie. Friday—Weston. Each meeting will last two days.

The only legalities to come off are—the Surrey Canal on Monday, and the Royal Caledonian Club Challenge Cup on Thursday.

The Cricketers will have a busy week of it, no less than ten matches of interest being in the register; they are arranged as follows:—Monday—An All England match at Bradford; Bristol (Eleven) Match at Sheffield; a Match at Kennington Oval; one at Hertford between the city and Hertford Clubs; and Penshurst v. Peckham Rye, Albion Club at Peckham. Tuesday—at Rickmansworth, Clapton, the county of Hertford, Wednesday—Brighton v. Sheffield, at Sheffield, at Rudgersfield. Thursday—the Zingari v. Warwickshire gentlemen; an All Eng and Match at Leeds. Friday—Burton-upon-Trent v. Trentham, at Burton.

TATTERSALL'S.

MONDAY.—Although the business was limited in amount, it touched upon a variety of events, and enabled us to make up a more lengthy quo ation than we have submitted for some time. The following were the latest averages:

	DONCASTER STAKES.	
5 to 1 agst Lady Evelyn	10 to 1 agst Hugo	13 to 1 agst Storyteller
9 to 1 —— Cave.and	12 to 1 —— Administrator	13 to 1 —— Madeline
	CHANGAGER'S STAKES.	
Even The Reiver		3 to 1 agst Viudex
	GREAT YORKSHIRE HANDICAP.	
6 to 1 agst Knight of the Garter	8 to 1 agst The Twin 10 to 1 —— Alp	10 to 1 agst Acorn
	ST. LEGER.	
5 to 2 agst Stockwell	11 to 2 agst Sagacity	20 to 1 agst Longbow
7 to 1 —— Daniel O'Rourke	16 to 1 —— Ugly Customer (1)	20 to 1 —— Lapwing
	CESAREWITCH.	
40 to 1 agst Scarecrow (1)	60 to 1 agst Bellaria (1)	66 to 1 agst Knaresborough (1)
40 to 1 agst Hernandez (1)	50 to 1 agst Tomi 66 to 1 agst Allegro	50 to 1 agst The Bit of Blue
	DERBY AND OAKS.	
	The Reiver	

TUESDAY.—With the exceptions of Daniel O'Rourke being backed for £500 at 3 to 1, and Songstress for £200 a. 6 to 1, nothing took place worthy of notice. Closing prices

	LEAMINGTON STAKES.—14 to 1 agst Storyteller (1)	
	CHAMPAGN STAKES (DONCASTER)	
	Even on the Reiver. 20 to 1 against his winning this and the Derby.	
	GREAT YORKSHIRE HANDICAP. 8 to 1 agst Knight of the Garter.	
	ST LEGER.	
9 to 4 agst Stockwell	3 to 1 agst Daniel O'Rourke (1 to 1 to 1 agst Songstress (1 to 1 to 1 agst Songstress (1 to 1 to 1 agst Songstress

EPITOME OF NEWS.—FOREIGN AND DOMESTIC.

From Ecuador we have accounts to the 28th of July. Flores had been completely defeated in consequence of the steamer *Chili* having gone over to the enemy with a very considerable part of his forces. Having been thus betrayed, Genaro Flores was compelled to cut his way through the enemy with the remnant of his force, and, with great difficulty, reached Tombez, in the territory of Peru.

A French, a Spanish, and a German newspaper have lately been established in San Francisco (California).

Advices from Jamaica to the 28th July state that the smallpox still remained on the island, though it did not appear to increase in virulence. Labour was growing scarcer every month, and great despondency was felt. The disposition to emigrate to Australia still remained, though it no longer spreads with the rapidity it commenced with.

A hurricane passed over part of Minesota, United States, on the 15th of July, the heaviest ever experienced. Several buildings were blown down, and others unroofed.

The crops of both cotton and corn in Mississippi (United States) are promising a very abundant yield. The cotton-worm has commenced its ravages in some parts of South Carolina.

Mrs. General Taylor, relict of the late President of the United States, died at last Pascagoula on the 14th ult.

A report had, on the 17th ult., reached New York of the loss of the clipper ship *Staffordshire*, late one of the packet ships between Liverpool and Boston, near Tu cannano. The account was, however, discredited. She was bound from Boston to San Francisco, and had upwards of 160 passengers on board.

The United States Magnetic Telegraph Company, whose line extends from Washington to New York, during the year ending on the 1st of last July transmitted over their wires 253,857 messages, the tolls received on which amounted to 103,232 dollars 37 cents.

On Sunday morning William Staines, a little boy aged eighteen months, at Ridley-place, Westminster, pulled over some boiling coffee upon himself, which so severely scalded him that his flesh came off with his clothes. Little hopes are entertained of his recovery.

The *Johnstone* arrived on Monday at Falmouth, with 11,100 ounces of gold from Sydney, worth £44,000.

The quantity of tea delivered last week from the London warehouses increased, compared with the previous week, being 628,850 lb.

On Saturday morning, at a very early hour, the premises of Messrs. Le Blond and Co., copper-plate engravers and printers, and illuminated blackcard manufacturers, 24, Snow-grove, Watling-street, were discovered to be on fire, and, before the Fire Brigade could be summoned, the whole of the contents, destroyed by a fire which, from some cause unknown, broke out in a portion of the building.

The *State Gazette* of Wurtemberg, of the 24th, publishes a telegraphic despatch received at Stuttgard, stating that on the morning of that day a violent earthquake was experienced at Ercleezim, near Biberach, which completely destroyed the church and several houses.

The *Johnstone* arrived on Monday at Falmouth, with 11,100 ounces of gold from Sydney, worth £44,000.

Dr. Erb, professor of astronomy in the University of Heidelberg, has obtained a grant of ground from the corporation of Bamberg, in Bavaria, on which he will proceed to erect a high tower to contain an electric clock, time-ball, and other apparatus, by which the clocks of all the railroads in Germany will be regulated.

The shell-fish season, which is now drawing to a close, has been rather an unfavorable one, as far as the Hampton trade is concerned. Great numbers of crabs, obsters, and craw fish, on their way to Hamble, in Hants, died on board the vessels that were conveying them, owing to the heat and stagnancy of the water on board.

It is estimated that four millions of roses are annually sold in the Parisian markets, independently of what are furnished for official and private *fêtes*.

The last representative of a name celebrated in the annals of 1793, M. Isidore Justin de Robespierre, died in June last at Santiago de Chili, where he had been established nearly sixty years.

A few days since, Mr. Roper, of the George Hotel, Ross, Herefordshire, discovered a mouse killed in his cellar, under the following novel circumstances. The little depredator in question had been gnawing through the cork string of some ale bottles, when the cork must instantly have blown out, hurling the mouse to a considerable distance, and producing immediate death.

Thirty-seven bales of Australian cashmere wool were landed last week at the Southampton Docks, from Havre.

The King of Bohemia had half-a-score splendid horses and a sound foal—all of coaching breed—shipped a few evenings ago from the Paragon stables, and despatched in the *Victoria* steam-ship, from Hull and Hamburgh. They were selected in Yorkshire and neighbouring counties, by the Comte Alexandre Jeanlieu Walworth, master of the horse to his Majesty.

Last week a man, who gave the name of John Murphy, supposed to be an American, underwent an examination at one of the police offices in Dublin, and was remanded on a charge of procuring to be forged bank notes of the State Bank at Hartford, in the State of Connecticut, U.S.

The Cork Exhibition is to be kept open till the 11th of September, when it finally closes.

Thirty-six Irish members have sent in their adhesion to the tenant-right conference, to be held in Dub in on the 8th of next month, with a promise to attend the same.

Among the robberies reported last week in Liverpool was the theft of a parish coffin, worth 2s., which is supposed to have been stolen for firewood.

On Saturday night last, a train which had come to a stand still in the Blackheath tunnel, on the North Kent Railway (in consequence of the engine having insufficient steam to work proper fresh), was run into by a pilot engine, and the passengers much shaken and bruised.

A milliner, twenty-two years of age, deliberately committed suicide, a short time ago, by throwing herself into the Niagara river, just above the Cataract. Her body was ultimately secured by a sturgeon spear, and brought to shore.

On Monday evening, the veteran aëronaut, Green, ascended from Vauxhall Gardens, accompanied by a military band, which played some beautiful music as the machine ascended into the upper regions of the air.

Labourers for harvest work are now receiving 3s. a day in many parts of Ireland, so scarce is the number of hands to be employed.

John Oliver Hanson, Esq., is the gentleman recommended by the Court of Directors of the Bank of England to fill the vacancy in the direction occasioned by the decease of Sir John Henry Pelly, Bart.

According to a return in the *Montreal Gazette*, the total number of houses burnt in the city of Montreal on the 8th and 9th of July was 1108; of families reported of their habitations, 9385; of the assessed value of the property destroyed, £20,449; of the estimated value of such property, £340,816.

While John Bentley, a mason, was on Tuesday evening working in the area of 21, Russell-square, a lock plane fell from a carpenter's hand upon his head, fracturing the skull and inflicting such injuries that he is now lying in the University College Hospital, without hopes of his recovery.

Mr. Saunders, landlord of the Leopard, Graysmore-street, Bristol, during a recent visit to London, purchased a few shillings' worth of a broker's shop, an old painting of "Diana and her Nymphs," which the most experienced connoisseurs pronounce to be one of Vandyke's best productions, and as such worth several thousand pounds sterling.

On the 6th ult. a fire broke out in the Austrian village of Metzlen, near Sternamanger, which destroyed 117 houses and the church.

On Sunday, as Mr. Lemon Marcus, aged fifty-two, an extensive merchant was ascending Haverstock-Hill, accompanied by his son and daughter, he became suddenly faint, and was conveyed to the Railway Inn, Haverstock-Hill, where he swooned away and died in a few minutes. The cause of death was constriction of the heart.

Susanna Toffs, wife of a vendor of fish in the Whitechapel-road, commonly called "Mackerel Bill," was choked by a piece of cooked sweetbread, weighing three-quarters of an ounce, which, being only half masticated, stuck in her throat and occasioned suffocation. The poor woman was ravenously hungry at the time she endeavoured to swallow the meal.

The French papers on Wednesday (last week) mention the arrest by the police of an engineer of the Northern Railway, having committed extensive frauds, amounting, it is calculated, to upwards of 100,000 f., on the construction of his part of the line. This man was specially charged to purchase the forwarding of spirits to foreign countries.

CHESS.

TO CORRESPONDENTS.

STUDENT.—Problems wherein the mate is to be effected in *two* moves cannot be made very difficult. The following are as good as any of the kind we know: *White*: K at K Kt 6th, Q at K 4th and at K 8th and Q R sq. *Black*: K at Q R sq and Q R 3d. P at Q Kt 2. White to mate in two moves. This is by the same versatile composer of Life.—The mate is by Paul Loquin. *White*: K at K B 4th, Q at Q B 8d, Kt at Q B 5th. *Black*: K at Q 5th. White to mate in two moves.—The third by Mr. Brede. *White*: K at K B 2d, Q at K B 5th, B at K B sq, and Kt at K B 6th. *Black*: K at Q 5th, P at Q B 3d. White to play and mate in two moves.

B W F—The case can be easily solved in *two* moves, by—1 B to Q Kt 5th; 2. B or Q mates accordingly.

C M—The Problem is "correct, but very easy."

JASON—I fear problems have latterly been so difficult that hardly one in ten of the solutions forwarded to us prove correct. S. S. A. M.—A no England man. We quite agree with you, that as a composer of Chess problems, he fills fair to become rather eccentric.

G. A., Manchester.—Your solution of the celebrated "Indian Problem," on the wrapper of the *Chess-Players' Chronicle*, is right.

R. D. M.—Your letter, with solutions of the problems which appeared a month ago, has only just reached us. As you must long ere this have seen our solutions, it is needless to say they are correct.

CHRONY.—The Hindu origin of Chess is not so indisputable as you appear to think. For the learned and exceedingly interesting paper recently published in the journal of the Royal Asiatic Society, by Sadhanal Blood, Esq., entitled "Persian Chess, Illustrated from Oriental sources, especially in reference to the Great Chess, improperly ascribed to Timur; and in Vindication of the Persian origin of the Game, against the claims of the Hindus."

J. F. K. of Stuttgard.—Can be sent to be moved by L. Kt to Q 8th, in four moves.

GAMBIT.—We will give our opinion upon your defence in our next. It reached us too late for examination this week.

SOLUTIONS OF PROBLEM, No 447, by A Z, Omega, Sussex, Jedy, are correct.

SOLUTIONS OF PROBLEM, No 448, by Arden, Philip, Rodger, Sussex, C B, Andrew, J M, of Aberbonne, Jedy, are correct.

SOLUTIONS OF ENIGMAS by Dawson, Alpha, L S D, M P, Rev J T, Rev H S, Jedy, are correct; all others are wrong

SOLUTION OF PROBLEM NO. 447.

WHITE.	BLACK.	WHITE.	BLACK.
1. Q to Q R 5th	Q Kt takes Kt (best)	3. Q to K Kt 5th (ch) R takes Q	
2. Q to K 8th	K Kt to Q 2d	4. P to Q 4th—Mate	

SOLUTION OF PROBLEM NO. 448.

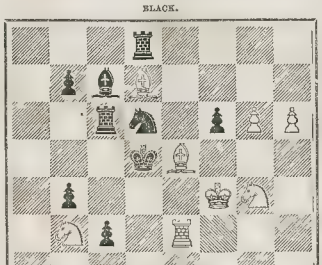
WHITE.	BLACK.	WHITE.	BLACK.
1. Kt takes R (ch)	R takes Kt	4. P takes Kt (ch)	K takes P
2. Q to K Kt 8th	R to K 4th (ch) (a)	5. Q takes R—Mate	
3. K to B 6th	Kt to K 5th (ch)		

(a) Black may play instead 2. Q to Q B sq, or 2. P to Q 3 4th, but the mate is equally forced in the same number of moves.

PROBLEM No. 449.

By E. A. M., of India.

BLACK.



WHITE.

White, playing first, is to mate in six moves.

CHESS IN RUSSIA.

Brilliant little "Allgaier" between the elder Prince OBROUSSOFF and Mr. BURN, of Moscow.

(*Allgaier Gambit.*)

WHITE (The Prince O.)	BLACK (Mr. B.)	WHITE (The Prince O.)	BLACK (Mr B.)
1. P to K 4th	P to K 4th	10. B to K 2d	Kt to K Kt 3d
2. P to K B 4th	P takes P	11. B takes K Kt P (b)	Kt takes Q B P
3. Kt to K B 3d	P to K Kt 4th	12. Castles	Q takes K P
4. P to K Kt 5th	P to K Kt 5th	13. R takes Kt (ch)	K to Kt 2d
5. Kt to K Kt 5th	P to Q 4th	14. Q to K B 3d (c)	Q to K 5th (ch)
6. P to Q 4th	P to K R 3d	15. K to R 2d	Q to K 8th (ch)
7. K takes K B P	K takes Kt	16. B to K 3d	Q to h 3d
8. Q B takes P	Q B to K 3d	17. K to K B 6th (d)	
9. P to K 5th	K Kt to K 2d (a)	And Black abandoned the game.	

(a) Black has a place more than his adversary, but his position is not an enviable one, on account of his chief men being so locked up.

(b) Well played, and, indeed, are all the subsequent moves of this dashing assault.

(c) All this is in the best style.

(d) A coup de maître. If Mr B sth takes the Bishop, the Queen gives check at K Kt 3d; by the Rook Queens was to resign with, he saith could have.

CHESS IN VIENNA.

Well-played *partie* in the Match won by Mr. Löwenthal of Mr. Hampe.

(*The Q's Kt's Opening.*)

BLACK (Mr. H.)	WHITE (Mr. L.)	BLACK (Mr. H.)	WHITE (Mr. L.)
1. P to K 4th	P to K 4th	16. P takes P	Kt takes B (dis.)
2. Kt to Q B 3d (a)	Kt to K B 3d (b)	17. P takes Kt	P takes P
3. B to Q B 4th	B to Q B 4th	18. P to Q B 3d	R to K Kt 2d
4. P to Q 3d	P to Q 3d	19. P to Q 4th	B to Q Kt 3d
5. B to K Kt 5th	B to K 3d	20. P to Q K 4th	P to Q K 4th
6. Kt to Q 5th	B takes Kt	21. K to Q 2d (e)	Kt to K B 3d
7. B takes B	P to Q B 3d	22. K R to K sq	R to K R 2d (ch)
8. B to Q Kt 3d	Q Kt to Q 2d	23. K to Kt sq	R takes R (dis.)
9. Kt to K 3 3d	Castles	24. K takes R	Kt takes P
10. Castles	P to K R 2d	25. Q to K sq	P to K B 4th
11. B to K R 4th	P to K Kt 4th (c)	26. P to h 3d 4th	Q to K R 2d (ch)
12. B to K Kt 3d	Q to K 2d	27. K to Kt sq	P takes Q P
13. K to R sq	a to R sq	28. K takes Q P	P to Q B 4th
14. P to K R 4th	Kt to K R 4th	29. P takes K B P	P takes Kt
15. Q to her 2d (d)	K K to K Kt sq	30. Q takes h	P to Q 6th (ch)
		And White mates next move.	

(a) For information regarding this unusual opening the reader may consult Jaenisch. "Aus yes Nouveau," p. 80, and Allgaier's "Handbuch," p. 306 (1850).

(b) Kt is considered the best move, but the second player may safely move his K B to Q B 4th, or, if he wish a lively game, can adopt the Scotch gambit. P to K 4 4th.

(c) We rarely like the advance of this pawn so early in the game.

(d) At first sight it appears as if Black could now sacrifice his Kt, and get a winning attack, but on carefully looking through the variations, we believe that White can escape. For suppose—

BLACK.	WHITE.	BLACK.	WHITE.
15. Kt takes R	Kt takes d (ch)	17. Q to K 3d (ch)	K to K 2d
16. P takes d	P takes Kt		

And we cannot see how Black, owing to the peculiar situation of his King, can ever maintain the attack.

(e) This appears to us utterly useless, and worse.

CHESS ENIGMAS.

No. 759.—By E. B. C., of Princeton.

White. K at Q R sq, Q at K Kt 2d, R at K 3d, Kt's at K B 4th, and Q's 6th.
Black: K at Q 5th.

White to play, and mate in three moves.

No. 760.—By E. M. H., of Hull.

White: K at K B sq, R at K Kt 6th, B at Q K 5th, Kt at Q 6th; P's at K B 3d and 4th, Q B 3d, and Q Kt 4th.
Black: K at K B 8th, Q at Q B 3d; P's at K R 7th, K Kt 3d, K B 4th, Q B 2d and 5th, and Q Kt 3d.

White to play, and mate in four moves.

During the past week, Mr. John Pengelley, master of a scan-boat belonging to the port We have received Henry Pengelley, assisted by an active crew, succeeded in taking the enormous quantity of 480 hogsheads of pilchards in one haul. This is the largest taking known for the last forty years.

OBITUARY OF EMINENT PERSONS RECENTLY DECEASED.

THE EARL OF FALMOUTH.

GEORGE HENRY BOSCAWEN, second Earl of Falmouth, Viscount Falmouth, and Baron of Boscawen-Rose, in the county of Cornwall, in the peerage of the United Kingdom, Hugh Steward of Wallingford, was only son of Edward, the first Earl, and fourth Viscount, and was born on the 8th July 1811. He was educated at Eton, and graduated at Christ Church, Oxford, where he was first-class in classics in 1832. Prior to succeeding to his father, he was for a short time a member of the House of Commons, having been returned for the eastern division of the county of Cornwall, in July, 1841; but his father dying in December, the same year, he inherited the Earldom and other family honours. George, second Earl of Falmouth, was a man of acknowledged taste, a lover of the fine arts, and a distinguished amateur musician. He died on the 26th ult., after a short but painful illness, at his residence, in St. James's-square. His premature demise has caused general regret. His Earldom becomes extinct by his death, but he is succeeded in his Viscountcy and Barony by his first cousin, Evelyn, eldest son of the late Hon. and Rev. John Evelyn Boscawen, Prebendary of Canterbury, as sixth Viscount. This nobleman was born the 8th March, 1819, and married in 1848, Mary Frances Elizabeth, present Baroness Le Despencer, and has issue.

ARCHDEACON BRYMER.

THE Ven. Archdeacon Brymer died on the 19th ult. at Charlton Mackrell, at the age of fifty-five. The formation of the diocesan boards, about sixteen years ago, first brought this distinguished and amiable clergyman into public notice, when he gave to those societies the benefit of his great energy and influence. He had, however, been previously known as a staunch and wealthy supporter of Church institutions. The Archdeaconry of Bath was bestowed upon him by the Right Rev. Dr Law, the late Bishop of the diocese, on the resignation of Dr. Moysey. About the same time Mr. Brymer was presented by the Dean and Chapter to a Canonry in Wells Cathedral.

On the Bishop of Salisbury being appointed to perform the duties of the diocese of Bath, in consequence of the illness of Dr. Law, the late diocesan, Archdeacon Brymer undertook the responsible office of superintending general affairs as the "Spiritual Person" under the Bishop. Possessed of a large fortune, Archdeacon Brymer was a liberal contributor, not only to the diocesan societies and local institutions, but his name was often to be found in London charitable lists for more extended objects. His private benevolence was also very great.

The funeral of the deceased Archdeacon took place on the 25th ultimo, at Charlton Mackrell. The church bells of the city of Bath tolled mournfully during the morning, and many of the shops were partially closed.

MAJOR HUGH MONTGOMERY.

MAJOR HUGH MONTGOMERY, of the Madras Horse Artillery—a praiseworthy and able officer—held the appointment of one of the Commissioners for the affairs of Mysore. On the outbreaking out of the war in Burmah, he volunteered to join the army there; and he commanded a wing of the artillery at the siege of Rangoon. He was suddenly attacked with fever, and went to Calcutta, where, on the 4th of June, he died, thus closing prematurely a career which promised to be as honourable to himself as beneficial to his country. Major Montgomery was born on March 13, 1809. He was the third son of the late Sir Henry Cunningham Montgomery, Bart., of the Hall, in the county of Donegal, and brother to Sir Henry Cunningham Montgomery, the present Baronet, Secretary to the Government of Madras. The officers of the Madras Artillery have adopted measures for erecting a testimonial of respect to the late Major Montgomery, as well as to the recently deceased Major Oakes, whom they deplore as two of the ablest soldiers of their corps.

M. DE WAECHTER.

M. DE WAECHTER, the senior portrait painter of Germany, a member of the Royal Institution of Stuttgard, has just died in that place, aged 80. He was originally a pupil of the French painter David, and afterwards studied at Rome. He resided for many years at Vienna, where he was distinguished as an historical painter. When he finally came to pass the decline of his life at Stutgard, Frederick I. made him Conservator of the Royal Cabinet of Engravings, and Professor at the Beaux-Arts, which appointments he retained till his demise.

WILLS.

The will of the late Right Hon. William Edwardes, Baron Kensington, in the peerage of Ireland, late residing at Kensington-crescent, who died on the 19th ult., has just been proved in London; it was made in May last, by which he subjects the manor of Kensington, and his estates in the several counties of Middlesex, Pembroke, Carmarthen, Cardigan, and Radnor, and in the city of London or elsewhere, with the payment of the legacies and annuitants, which are chiefly among his own family and kindred, £500 to his executor, and £100 a year to an old servant.

The will of the late Sir John Henry Pelly, Bart., of Upton, Essex, has been proved by his son, Sir John Henry Pelly, Bart., the sole executor, the personalty having been valued at £30,000. The will bears date 20th January, 1846, devising the estates in Norway amongst his seven younger sons, charged with £,500 a year for his lady, and a his interest in all other estates, real and personal, the present Baronet being left residuary legatee.

Last Sunday morning, as Mr. John Pollard, of Leighton-terrace, in Lenca shire, was strolling on the shore at Backpool, he was surprised to me t with a strange fish, which had been left on the beach by the receding tide. He went towards it, when it made an attempt to fly at him. He then called to some persons near him for assistance, and soon after was captured the monster. It was found to be a flying fish, with four wings and two feet, and measured 34 inches in length and 27 inches in breadth. Mr. Duke, of the New Inn, intends to have it preserved.

A singular capture was a few days ago effected by Mr. William Sprout, of Ambleside, in Lake Windermere. On the previous evening he had set a night line in the lake, for the purpose of catching pike, and on going early in the morning to bag his shiny game, he was not a little astonished to find a fine cormorant, or scarf, fast to one of the hooks, it having dived down in pursuit of water, and swallowed one of the small fish with which the hook was baited. The bird is now stuffed, and exhibited at the Salutation Inn, Ambleside with the mode of its curious capture appended.

FOREIGNERS IN CALIFORNIA.—By the latest advices (July 10) from California, we learn that a party of foreigners, principally Mexicans, who had been settled for some time at a place called Mariposita, and had found good diggings, had been expelled by a body of Americans, who erected the right of the foreigners to work them. The foreigners, to the number of 300 or 400, and headed by a few Frenchmen, resolved upon defending their claims, but an opposing force of 200 armed Americans among them, they deemed it prudent to retire, leaving their claims and property in possession of the Americans. Short y after they had retired a meeting was held by the Americans, at which it was resolved to expel all foreigners from the district; and the resolution was immediately carried into effect. One of the expelled, a Mexican, who had been working a claim for five months, and had erected machinery at a cost of 1300 dollars, had to abandon all to save his life.

CURIOUS DISCOVERY.—The police of Paris have made a curious discovery, which will have, it is to be hoped, the effect of checking the London thieves. Some days since, a detective officer received information that a female of suspicious character, residing in the quarter St. Antoine, frequently received bales of various merchandise from England, which she sold at less than half the value. On a search investigation, the policeman ascertained that the woman in question was the general agent in France for the London pickpockets, and that the merchandise so thus disposed of was the fruit of their dexterity, which it was found hazardous to offer for sale in London. A large quantity of English jewellery has been found in her possession. She had been lodged in the prison of the Prefecture of Police.

A vessel of war, with a strong police force, has arrived at Clare Island, off the coast of Mayo, Ireland, once the stronghold of the celebrated Irish pirate, Grace Omalley, for the purpose of the formal possession of the island for the Law Life Insurance Company, whose property it has now become. The precautionary force was deemed necessary, as resistance was expected from the islanders, numbers of whom are, it is said, to be dispossessed, and their cottages taken down.

The French Mediterranean squadron, under the orders of Vice-Admiral La Susse, recently visited the port of Algiers. In a report to the Minister of Marine, it states that the port is already sufficiently spacious to allow of the mooring of nine men-of-war and nine steam-frigates, and that it will afford a sure refuge at all times. He adds, that if certain alterations be made, a larger number of vessels can be moored.

MARBLE STATUE OF HIS ROYAL HIGHNESS PRINCE ALBERT.

MARBLE STATUE OF PRINCE ALBERT.

THIS clever work of art is from the studio of Wolf, at Rome; and is a companion statue to that of the Queen, sculptured by Gibson, also at Rome.

In classic character and delicacy of chiselling this Statue is worthy of its rank as a companion to Gibson's famous work; and, like it, it is slightly touched with delicate lines of colour on the edges of the drapery, and on the sandals. The shield bears on its centre St. George and the Dragon; and near the outer border, are dolphins. The lambrequins bear the devices of the three kingdoms, and on the centre one are the armorial bearings of Saxe-Coburg-Gotha. The whole figure is most exquisitely finished, and does infinite credit to the artistic knowledge and skill of its sculptor.

PARIS FASHIONS FOR SEPTEMBER.

THE *modistes* of Paris appear to have been much disappointed with the Bal de la Halle. Hopes were entertained that brilliant toilets would be worn by the *dames de la halle*—that there would be a display of curious and rich costumes; but the dresses were almost invariably in bad taste, and the *dames de la halle* of the Opéra Comique are described as preferable to those in real life. Little novelty has, therefore, been produced. Summer dress is irretrievably fixed; and autumn has not yet revealed any fresh feature. However, the closing season has brought in the Talma mantelets, with hoods. During the daytime the heat still allows light and airy dress to be worn; but the evenings are chilly, when this hooded mantelet is thrown over the shoulders. It is made of Scotch cashmere, and lined; it is cut round, rather full; and does not reach much beyond the waist. The hood should not reach below the edge of the mantelet; it is the same as the Talma mantelets of last winter, but rather shorter, made of lighter material, but quite as ample; it is trimmed with braid and velvet ribbons, or silk braid and embroidery.

We noticed, a few days ago, a charming ball-dress, quite new, and which may perhaps set the fashion for the approaching season. This dress was made of white taffeta silk, with five flounces, on which is placed a plaid ribbon with white ground, seven centimètres larger; the body (Louis XV.) is edged with a similar ribbon, with bows of which also it is trimmed down the middle, to the point of the body. All the flounces are edged with a white silk fringe, which leaves greater latitude in the choice of the ribbon for trimming the dress. Dresses are also worn of white taffeta silk, with flounces with falling heads, so as to make them large and small; they are also trimmed with slight fringe. The *casaques* or bodies of white drilling (*piqué*) are also much in vogue: they are worn with Scotch popelin petticoats, with Valencias, taffeta silk, barège, and generally of light summer stuffs. This dress, with the Talma mantelet, of which we just spoke, makes a charming toilet for the season for visiting in the country.

Bonnets have undergone no change: vegetable straw, with blonde, net, and crape, are still worn.

THE ILLUSTRATIONS.

MORNING DRESS.—Vegetable straw bonnet, trimmed with crape and a bunch of flowers. Taffeta mantelet, trimmed with lace; the top of the flounce is trimmed with small double frill *à la vieille* (olden fashion), like the sleeves; under-sleeves closed at the wrist. Dress of plaid taffeta, trimmed with large stripes (*Albanaises*), with patterns; which is also repeated at the extremities of the sleeves, and down the front of the body.

EVENING DRESS. Head-dress of lace and flowers, with long lappets falling on the shoulders. Dress, with body *à la Louis XV.*, trimmed with lace similar to that of the cap, as also the under pagoda sleeves. The skirt is composed of two large flounces, sprinkled with small flowers: the edges of the two flounces and the sleeves are trimmed with a large variegated garland of lively-coloured flowers.

Night-cap, with frilled bands of muslin, with knot trimmed with a small frilled flounce; as also the ribbon to fasten round the neck. Caps of lace trimmed with dark-coloured ribbon, violet, or blue, with long ends of ribbon of the same, falling very low, are also worn.

MORNING DRESS.

PARIS FASHIONS FOR SEPTEMBER.—CAPS AND CAZENOU.

Canezou (jacket) of white Nansouk, with mock facings trimmed with small Malines lace, which runs round the waist, closed in front by a single row of fancy buttons of malachite, gold, or diamonds. Half pagoda sleeves, trimmed with three similar buttons, and edged with the same two edges as the body.

A monument to Titian was inaugurated at Venice on the 17th ult. The civic, ecclesiastical, and military authorities were present at the ceremony. The monument represents Titian surrounded by the Fine Arts; below are figures representing the 16th and 19th centuries. The basement is adorned with five bas-reliefs, representing as many celebrated paintings of the great artist. The monument is from the chisel of the brothers Zandomeneghi.

FOUNTAIN AT THE BANK OF ENGLAND.

THIS new Fountain has lately been placed in the beautiful garden-court of the Bank of England; and in its construction, the present active Governor of the establishment, Thomson Hankey, jun., Esq., has shown to the public a new principle which can be advantageously followed in all parts of London; for the column of water which is thrown from a single jet thirty feet high amongst the boughs of the two fine-t lime-trees in London, is part of an extensive system of water-works of great importance to the Bank. An Artesian well has been sunk 330 feet deep, 100 feet of which is in the chalk. This yields an unlimited supply of soft water, quite free from lime, and containing a mere trace of organic matter. The water from this well is pumped into tanks, at the top of the building, which contain 50,000 gallons, at any moment available at any part of the Bank in case of fire, besides being applicable for the general wants of this large establishment. The Fountain is connected with these tanks

FOUNTAIN AT THE BANK OF ENGLAND.

and the water after having been through it, is carried without any waste to the cisterns below the ground-floor of the building-court; consequently, the air is refreshed and cooled at no expense. In this matter, Mr. Hankey's fountain is of great assistance, as it shows that the New River being ninety feet above most parts of London, might throw jets of water from fifty to sixty feet high in fountains placed in different parts of London, and then be used for the supply of cisterns in lower situations. In this way a noble fountain might be placed before St. Paul's, and work perpetually without cost, and the influence which water has in cooling the air, and supplying a proper amount of moisture, cannot, in such a metropolis as London, be too highly valued.

The Fountain is placed on the site of the churchyard of St. Christopher-le-Stock. The last funeral which took place here was that of Jenkins, a Bank clerk, who was 7½ feet in height, and his outer coffin was 8 feet in length: he was permitted to be buried within the walls of the Bank to prevent the possibility of disinterment, on account of his unusual height.

The water is raised to the tanks in the roof by the steam-engine, which is also employed in the printing of the Bank notes and other papers of the establishment.

TROWBRIDGE GRAND HORTICULTURAL AND FLORAL EXHIBITION.

THE third festival of the Trowbridge Horticultural and Floral Society took place on Wednesday, the 25th ult., in a large field contiguous to the railway station, commanding a pleasing view of the new church, and close to the station of the Wilts, Somerset, and Weymouth Railway The doors were opened at two o'clock, when a large number of aristocratic visitors, from Wiltshire and the adjacent counties, honoured the Society by their presence. Foremost among the company were Water Long, Esq., M.P.; T. H. S. Sotheron, Esq., M.P.; James Wilson, Esq., M.P., and family; H. G. G. Ludlow, Esq., and party; Colonel Phipps, Captain Palairet, Captain Winter, Captain Meredith, John Davis, Esq., and

EVENING DRESS.

THE NEW AUSTRALIAN EMIGRANT PACKET-SHIP "BEN NEVIS."

family; John Ravenhill, Esq., Miss Waldron, and party; W. Stancomb, Esq., and party; J. Sinkin, Esq., and party; H. M. Blair, Esq., and party; W. B. Whitmarsh, Esq., the Vice-Presidents, and the Managing Committee. At half-past three, the doors were opened at the second scale of charges, when about two thousand persons, including large numbers from Warminster, Westbury, Bradford, Chippenham, and the neighbourhood, entered the grounds. At five o'clock, the admission fee was reduced to the minimum, when upwards of three thousand of the industrious classes were admitted

The appearance of the ground was very striking. The entrance gate was surmounted by a triumphal arch composed of evergreens, and surmounted by the Royal initials; flags and banners were effectively disposed in various parts of the grounds.

The flowers and plants occupied five tents, which, with others appropriated for refreshments, were dispersed throughout the ground with picturesque effect. Two brass bands were engaged, one of them formed by the sax-horns of the Shapcott family, the other composed of the Trowbridge musical corps; both of them materially contributed to the joyousness of the scene. In the evening the friends of the society dined together, and the proceedings of the day concluded with a brilliant display of fireworks.

The high patronage which this Society enjoys (says the *Bath Chronicle*), the value of the prizes which it offers, and the spirit with which they are thrown open to the competition of all England, has given a foremost place to its exhibitions; and the above meeting was distinguished not less by the extent of the contributions than by the number of the company which it attracted.

In point of excellence the Show was equal to anything of the kind yet witnessed in the west of England. We are compelled, by want of space, to omit the list of prizes.

Amateur and professional culture was not placed in competition. Had such been the case, the former would have borne away the prizes, many of their flowers (some specimens of heath especially, which obtained the first prize), being of remarkable beauty.

EMIGRATION TO AUSTRALIA.—THE "BEN NEVIS" PACKET-SHIP.

A distinguished *littérateur* of the last century, voyaging by one of the passenger ships of that day, characterised it in the bitterness of his discontent as a "dungeon"—with this disadvantage, that you could not possibly get out of it. The wonderful developments of science, in their application to the purposes of social life, are nowhere more visible than in the progress of marine architecture, and in the accommodation now afforded to these whose business or pleasure leads them "to go down to the sea in ships." There is as much difference between a packet-ship of the present time and its counterpart of twenty years ago, as between an elegant modern villa and the rude hut of a peasant. The object seems to have been, by added accommodation, and the perfecting of every arrangement, almost to make passengers forget that they are on shipboard, for it is certain that they may now sail to the Antipodes without missing one of the essential comforts of home.

We have been led into these remarks by the inspection of a noble vessel now lying in the Salthouse Dock at Liverpool, fitting out for the Australian passenger trade. She is called the *Ben Nevis*, and will form one of the White Star line of packets, consigned to Messrs. Filkington and Wilson, of Liverpool. The *Ben Nevis* is of 1420 tons register, and 2000 tons burden, and has capacity for carrying 650 passengers; but the number, we understand, will be restricted to a much less amount, for the greater comfort of the passengers who may engage. She is 180 feet in length, with 38½ feet breadth of beam. Commanding as a frigate in appearance, the *Ben Nevis* is of very handsome model, and she sits upon the water with an ease and grace that afford the happiest augury as to her sailing qualities. Her figure-head is a Highlandman in full costume, and the vessel carries on her stern the Caledonian arms. Colonially built, the *Ben Nevis* is of immense strength, and nothing seems to have been omitted, either in her build or fittings for the safety and convenience of the passengers.

With the exception of a small house in the centre, the upper or spar

TROWBRIDGE HORTICULTURAL AND FLORAL EXHIBITION.

deck presents a beautifully clear run fore and aft, and is especially free from those obstructions at the side of a vessel which often interfere so much with a promenade. The length of the house on deck is 40 feet by 16 feet; and the fire compartment of this which we enter is the cooking galley or caboose. Well protected by metal plating from the possibility of accident by fire, this apartment possesses capacity, according to the standard adopted by the Government emigration officers, to cook for 800 people. In the next compartment to the passengers' caboose, and separated by a bulk-head from the other, is the ship's cooking apparatus, through which, by doors and windows, there will always be circulating a fine current of air. And here we find some ingenious instances of the economy of space for stowage practised on board ship, for, in unconsidered corners of this small room there are pointed out a water-tank, "lookers" for bread, potatoes, coals, and the small stores of the crew, and also a stand for the "harness" cask of beef and pork. Next to the ship's caboose follow offices for the cooks, stewards, and other petty officers; and at the extreme end of the range is a "shop," or very convenient apartment for serving out food to the passengers, where the purser and his assistants have every accommodation.

Further on, and nearer to the stern, a beautiful little room has been fitted up with stained glass windows, as the ship's "hotel." At the stern on each side of the wheel-house, accommodation has been provided as a lounging-place and smoking-room. The vessel is supplied with a fire-engine and force-pump, situated in the forecastle, with a length of leather hose which could be carried to the remotest corner of the ship in case of fire; leaden pipes in connexion with the pump run right round the vessel; and by this means the cisterns, &c., are supplied with water; three pipes rising to the spar-deck from her lower hold, filling the deck cisterns with a full day's supply.

In the main saloon the berths are paneled in gold and white, the floor has a Brussels carpet, and the settees and cushions are covered with silk velvet and rich tapesty; the *coup d'œil* being much heightened by the beautiful stained glass ventilator shafts, which run from the spar-deck even into the hold. In the after saloon, which is beautifully lighted by stern windows of unusual size, the rooms are fitted up, and in this locality the captain will fix his quarters. Owing to her great breadth of beam, the berths on board the *Ben Nevis* are as commodious as those of any ship afloat. The height between decks is about seven feet, and we have now only to notice what forms the chief peculiarity and excellence of the vessel—the perfection of her lighting and ventilation. The between-decks are cheerfully light and airy; and we understand that the Government Emigration Officer has expressed his very high approval of the vessel, especially in those respects.

The *Ben Nevis* will be commanded by Captain Herron, an experienced ship-master, under whose personal superintendence she has been fitted up. She will sail, it is understood, about the 10th of September.

The screw-steam squadron, consisting of the *Arrogant*, 46, Captain Robinson; *Dauntless*, 24, Captain Halstead; *Highflyer*, 21, Captain Matson; and *Encounter*, 14, Captain Gordon, arrived at Portsmouth on Wednesday, from their cruise in the Med terranean.

The ship *Albatross* has arrived in the Thames from Australia, with £60,000 in gold dust, 1060 tons of copper ore.

LOSS OF THE "CENTAUR"

It is with extreme regret (says the *Bengal Hurkaru*) that we have to announce the total loss of the ship *Centaur*, of Calcutta, Captain W. F. Salmon, on the coast of Arabia, about one hundred and twenty miles from Muscat. The vessel was proceeding to the port named, and had made out the land, when, during a fog at midnight of the 13th and 14th of May, the current carried her on to a reef near Ras-el-Kubba. As she hung by the bows only she would probably have been got off; but the Arabs came on board in great numbers, and plundered the crew to desist from their endeavours to extricate her, plundered the ship and all on board her, of course, and finally, it appears, set her on fire. Captain Salmon is a steady and intelligent young man, a careful navigator, and well acquainted with the coast, so that we feel assured no blame attaches to him.

The *Centaur* had a valuable cargo on board, including about 1600 chests of Indigo for Muscat, Bushire, and Bussorah We trust that the British Indian Government will not allow this outrage committed by the Bedouins to pass unnoticed. Two of the war vessels of the Indian Navy might be very usefully employed in improving their views of the rights of property. If the Imaum of Muscat has no influence over them, he cannot object to his allies inflicting the chastisement which they deserve.

Captain Salmon, with his officers and crew, proceeded in the Imaum's ship *Artemise* towards the scene of the wreck, but the Arabian man-of-war made such little progress against strong head winds that the commander deemed it expedient to bear away and return to Muscat. While proceeding down the coast, information was received that the pirates had burnt the wrecked vessel, and this intelligence subsequently received official confirmation.

Captain Salmon has published an interesting narrative of the accident, and of the circumstances by which it was attended, wherein he minutely details the treachery of the Arabs, their threatening with daggers in their hands, and the seizure of the ship. "The vessel," says the narrative, "up to this time (about 9 A.M.) made no water, but they now took the sounding rod from the carpenter, and cut the line in pieces. They now set to work pumdering in earnest, but before commencing, one whom they called Raschid stood upon the rail, and called out '*Allah Akbar!*" the rest all responded. The cry was taken up on the bench, and after being told by Rashid to begin, they went to work heartily. All the chests belonging to the lascars and passengers were broken up, and the contents thrown into the boats, and any one who secured a better prize than others, was set upon, and in his turn plundered. Daggers were drawn and several were wounded, and the deck in many places was dyed with blood. The deck plunder being disposed of, they now held another consultation, the purport of which was, whether to kill us at once or wait till night. Our better star prevailed, and we were left till evening, when the same time they would commence upon the cabin, which they had hitherto refrained from entering. I stood at the larboard door for a minute or two, trying to persuade them not to enter, as there was a woman (the wife of a Mahometan priest, one of the passengers) and her children in one of the cabins, but it was of no avail. Down went doors and venetians, and in less than five minutes every side cabin was broken open. The poor woman had to run out half naked, the brutes having taken some of her clothes off. My room being locked by Rashid to a panel and entered The chronometers were saved by being passed up through the quarter gallery window, by some of the lascars, and also the barometer; my drawers were nearly smashed to atoms, and all the chests broken open. My papers, letters, &c., were lying strewed about the deck. Money, sextant, quadrant, pistols, &c., all gone.

"The appearance of the ship was totally changed: brass rails gone, the front of the poop beaten in, the cabin clock covered with the stuffing of our beds and couches, which they had torn piece to piece for money. There were, I suppose, about 250 on board perhaps more—yelling and shouting like madmen. Affairs were getting desperate; and three more large boats were bearing down upon us full of men; but I hoped that these might make a diversion in our favour, as we could hardly be worse off, and they could only do as they had promised—kill us. I therefore had a consultation with the chief mate, and we came to the conclusion that it was useless our staying on board to be killed, as by getting to Muscat we could perhaps obtain assistance and in all probability save the ship and great part of the cargo. I therefore went to the head Sheik, and begg d him to allow us to leave with our long boat and cutter (the gig they stole early in the day) and to order his people not to molest us while we were in readiness. After a long palaver he consented, and we prepared to get our boat out, when a boat came alongside from the three boats before mentioned, and I offered the Nacoda 100 dollars to take us to Muscat, where he was bound. The wounded and children and six of the crew were put into the cutter and sent off to the bugalow, and returned and took some more men and some provisions. Chief and third mates went in the jolly-boat, into which I managed to throw several books from the stern windows. At 1.30, having seen all out of the ship, I left in the cutter, with the syrang, cassaub, and my servant, and went on board one of the bagalows. * * * * * * *

"On Saturday, May 15, anchored at Soor, and were visited by Syed bin Abdullah, sheik of Soor, and Hamood bin Ali, the Resident, sent here from the Court of the Imaum. They condoled with me in my misfortune, and requested me to tell them in what manner they could assist me. With many thanks for their kindness, I begged of them to go

(*Continued on page 192.*)

SEASON OF 1852 AT THE ROYAL ITALIAN OPERA.

THE sixth season was completed on Wednesday, the 1st of September, the theatre having been opened on Saturday, March 27th. It is now the moment to review the doings of the campaign, to compare the performances with the promises of the prospectus, and to pronounce whether the establishment has been true to the principle on which it was formed in 1847—that of progress in lyric art. No less than five new operas were promised, namely, the position of Rossini's "Count Ory," Donizetti's "Martiri," Weber's "Oberon," and Spohr's "Faust;" and, *mirabile dictu*, a new work by M. Jullien. In addition to the familiar names of Grisi and Viardot, Madame Castellan, Mademoselle Zerr, Mademoselle Bertrandi, Masanni, Coti, Mdlle. Bellini, Mario, Tamberlik, Ronconi, Formès, Tagliafico, Rommi, Polonini, Stigelli, Mei, Soldi, Rache, Gregorio, and Marini, the *débuts* of Mdme. Jullienne, Mdme. Gazzaniga, Mdme Médori, Mdlle. Segum; Signor Bartolini from Belgium; Herr Ander, of Germany; M. Gueymard, of France; Signor Negrini and Signor Galvani, of Italy, were promised. Subsequent notices informed the astonished amateurs that the services of Mdl.e. Wagner were exclusively engaged for the Royal Italian Opera, although her name was in Mr Lumley's prospectus; that Mdme. Bosio, from the Havannah, had been secured; and that Signor Dalle Aste, a German basso, had been equally inscribed in the list of the Royal Italian Opera *troupe*.

To the initiated in opera matters, it was obvious from the array of new works and of new *artistes*, that the working out of the scheme would be impracticable. When it isurged that the subscribers can have no reason to complain of hearing so many new singers, a fallacy is involved, as the effect of the excess is to prevent the hearing of the best *artistes* in their best parts. Between the pledges in the prospectus and their fulfilment there exists a very large balance against the management. Mdme. Gazzaniga, Madame Médori, and Madame Viardot have not been heard. Mdlle Wagner and Signor Dalle Aste, although their names stand in the bills, have not been behind the foot-lights; the reason of the non-appearance of the Hanoverian *prima donna* is to be found in our law reports; the vanishing of the German basso, has ever remained a mystery, like the non-coming of Gazzaniga. Madame Médori has been reserved for the spring season, and, unfortunate have been the new singers. The four new tenors, Ander, Galvani, Gueymard, and Negrini, have all been failures: although Gueymard is unquestionably no ordinary artist. But the "Juive" did not draw, and the French tenor was the first to disappear completely.

We dissent entirely from the verdict of our amateur audiences as regards this masterly production, and we are vexed to find that London is the only European capital that has not accepted "La Juive;" at the same time, we are convinced that the "forcing system," as was resorted to with "Pietro il Grande," will make the paying public support what it dislikes and repudiates. The "Martiri" made the reputation of Madame Jullienne and increased the fame of Tamberlik, but the opera was a financial failure; and "Faust," the production of which has been the only really honourable achievement of the direction this year, as regards novelties, although sustained by the presence of its unquestionably gifted composer, failed to attract houses. *Beaucoup de bruit, point de fruit*, was the result of the "Pietro il Grande." Thus has been the capital offence of the directors. The Royal Italian Opera, whatever may have been the private motives of the originators, was brought before the public as an art question; it must stand or fall by its banner; its existence would be as much an imposition as an injustice, if the theatre were not the focus of high art. It has become the most startling difficulties on the strength of this principle, although its creation was declared to be the dream of a madman, so insurmountable were considered to be the impediments. To introduce, therefore, a new opera, by a composer, whose reputation was only acquired by dance-music, at promenade concerts and public gardens, was to tell the musical public that success was not to be looked for from creative genius, but from monstrous achievements in spectacle, and eccentric vocal and instrumental effects. The independent amateur at once resented this insult to their understandings; and if "Pietro il Grande" has been kept in the bills after excisions of the first night, it is a patent fact that it has been so maintained for considerations totally irrespective of art and of public opinion.

There have been twenty-one operas performed this season. We subjoin the titles and the names of the composers, with the number of times each work has been given:—

	Times.		Times.
DONIZETTI.		ROSSINI.	
"Maria di Rohan"	2	"William Tell"	4
* "Martiri"	5	"Il Barbiere"	1
"Lucrezia Borgia"	5	"Otello"	1
"Elisir d'Amore"	2	BELLINI.	
"Anna Bolena"	1	"Sonnambula"	1
"Lucia"	1	"Norma"	2
VERDI.		"Puritani"	5
"Ernani"	1	JULLIEN.	
SPOHR.		** "Pietro Il Grande"	4
* "Faust"	4	MOZART.	
HALEVY.		"Il Flauto Magico"	3
"La Juive"	2	"Don Giovanni"	1
MEYERBEER.		Times.	
"Les Huguenots"		11	
"Robert le Diable"		3	
"Le Prophète"		9	

The works marked thus * were novelties. As regards the selections from operas we find that the third and fourth acts of "I Martiri" were given five times, and the fourth and fifth once; the second and third acts of "William Tell" once, the first act of "Norma" twice, the first and second acts of "Roberto" twice, the first act of "Il Barbiere" once, and the prologue from "Lucrezia" once. There have been 68 representations, of which 46 were on subscription nights, which were completed last Saturday; 19 extra Thursdays, and three at reduced prices—last Monday, Tuesday, and Wednesday. There were two morning concerts, May 21st and June 2d (Mrs. Anderson) Of the 68 performances, it will be seen that the works of Meyerbeer occupy the lion's share in the returns, his name being more than one-third of the nights in the bills. And there can be no doubt that this proportion would have been infinitely larger but for the uncertainty of Mario's voice, and the non-appearance of Madame Viardot, whose absence from the cast of the "Prophète" was a serious drawback. The precarious condition of Mario's organ had a curious effect in restoring the popularity of the operas of the modern Italian school. The musical public with that rapid promotion which now distinguishes its patronage, found that the famed tenor and the glorious *prima donna* were much more to be relied upon in the "Puritani" and in the "Lucrezia" than in the "Huguenots" and "Prophète," and hence the very large receipts which attended the revivals of the masterpieces of Bellini and Donizetti. Ronconi's histrionic genius in the "Lucrezia" also materially aided its attraction. This prince of baritones has attained the highest popularity this season by his loyal and artistic feeling.

The new company was quite inadequate for the duties. A presentable *seconda donna* has been another article of deficiency. Madame Jullienne is a highly useful acquisition. Marini's return, has been of essential value to divide and relieve the basso parts with Formès. Mdlle. Anna Zerr's engagement, and that of Madame Bosio, were managerial mistakes while Mdlle. Castellan is on the establishment. The only advantage accruing from Mdlle. Zerr was that she had the high F for the *Queen of Night* Grisi and Mario have maintained their supremacy in popular esteem, although the voice and execution of both *artistes* have not been up to the mark this season. In every point of view, the *Fêtes* of Grisi is to be regretted. Tamberlik's lasting powers point him out as the legitimate hero of Meyerbeer's operas; sooner or later the public must hear him in *Raoul*, and in *Jean of Leyden*, as well as in *Arnoldo* and *Eleazar*, as well as in *Polyeucte* and *Otello:* when that epoch arises, let the public be prepared for sensations more thrilling than even those they have yet experienced from this truly great tenor.

Piatti and Bottesini were added to Costa's orchestra this season. The artistic zeal and intelligence of the musical director have insured the continuance of those magnificent performances, which have deservedly won for the Royal Italian Opera its great name.

We have gen rally indicated that the wisdom between profuse expenditure and effective outlay has not been observed this year, and that the directors, consequently, running on the side of surplus, have made the subscribers the sufferers; we have stigmatised the folly of risking the high character of the establishment by entering into a contest as regards the very uncalled for; and we have warned the directors of the peril they encounter of drawing down ridicule, and something worse, on their proceedings, by producing works of musical acrobats, whose grotesque gyrations should be confined to their own peculiar localities. Truth must be the basis of art-discussion; and it is because we know that we speak the sentiments of the great majority of the influential sub-cribers of the Royal Italian Opera, and because we believe that we are faithful echoes of public opinion, we frankly point out the errors and excesses of the present season. On the other hand, let us cheerfully pay a tribute to the liberality of the management in the exquisite *mise en scène* of each work; let us acknowledge with pleasure the admirable administrative arrangements for the comfort and convenience of the visitors; and, finally, let us rather strive to dwell on the glories of many gorgeous representations of masterpieces, than to recollect exhibitions and shortcomings which proved how soon a world-wide distinction may be compromised by a policy not sincerely based on art-progress.

THE THEATRES, &c.

SADLER'S WELLS.

The opening of this house on Saturday may be said appropriately to have inaugurated the dramatic season. Advantage has been taken of the recess to re-paint, re-paper, re-gild, and re-drapery the interior of the theatre, which now presents a very cheerful and attractive appearance. The play selected for the occasion was Macklin's "Man of the World," in which Mr. Phelps sustained his favourite part of *Sir Pertinax* with his usual power and breadth of delineation and of colour. On Monday he ventured on the character of *Hotspur*, Mr. Barrett enacting *Falstaff* with considerable unction. The entire tragedy was finely interpreted, and with such well-regulated attention to the fitness of the parts with the performers, as to make it difficult to select any one for special commendation. To Mr. Robinson, who played *Prince Hal*, a word, however, is due. A more pleasing representative of the character we have never witnessed.

On Wednesday a play seldom acted was revived, Shakspeare's "All's Well that Ends Well." The mere announcement was calculated to excite great curiosity. It is one of those perilous adventures which, on this stage, have furnished the most remarkable successes. There are more than one difficulty, too, in the plot; but these appertain rather to the story than the treatment. The rude accidents of the tale are judiciously kept in the background; and the slight indiscretions in dialogue have been judiciously and skilfully weeded by the management. The general style of the drama is calm and dignified poetry; and this was well observed by the actors, who contented themselves with a smooth utterance of the verse, which enabled the meaning to reach the mind of the aud tor without misinterpretation. The natural interest of the play thus rose scene by scene, and exercised a quiet influence which was perfectly delightful. Notwithstanding its obvious crudities, "All's Well that Ends Well" is still a gem at this theatre, is one of the most pleasing of plays, and will have a decided run. The heroine was beautifully sustained by Miss Cooper, who gave to the soliloquies of *Helena* a careful elocution, and was throughout elegant in her attitudes. Her acting was nothing in the shape of rant or mannerism, and these, within their due limits, are capable of charming expression. Mrs. Ternan, also, as the *Countess*, came well off, and spoke and acted with proper dignity. But the feature of the evening was the *Parolles* of Mr. Phelps, whose nervous temperament well expressed the comic uneasiness of the braggart, whose tongue outruns his thoughts and deeds, even sometimes its words, which it has to borrow from others' mouths. The continual propelling of his arms was as curious as it was artistic and provocative of mirth. In the affair of the drum he was admirable; and, in the scene of the exposure, acted with an aptitude which realised the situation most thoroughly. The success of the experiment will, no doubt, give rise to amended criticism on this play, the elements of which have been much mistaken. It only remains to add that the performance was illustrated by some very picturesque scenery, and that the *mise en scène* was in excellent taste. The revival is altogether highly creditable to the management.

OLYMPIC.

"The Master-Passion" is the name of a comedy, in two acts, produced on Wednesday. It is a play devoted to the passion of love; in the persons of *Randolph Buscoyne* (Mr. W. Farren, jun.), and *Mildred Austead* (Mrs. W. Lacy), who is perversely destined by her parents for *Caleb Thomas* (Mr. Hoskins), whose jealousy is at last made to set the lady at liberty. The part of the father, *Jacob Austead*, is performed by Mr. Farren himself, and the display of his parental feelings gives great force and interest to the second act. The piece was perfectly successful.

LYCEUM.

Mr. Russell is again in London; and at this theatre, on Monday, repeated his lectures on the "Far West," "Negro Life," and the "Slave Trade," with the usual *mélange* of dramatic singing and narrative description; on which he delivered himself with striking effect. His performances on the pianoforte were also executed with unwonted emphasis; and throughout, we may add, that we never saw Mr. Russell in greater force. The diorama was in excellent condition, and all went off exceedingly well. The audience was numerous and respectable.

ASHLEY'S.

On Monday the *début* of the "American Wonders" took place. Mdlle Ella bounded into the ring, and executed with ease, confidence, and grace, the leaps over the star-spangled banner. Entirely different in style was young Ashley with his bounding steed May-fly. The various feats of strength and agility which he accomplishes during the flying of his horse over high gates and balloons of fire, are really astonishing. The performances were greeted with enthusiastic plaudits. The Brothers Segrist continue to excite general admiration.

MARYLEBONE.

This house opened on Monday, with its interior repaired and re-decorated in very superior style, presenting an effect at once elegant and rich. The performances were of the melodramatic cast, consisting of "Alice May," "The Shower Bath," and "Margaret's Ghost." The scenery, which is painted by Messrs. Feinheulet and Rogers, was finely executed and brilliantly coloured. The house was numerously attended, and the performances were all apparently satisfactory to the audience, who were warm in their admiration of the new embellishments, both on and off the stage.

SEYNE'S DRAMATIC ENTERTAINMENT.—At the City of London Institute, on Monday, a dramatic entertainment was given under the direction of Mr. Nelson Seyne. The pieces, which were played in appropriate costume, were selected from "Othello" and "Calayros." The comedy of "Charles the Second" was also performed. The musical portion was entrusted to the Printers' Dramatic Society, who always acquit themselves with credit. The farce of "State Secrets" concluded the performances. During the evening, Ingoldsby's "Lay of St. Cloud" was well recited by Mr. Henry Thomas.

The Rajah of Coorg, accompanied by his two wives, and attended by his suite, visited the Colosseum and Cyclorama last week. The party were evidently much gratified with their visit. It was rather a novel sight to see them traversing the saloon, covered with umbrellas, veiling their beauty from the eye of the other visitors. The Rajah, before retiring, desired his interpreter to express his sense of the attention paid to him.

THE AFRICAN OPERA COMPANY.—At the Strand Theatre, under the management of Mr. Donaldson, the importer of the original Ethiopian serenaders at the St. James's Theatre, a new company of vocalists commenced on Monday, having the advantage of the genuine "bones," Pell, whose whimsicalities alone would go far to sustain this class of entertainment. The singers vocal ly excel ently, and their pictures of negro life are animated.

DEATH OF J. K. CHAPMAN, ESQ.—This gentleman, who was known as the proprietor and manager of the *Sunday Times*, expired on Thursday, from dropsy, after a long and painful illness, leaving a large family to lament his loss. John Kemble Chapman was the son of Mr. Chapman, for many years a member of the Covent-Garden Company, the original *Rebecca Gomar* in Sir H. R. Bishop's opera of "The Maid and the Mon." The late Mr. Chapman was married to Miss A. Price, the vocalist, sister of Mrs. C. Kean.

WALKING ON THE CEILING.—An extract from the *Wolcott Standard*, Wayne county, United States, says, that on Saturday afternoon it was discovered that Sands, a circumstances, would, amongst other things, walk across the ceiling with his feet upwards and his head downwards, by means of a scientific apparatus appended to his feet. The experiment was successfully made by Mr. Sands, and the audience went away perfectly satisfied with what they had seen, all except one person, who said Mr Sands could not perform the feat out of the circus. Mr. Sands offered to exhibit the same performance in any place where a ceiling having a smooth surface of sufficient strength to sustain the weight could be obtained. The large room in the town-hall was selected. Mr. Sands repaired to the hall, and commenced his antipodal performance over the ceiling at an elevation of eighteen feet from the floor. He had proceeded several steps, and was in the act of returning, when a large portion of the plaster gave way, and he was precipitated to the floor beneath. Mr. Sands was taken up speedless. His neck was broken by the fall, and death ensued instantly.

ACCORDING to the Greek journals the malady in the Corinth grapes has been so extensive that the yield of the year will only be 13,000,000 lb., instead of 52,000,000 lb., as it has heretofore averaged; and that of the Ionian Islands will be 10,000,000 lb., instead of 35,000,000 lb.

LAW AND POLICE INTELLIGENCE.

THE NATIONAL LAND COMPANY.—An important and rather remarkable inquiry has been proceeding at Rickmansworth during the past week, under the direction of the Court of Chancery and 14 and 15 Vic., for dissolving the National Land Company and Chartist Co-operative Land Society, and for winding-up its affairs, properties, and buildings, the principal estates connected with which are situate at Charlestown, or Herringsgate, three miles from Rickmansworth, at Minster Lovell, near Witney; at Redmarley, near Tewkesbury, and at Lowlands and Snig's End, near Gloucester. The estate called O'Connorville, though not the most extensive, was one of the earliest located, and was purchased in 1846, and was parcelled out into allotments, upon the experimental plan of enabling its occupants, "by means of the reproductive and co-operative principle, and by moderate industry, to live in comparative comfort and independence," on two or three acres of and, and at the same time to form the nucleus of a political propaganda for promoting the exploded six points of the charter. In the attainment of both these objects, the experiment, as the present inquiry goes to show, has proved a signal delusion; the occupants of the estate being, more or less, in embarrassment, and the projector of the plan, as is well known, in a state of mental aberration. The sittings to inquire into the subject have been held at the Swan Hotel, before Mr. W. Goodchap, one of the official assignees of the Court of Chancery, assisted by Mr. Roxburgh, as receiver and assessor; Mr. John Tucker, of the firm of Tucker and Adams, and Mr. Woodthorpe, surveyor and architect. Mr. C. Roche, of the firm of Symons and Roche, represented the allottees, or occupants, who attended very numerously. The matter stated that on 11th April, 1846, it was notified to the shareholders by Mr. Feargus O'Connor, that he had purchased the O'Connorville estate, consisting of 130 acres, for £2344, subject to an annuity of £60 per annum, conveyed by T. Ayres and J. Margetson, but the title-deed of which was now retained by W. F. Roberts, solicitor, of Manchester, on the ground of alleged lien. Soon after a ballot for two, three, and four acres respectively, took place among those members of the company who had paid £2 10s. deposits, being the value of one lare in the company. The members who became located were principally mechanics or weavers, totally unacquainted with agricultural pursuits, from Stockport, Bradford, Manchester, Leeds, and Wigan. The two acre ballot-lots, including building one share had allotted them a house, two acres of land, and £15; the three-acre members, a house, three acres, and £22 10s.; and the four-acre members of two shares, a house, four acres, and £30. In this way the 100 acres were parcelled out, two acres being set apart for the school at the head of the estate. The members entered on their locations on the 1st May, 1847. Some are still in possession; others have been ejected. During the period they occupied they received and money, cultivation money, and bushels of wheat. Some sold their right of location, which latter was of the average value of from £30 to £100. In some cases distresses were levied on the goods, chattels, and trade implements of the allottees, and the sale of effects continued until the Act of Parliament for winding up this and other estates in a similar portion was obtained, and which, amongst other things, is the object of the inquiry to determine and adjust. The allottees, in their sworn examinations, have proved their title to the allotments, and the amount of back rent to be paid by them will have to be determined.

THREATENING LETTERS TO THE FOREIGN MINISTER.—At Bow-street police-office, on Saturday, John Arond, a foreigner, apparently about 30 years of age, of good appearance and dress, was charged before Mr. Henry with writing and sending threatening letters to the Earl of Malmesbury, her Majesty's Secretary of State for Foreign Affairs. The letters, which were in the German language, were received at the Foreign-office on the 19th of July last, and was to the following effect:—" My Lord,—Recollect the affair of 1812. I mean the affair of Bellingham and Perceval. John Arond has been in London 18 months upsetting for redress, but it has not been obtained for him. One of her Majesty's Ministers will have to seal the case with his blood in the lobby of the House of Commons. John Arond can only have his due. He wants nothing but fair play. Arond's own inquiry which had been made into the circumstances, it appeared that Arond was a person who had made a great variety of charges against the several Consuls of her Majesty in the East, and some of which pronounced had taken place upon the subject, showing them to be groundless. The defendant had requested to have a similar letter inserted in the Illustrated London News, on the 8th of August, and, upon being refused, wrote the following day to insist upon its insertion. Evidence having been given to show the above effect, the defendant made a long statement which it was quite impossible to comprehend, from his excited manner and incoherent language, and which was declared to complain that the English Consuls in Syria and elsewhere had combined to confiscate his property, and rob him of his wife and children. He had been a great sufferer, but he denied that he ever meant to shoot the Foreign Secretary, or any one else. He did not write the letters, but some one had used his name. A Mr. Abraham wrote them. He could not write such letters for a thousand pounds. He wanted his injuries to be made public in the newspapers.—The magistrate bade him to enter into his own recognizances of £100, and to find two sureties of £50 to keep the peace for 12 months.—The prisoner was committed, in default, and an order was given for the police to retain his papers, &c., pending his enjoyment of his terms of imprisonment.

SAD AFFAIR.—A young Austrian, who called himself Francesco Thropier, evidently an assumed name (who had been remanded from a previous day), was brought up at the Manslon-house police-office, charged with having attempted to drown himself by leaping into the Thames. The prisoner, soon after he had been rescued from his perilous position, stated that his step to destroy himself was caused by his having no money, being deprived, as he had been, of his books, which were to him into a table, and abandoned by his parents because of his conversion to Christianity, he could be only relieved through an acquaintance in the community. A gentleman deposited £100, and to find two sureties of £50 to keep the peace for 12 months.—The prisoner was committed, in default, and an order was given for the police to retain his papers, &c., pending his enjoyment of his terms of imprisonment.

SAD AFFAIR.—A young Austrian, who called himself Francesco Thropier, evidently an assumed name (who had been remanded from a previous day), was brought up at the Mansion

MR. NICKLIN. MR. WELSH. MR. ADIE. MR. GREEN.

SCIENTIFIC BALLOON ASCENT FROM VAUXHALL GARDENS.—FROM A DAGUERREOTYPE BY MAYALL.

SCIENTIFIC BALLOON ASCENT.

In our Journal of last week, we detailed the first balloon ascent for scientific objects, under the direction of the Kew Committee of the Council of the British Association. The ascent took place at Vauxhall Gardens, on the 17th ult., and the second of the series, on Friday (last week), at 44 minutes past 4 P.M., from Vauxhall, under very favourable circumstances of wind, weather, and freedom from cloud. Mr. Welsh and Mr. Nicklin were, as before, the aëronauts, under the guidance of Mr. Green. Various re-arrangements and adaptations of the instruments had been found desirable by the experience of the first ascent. The descent took place with great ease at Latimer, near Boxmoor, at 7.35 P.M., the balloon not having travelled more than 25 miles in two hours fifty-one minutes; the rate in the previous ascent having been about 40 miles an hour. The greatest height attained was about 19,200 feet; the temperature of the air being 7 degrees Fahrenheit, or 25 degrees below the freezing point. One of the dew points was 17 degrees below zero. Clouds were not seen above the aëronauts, although cumuli were observed around, below the level of the balloon. No difficulty of breathing was experienced. Air was brought down from the greatest height in tubes previously exhausted, for future analysis.

Previous to the first ascent the two experimentalists, Mr. Welsh and Mr. Nicklin, together with Mr. Green, the aëronaut, and Mr. Adie, of 386, Strand, the maker of the instruments taken up in the balloon, were daguerréotyped by Mr. Mayall, which has enabled our artist to engrave the group, in illustration of this memorable ascent.

GRAND ERUPTION OF MOUNT ÆTNA.

We learn by accounts received *viâ* Malta, that on the night of the 26th Aug., during the celebration of the *centinaja*, or every hundredth anniversary of St. Agata, the patron saint of the town of Catania, Mount Ætna became suddenly convulsed, and a magnificent eruption took place, which has not been surpassed by any within the past forty years; and fears were entertained that, from the northerly direction which the lava took, the neighbouring villages of Zafarana and Giarre have very seriously suffered, if not, perhaps, have been utterly destroyed.

An English party from Malta, who were visiting Catania for the *festa*, happened to be ascending the mountain at the time, and, contrary to the advice of the guides, persisted in their journey, notwithstanding the premonitory signs of the approaching event. One of the party thus narrates what was witnessed:—

The party consisted of Capt. Hallett, R.N., Mrs. Hallett, two Misses Sarkey, the Hon. Lieut. Finch of the 68th Light Infantry, and Lieut. Ravenhill, of the Royal Engineers, accompanied by their muleteers, and the usual Sicilian guides. They took their departure late at night from Nicolosi, so as to insure reaching the summit of the mountain by daybreak, in order to enjoy the grandeur of the scene at that particular hour. As they proceeded the wind rose so violently that the guides, fearing some mishap, recommended them to retrace their steps; but the intrepid party, unwilling to be baulked in their intentions, persisted in proceeding. Soon afterwards the wind increased, and the mountain began to shake like a giant arising from his slumber. All of a sudden, when the party was in a narrow pass, mules and riders, male and female, conductors and guides, were precipitated to the ground by an awful blast, and lay rolling over and over among cinders and ashes; whilst at a spot called Colossi, scarcely one hundred yards distant from the party, the mountain opened, and burst out with terrific violence, the wind keeping pace, and apparently struggling which should roar the loudest. Crawling under a projecting block of lava, the formation of a former eruption, they huddled together for protection from the piercingly cold blast and clouds of acutely sharp dust. The eruption commenced at about two A.M. The flames issued in widely-spread sheets from the summit; but by far the most fearful eruption took place at the foot of the cone, at a spot called the Crater Colossi. This explosion caused the mountain to heave and rock, and the liquid lava flowed over from the boiling gulf beneath; minor craters opening from time to time, and forming a grand junction, from which huge masses were thrown up amidst fire and smoke. Fortunately for the party, the wind blew from them towards the crater, or they must have been inevitably suffocated by the sulphureous fumes; and, as it was, each moment threatened to be their last. After daybreak, when another terrific explosion and outbreak shook the lofty mountain to its very centre, the party left their retreat, and made their way with difficulty back to Nicolosi. For several days previously torrents of rain had descended, and passengers from Messina, from the French steamer, which had arrived at Malta on the morning of the 28th, report that the volcano was still in activity during the night of the 24th, and no doubt dreadful ravages will result.

(*Continued from page* 190.)

down to the wreck and endeavour to stop the plundering, which they promised to do, and then took leave, assuring me that they would leave Soor immediately after the afternoon prayers. Left Soor in the evening, and anchored at Kalhat next day, as we were in want of water. On Wednesday, May 19, we all arrived safely at Muscat and were received with great kindness and hospitality. I shall ever remember with feelings of deepest gratitude the great kindness and attention shown to me by his Highness Syed Syed, the Imaum, and also by Major Hamerton, the British Consul. His Highness hearing of our arrival, sent his Vizier many times to know what assistance we required. With many thanks to his Highness for his condescension and generosity, I asked for one of his men-of-war to proceed in down to the wreck. Orders were sent to prepare the *Artémise* for sea. Our crew were all sent on board her, and our passengers on board the *Faize Allum*, with provisions and money. The next morning I called on his Highness to thank him for his goodness. He said that he hoped I bowed with resignation to the will of the Almighty, who was afflicting me for his own good purposes. He told me that he had placed the sloop of war *Artémise* entirely at my disposal, every one on board being under my orders, and that he had written to the Sheik of Soor to supply me with any number of boats that I required. He also sent a guard of twenty-five sepoys to protect us when at the wreck. After again thanking him, I took leave and returned to the Consulate, and found that his Highness had sent a bolt of black broad cloth and twelve pieces of fine shirting to make clothes for my officers and myself. The *Artémise* was lying with topmasts down at four in the morning, and by 8 P.M. that night was all a-taunto, sails bent, water, &c., on board, and at nine was unmoored, hauled outside, and reported ready."

THE SHIP "CENTAUR," OF CALCUTTA, LOST ON THE COAST OF ARABIA.

London: Printed and Published at the Office, 198, Strand, in the Parish of St. Clement Danes, in the County of Middlesex, by William Little, 198, Strand, aforesaid.—Saturday, September 4, 1852.

THE ILLUSTRATED LONDON NEWS

No. 578.—VOL. XXI.] FOR THE WEEK ENDING SATURDAY, SEPTEMBER 11, 1852. [SIXPENCE.

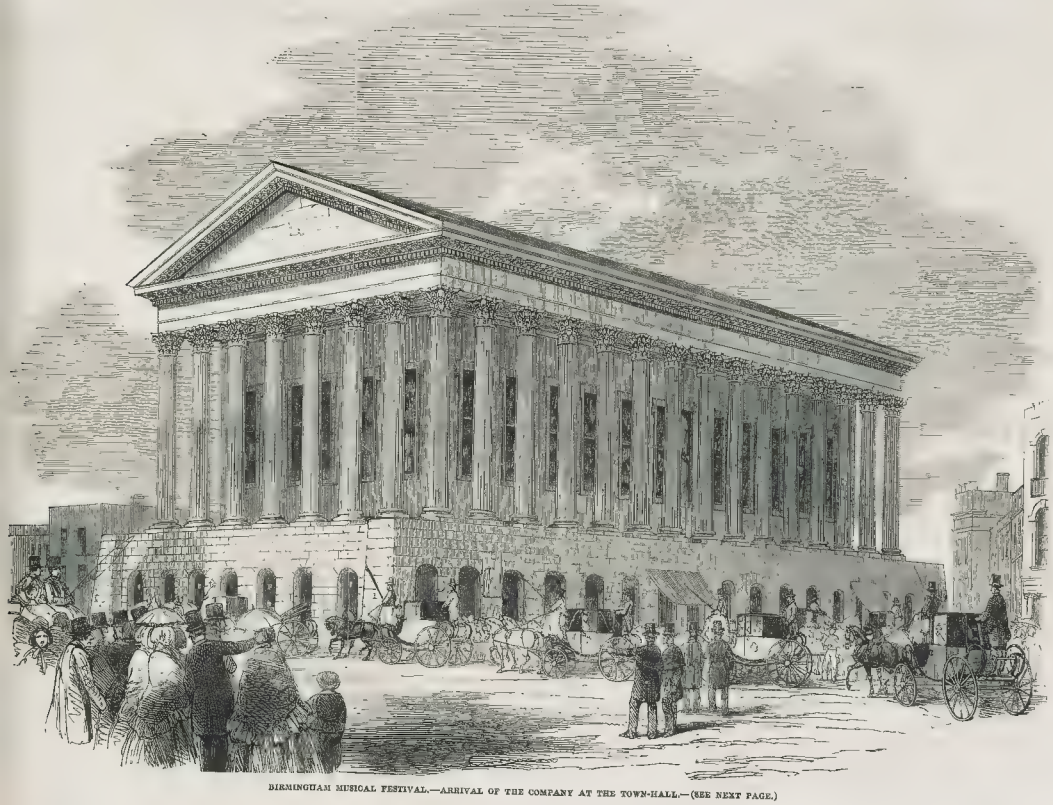
FREE LIBRARIES OR FREE LITERATURE?

MANCHESTER is ambitious, and wishes to excel in other things than in the acquisition of wealth. She is not contented with being great, populous, enterprising, industrious, and thriving; but desires to be known for her love of literature and the arts, and her generous encouragement of them. Her wealthy citizens, engrossed as they are in trade and manufactures, are anxious to set a good example. They have shown that the pursuits of worldly gain do not necessarily shut the mind against elegant accomplishments and refined tastes. If cotton and gold be good, books are as good as either. If it be right that the multitude should toil not alone for their daily bread, but for present wealth or future independance, it is right that in the hours of their leisure and relaxation, they should cultivate and improve their understandings by the wisdom and the wit, the history and the philosophy, the poetry and the science of the past and of the present. So say the people of Manchester, and when an idea takes possession of them, these shrewd and hard-headed men generally work it out to a successful issue. This has been testified before now by the debates of our Senate, and in the history of our time, and has been testified again by the establishment of the great Free Library—the first, but most certainly not the last institution of its kind.

The public inauguration of that library, graced as it was by the presence and co-operation of some of the most eminent authors of our day, is an event which may well excite reflection, both among those who love, and those who live by, literature; the first class reckoned by millions, the second by hundreds, if not by thousands. Upon that interesting occasion the readers and the makers of books were both represented. They stood face to face, and shook hands with each other. Manchester, the great and wealthy city, declared, with pomp, circumstance, and emphasis, that she fully appreciated the uses and the blessings of good books, and desired to extend them to all classes of her people. She acknowledged literature to be a power in the commonwealth, although the commonwealth practically denies it; and the wielders of that power stood by and applauded the sentiment. Among those men, representing in the most effective and brilliant manner the literary genius of our time, were several, and those among the most distinguished, who went to Manchester, not to aid in the establishment of a Manchester Library, but to gather money for the support and endowment of an institution of a very different class. Sir John Potter and the men of Manchester had succeeded in their object. Their institution was formed. The building was built, the books were bought, and the city of Manchester had voluntarily taxed itself to support it. But the object to be attained by Sir Edward Lytton, Mr. Charles Dickens, and the other friends of the GUILD OF LITERATURE AND ART had not arrived at the same happy culmination. Their institution is to do for literary men, what Manchester, with all its patronage, were it a thousand times greater, cannot perform; it is to elevate the position, not in the first place, of the readers, but of the makers of books; and by thus improving the character and extending the usefulness of the literature of the present age, to include the work of Manchester in its own.

If we are to judge, however, by the speeches made on this occasion, Manchester intends to do little or nothing in this sense. The object of Manchester is the books and not the authors. She has got her library, and taxed herself to support it as it stands; but, by a strange omission in the act of Parliament under which the Free Library has become the public property of the district, Manchester has no power except by voluntary contribution to increase, by the purchase of new books, the library which she has established. In so far the living authors of Great Britain will receive but a barren tribute of applause from the commercial city. The object of those who desire to establish the GUILD OF LITERATURE, and who gave the powerful support of their presence, their sympathy, and their speeches to the Free Library, gains nothing from Manchester. Yet Manchester and its people desire, we cannot doubt, not simply to do honour to the literary character, but to make the profession of literature as self-supporting, as honourable, and as certain as any other pursuit or calling to which able and conscientious men can devote themselves. But how, it may be asked, can Manchester do this? What prevents literature from taking its rank as a profession equal to Law, to Medicine, and to Divinity? and why should Manchester or any other place be called upon to aid in so establishing it?

We shall endeavour briefly to answer these questions, and to



BIRMINGHAM MUSICAL FESTIVAL.—ARRIVAL OF THE COMPANY AT THE TOWN-HALL.—(SEE NEXT PAGE.)

show what Manchester, which has done so much, can yet do—not alone for books, but for those who make them—not alone for literature in the abstract, but for the literary men without whom we should have no literature except the literature of the past.

We say nothing more at present of the "Guild of Literature," because most of the objects in view of its promoters are objects which are to be achieved more by literary than mechanical means, and which can be achieved more by literary than mechanical means, and which can be achieved more by literary men themselves than by the public, but shall confine ourselves to those objects which the literary men who support the Guild, as well as literary men generally, have some right to demand public assistance in obtaining. The resolution which was proposed at Manchester by Mr. Charles Dickens, expressed a hope that the books made available to the people by means of a free library would "prove a source of pleasure and improvement in the cottages, the garrets, and the cellars of the poorest of our people." No doubt they will; but if so, it surely becomes a matter of importance to Manchester and other large cities, and to the State and the Government, that the class of men without whom contemporary literature could not exist, should have fair play in the exercise of their calling. If they are public benefactors, the public ought not to impede them in their vocation. If they render the State a service by educating the popular mind, and by keeping alive the sacred flame of patriotism and virtue, the State, even if it did not recognise, honour, and reward them, should at least refrain from taxing their industry. Many persons are of opinion that the State should not only honour, when living, the great authors, whose names in foreign nations are synonymous with the literary glories of their country—but that it should honour them substantially by employment, or by provision for their old age. On the lower ground of commercial justice, the State, if wise, should, we think, treat them with as much consideration as the producers of any other kind of commodities, which help to make up the sum of national wealth. And here it is that the aid of Manchester, and of the lovers and readers of books generally could be of such service to them. A book, though it treats of mental and spiritual things, is a physical substance. It exists, and can be felt and handled and weighed and packed like any other article of merchandise. It is true that there may be an evil in excessive trade; and Lord Shaftesbury calls excessive trade a "whirlpool." The State has taken good care, that in this "whirlpool," if such it be, no author shall be overwhelmed. Lest he should trade to excess, the Government that does not tax the material upon which a painter paints, or a sculptor chisels, or a violinist performs, taxes the paper, without which his book could not exist;—unless, perchance, some revolution in taste and in manufacture should enable him to print upon thin sheets of metal, or some other commodity, as yet unknown to the exciseman. If, under the present system an author be wiser than his age, and publishes a book too great and good for popular appreciation or comprehension, and sells but one copy, he must pay to the Government a tax upon the one copy that he does, and upon the nine hundred and ninety-nine that he does not, sell. As every book must be made known to the world, before the world will purchase or encourage it, the author is taxed for publicity, and is impeded in advertising it. We would ask the clear-sighted folk of Manchester how the production of cotton goods would answer, if such a system were in operation with them? and, as sensible men of business, how long they would endure it?

In an age when free libraries have become necessary, when the love of books is daily spreading wider and wider in society, the business of literature is as much a legitimate business as any other. It, indeed, becomes a question whether, instead of going to a free library to borrow, the working-man and the cottager, as well as the poorer portions of the middle classes, would not purchase books, if justice were in this respect done to their producers. With an international copyright, and untaxed paper and advertisements, the literary genius of this age would find its money reward from the public of its own and other states. It would cease, to a great extent, to be in distress and its difficulties, and would be at well paid by the sale of its commodities as the manufacturers of Manchester in the production and sale of theirs. Expensive books do not suit the multitude of readers. Books must be made cheap ere they can be made accessible to the cottage or the workshop. By all means let our towns and cities have their free libraries; but, at the same time, let us have free literature. The two objects are so far from being incompatible, that the second in reality includes all the advantages of the first, with many others of its own.

The "million" require cheap books as well as cheap bread. If they cannot get cheap good books they will have cheap bad ones. If publishers cannot produce new books at a cheap rate and to pay the authors a copyright, which would not amount to more than the paper duty, they will pay the paper duty upon old books, on which there is no copyright, and leaving the living author to starve, or to change his vocation for the "diggings," or the street-crossings, will carry on a trade in reprints, or in that inferior literature unworthy of the name, which degrades instead of elevates the people. To this result neither Manchester nor any other great city can be indifferent.

It is in contemplation to have a time-ball put up on a prominent spot on the South Foreland, near Dover, which will act simultaneously with the time-ball at the Observatory at Greenwich, and in the Bristol Channel, regulated by its falling by the electric current, will enable all the vessels within ten miles distance, and in the Downs, to have their chronometers corrected to a second. It is also contemplated to fire a large gun simultaneously with the ball falling, the smoke field being the agent in foggy weather.

A few days since a thunder-storm broke over the village of Bucyle-Long (Ayrshire), in France. The lightning struck the steeple, and tore off a number of the slates and part of the woodwork. The pendulum of the clock was also broken. The storm first afterwards entered the church, where it split a number of the panels and the door through which it found egress.

Two persons are now in Carlisle Infirmary having each the tendon Achilles completely severed. The one, a Scotchman, while shearing, sustained the injury from the sickle of a man reaping behind her; the other, a lad, while walking along with a spade over his shoulder, accidentally let the implement drop, and falling behind him, it totally severed the tendon Achilles just above his shoe.

The import of foreign grain, cheese, &c., into Liverpool for the fortnight ending the 1st of September, 1852, was 176,329 bushels wheat, 2087 bags ditto, 41,752 barrels flour, 1156 sacks ditto, 761 bags sago flour, 51,533 bushels Indian corn, 1923 bags ditto, 500 barrels corn meal, 31,400 bushels oats, 25 080 bushels barley, 3926 bushels beans, 57 bags peas, 13 boxes cheese.

The Rev. R. Rothwell, rector of Sefton, who succeeded his father in 1801, and is now upwards of 80 years of age, has, during the whole period of his ministry, annually mowed a meadow belonging to the rectory with his own hands. His task for the present year was finished a few days ago, being the 51st time of his performance of the same work.

About two months ago, an a belonging to Mr. Worn, of Gedney, Lincolnshire, was bitten by a mad dog. It lately became very restless, and so to steer, that he could not, feeling convinced that it was attacked with hydrophobia, had him shot. [illegible] was in the immediate with the ass, and he is bitten by it. [illegible] also killed.

A [illegible] recently [illegible] John Dale, aged 19, as an share-broker's clerk, [illegible] from Manchester, charged with having transferred [illegible] and obtaining money to a large amount. He is twenty [illegible] of age, but older in appearance. He was seen at Dover the day after [illegible] from Manchester, with three boxes and a leather portmanteau. A reward has been offered for his apprehension.

John Lanaway, 15 years of age, servant of Mrs. Pearson, a butcher, in Tabernacle-walk, St. Luke's, a few evenings ago died suddenly from the effects of one of two [illegible] on each [illegible] butcher, [illegible] resulting in the same [illegible]. The [illegible] deceased [illegible] of the brain. [illegible] coroner's jury returned a verdict of "Manslaughter" against Clarke, who was thereupon arrested, but subsequently liberated on bail for his re-appearance.

MUSIC.

BIRMINGHAM MUSICAL FESTIVAL.

(From our own Correspondent.)

BIRMINGHAM, Friday.

The great triennial gathering will terminate this morning, with the performance of Handel's "Samson," with Costa's accompaniments. In point of artistic interest, the meeting has been unsurpassed by any preceding festival. It marks an epoch in the history of art-progress. The plans of the managers have been large and comprehensive, and their designs have been carried out with the intelligence, zeal, spirit, and liberality which have distinguished the doings of the Birmingham amateurs since they commenced the festival for the purposes of "godlike charity." If the admirable institution, the General Hospital in this town, has benefitted financially by the festivals, the cause of music in this country has immensely gained by the triennial assemblage of the greatest artists, vocal and instrumental, to execute the finest works, sacred and secular, of the masterminds of every age and country. Acting upon the principles of the original founders, the present committee have been signally successful in the schemes of the morning and evening entertainments. In securing the services of Costa, a guarantee was at once afforded to the musical public, that the orchestra and chorus would be on the largest and most efficient scale, and the result has proved that at no former period have there been such magnificent readings of oratorio and opera as during the current week. The orchestra was arranged by the conductor in a most novel manner; the platform for the principal singers was lowered and extended further into the hall, and this gain of space enabled him to concentrate the instrumentalists, to procure the proper blending of tone; whilst making the inner parts stand out more clearly than heretofore, the voices were heard more distinctly through the monster mass of brass, wood, and percussion, collected for the meeting. There were 150 players: 28 first violins, 26 second violins, 18 violas, 18 violoncelles, and 17 double-basses—107 stringed in all, the wind and percussion counting for 33. The conductor's seat formed the apex of the orchestra; on each side of him the principal vocalists were ranged; immediately in his front were Sainton, Blagrove, Lucas, Howell, Hatton, Piatti, Bottesini, Westrop, and Watkins; to the left of Costa were the first violins; to his right, the second; in the centre were the violas, with the flutes, oboes, clarionets, bassoons; and above were the harps, trombones, opheoleide, &c. At the very back, or rather summit of the orchestral phalanx, twenty double-basses and violoncelles, ten on each side, were located—Chipp with his colossal drums occupying the centre of gravity. Below Chipp, in a hollow, the organist (Mr Stimpson) was seated, at the keys of the gigantic organ, and his view of the conductor was obtained in a looking glass, over the key-board. The soprano (80) and tenors (30) were on the left of the conductor; and the altos (61) contraltos (20) and basses (63) to his right. The entire orchestra, piled up to the ceiling, with the vast organ in the centre, and extending down to the body of the Hall, had a most imposing appearance. With the entire company standing up for the National Anthem (in which Viardot, Castellan, Misses Dolby and Williams, Lockey, and Formès took part), the effect was startling, and will not be easily forgotten.

THE MORNING PERFORMANCES.

In our weekly record of matters musical, it is no easy task to condense into a summary within our prescribed limits the points of paramount interest connected with the various performances. However tempting the inducement to enter into full details, we must confine ourselves to general impressions and results, rather than to the elaborate analysis of the execution of each programme. The morning attractions at the Town-Hall were the "Elijah" of Mendelssohn on Tuesday; the "Christus" of the same composer, his motett, "Ave Maria," Dr. Wesley's anthem, "The Wilderness," and Haydn's "Creation," on the Wednesday; Handel's immortal oratorio, "The Messiah," yesterday; and his "Samson" this day. Fine as have been the readings of "Elijah" at former meetings, under the direction of the gifted and lamented composer, as well as of Costa, there is but one opinion, that the present interpretation has never been approached in closeness and brilliancy. The overture and under-current of orchestration throughout the work were masterly readings, as well as the most highly-finished specimens of the perfection to which orchestral playing has been carried since Costa has been organising our modern bands. And most assuredly at no other place in the world than at this festival, could such matchless execution be heard. The Birmingham amateurs have the incalculable advantage of the training of our London orchestras; they consentute in the week's meeting the excellences of our Philharmonic Society, our Sacred Harmonic Society, and our Royal Italian Opera. Free from favouritism, exempt from oligusm, having no local interests to serve, art alone becomes the banner of the committee, and they have thus the power to pick out everything that is good and great in choral and orchestral talent. Amongst the leading *artistes*, certainly here and there a mediocrity, perhaps an impostor, an inferiority, and possibly a pretender, may have found their way here; but it is to the aggregate we must look, as we must with justice regard the *ensemble* of the interpretation, rather than dwell on slips and flaws of trifling import. With such stupendous performances as we have this week heard, we could no more think of testing times of oratorios by the metronome, than we should think of examining a beautiful picture with a microscope. He must indeed be made of strange stuff who could have listened to Tuesday's rendering of the "Elijah" without sensations of an overwhelming nature. The "Thanks be to God!" at the end of the first part, will be the recollection of a musical existence: the heroic breathing of the composer's art was caught by the executants with an impetuosity and fiery exultation worthy of his genius. Under the wand of the enchanter the most intricate mechanism became clear, intelligible, and marvellously exciting. The double quartet, sung by Mdlle. Castellan, Mrs. Bull, Miss Dolby, Miss Williams, Messrs. Lockey, T. Williams, Weiss, and Smythson; the Baal choruses; the quartet, "Cast thy burden," given by Castellan, Miss Williams, Lockey, and Weiss; the trio, "Lift thine eyes," by Mdme. C. Novello, Misses Williams and Dolby (re-demanded); the quartet, "Holy! holy!" led off by Mdme. Novello; the chorus, "He, watching over Israel," can only be referred to. Amongst the solo gems must be noted the air "Woe unto them," sung by Mr. Lockey, and the "Queen," sung by Viardot, who has returned, with her voice in the finest condition, and with her musical genius more palpably developed than ever. She created a profound sensation by her noble reading and classic conception of the "Queen" music. The "Hear ye Israel" of Madame Novello displayed her superb voice; and the "O rest in the Lord" of Miss Dolby was marked with its deep pathos. Mr. Lockey and Mr. Sims Reeves divided with honour the tenor part. Madame Castellan was allotted the score of the Widow; and Herr Formès had all the music of the Prophet, his best displays therein being in the second part. From the "Elijah" we must pass to the "Christus." It will produce little surprise to state that the fragments of this unfinished oratorio produced little effect on Wednesday's auditory. How could it be otherwise? The piece consists of two sections—the one treating of the adoration of the wise men of the East, and the other of the accusation before Pilate. There are no connecting links. The recitatives, chiefly for the tenor and the choristers are brief, some of them even to abrupt-ness. It is impossible to tell what were the intentions of Mendelssohn for these fugitive scenes; and we are quite certain, that if Providence had spared his life, he would have re-written some portions, in which his ideas from "Paulus" and "Elijah" are too manifestly reposted. Still the hand of the master cannot err, even in mistakes in certain situations. The choristers "He stirreth up the Jews," and "We have a sacred law," especially the latter, are dramatically graphic; but the gem is in the lament, "Daughters of Zion, weep," and an andante in three-four time, a most lovely and heart-touching strain, in which the pizzicato of the stringed accompaniment has the most enchanting effect. A Bach chorale concludes the fragments. Mdme. Clara Novello had a single bit of recitative in Mr. Sims Reeves, who took great pains in the tenor recitatives; but with him were associated Weiss and Formès in the trio. Although not strictly in place, mention may be here made of the splendid execution of the "Walpurgis Night," at Tuesday's concert. It made a great impression. The rolling violoncello passages, and those for the horns in the overture, were capitally done. Miss Williams sang the air in D minor of the old woman; Mr. Lockey and Mr. Weiss had the tenor and bass [illegible]. The chorus of Druid Guards, "Disperse, disperse," and the wondrous chorus in G minor of the grotesque goblins, so replete with supernatural fancies, were executed with surprising skill. On the whole the "Walpurgis Night," with its bold, striking, and singular passages of descriptive writing, was never before so well done and so thoroughly relished. Returning to the morning programme of Wednesday, the "Christus" was preceded by Mendelssohn's motett, "Ave Maria," given with English words, under the title of the "Saviour of Sinners." This was an early work (Op. 23) of the composer, full of devotional feeling, and thoroughly ecclesiastical—it might be added, Gregorian in character. Madame Clara Novello, Madame Castellan, Miss Dolby, Miss Williams, Messrs. Sims Reeves, Lockey, Weiss, and Formès, joined in the choral singing; an organ accompaniment played by Mr. Stimpson sustained by the double-basses, went with the voices, but the great instrument did not speak in the best tune on this occasion. Dr. Westley's anthem, "The Wilderness," directed by himself, followed the "Christus;" the texts are from Isaiah xxxv, verses 1, 2, 4, 6, 8, 9, 10; but, whether it arose from the want of control of the composer over the singer and band, or from the innate dryness of his ideas, the anthem seemed to be wild and incoherent, and the part-writing to be unvocal and uninteresting. The "Creation" terminated a long morning's selection on Wednesday; Mdme. Novello, Mdme. Castellan, Mr. Lockey, Mr. Sims Reeves, Mr. Weiss, and Herr Formès being assigned the solos. In the "Messiah" the same singers sang, with the addition of the Misses Dolby and Williams, and Signor Tamberlik, who had the recitative "He that dwelleth," and the air "Thou shalt break them"—the culminating and electrifying points of which are peculiarly adapted to the energetic and powerful style of the Italian tenor. In the "Samson," Mdme. C. Novello, Misses Dolby and Williams, Mr. Sims Reeves, Mr. Weiss, and Herr Formès have the solos, Madame Viardot singing the air, "Ye sons of Israel," in the first part. At Monday's rehearsal of this oratorio, the reception of this great singer by the orchestra was most rapturous; and after she had sung the lament of *Micah*, her noble declamation was the theme of unanimous admiration. It is to be regretted that her share in the oratorios has been so limited, having only been assigned but few pieces in "Elijah" and "Samson;" but the genius of the singer has not the less been displayed, and appreciated by admiring audiences at the festival.

We must not omit to mention, amongst the signs of the times, that the recitative, "Thus saith the Lord," and the air, "But who may abide," usually sung by a basso in the "Messiah," have been restored to the contralto, for which Handel wrote them; and that Miss Dolby was not wanting in declamatory fire for the train of beautiful modulations in the air.

THE EVENING CONCERTS.

In the programmes of the three evening concerts of Tuesday, Wednesday, and Thursday, the great feature of novelty has been the use made of the entire chorus and band in connected pieces, and *finales* from grand operas. Thus, there have been the famed *finale* from Rossini's "Mosè" (Zora), beginning with "Mi manca la voce," sung by Mdme. Castellan, Mdlle. Bertrandi, Tamberlik, Belletti, Polonini, and Lockey; the "Ah! non temer," from Spohr's "Last Judgment," given by Tamberlik; the Market Fryer and Battle Cry, from Auber's "Masaniello;" the massive "Possentii numi," from Mozart's "Il Flauto Magico," so finely sung by Herr Formès; the *finale* of the oath of the Cantons, from Rossini's "William Tell;" the grand tenor scene of *Arnoldo*, from the same opera, as well as the trio in which Tamberlik electrifies his audience, and the *finale* from Rossini's "Siege of Corinth," with Signor Belletti. When it is added, that the madrigal by Festa, "Down in a flowery vale," Beethoven's choral sympathy, No 9, and the *finale* from Mendelssohn's unfinished opera "Lorely," were included in the schemes, it will be seen that the concerts assumed unusual importance and interest. The "Lorely" *finale* will inspire regret that the composer did not live to complete the opera. It is thoroughly dramatic, and it is needless to add that the supernatural machinery is in Mendelssohn's happiest vein. The subject is the invocation of the Rhine spirits by *Leonora* to aid her, to revenge herself on her faithless swain. The *scena* taxes the powers of the *prima donna* to the highest extent—Madame Clara Novello's organ is especially adapted for the music. The choral symphony was, of course, a special item at this meeting, and no means had been neglected by Costa to secure a poetic and accurate interpretation of its enormous intricacies, vocal as well as instrumental. The adagio in B flat was the climax of passionate colouring, and effects were elicited in the pizzicato passages as delicious as they were novel. The breaks and surprises in the opening allegro and finale were executed with unfailing certainty, and strained as are the voices in the concluding choral movement, there was no stoppage or compliention, and the entire symphony was gone through with an intensity, and with an artistic feeling pervading the execution of every part, worthy of the composer. To enumerate the overtures, "William Tell," of Rossini; "Der Freyschütz," of Weber; "Jessonda," of Spohr;" "Zampa," of Herold; and to specify the "Jupiter" Symphony of Mozart, will suffice to afford a notion of the grand musical treat. The overture-score of the "William Tell" was like the rush of the players in the allegro, it was a veritable *tornado*. Barret, Pratten, T. Harper, Lucas, and Piatti rendered good service, it may be readily imagined. The "William Tell" concertante duo, for violoncello and double-bass, by the contra-basso solo of Bottesini, drew delicious *entremets* in the instrumental banquet. To describe singly the individual displays of the solo singers would fill a volume: the selections were those in which the artists have acquired distinction, and have been many a time and oft lauded in the columns of the ILLUSTRATED LONDON NEWS.

A festival without a "scene" would be a departure from all our notions of artistic susceptibility. One, therefore, took place on Tuesday night, in consequence of an accident to Mdlle. Zerr's toilette having prevented her being in time to sing a duo from "Lucia" with Mr. Sims Reeves. A bad reputation in this instance caused the blame to be ascribed where it was not due; and Mr. Sims Reeves, on coming forward to sing the "Cujus animam" was sibilated, as if he, the tenor, had been exhibiting "nasty airs." He retired indignant, very naturally, and Mr. Costa had to make an oration declaratory of the innocence of Mr. Sims Reeves as to the public disappointment. He was, therefore, much cheered on his return to the orchestra. He has been singing finely, and striving to please the public, never loth to recognise an artist's conscientious exertions. Our English singers generally have maintained a most honourable position at the meeting; but some speculations as to the fame acquired in town, and that acquired in the provinces, in respect to singers generally, must be reserved to a future period.

The general financial results are not yet known, but they are favourable, and are beyond expectation. Lord Leigh, the president, has been unusual in his attendance, and the nobility and gentry of the adjacent counties have mustered in great force. The weather has been variable, but on the whole propitious. The makers-ers have been extort-onate, as usual; and the railway companies, especially the North-Western and Midland, very liberal in their arrangements.

MADAME PARISH ALVARS.—This celebrated *harpiste* left this country for St. Petersburgh, on the 2d instant, in consequence of an invitation from the directors of the Imperial Court of Russia.

THE THEATRES.

SADLER'S WELLS.

On Monday the tragedy of "Lear" was reproduced, Mr. Phelps performing the character with remarkable pathos, and a stronger hold on the sympathies of the audience than on former occasions. There were, indeed, some touches of feeling which were well entitled to be regarded as "fine issues," eliminated from a "fine spirit." There was much that went to the heart. No doubt the tragedy will be frequently performed during the season.

HAYMARKET.

The very objectionable drama of "Jack Sheppard" was re-produced on Monday, at this theatre. The version played is that of Mr. Buckstone to which the Lord Chamberlain has limited his license—a course which has produced some jealousy in dramatic circles.

RICHMOND.

The engagements of Miss Edith Heraud at this theatre terminated on Wednesday, when she performed the character of *Parthenia* in Mrs. Lovell's exquisite play of "Ingomar." Miss Heraud's manner of acting this part is quite original, and charmingly exhibits the girlhood of the heroine—an attribute strangely omitted by previous impersonators—but which, nevertheless, greatly adds to the fascination of the performance. In consequence of the success experienced, the theatre has been kept open every night—a circumstance of rare occurrence for many years past. Miss Heraud's characters have been *Anne* in the "Hunch back," the *Lady of Lyons*, *Juliet*, *Lady Macbeth*, *The Wife*, *Julie de Mortemar*, and *Portia*; in each of which she was much admired; but most of all in that of *Marianna*.

FOREIGN AND COLONIAL NEWS.

FRANCE.

The President proceeds on his tour to the south on Tuesday next, the 14th instant—a day earlier than he had at first proposed. The route, as originally laid, was as follows:—Arrival at Nevers from Paris on the 15th; departure on the 16th from Nevers to Moulins; 17th, Moulins to Roanne; 18th, Roanne to St. Etienne; 19th, St. Etienne to Lyons; 20th, rest at Lyons; 21st, Lyons to Grenoble; 22d, rest at Grenoble; 23d, Grenoble to Valence; 24th, Valence to Avignon; 25th, Avignon to Marseilles; 26th, rest at Marseilles; 27th, Marseilles to Toulon; 28th, rest at Toulon; 29th, Toulon to Aix; 30th, Aix to Nimes; 1st of October, Nimes to Montpellier; 2d Montpellier to Narbonne; 3d, Narbonne to Carcassonne; 4th, Carcassonne to Toulouse; 5th, rest at Toulouse; 6th, Toulouse to Agen; 7th, Agen to Bordeaux; 8th and 9th, rest at Bordeaux; 10th, Bordeaux to Angoulême; 11th, Angoulême to Rochefort; 12th, Rochefort to la Rochelle; 13th, la Rochelle to Niort; 14th, Niort to Poitiers; 15th, Poitiers to Tours; 16th, Tours to Paris. There will be no deviation from this itinerary beyond the departure from Paris by one day earlier, for the purpose of including, as the first place to be visited in his tour, the city of Bourges; a deputation of the inhabitants, and a resolution of the Council-General, having requested that honour. The Municipal Council of Bruges has voted a sum of 10,000f. to defray the expenses of the reception. The Prince will take up his residence at the palace of the Archbishop, which is stated to be one of the largest and finest in France. The National Guards are being organised and armed with all possible haste, in order that they may be reviewed by him and receive their eagles. All the other cities and towns situate on the route of the Prince President are actively engaged in preparations for his reception. He will enter Nevers in an open carriage, and proceed directly to the Cathedral. After assisting at a *Te Deum*, he will repair to the Prefecture, amidst a double line of National Guards and soldiers, old military men of the Empire, boatmen, wood floaters, &c., who will afterwards defile before him. The entire population of the Nièvre, and of the neighbouring districts of the Cher, are expected at Nevers to salute the Prince on his passage. At Moulins the same activity in the preparations is observed. A battalion of infantry and 120 gendarmes are commanded to perform duty there during the stay of the Prince. At Lyons the Municipal Commission has placed a sum of 60,000f. at the disposal of the Prefect, to provide for his reception. The inauguration of the equestrian statue of the Emperor, a sham battle, and the siege of the fort of La Vitriolerie, a general review of the army of Lyons, a ball at the grand theatre, and a brilliant illumination, are to be the principal episodes of the *fête*. The reception of the nephew of the Emperor in the Isère will be most enthusiastic, if we are to judge from the agitation and the preparations in progress. The inhabitants of Grenoble, it is said, intend to present him with the keys of the gates of their city, as they did Napoleon in 1815 on his way from the island of Elba. The Council-General has added 50000f. to the 25,000f. already voted by the Municipality. At Avignon the preparatory works are proceeding with activity in the new Hotel de Ville, which is to be sumptuously decorated.

The Council-General of the Department of the Vendée, in compliance with the wishes of the population, has granted a sum of 10,000f. for the erection, on the principal square of Napoleon Vendée, of an equestrian statue of the Emperor Napoleon, its founder. The municipality, moreover, has voted for the purpose an unlimited credit, to complete the erection of the monument, should it not be covered by the private subscriptions.

Petitions for the re-establishment of the Empire, signed by 15,000 inhabitants of the department of the Cantal, have been forwarded to the Senate.

General St. Arnaud (the Minister of War), in a circular to general officers commanding divisions, informs them that, after the general inspection of 1853, infantry captains will be required to satisfy the inspecting general of their capacity to command three companies in battle before they can be promoted to the rank of field officers. The Minister of War dwells upon the subject as one of great importance. It appears that many officers, on receiving the epaulets of a *chef d'escadron* find themselves on horseback for the first time in their lives, and their lamentable ignorance of equitation has led to ridiculous scenes Orders have been given that the riding schools of cavalry regiments shall be opened at all convenient times to such infantry officers as may be designated by the colonels of their regiments. Another circular also has been addressed by the Minister to the generals of division, calling upon them strictly to enforce the decree made in 1843, to the effect that no officer in the army be allowed to marry unless the lady shall possess an income 1200 francs a year in her own right.

The *Débats* countenances a statement, which had been circulated by a Dutch paper, of the recall of the French Minister from Holland, in consequence of the rejection, by the Dutch Government, of the copyright treaty; but the *Independance Belge* of Wednesday denies, in the most positive manner, that the French Minister had been recalled, stating that he had merely returned to Paris for a short time, on leave of absence. It adds, that the falsehood was propagated to serve a speculation on the Amsterdam Stock Exchange.

M. de Maupas, the Minister of General Police, has addressed a circular to the Prefects of Departments, the purport of which is to insist that, in all cases of condemned persons (whether political offenders or not) who have been liberated on condition of being under surveillance, no change of residence shall be permitted to them without the personal sanction of the Prefect. That of a Sous-Prefect, Maire, or Commissaire de Police, will not be recognised by the Minister, who lays it down, moreover, that, even by the Prefect, no permission shall be given except he shall have previously satisfied himself that there is reasonable ground for the change of residence.

General Haynau has left Paris for Germany.

Dispatches from French Guiana of the 24th July represent that penal colony as going on satisfactorily.

A dispute, it is said, has arisen between the French Minister in Mexico and the Government of that country, arising out of two French people being married by the French Consul, for which the bridegroom had been condemned to four years' imprisonment by the judge of the Orizaba. Redress had been demanded for this outrage, which was not only refused, but the decision of the bench vindicated.

UNITED STATES.

The latest intelligence received this week from New York is dated August 28th.

The British Minister at Washington had proposed, under instructions from his Government, to negotiate an international copyright, similar to that recently concluded between England and France. He was desirous to secure for British authors the privilege of copyright for their books, and thus control their publication and sale in the United States. President Fillmore had signified his willingness to enter upon such a negotiation, and the subject was under consideration.

The President had transmitted to the Senate a message containing correspondence between the Secretary of State and the Peruvian Minister on the Lobos Islands and guano question. The Secretary, in this correspondence, argues the right of the United States to go there for guano, but official proceeding in the matter, he says, is suspended. The President had given instructions to the American Minister at Lima that orders be given to the naval force there to prevent any collision until a further examination into the state of the case. No countenance was to be given to the authors of enterprises undertaking to defend themselves.

A disgraceful personal dispute had occurred in the House of Representatives at Washington, out of which it was expected a duel would ensue. The words "liar" and "falsehood" were very freely bandied between two or three members.

The Senate Committee have reported that Mexico must fulfil the Garay grant for a railway across Tehuantepec, which Mexico has refused to do.

Congress had passed a bill for the better security of life in steamers.

We have again to record a steamboat accident attended with the loss of life. A telegraph communication, dated St. Louis, August 29, says that the steamer *Franklin* burst her boiler the previous morning, six miles below that city. Thirty persons were scalded, nine killed, and six were missing.

On the Erie Railroad a train had been precipitated down a twenty-feet embankment, killing a fireman, and severely injuring some of the passengers.

Cholera has again made its appearance in Victoria, in Texas.

An German ball in Lexington-street, Philadelphia, on the 24th ult., a riot occurred, and a German named Potts was killed by a pistol shot. Others were badly wounded.

There were upwards of 300 persons lost by the collision of the steamers *Atlantic* and *Ogdensburg*, which we noticed last week.

The Canadian Parliament was opened at Quebec on the 19th ult., when the Hon. J. S. Macdonald was appointed Speaker of the Legislative Assemb y.

From Mexico we learn that the Mexican insurgents had captured Guadalcazar.

Captain Stevens and 56 soldiers have been massacred by Camanche Indians, near Texas.

WEST INDIES.

Advices to the 11th of August, from Jamaica, mention that there was a large emigration, particularly of overseers of estates, going on to Australia. The House of Assembly was to meet on the 7th inst.

There is a total absence of news in the accounts from this and the other West India islands.

From Havannah, in the Spanish island of Cuba, we learn that an extensive organisation for the invasion of Cuba from the United States was said to have been discovered in the latter country, called "The order of the Lone Star," numbering 15,000 members. Several bodies were daily thrown into prisons that have been untenanted for twenty years—the most loathsome dungeons were put in requisition to accommodate those persons who were deemed the most refractory. Proclamations continued to be issued from a secret press that baffles all the ingenuity of the police to discover. The consequence is that most rigorous measures are instituted on the part of the Government, and many innocent people are made to suffer. Almost every Creole familyis under the surveillance of the police. Female privacy is disregarded, and altogether a very unhappy state of affairs reigns in Havannah. The city is shrouded in gloom. Yellow fever, cholera, and small-pox prevail to a great extent, and almost every ship in the harbour had some cases of the fever. Out of one company of 120 soldiers 110 had died, and in a chain-gang of 109 there died 100.

CAPE OF GOOD HOPE.

The last intelligence from the Cape is of the same unsatisfactory character as the advices have almost invariably been for the last eighteen months. The Kaffir war, in fact, appears interminable. The accounts for the month ending Aug. 3—the day on which the mail screw steamer left the Cape—disclose the same unvarying dismal tale as hitherto, of cattle-lifting, fruitless encounters, and bootless bloodshed, on both sides, without the most remote prospect appearing of an end to those dreary scenes, which only serve to depress and disgust the minds of the Europeans, whether soldiers or colonists, who are engaged in them. The only skirmish worthy of notice took place in the Waterkloof on July 24, when Colonel Buller, with a party of Rifles, attacked the Kaffirs, whom he had lured from their stronghold by a feigned retreat. Upwards of one hundred of the enemy were slain, and only three of our troops were wounded, and one killed.

A proclamation which had been issued by General Cathcart on July 1, and an explanatory circular of July 20, in reference to it, throws considerable light on the dubious state of colonial feeling relative to the war, which the policy of the Imperial Government has engendered. The proclamation calls for the assistance of every man capable of bearing arms against the enemy; and the circular states, in explanation, that all that General Cathcart required was a deputation of all the fighting men who can really come to represent the district, and for those who cannot come to assists those who can. He insists on this help. The mother country, he says, has sacrificed much life and treasure, while its only real advantage was the possession of the seaport of Simon's Bay. The protection of certain colonists who settled on the frontier thirty years since might be considered an obligation, but such obligations have their limits. This must, probably, be the last Kaffir war carried on at the cost of the British Government. The object of his intended expedition, General Cathcart goes on to say, was twofold—first, to test the willingness of the colonists; and, secondly, if they came forward, to demonstrate to the Kaffirs that, independently of the Imperial force, there was sufficient strength in the colony to chastise the enemy, should he again attack the frontier. If he (the General) found the colonists unwilling, he had ample force to cross the Kei and vindicate the national honour, but this would convince the world that the colonists were deficient in their former energy, and their chief opponent, Kreli, would ever after hold them in contempt. After returning from the expedition beyond the Kei, he says, it will be his duty to report to the Home Government if the colonists had not rendered him proper support; in that case, he will probably be ordered to withdraw his army, when his parting recommendation to them would be to keep less sheep and oxen, and more shepherds and herdsmen; for wild men and wild beasts would soon recover their ancient sovereignty in the Fish River and Zuurberg, and the colonists will not be able to drive them out as their fathers did in the olden time.

CHURCH, UNIVERSITIES, &c.

The *Durham Advertiser* says—"That it is not generally known that, after the death of Bishop Van Mildert, who was the last Prince Palatine of Durham and Earl of Sadberge, those titles devolved on the Crown by the act of Parliament which deprived the Bishops of Durham of their temporal dignities and privileges; her most Gracious Majesty is, therefore, the first Sovereign of this realm who has borne the titles of Princess Palatine of Durham and Countess of Sadberge."

The Chapter of St. Paul's have appointed the Hon. and Rev. H. Montague Villiers as their Proctor in the ensuing Convocation.

The restoration of Sir James Thornhill's cupola and dome, we are informed, has been determined on by the Dean and Chapter of St. Paul's.

THE BISHOP OF LONDON.—His Lordship the Bishop of London, on leaving the Palace at Armagh on Saturday last, where he had been some time on a visit with his Grace the Lord Primate, was presented with a complimentary address by the Dean and Chapter of Armagh, which the right rev. prelate acknowledged with expressions of gratitude.

PRESENTATION OF PLATE.—On Tuesday evening two pieces of plate, of beautiful workmanship, consisting of a tea-pot and cream-jug, were presented on behalf of a large number of the leading inhabitants of St. Philip's, Stepney, to the Rev. James Bonwell. The inscription on the larger piece ran thus:—"Presented to the Rev. James James Bonwell, M.A., incumbent of St. Philip's, Stepney, by his congregation, in token of their admiration of his talents, and in gratitude for his ministerial labours."

ST. MARY'S CHURCH, RADCLIFF.—A portion of the panelling inside of this church having been recently removed, two stone coffins were discovered, containing the skeletons of a man and a woman, supposed to be those of the founder and his wife.

TESTIMONIALS.—The following clergymen have recently received testimonials of esteem and affection:—The Rev. G. S. Bull, rector of St. Thomas's, Birmingham, from some of the junior members of that congregation; the Rev. M. Gweetz, curate of Stoke Gabriel, Devon, from his parishioners, on his resignation; the Rev. John Brownlow, of Corn-street Chapel, Bath, from his congregation, on his departure; the Rev. John Hoyda, from the congregations of Asbarn, Fenwick, and Moss, Yorkshire; the Rev. Matthew Robinson, on his resignation of the charge of the Episcopal Chapel at Dunkerque.

APPOINTMENTS AND PREFERMENTS.—The following appointments and preferments have recently been made:—*Rectories:* The Rev. E. Cookson, to Kirkbythorpe, Westmoreland; the Rev. H. S. Savory, to Camelzy, Somerset. *Vicarages:* The Rev. F. J. Hopkins, to Oakton, Cambridgeshire.

The Rev. Robert Eden, M.A., F.S.A., vicar of North Walsham, Norfolk, and chaplain to the Lord Bishop of Norwich, has been collated to the place and dignity of an honorary canon in the cathedral church of Norwich, with a stall annexed. Patron—the Bishop of Norwich.

By the *Hellespont*, Cape mail steamer, we are advised of the arrival of the *Queen of the South*, at the Cape of Good Hope, on the 26th June, being 38 days from England, and 12 from Ascension, to the Cape; and of the *Lady Jocelyn* at St. Vincents, on the 25h August, 16 days from England.

Richard Cross, the bankrupt of Southampton, who absconded from his creditors, taking with him a large quantity of jewellery and watches, and who left Plymouth on the 30th July in the *Queen of the South*, was secured at Cape Town, in consequence of intelligence taken out by the *Hellespont* steamer, which arrived only five hours before. Cross, alias Talbot, has come home in the *Hellespont*, in charge of Mr. John Ledger, belonging to the A division of the detective force.

From an experiment made this week, it appears that telegraph despatches can be transmitted from Paris to Vienna, *viâ* the Strasburg Railway, in about an hour. The closing prices of the Vienna Stock Exchange were sent off a few days ago at three o'clock, and reached Paris at five, after being detained at Strasburg nearly an hour.

MUSEUM OF ORNAMENTAL MANUFACTURES.

THE Museum of Ornamental Manufactures, formed in connexion with the Department of Practical Art, and of which the nucleus was exhibited in February last, having been enriched by of several important additions, and entirely re-arranged, was opened for the use of students and manufacturers, and for the inspection of the public generally on Monday last, at the temporary offices of the Department at Marlborough House. The interests of this infant school of taste have always been most warmly and graciously supported by her Majesty, who, in addition to several gifts of importance in various branches of art, has consecrated to lend a choice collection of lace and Sevres china—the latter intended to assist in carrying out a course of instruction in the ceramic art, under Mr. Simpson, a gentleman of long experience in this peculiar department, and who originally came from the potteries. The collection of Sèvres china belonging to her Majesty was originally formed, or completed, by George IV., and comprises the choicest *morceaux* which adorned the palace of Versailles previous to the breaking out of the first French Revolution. All the objects are of the most costly character, some of the larger vases being estimated to be worth £1000 a piece; and in that being probably not by any means over-rated, seeing that they individually employed the highest resources of chemical science in the composition and treatment of the material, combined with the first artistic skill in the modelling and designing. The lace exhibited by her Majesty is of unique magnificence, and will be examined with delight and interest by all who appreciate the properties of this elegant material.

The articles are classified for the present in six groups, viz.:—1, woven; 2, metal; 3, ceramic or pottery; 4, glass; 5, furniture; and 6, various. The catalogue, besides giving the description of each article, maker's name, price, &c., contains, generally, critical observations, more or less extended, upon the peculiar merits of the work in question, whether as to the processes employed in its production, or the taste displayed in its design. In order still further to illustrate the subject, and to inculcate the doctrines of right and wrong in matters of manufactural taste, according to the notions of directors of the department, a seventh group has been formed, of "Examples of False Principles in Decoration," and which are exposed *in terrorem* in an ante room, with the sentence of condemnation affixed to each. Many of these examples, and of the observations attached to them are very suggestive; but as it is our intention to illustrate this interesting exhibition upon another occasion, we shall reserve until then the further observations upon the subject.

PROPOSED CRYSTAL PALACE AT PARIS.—Notice of the formation of a company for the proposed Crystal Palace at Paris was posted on Monday in the London Stock Exchange. The capital is to be 13,000,000f. or £520,000, in 130,000 shares of £4 each, of which a small proportion are to be allotted in England. The concession for the building is granted to Messrs. Ardoin and Co., for 50 years, and embraces a minimum guarantee from the Government of dividends of 4 per cent., after the payment of all expenses, including a provision for a sinking-fund. The building is to be devoted to general purposes of exhibition, both national and universal.

AN INGENIOUS GOLD-DIGGING INVENTION.—A south country contemporary describes a very ingenious instrument, denominated "The Combination Gold-digging Tool." By the adaptation of its parts to one common handle, which changes in their position, it may be converted into a shovel, pick, scraper, axe, or crow-bar. The cost is considerably less than that of the large assortment of tools the gold-digger is now compelled to carry with him.

THE KING OF SWEDEN AND THE GRAND LODGE OF SCOTLAND.—Oscar, King of Sweden, has sent an address to the Grand Lodge of Scotland, accompanied by one of the diplomas of honorary member of the Grand Lodge of Scotland. This is, he says, the first instance of such a distinction having been conferred upon any person in his country. In his address, which, in highly laudatory terms, recognises the order of Freemasonry as "at once ancient and grand," he assures his brethren that he "observes with the utmost attention the march of events in the masonic world." The Masonic Lodge of Ulster also purpose investing the Monarch with honorary membership.

A Paris cabman was recently arrested on suspicion, while offering for sale a certain amount of Spanish stock at a money changer's in the Palais Royal. The man subsequently confessed that it was part of a sum of 150,000 francs in Spanish stock which he had found some time before in his cab, and had appropriated. He also admitted that he had already sold part of the stock, and had been living a life of laziness and luxury on the proceeds. He was sent to the Conciergerie Police. The owner of the *rentes*, who left it in the man's cab, has not yet been discovered.

OPENING OF THE MANCHESTER FREE LIBRARY.

THE ceremony of opening the above Library took place on Thursday the 2d inst., and was noticed in our late edition of last week. The Corporation, a great portion of whom were ladies, were present. Sir J. Potter presided, and was supported on either side of the chair by the Earls of Shaftesbury and Wilton, the Bishop of Manchester, Sir E. B. Lytton, Sir J. Stephen, Messrs. C. Dickens, Thackeray, C. Knight, J. Bright, M.P.; M. Milnes, M.P.; W. Brown, M.P.; J. Kershaw, M.P.; J. Brotherton, M.P.; and Mr. Felkin, Mayor of Manchester. Amongst the ladies were the Countess of Wilton and the Hon. Miss Egerton.

The chairman read the report, which stated that the sums expended, including the necessary law charges, amounted to £7147. The total of all subscriptions received was £9325, which was increased to £10,125 by the working men's subscriptions. The expenditure in repairs, shelves, fittings, &c., was £4316; giving the total cost of the buildings, fittings, furniture, &c., of £8863. The number of volumes at present contained in the library is 16,013. Books of equal value have rarely, if ever, been collected on terms so moderate. The entire cost of the library was £4282, independently of the large portion of the library which was contributed gratuitously. This is believed to be the only gratuitous lending library now existing on such a scale. An act, 13 and 14 Vict., c. 65, known as the Public Libraries Act of 1850, provides the power of levying rates for the purpose of supporting this and other similar establishments, and on the poll for adopting a rate in favour of this institution there were 3982 for, and only 40 against it. It will be for the Town Council to determine on the necessary expenditure, and on the rules under which the institution will be ultimately constituted. But the act of Parliament requires much amendment, as it only provides power to purchase land and buildings, but makes no provision for the purchase of books. The chairman having read the report, stated that Prince Albert had presented a number of handsomely bound books to the institution—(cheers)—and read a letter from Colonel Phipps, which accompanied them.

The Earl of Shaftesbury then rose, and moved the resolution expressing confidence "That the institution will effect great and lasting benefit to the generations to come." He said that, amidst the whirl of business there was a homage to mind and truth. They might have founded an attractive reading-room, with journals and periodicals, and have added the allurements of a smoking-room and billiard-table, but they would not have satisfied the requirements of the age or the aspirations of Manchester.

Sir Edward B. Lytton said that this library would form an endearing and conservative link between their wealth and their labour, and between the manufacturer and the operative. The other day the Minister of the United States told him, in reply to his question of what was the heaviest rate in the United States, that in some towns the poor-rate was almost as heavy as in this country, but that the largest rate was for the purpose of education (hear)—at which no one grumbles, as in education they find the principle of their safety.

Lord Shaftesbury's resolution was carried amidst loud applause.

Mr. C. Dickens moved the next resolution "That as this institution provides specially for the working-classes a free lending library, the meeting earnestly hopes that the books will produce pleasure and improvement in the cottages, the garrets, and the cellars of the poorest of the people." (Cheers.) Mr. Dickens, in the course of his address, characterised the Manchester School as "a great free-school, bent on carrying instruction to the poorest hearths. (Cheers.) It is this great free school, inviting the humblest workman to come in and to be a student—this great free school, munificently endowed by voluntary subscriptions, in an incredibly short space of time—starting upon its glorious career with 20,000 volumes of books—knowing no sect, no party, and no distinction; nothing but the public want and the public good. (Cheers.) Henceforth, ladies and gentlemen, this building shall represent to me the Manchester School. (Cheers.) And I pray to heaven, moreover, that many great towns and cities, and many high authorities, may go to school a little in the Manchester seminary, and profit by the noble lesson that it teaches." (Cheers.)

Mr. W. M. Thackeray seconded the resolution, and said that education is much changed from what it was one hundred years ago. Then Hogarth represented the idle mechanic as reading "Moll Flanders," and the good mechanic as reading the history of that good apprentice who was made Lord Mayor of London. Now mechanics have got their Car-

THE FIRST REGATTA AT LISBON.

lyles, their Dickenses, and their Bulwers to read. Such works as he (Mr. Thackeray) was in the habit of writing would occupy but a small space in such a library as this. "I know," said Mr. Thackeray, "that our novels are but what we may call tarts for the people, whereas history is bread, and historical and spiritual truths are that upon which they must be fed."

The resolution was passed. Several other resolutions were also passed, and the meeting having been addressed by Sir J. Stephens (Professor of Modern History at Cambridge), the Earl of Milton, Messrs. M. Milnes, M.P., Bright, M.P., Brown, M.P., Feilkin, C. Knight, Doctor Vaughan, and the Mayor, thanks were voted to the chairman, and the proceedings terminated.

A View of the Exterior of the Manchester Free Library appeared in No. 526 of the ILLUSTRATED LONDON NEWS.

FIRST REGATTA OF THE LISBON YACHTS.

A SPIRITED contest took place on the 13th ult., at Lisbon, for a silver cup, by four boats rigged as "cahiques." Two of them sailed under the British flag—the *Arrow*, and the *William and Edward*, of about 12 tons burthen each: the former was built at Oporto, and the latter at Lisbon, by Mr. Edward Shirley. The other two competitors were under the Portuguese flag, and were built at Lisbon—the *Corça*, after the design of Mr. Ronalds, in England, 12 tons burthen; and the *Patusco*, by Mr. Faria, of about 6 tons. The course was about fifteen nautical miles, between Belem Tower and Fort Mayas, crossing and recrossing several times the Tagus. The wind on the above day was a strong breeze from the north, and flood tide. The boats took position at Da Fundo, according to the lots they drew. The first to windward was the *William and Edward*, second the *Arrow*, third the *Corça*, and, to leeward of all, the *Patusco*, with three minutes start allowed for difference of tonnage.

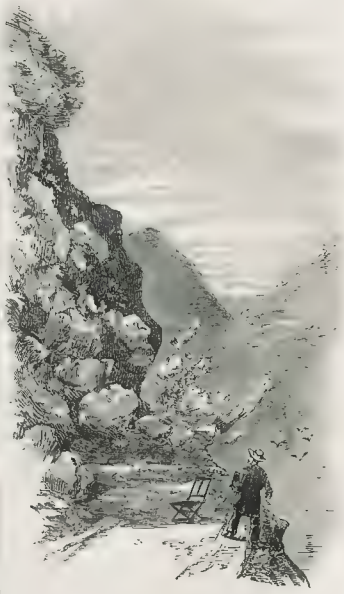
The *Arrow* got under way in gallant style, followed by the *Corça*, and shortly after by the *William and Edward*; the course being a close haul to Boa Viagem, the *Arrow* leading. The *Corça* gaining on the *Arrow*, was very soon in her wake, and manœuvred for some time to get to windward of the *Arrow*, which she effected at the moment of reaching the Boa Viagem mark, when the *Arrow* bore up sharply round the mark, the *Corça* being obliged to shoot past a considerable distance before she could wear; having done so, she in a few minutes crossed her opponent's bow; the *William and Edward* followed the *Corça* closely on her starboard quarter; the three rounding the mark at Trafaria in the following order: the *Corça*, in 24m.; the *William and Edward*, in 25m. 25s.; and the *Arrow*, 28m. 53s.; the distance being 3½ miles. The *Patusco* gave up on leaving the Boa Viagem mark, a distance of 1½ mile, which she ran in 20m. 28s. On the arrival of the *Corça* at Trafaria, she hauled her wind on the starboard tack for the Fort Mayas—on the north bank of the Tagus, with the *William and Edward* on her larboard quarter; the *Arrow* keeping more away, in order to avail herself of the eddy that runs along the southern coast through the Golada, by which she regained on the *Corça* 4m. 21s., and on the *William and Edward* 3m. 7s., rounding the mark at fort Mayas—the *Corça* in 58m. 30s., the *William and Edward* in 55m. 41s., and the *Arrow* in 59m. 27s. In going about here the *William and Edward* shot in between the mark and the *Corça*; and, luffing up hard, became the leading boat, with the *Corça* on her weather quarter, who, gathering way and bearing down upon her, passed her in a few minutes, arriving at Porto Brandon—the *Corça* in 1h. 36m. 25s., the *William and Edward* in 1h. 27m. 15s., and the *Arrow* in 1h. 30m. The next mark to be weathered was below Belem Castle, one mile dead to windward. The *Corça* and the *William and Edward* hauled their wind on the larboard tack, which they prolonged until they were in a position to weather the mark. The *Arrow* followed a different plan going about to the starboard tack in rounding the Porto Brandon mark, rounding it in 1h. 48m. 15s.: the *Corça*, in 1h. 41m. 15s.; and the *William and Edward*, in 1h. 43m. From hence the course was again to the south-west, and the three boats bore away, with the wind on the quarter, on the starboard tack, distance 1½ mile, rounding the Trafaria mark second time—the *Corça*, in 1h. 50m. 35s.; the *William and Edward*, in 1h. 52m. 55s.; and the *Arrow*, in 1h. 58m. 26s. The remaining points to be attained was when they started at Dafundo, on the north bank, distance 1½ mile, dead to windward. The *Corça* and *William and Edward*, hauled their wind on the starboard tack; and when they found themselves well to windward, being abreast of Caxias they went about with the wind abeam, and out of the influence of the tide which sets across to the south-east. The *Arrow* did not follow this movement, but, on passing Trafaria, went about on the larboard tack, steering for Belem Castle. The *Corça* arrived at the winning-post in 2h. 24m. 51s.; the *William and Edward* in 2h. 28m. 49s.; and the *Arrow* in 2h. 41m. 27s.; the *Corça* being declared the winner, beating the *William and Edward* by 4m. 58s., and the *Arrow* by 17m. 24s. The course the boats ran is computed at about nineteen nautical miles.

OPENING OF THE MANCHESTER FREE LIBRARY.

LAND-SLIP NEAR LINTON, NORTH DEVON.

REMARKABLE ESCAPE.

ALL who are acquainted with this picturesque locality will doubtless recognise in the accompanying Sketch, the romantic roadway which leads from Lynmouth to the Waters Meet, winding tortuously by the side of a rugged hill, which rises almost perpendicularly from the bed of the brawling Lyn to the height of many hundred feet, and terminating in gigantic grey rock, jutting out at the summit into a variety of grotesque forms. It was at one of the turns in this road, where nature affords the artist with all the materials of a picture, with a magnificent foreground of red and purple rock thrown into the wildest forms of irregularity, and a mid distance of wooded hill and peep of the river, and a background of purple hills that lead the eye on to the blue sea beyond, that the following incident occurred. Mr. Philip Mitchell, an artist well known in the counties of Devon and Cornwall, had selected this spot, about two miles from Linton, for a sketch; and, on Tuesday, the 31st ult., accompanied by some friends, he proceeded



LAND-SLIP NEAR LINTON, NORTH DEVON.

thither, and took his seat. His companions, however, strolled further on, and, sketching by the way, did not return for four or five hours, when, to their utter astonishment and horror, they discovered that there had been a land-slip in their absence, and that that part of the road where they had left Mr. Mitchell sketching, was covered with massive rocks; whilst he was there uninjured to relate what had happened. It seems that while sketching, he was occasionally annoyed by loose earth that kept falling on the road; and, to avoid this, he removed about thirty feet off, when shortly after he had resumed his sketch, an enormous mass of the rock above him rolled precipitously down upon the road at the exact spot where he had been sitting, a large portion of it rolling over the road into the river below. The fallen mass totally obstructed the road, and must have amounted to upwards of 100 tons, and was not easily removed even by a large number of workmen, who have since had to blast the rocks before they could be sufficiently reduced so as to be rendered manageable. Many visitors of the neighbourhood, who had passed the road in the morning on their way to the Waters Meet, were unable to return by the same road, and had to make a circuit of many miles.

The Sketch gives the view on the road looking back to Linton, which is situated at the top of the angular hill in the distance.

THE GIANT'S CAUSEWAY.—GENERAL VIEW, WEST.

MEETING OF THE BRITISH ASSOCIATION.

(From our own Correspondent.)

BELFAST, Wednesday, Sept. 1st.

THE twenty-second meeting of this Association commenced its sittings at Belfast—the "Irish Athens"—this day, under most favourable auspices. The attendance of members, the lists of papers to be read, and the fact of the attendance of the Lord-Lieutenant at many of the principal Sections, will contribute to render the present meeting one of the most interesting and successful of any which the Association has yet held. Of the objects of the Association it is unnecessary for me to say more than that they contemplate giving a stronger impulse and more systematic direction to scientific enquiry, promoting the intercourse of those who cultivate science in different parts of the British Empire, as well with each other as with foreign philosophers; obtaining a more general attention to the objects of science, and the removal of any disadvantages of a public kind which impede its progress. The aims which the Association have in view are, therefore, of the most praiseworthy and valuable character, and the mode by which they are sought to be attained, though, perhaps, open to some objections, have been hitherto eminently successful; and, notwithstanding the peripatetic character which is sometimes attached to the meetings of the Association, its labours have been productive of many important and permanent advantages to the cause of science.

The principal officers for the present year are:—

President.—Colonel Edward Sabine, R.A., V.P., and Treas. R.S.

Vice Presidents.—Sir Henry T. De La Beche, F.R.S., &c.; the Earl of Enniskillen, F.R.S., the Rev. Edward Hincks, D.D., the President of Queen's College, Belfast, the Rev. T. R. Robinson, D.D., Pres. R.I.A., the Earl of Rosse, Pres. R.S., Professor Stokes, LL.D., Professor Stokes, M.A., F.R.S.

General Secretaries.—J. Forbes Royle, M.D., F.R.S., Professor of Materia Medica and Therapeutics in King's College, London.

Assistant General Secretary.—John Phillips, Esq., F.R.S., St Mary's Lodge, York.

General Treasurer.—John Taylor, Esq., F.R.S., 6, Queen-street Place, Upper Thames-street, London.

Local Secretaries.—W. J. C. Allen, Esq., 8, Wellington-place, W. M'Gee, M.D., Donegal-square East.

Local Treasurer.—Robert Patterson, Esq., High-street.

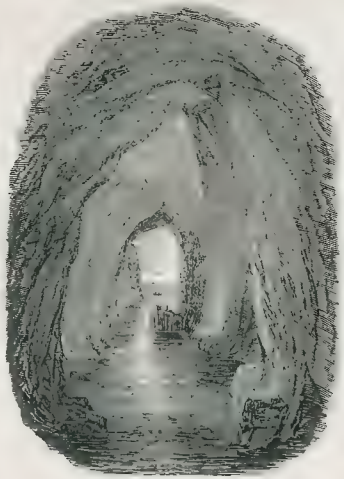
The rooms of the Queen's College are appropriated to the reading of the different papers, and the board room of the Ulster Railway has been placed at the disposal of the Association, for the purpose of a reception-room, for supplying lists and prices of lodgings, addresses of members, and other information which may be required with respect to the business of the meeting. The Presidents of the various Sections are as follow:—

Sections.	Presidents.
A. Mathematical and Physical Science.	.. Prof. W. Thomson, M.A., F.R.S.L. & E.
B. Chemical Science	.. Thomas Andrews, M.D., F.R.S., M.R.I.A.
C. Geology	.. Lieut.-Colonel Portlock, R.E., F.R.S.
D. Zoology and Botany	.. W. Ogilby, Esq., F.L.S., F.Z.S., M.R.I.A.
E. Geography and Ethnology	.. Colonel Chesney, R.A., D.C.L., F.R.S.
F. Statistics	.. His Grace the Archbishop of Dublin.
G. Mechanical Science	.. James Walker, Esq., C.E., F.R.S.L., & E.

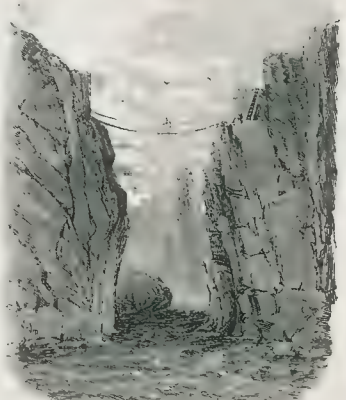
The actual business of the meeting commenced this evening, consisting of the opening address delivered by the President, Colonel Edward Sabine. The address was delivered in May-street Church; the attendance, notwithstanding the unfavourable state of the weather, was exceedingly good, and the address was most warmly and enthusiastically received. By the courtesy of Mr. Finlay, the proprietor of the *Northern Whig*, I am enabled to forward you an abstract of the very able and interesting address of Colonel Sabine.

After referring to the honour which had been done him, by placing him in the chair upon the present occasion, the gallant chairman said—Gentlemen, we meet for the third time in the sister kingdom, on the invitation, which has been most welcome to us, of a part of the kingdom which has furnished to the British Association so large a proportion of distinguished members, actively engaged in almost every department of science. On our arrival, we find ourselves surrounded by faces familiar to us in the recollections of many previous meetings, and long recognised as amongst the warmest and steadiest friends of our Association. With ample and excellent accommodation liberally provided in the full est anticipation of our wants, and with the evidence which forcibly impresses itself on every side of rapidly increasing prosperity, opening a wide field for the practical applications of science, our satisfaction in assembling here would be complete, were it not clouded by the absence at one friend who would have been among the foremost to have welcomed us to this meeting which he prepared, the Naturalist of Ireland, whose memory will long be honoured and cherished by the members of the British Association.

Among the subjects which are likely to come before the Mathematical and Physical Section, there is none, perhaps, of greater importance, or requiring more careful consideration, than the question whether the time is arrived when the establishment of an observatory in the southern hemisphere, furnished with instruments, of suitable optical power, for the examination of the nebulæ of the southern heavens, and devoted exclusively to that branch of sidereal astronomy, should be again brought under the consideration of her Majesty's Ministers. In the discussions which took place at a former period, the only difficulty which appeared to be apprehended, in reference to the successful working of such an establishment, arose from a doubt whether mirrors of the required magnitude could be re-polished, as they would frequently need to be, on the spot. This difficulty has now, it is understood, been entirely removed by the improvements which the noble Earl, the President of the Royal Society, to whom science is so deeply indebted for the instrumental means of prosecuting these researches, has made in the apparatus for re-polishing the mirrors, and in the instructions for the guidance of those who may have occasion to employ it, which his own great personal experience has enabled him to prepare. That an observatory for the purpose specified, in a part of the globe where it can render peculiar service, and where we possess facilities which other nations do not possess, will ere long be established, no one, I believe, entertains a doubt. The importance was admitted by the Ministry, to whom the recommendation was made, the only question with them appearing to be one of time. It will be for the members of the Mathematical and Physical sections to consider in the first instance, and for the general committee subsequently to consider and decide, whether any official step in this direction shall be taken by the British Association in the present year. Hitherto the researches of sidereal astronomy, even in their widest extension, had manifested the existence of those forces only with which we are familiar in our own solar system. The refinements of modern observation and the perfection of theoretical representation had assured us that the orbits in which the double stars, immeasurably distant from us, revolve around each other, are governed by the same laws of molecular attraction which determine the orbits of the planetary bodies of our own solar system. But the nebulæ have revealed to us the probable existence in the yet more distant universe, of forces with which we were previously wholly unacquainted. The highest authorities in this most advanced of all the sciences acknowledge themselves unable even to conjecture the nature of the forces which have produced and maintain the diverse, yet obviously systematic, arrangement of the hosts of stars which constitute those few of the spiral nebulæ which have been hitherto examined. Hence the importance of increasing our knowledge of the variety of



FORT COON CAVE, NEAR THE GIANT'S CAUSEWAY.



CARRICK A REDE (SWINGING-BRIDGE), NEAR THE GIANT'S CAUSEWAY.

forms in which the phenomena present themselves, by a similar examination of the southern heavens to that which Lord Rosse is accomplishing in the northern heavens. In our own satellite, for example, we have the opportunity of studying the physical conformation and superficial phenomena of a body composed, as we believe mainly at least, of the same materials as those of our own globe, but possessing neither atmosphere nor sea; and we cannot but anticipate the many instructive lessons which may be furnished by the points of contrast, as well as of resemblance, which the surface of the moon, viewed through Lord Rosse's telescope in the southern hemisphere, may present. It is understood that Lord Rosse himself participates in the wish that such an examination of the surface of the moon should be made; and, should the desire of the Association be expressed to that effect, is willing to undertake it in conjunction with one or two other gentlemen possessing the necessary physical and geological knowledge.

In connexion with astronomy, I permit myself to notice the publication, now in progress, of two works of considerable magnitude and value, because they do honour to the science and public spirit of the part of the United Kingdom in which we are assembled; I refer to the Markree Catalogue of Ecliptic Stars, and to the results of the observations at the Armagh Observatory. One volume has already been published in the year which has elapsed since our Ipswich meeting, and the second is in preparation; and both, by the aid of the funds supplied from the annual grant now placed at the disposal of the Royal Society, to be applied in the advancement of science. I have the more satisfaction in noticing these appropriations in favour of Irish science, from funds designed for the general benefit of the United Kingdom, because they indicate the fairness and equality with which the distribution of those funds is administered; it is also, I believe, strictly in character with the prevailing principles which sanction public aid, that it should be given, when needed, to those who, as in the case of these private observatories, have already contributed largely from their own resources.

The mathematical and physical theories of light have afforded subjects for many interesting and profitable discussions in Section A, and have, usually, had one day in the six specially allotted to them. Those discussions will derive a more than usual interest, at this meeting, from the remarkable discovery announced made by Professor Stokes, that, under certain circumstances, a change is effected in the refrangibility of light; and, from the advantage we possess, in having amongst us, on this occasion, the eminent mathematician and physicist, by whom this most important contribution to the science of physical optics has been made. As the interest of this discovery is not confined to a single branch of science, the officers, with the approbation of the Local Committee, have requested Mr. Stokes to favour the Association with an expedition of the subject at an evening meeting, when the members of the different sections may be able to attend without prejudice to their respective sectional duties.

Among the subjects of inquiry which may well deserve the attention of a committee of philosophers, perhaps few could more usefully occupy their joint labours than the revision of the equivalent numbers of the elementary bodies. This is a task which must necessarily require the co-operation of several properly-qualified individuals, if it be accomplished within anything like a reasonable time. Most of the numbers now in use depend upon experiments performed by Berzelius, at a time when the methods of research first known were formed by Berzelius, at a time when the methods of research first known were inadequate, even in such hands, to determine these constants with an accuracy sufficient for the wants of science at the present day. Such a subject, it is believed, might be highly proper for consideration by the Chemical Section, to which section it would be introduced by the distinguished chemist, Dr. Andrews, whose name it would be unnecessary to mention to those amongst us by whom he presides over that section, and than whom no one could be named as more competent to estimate the importance of such a revision, or to judge more truly of the qualifications that would be required for its execution.

The theory of heat has made great advances within the last ten years. Mr. Joule has by his experiments confirmed and illustrated the view of the connexion of heat the end of the last century by Davy and Rumford regarding the nature of heat, which are now beginning to find general acceptance. These researches appear to be laying the groundwork for the ultimate formation of a *mechanical theory of chemistry*, by ascertaining experimentally the mechanical equivalents expressed in absolute motive force of the thermal, electric, and magnetic forces. In discussing these subjects the section will have great advantage in being presided over by a gentleman, a native of Belfast, Mr. Thomson, who at so early an age has attained so high a reputation, and who is taking a leading part in the investigations to which I have referred. In connexion with the subject of heat, I would advert to the experiments in which Mr. Hopkins is engaged for investigating the possible influence of high pressure on the temperature at which substances, in a state of fusion, solidify. It is well known that the temperature of the earth increases as we descend, and it has been calculated that at this rate at which the increase takes place in such depths as are accessible to us, the heat at the depth of 80 or 100 miles would be such as to fuse most of the materials which form the solid crust of the globe. On the hypothesis of original fluidity, and assuming that the rate of increase known to us by observation, continues further down, and is not counterbalanced by a considerable increase in the temperature of fusion occasioned by pressure, the present state of the earth would be that of a solid crust of 80 or 100 miles in thickness, enveloping a fluid nucleus. Mr. Hopkins considers this state to be inconsistent with the observed amount of the precession of the equinoxes, and considers that if the temperature of fusion be considerably heightened by pressure, the conclusion is unavoidable that the earth must be solid at the centre. Mr. Hopkins is assisted in these experiments, which are carried on at Manchester, by the well-known engineering knowledge which are carried on at Manchester, by the well-known engineering knowledge which are carried on at Manchester, by the well-known engineering knowledge

POSTSCRIPT.

Closing of the Transfer Books at the Bank of England and South Sea House.—On Thursday the transfer-books at the Bank of England, for the Annuities due on the 10th of October on the following Stocks, were closed, and will be re-opened on Tuesday, the 19th of October next, viz. Reduced Three per Cent. Annuities, Long Annuities, and Annuities for terms of years; Bank Stock, from the 10th inst. until Tuesday, the 19th October; and the Three-and-a-Quarter per Cent. Annuities until Wednesday, the 3d of October. At the South Sea House, the transfer-books for South Sea Stock were closed yesterday (Friday) afternoon, until Tuesday, the 15th October next.

Royal London Yacht Club.—On Thursday the last match of the Royal London Yacht Club came off. The start was from Blackwall Reach, down the river, round a boat moored off Tilbury Fort, and return to the point of starting. The following are the names of the yachts which were entered for the match:—

	Tons.	Owners
Whisper	19	T. Ewelegh, Esq.
Thought	23	G. Coope, Esq.
Phantom	20	S. Lane, Esq.

Half-minute time was allowed to the yacht of inferior tonnage over that of superior tonnage. The issue was as follows:—*Thought* was five and a half minutes before *Phantom* at the starting place, which was reached at half-past four, and the latter half a minute in advance of *Whisper*. A protest has been tendered on the part of the owner of *Whisper* of being twice fouled by *Phantom*, which has to be decided by the committee.

Another Parachute Descent.—Madame Poitevin effected another safe descent in a parachute, which was attached to a balloon that ascended from Cremorne Gardens on Thursday evening. The machine fell in Richmond Park.

The Late Mr. Allen, the Artist.—The City of London School has given a gratuity pension to the widow and family (eight children) of their late professor of drawing, Mr. J. W. Allen, the well-known landscape painter (a notice of whose life appears in another column). The head-master, the Reverend Dr. Mortimer, has also given ten guineas, and the other masters have made this sum up to thirty guineas.

The Cholera.—Metropolitan Commission of Sewers.—The following resolution was passed at a recent meeting of the Metropolitan Commission of Sewers: "Resolved that, inasmuch as it appears to the Court that the cholera is rapidly approaching this country and metropolis, and it is urgently necessary for the public health that foul open sewers and ditches should be covered over, and other aggravated nuisances removed; and inasmuch as the Commissioners have failed in their endeavours, under the existing law, to raise the sums required for the execution of such works by loan on the security of the sewer-rates, it is, in the opinion of this Court, expedient and necessary that immediate application be made to her Majesty's Government for a temporary advance of such a sum as will enable the commissioners to execute the works of urgent necessity above referred to; and it is ordered that it be referred to a committee of the entire body of commissioners to consider and determine the most convenient mode of bringing the subject to the notice of her Majesty's Government, and that such committee be authorised and empowered to communicate with the Government for such purpose; and ordered, further, that the committee be summoned for Tuesday next, the 14th inst., at 11 o'clock A.M., at this office, for the consideration of the said matters."

Court-Martial—Sentence of Death!—A court-martial was held on Thursday morning, at Portsmouth, on board the *Victory*, flag ship (Rear Admiral Superintendent Prescott, President; and Mr. Greetham, Deputy-Judge-Advocate), for William Alexander Williams, private Royal Marines Artillery, on board the *Dauntless*, 33, screw-frigate, Captain Halsted, for having struck the gunner of that ship. The prisoner was found guilty, and sentenced to suffer death, without any recommendation. Transportation for life will very probably be the commuted punishment.

Great Fire at St. George's-in-the-East.—Yesterday (Friday) morning, at about four o'clock, a fire broke out on the extensive premises of Mr. Herman Braden, the sugar refiner, of Dunmark-street, New-road, St. George's-in-the-East, which resulted in the destruction of many thousand pounds' worth of property. The building is entirely destroyed, with its contents, and nothing remains but the outer walls. Mr. Braden was partially insured.

Serious Scaffold Accident.—About four o'clock on Thursday afternoon, a scaffold thirty feet high in front of the new building in Grafton-place, Kentish Town, fell to the ground. Two boys, named James Leonard, aged 16, and Timothy Walsh, aged 18, were dreadfully injured, the skull of the latter being smashed. There is but little hope of their recovery.

LATEST FOREIGN NEWS.

FRANCE.

The advices of yesterday (Friday) from Paris show that no abatement in the severity of the laws against the newspaper press can be expected under the *regime* of Louis Napoleon, at least for the present, for we find in the *Moniteur* a decree suppressing the journal entitled the *Corsaire*. The article which has brought down such a severe judgment upon this paper has not yet been made known.

An extraordinary credit of 150,000f. has been obtained by the Minister of the Interior to defray the expenses connected with public *fêtes*.

THE COURT.

In our last we announced the arrival of her Majesty and the Prince Consort, &c., at their Highland home, the genial retirement of which they are now enjoying.

The Earl of Malmesbury is in attendance on her Majesty as Secretary of State.

Her Royal Highness the Duchess of Kent and her Serene Highness the Princess Hohenlohe Langenbourg have been on a visit to the Queen.

Since the arrival of the Royal party at Balmoral, his Royal Highness Prince Albert has gone out almost daily deer-stalking; and her Majesty and visitors have taken drives in the neighbourhood.

On Sunday last the Royal party attended divine service in the parish church of Crathie. The Countess of Desart, the Hon. Mary Seymour, Colonel the Hon. C. B. Phipps, and Lieut.-Colonel the Hon. A. Gordon were in attendance.

Her Royal Highness the Duchess of Kent has resumed the occupation of Abergeldie.

His Royal Highness the Duke of Cambridge is expected to return to this country from Prussia in the course of the present month. His Royal Highness has been witnessing the grand reviews of the army at Stettin.

Their Royal Highnesses the Duchess of Cambridge and the Princess Mary have returned to Kew from Ryde, Isle of Wight.

The mortal remains of the late Duke of Hamilton were interred on Saturday, the 4th inst., in the family mausoleum at Hamilton Palace. The ceremony was of the most solemn and imposing kind, and the body was consigned to an Egyptian sarcophagus, supposed to belong to an Egyptian Princess. It was erected within the mausoleum by the late noble founder, who brought it from Egypt.

The Duke and Duchess of Richmond are entertaining a succession of visitors at Gordon Castle, county of Banff. The Prince and Princess of Saxe-Weimar are amongst the circle.

The Marquis of Lansdowne, who had been indisposed, is much better.

The Earl of Eglinton proposes leaving Dublin immediately on a brief visit to Eglinton Castle, where the annual sea meeting will come off during the week following Doncaster races.

Cheshire Fauna.—That rare visitant in the north-west, the moth-hawk (*Caprimulgus Europæus*), was shot on the 1st instant, by William Downes, Esq., on the Chester Orchard Estate, near Neston. The moth-hawk, with its serrated middle claw and wide gape, is an eminent instance of contrivance.

The *New Prussian Gazette* of Berlin was seized on the 6th instant for an article criticising in very severe terms the policy of the Government.

Parachute Descent from a Balloon.—On Monday evening Madame Poitevin performed successfully the perilous task of descending to earth in a parachute, from a balloon which ascended from Cremorne Gardens. About an hour before dark the ascent of the balloon took place, with M. Poitevin in the car, from which was attached, by cords of considerable length, the parachute. A kind of circular basket, in which Madame Poitevin sat, was connected by cords with this parachute. For some time after the company machine had left the earth, the lady's seat was observed to rock to and fro before it settled down under the balloon, and the greatest anxiety was manifested by the wondering spectators for the safety of this extraordinary woman. The parachute was not disengaged from the balloon until it had attained a great elevation. At length the cords were loosed, when the silken canopy was seen dilating until it assumed exactly the form of an umbrella, when it continued gradually to descend until it touched the earth, in the middle of Clapham-common, when the lady left her little basket, sound in mind and body, and repaired to Cremorne Gardens, where she received the congratulations of thousands upon the success of accomplishment of one of the most daring, reprehensible and perhaps useless feats ever performed, even by one of the hardier sex. M. Poitevin also effected a safe descent from the balloon.

METROPOLITAN NEWS.

Bank of England.—On Wednesday a special general court of proprietors was held at the Bank of England, for the election of a director in the room of Sir John Henry Pelly, Bart., deceased. The chair was taken by Thomson Hankey, jun., Esq., when the scrutineers were appointed, and made their report unanimously in favour of Mr. Oliver Hanson, Esq., who was elected accordingly. The court then adjourned.

South-Western Railway Steam-boats.—The steam-boats that touched every ten minutes at this company's pier on the Surrey side have been suddenly discontinued, and the pier closed, the service not answering the expectation of the steam-boat company, or paying the working expenses.

Direct London and Manchester Railway Company.—A return of between 6s. and 7s. a share is being made to the proprietors by Mr. Turgland, the official manager for winding up the company's affairs, being the result of a compromise with the directors in accounting for moneys misapplied.

Congregational Board of Education.—On Wednesday night the Rev. J. Unwin, M.A., delivered the inaugural address at the formal commencement of the Session of the Training Institution of the Congregational Board of Education, in the new Institute, which was formerly Homerton College, under the late Dr. Pye Smith. There were present a large number of the friends of the Institution, and the parents of the children attending the "practising schools."

Evening Classes for Young Men.—The annual meeting of the society by which these classes are conducted was held on Monday evening at Crosby Hall, Bishopsgate-street. There was a crowded attendance. The Lord Mayor presided. In introducing the business, he congratulated the meeting on the success of this institution, whose objects he regarded as of the utmost importance. Resolutions were adopted for carrying out the objects of the society.

Organ Builders' Benevolent Institution.—The tenth annual meeting of the members of this society, which was established for the purpose of assisting decayed or aged members of the trade, was held on Monday evening at the Freemasons' Tavern, Great Queen-street; Mr. W. E. Richardson in the chair. The balance-sheet contained in the report showed the following results:—Assets, £727 6s. 11½d., including £691 invested. Benefit fund, for the purpose of building an organ builders' retreat, £45 3s. 10d. The report was adopted; and, after the election of officers for the ensuing year, the meeting separated.

The Re-opening of the British Museum.—The British Museum, which has been closed for several days, is re-opened for the admission of the public, after being thoroughly cleaned, and various additions made in the galleries. The Institution will be continued open on Monday, Wednesdays, and Fridays from 10 A.M. to 4 P.M., till the 30th of April, 1853, when the re-adoption of a week from the 1st to the 7th day of January, when it will be opened till six o'clock in the evening. The workmen are busily engaged in the erection of two fountains in the front of the court-yard.

Exhibition of 1851.—The following notice has lately appeared:—"Many exhibitors of the City of London having made personal and written application to this office for the medals, certificates, and copies of the Jurors' Reports prevented to them by her Majesty's Commissioners, notice is hereby given that the late Local Committee for the City of London have undertaken the distribution of the medals and other articles in question, and the honorary secretaries will shortly announce their arrangements for this purpose.—By order of her Majesty's Commissioners, Henry C. Owen, Capt. R.E., 1, Old Palace-yard, Westminster, Sept. 7."

City of London Registration.—The aggregate of claims and objections returned to Mr. M'Christie, the revising barrister, this year, to be disposed of at the approaching registration of voters for serving in Parliament for the city of London, is as follows

	Claims.	Objections.	Total claims and Objections
Freemen and liverymen	2	539	541
Inhabitant householders	185	749	934
	187	1288	1475
Last year it was thus:			
Freemen and liverymen	3	214	216
Inhabitant householders	160	972	1132
	163	1186	1348

The New Houses of Parliament.—Since Mr. Jay, the new contractor for building the remaining portions of the New Palace of Westminster, commenced operations three weeks ago, a large additional number of workmen have been taken on, and are busily engaged on several parts of the building. A considerable number of Mr. Grissell's (the former contractor) men, are also engaged in finishing various parts of the building decided by that gentleman's contract. An immense scaffolding has been raised within the last few days, extending from the entrance to Westminster-hall to that portion of the main building immediately eastward of the House of Commons, and where during the railway mania of 1845, 1846, and 1847, a temporary wooden building and staircase of great height was constructed to communicate with the long corridor and numerous committee-rooms in the river front. Consequently, a new door has been made in the erection of the wing intended to be raised along this line to complete the square, immediately at the back of Westminster Hall, where formerly stood the Star Chamber, the Speaker's house, &c. Through this square will be the main approach to the cloisters, by elegant colonnades on each side, in keeping with the Gothic architecture of the cloisters, and when completed, will form one of the handsomest and most interesting portions of the New Palace. Within the court will also be the entrance to the reporters' and strangers' gallery. This portion of the building is expected to be completed before the end of the Parliamentary session of 1852-53.

Sanitary Reform at Tottenham.—On Monday a *fête*, in honour of the cause of sanitary reform was held at Tottenham, a district which has a clear five miles away out of the smoke of London, but which, nevertheless, from unsuppliable circumstances and relative over-population, has for years been badly trained, bad y watered, and on as only a suburban huddle-place for fever and cholera. In August last were, however, completed extensive and adequate drainage works; and on Monday a deputation from the Central Board of Health went down to Tottenham, at the invitation of the local body, to inspect the works, and to pass the formal official approval on what had been done. The deputation was headed by Mr. Chadwick, Mr. Corbett, Mr. Cornwall, and Dr. Southwood Smith. After the examination of the works the party sat down to a cold collation, provided for them by the hospitality of Mr. Purton, at his mansion, Tottenham Park. The report, which was read at the dinner, was of a most satisfactory character.

Improvements at the West-End.—Mr. S. Carey, the patentee of the concave and convex wood pavement, of the same kind as that laid in Lothbury, by the Bank, in Cornhill, and other places in the city, has received instructions to take up the existing wood pavement in Piccadilly (which he laid down about eight years ago), and to relay the same in Jermyn-street, which throughfare was previous y paved with wood by the Metropolitan Wood-paving Company. It is expected that the whole of the work will be completed previously to the opening of the House of Parliament, in November next. The whole of Piccadilly will also, during the same period, be laid with four-inch granite cubes of stone by Mr. Chadwick, the City paviar, and that portion of the same line of road leading from the mansion of the Duke of Devonshire to Apsley-house, previously macadamised, is now nearly covered with stone, laid by Messrs. Mowlem and Co., by order of the parochial authorities connected with Piccadilly.—Builder.

Metropolitan Commission of Sewers.—A special general Court of Commissioners was held on Tuesday morning, at the chief-office, Greek-street, Soho; Mr. R. Jebb in the chair. Present—Captain Veitch, Mr. G. S. Smith, Mr. L. Redhead, Mr. G. Baker, Mr. Thomas Gibson, Mr. Bowen, and Sir J. Burgoyne. The secretary reported that the balance in hand on the 4th of September amounted to £5513 7s. 8d., upon which payments had been ordered to the amount of £4916 0s. 4d., leaving a sewers rate balance of £597 7s. 4d. Payments to the amount of upwards of £5000 were then ordered. The Court then ordered a rate of 6d. in the pound to be made for six months on the western division of the Westminster sewers. The proceeds of this rate, with arrears uncollected, were estimated at £38,000. Rates at 6d. in the pound were also ordered to be prepared on the following districts:—Holborn division, Surrey and Kent district, Fulham and Hammersmith district, Counter's Creek district, Wandle district, Tower-hill level, Upper Limehouse level, and Limehouse level.

Increase of London District Post Letters.—There passed through the London District Post-office, during the week ending on the 30th ult., no less than 356,563 letters. The year of the Exhibition of All Nations but 14,563 more letters passed through the office during this period, the number given being 170,000.

The clearances from the port of London for the gold colonies of Australia, during the week ending last Saturday, show an increase in the number of vessels cleared there five to Port Phillip of an aggregate burden of 3472 tons, two to Port Phillip and Sydney of a joint burden of 2381 tons (one of these being the *Sesostris* screw steamer, of 500 tons), and two to Sydney of 1661 tons. There was also one vessel to Adelaide of 528 tons. The exports of goods, and of specie and bullion, have been considerable; but although a reduction of from 20 to 24 per cent. has taken place in the rates of freight, there has not been so much activity as was manifested a few weeks back. The demand for passages is also rather diminished.

Emigration from St. Marti's Workhouse.—The Poor Law Commissioners have at length sanctioned the proposition of the board of guardians of St. Martin's-in-the-Fields for the transmission of a considerable number of their able-bodied poor and the vessel [illegible] to convey them to Port Adelaide. On Tuesday the [illegible] in all 365 persons, assembled in the school-room of the [illegible] and were addressed by the chairman of the board and the Rev. H. Mayerne, the vicar. The tender for conveying the poor is £15 per adult. Every one will be supplied with an ample outfit. A small sum will be placed in the hands of the emigrants, to be disposed of by way of [illegible] and in clothing, from 10s. each in their pockets on the [illegible]

Present of a Fire-Proof Safe from her Majesty.—The fire-proof safe, for which the Society for the Encouragement of Art awarded to Mr. John Chubb an honorary testimonial, has been purchased by the Queen for a birthday present to her aunt the Duchess of Gloucester. The safe is of polished steel, beautifully inlaid with fine gold.

Royal South London Floricultural Society.—The last flower show of this society this season was held at the Royal Surrey Zoological Gardens. Notwithstanding the heavy rains of the last few days, these delightful gardens were crowded with visitors. The show of dahlias was exceedingly good, considering the state of the weather recently. The remainder of the show was somewhat below the average. A great number of prizes were awarded. The varied amusements which have so long rendered the Surrey Zoological Gardens a favourite resort were repeated with unusual spirit; and the exhibition of fireworks at the conclusion was particularly brilliant.

Mr. Green's Five Hundredth Balloon Ascent.—On Wednesday night the celebrated æronaut, Mr. Green, took his benefit at Vauxhall Gardens, and made his five hundredth balloon ascent, accompanied by Messrs. Henry Mayhew, Horace Mayhew, James Macswinney, R. Watkins, W. Little, and three other gentlemen. Just as the balloon was liberated, six cannons were fired in honour of the event, and the cheers of the spectators were not wanting to encourage the gallant veteran in what was considered as his last trip. As the Nassau was ascending, another balloon appeared over the Vauxhall Gardens, which was supposed to have ascended from the east end of the town, and both went in company in a westerly direction, the wind blowing rather freshly at the time.

Heavy Thunder-storm.—On Tuesday afternoon the metropolis was visited by a heavy storm of thunder and lightning, accompanied by a very copious fall of rain. At five o'clock, and for about a quarter of an hour before the storm burst, the air was thick and the sky veiled with vapour, so that the darkness was such as ordinarily overtakes the day about two hours later. The storm continued to rage at intervals until about seven o'clock on the following morning.

Singular Discovery.—On Saturday last, while some of the workmen employed by Mr. Walburton, builder, of Great Trinity-lane, were employed in removing a number of sashes, recently used as window-frames, at Mr. Curtis's, deceased victualler, in Queen-street, a snake was discovered underneath one of them. It is a beautiful specimen of the order *ophidea*, being in length about 4 feet, and at least 3 inches in circumference in the thickest part of the body. How it could have found a lodging where it was discovered is a mystery, as such creatures seldom remain such a full development as this one has done, except in exceedingly warm climates. From the fangs it possesses it is thought to be of the venomous kind. It is preserved for the present in a living state by Mr. Curtis.

Accidents from Cattle Driving.—On Monday afternoon some bullocks were being driven into a slaughter-house in Clare-market, when one of them, a fine healthy animal, smelt the blood, and darted off through the narrow streets of the market, knocking down several women and children, four of whom were carried, dangerously injured, to King's College Hospital, where they met with prompt attention. In its flight it dashed through the small passage leading from Clare-market into St. Clement's-inn, bending the back iron rail in the centre into a complete bow to admit of its passage through the inn, and thence forward into the Strand and Fleet-street, back to Smithfield, where it was ultimately secured

An Extraordinary Case of Hydrocephalus.—The body of a lad, named Joseph Davine, aged fourteen years, who had resided at 28, Canterbury-street, Agar-town, was found, on Sunday last, in the Regent's Canal, having fallen into the water while being attacked with a fit. By a post-mortem examination it appears that the head measured 27½ inches in circumference, 17½ inches across the top from ear to ear, 19½ inches from the nape of the neck up the centre of the back over the crown to the junction set with the eyebrow, and 11½ inches from one parietal bone to the other. The skull was as thin as that of a child two years old, and the bones were open like those of an infant never having closed. Seven punctures, upwards of five pints of water escaped from it, and the substance of the brain itself weighed 3½ lb. With the exception of the os frontal case of Cardinal, who lived till the age of thirty two, it was the largest head seen or heard of.

Births and Deaths.—The births registered in the metropolis for the week ending Saturday, September 4, were—Males, 785; females, 739; total, 1524. The deaths during the same period were—Males, 489; females, 477; total, 966, showing a considerable decrease on the mortality of August, the principal cause of decrease, as upon former occasions, which has been fatal to London than it was at an earlier period of the year. Twelve cases were registered last week. Diarrhœa carried off 89 children, and 16 persons of more advanced age; summer cholera was fatal to 8 persons, 4 of whom were adults. The registrar of Fulham calls attention to the great prevalence of diarrhœa at the present time in part of his district, and ascribes the bad sanitary condition of the locality. Fatal deaths are returned as caused by scarlatina.

Meteorological Observations.—At the Royal Observatory, Greenwich, the mean daily reading of the barometer was above 30 in. on Wednesday, Thursday, and Friday. The mean of the week was 29.979 in. The mean temperature of the week was 62°4 deg., which is 2·6 deg. above the average of the same week in ten years.

AGRARIAN MURDER.

The Correspondent of the *Evening Mail* supplies the annexed version of the dreadful murder of Mr. O'Callaghan Ryan:—

Clonmel, Sunday Evening.—It is my painful duty to have to inform you, that the neighbourhood of this town has again been the scene of as revolting and barbarous a murder as ever disgraced this unfortunate country. The victim, Mr. O'Callaghan Ryan, resided in Clonmel, and was universally respected by all classes of its inhabitants for his mild and conciliatory demeanour; but these qualities, it would appear, were insufficient to shield him from the ruthless arm of the assassin. The unfortunate gentleman was possessed of some property in the parish of Newcastle, in this county; and, having occasion to take legal proceedings against some of his tenants, it is reported that the necessary process caused to enable him to evict them yesterday. However, it is said that Mr. Ryan wished to give them one more trial preparatory to executing the ejectment, and with that view, unfortunately, proceeded to Clashganny on Friday in endeavour to come to amicable terms with the two parties, but with what result I am unable to learn, owing to the lamentable termination of his kind and feeling errand. About seven o'clock in the evening, as he was returning home, he was fired at near Kilmanahan, in the county of Waterford, about four miles from this town, and afterwards dragged inside the ditch; and, last the gunshot wound should prove insufficient for the accomplishment of his bloody deed, his head was battered in a most frightful manner—it is thought with a billhook, or some such instrument. A policeman had been passed by the ill-fated gentleman at no great distance, who, hearing the report of the gun, at once hastened to the spot, where he perceived Mr. Ryan's horse standing without his rider, and also marks about the ditch which indicated him to enter the plantation, which skirts the road at either side, and, being guided by traces of blood, he soon witnessed the horrifying spectacle of the gentleman whom he had but a few short moments passed in the enjoyment of health and vigour, now lying a mangled and lacerated corpse, and weltering in his blood. The police were soon scouring the country in all directions, but, up to the present, I have not heard that their efforts to effect the capture of the guilty persons have been successful. It would appear that it was intended to throw the body down an old lime-kiln near where it was found, but perhaps the hasty appearance of the constable prevented it; however, this is mere supposition, as it is not probable the murderers knew the murderous deed was discovered so soon. An inquest was held yesterday by Mr. Manahan, before Mr. Dennehy, coroner for the county of Waterford, assisted by numerous magistrates of both counties, and a verdict of "Wilful murder" returned against some person or persons unknown.

Another letter, dated Clonmel, Sunday evening, announces the arrest of two of the supposed assassins.

Two men, named Hackett and Norman, have been lodged in the gaol here on suspicion of being concerned in the murder of Mr. O'Callaghan Ryan, in the county of Waterford, near this town, on Friday evening last. Some of their clothes were found with spots of blood on them; as a man's hands, when the shots were somewhat blood. It is expected that they will be fully committed to-morrow, and sent off to Waterford Gaol, to stand their trial at the next assizes to be holden in that city.

THE VRAIC, OR SEA-WEED HARVEST, GUERNSEY.

Around the indented shores of the island of Guernsey, and in the neighbouring bays, grows in great abundance a marine plant of the Algæ tribe, which is locally known as *vraic*, and is highly valuable for economical purposes. It is used both as fuel and manure, and considered of such importance, that it cannot be cut or gathered except at certain seasons, and under certain restrictions, specified in ordinances of the local legislature. Indeed, so essential an article is deemed in the rural economy of the inhabitants, that "point de vraic, point de hautgard" ("no sea-weed, no corn-stacks") has passed into a proverb; and to the abundance of this herb in the neighbourhood is attributed the large corn and potato crops generally produced in the parishes bordering these bays.

Upon a recent visit to Guernsey, Mr. Duncan found in the Vraic Harvest the two picturesque scenes engraved upon the next page. The following descriptive particulars of the ceremony of the weed we abridge from Birtch's "Guide for the Island of Guernsey"

A distinction obtains between *vraie aoûté* and *vraie vesard*. The *vraie aoûté* is so called from its being cut off with a small bill-hook whilst fastened to the rock at low water. The *vraie vesard* is washed by the sea to the coast, and gathered as it [illegible] particularly in stormy weather. [illegible] are supposed to be worth from two to three of the

THE VRAIC OR SEA-WEED HARVEST, GUERNSEY.

GATHERING THE VRAIC OR SEA-WEED.

vraic venant. From two to three loads of vraic scié, and from four to five of vraic venant, are required to manure effectually one *vergée* of land. The vraic venant is almost exclusively applied to this purpose, whilst the vraic scié is first burnt as fuel, the poorer inhabitants, unable to afford coal, or to obtain wood, relying upon this provision throughout the winter. The ashes are then used as a manure, of which twenty bushels are considered requisite for one *vergée*.

The winter harvest commences at the spring tide of the first new or full moon after Candlemas Day, and continues to the 15th March. The summer harvest begins on the second spring tide after the 24th June, and continues during two moons. But that every class of society may share the benefit derived from this herb, poor persons, possessing neither horse nor cart, are allowed, during eight days of the first spring tide immediately preceding the summer harvest, exclusively to cut it, provided they bring it on their backs to the beach. These restrictions apply only to the vraic scié. The law relating to the vraic venant is at present to this effect:—It is allowed to persons, the whole year round, to mark, rake, or cart away, from sunrise to sunset, with the addition that in the winter months the time is extended till eight o'clock in the evening.

On the morning of the days appointed for the vraic scié being cut, thousands of the country people, old and young, male and female, uniting in companies of two or three families, some with their carts, and others with horses having strong panniers slung on each side of them, proceed joyously to the beaches, and as the tide recedes scatter themselves on the different rocks the boldest, on foot or on horseback, wading to rocks that have been previously examined, or where they suppose the vraic is thickest and longest and begin to cut away in right good earnest with a small kind of reaping-hook, collecting it in heaps, upon which they place a smooth stone with their initials chalked on it; and thus they keep on working until the tide begins to flow, when the men carry it on horseback at full speed, either to the beach above high-water mark, of to the carts belonging to their respective companies, which are in waiting as low down in the bays as the nature of the ground will allow them to come. This of course applies only to the vraic scié, the gathering and carting of which we have illustrated.

It has been satisfactorily ascertained that nearly 24,000 loads of vraic venant, each worth two shillings, *taken at the beach*, and about 1200 loads of vraic scié, each worth twelve shillings, are yearly got out of the beaches in round numbers the yearly result may be stated thus. 25,000 cart-loads, worth about £3000. Thus vraic is the only manure to be had in the island, there being here neither lime nor chalk. To its invigorating salts is doubtless to be attributed the productiveness of the land in the culture of potatoes, of which as much as six bushels, or 405 lb., to the Guernsey perch, were last autumn (1850) dug out of many a field being at the astonishing rate of 20 tons 1 quarter to the English acre.

CARTING THE VRAIC.

SKETCHES OF THE CALAIS FETES.

COURGAINAISE FISHWOMEN.

SKETCH IN THE COURGAIN.

(From our own Correspondent.)

A FEW weeks ago enormous placards were posted in various parts of the metropolis, with an unusually rich bill of fare promised by the authorities of Calais to those modest excursionists who are too closely riveted to their business to think of breaking their chain for more than a day or two. These huge promissory notes, indorsed by the Mayor, and illustrated with a large balloon "Aeronnon Aerostatique"—were perfect in the assurance of an official programme. Although the practice of French authorities in *fête*-giving is proverbial—their entire business seeming to be pleasure, yet, the great Calais *affiche* did not succeed in entrapping more than half a cargo for the steamer *Fame*, lying at London-bridge, to convey the pleasure-seekers to the "Grand Festival d'Harmonie Militaire, Regates à la Voile et à l'Aviron."

It is, no doubt, difficult to excite public curiosity at this time of the year, and especially about official festivities in little towns, which can afford to offer to their visitors little more than the small change of the magnificent displays which everybody has, of course, seen lately in Paris; to this the scant cargo of the *Fame* may possibly be attributable; yet the trip alone deserved better attendance.

Calais has been very much neglected of late; and the author of the last published history of the place ("The Annals and Legends of Calais") very appropriately styles it a "cursorily regarded old town." Still, it reminds us of the early enterprise of our ancestry; "and as the frontier town to one of the

> Two mighty monarchies
> Whose high, upreared, and abutting fronts,
> The perilous narrow ocean parts asunder—

and the scene of our first attempt at colonisation, in the midst of an inveterately hostile people, must ever remain deeply interesting to our

FETE AT CALAIS.—MUSICAL PROCESSION IN THE GRANDE PLACE.

selves." Yet this attraction is bookish more for the fireside than the field. Calais is one of the victims to fast railway travelling. Formerly it was almost the only specimen of France for many of our countrymen; now it is, perhaps, the only part they are ignorant of. Yet it is very striking as a most characteristic picture of French provincialism, and as an entirely fortified town of a great military people; whilst it possesses the kindred attractions of a rapidly growing English colony.

The history of the place has just been very pleasantly told in the "Annals and Legends," an archæological handbook of the better class, with some very entertaining glimpses of the present life of Calais. Alterations and improvements have been but few, and so much the better for the artist. The gate (*Porte du Havre*) is nearly the same as when Hogarth painted it in his "Roast Beef of Old England" a century since. The *nacelle* (skiff), in which the aëronaut Blanchard was thrown, no longer adorns the ceiling of the Hotel de Ville; it has done its duty to sight-seers, and has been allowed to retire on half-pay to the staircase of the old-fashioned little house in the *rue des Prêtres*, dignified as the Museum. Eustache St. Pierre has been removed too from the Grande Place; but he ought to have occupied a more honourable position in his birthplace, now grown up from a mean suburb into a well-peopled English town, forming a redoubtable rival to the ancient city.

The "Hotel Dessin," which Sterne has rendered so celebrated, and which is so familiar to every reader of his "Sentimental Journey," is yet in its olden state, minus the bustle of the *château*-like hostelrie. Its glories are faded; its courtyard is silent: you look in vain for the stately carriages which the landlord used to lend to his aristocratic patrons, amongst whom he numbered monarchs: perchance, however, you might discover in some corner an old-fashioned chaise, the identical one bargained for by Sterne. "Sterne's Room" is still shown, and the

THE FISHMARKET IN THE COURGAIN.

COURGAINAISE WOMEN HAULING IN A FISHING-BOAT.

author of the "Annals" thus consoles himself in his scepticism:—"Though the *remise* of his day may have been removed, and the chamber shown as his have been built a couple of years after his decease, yet the spirit of the author of "Tristram Shandy" hovers in the corridor of the house, as you fancy you are following in his footsteps. Hits about the fastened casement to your dormitory, and more hallows the hostelrie of Monsieur Dessin, than do all the chronicled arrivals and sojourns of a host of Regents, Dauphins, Field-Marshals, and Hidalgoes, of their fleeting and evanescent hour."

Of the long-announced *Fête*, which took place on Sunday and Monday week, August 29 and 30, a few details will suffice. It consisted principally of a *concours* of music, to which the people of the neighbouring towns and villages were invited. On Sunday the several bands, headed by their respective mayors and municipal authorities, banners, &c., marched into Calais, to the Hôtel de Ville, where *vin d'honneur* was offered to them. They then formed in procession, and paraded the principal streets. In the afternoon took place the *concours*, when each band, stationed upon a platform erected in the middle of the square, and surmounted with a muslin cupola, supported by Venetian mats, with bandcrolles, &c., played two airs.

In the evening the *beaffroy*, Hôtel de Ville, and the square, were tastefully illuminated, and, filled with gaily-dressed company listening to the music, had a very pleasing effect. In the middle of a *pasticcio à la Jullien*, performed by a very good brass band from St. Omer, our "God save the Queen" was played; and at the same moment an English naval officer and his colonel of engineers, who had been seated

EPITOME OF NEWS.—FOREIGN AND DOMESTIC.

The nomination of the Hon. Joseph R. Ingersoll as Minister at the Court of St. James's, in place of the Hon. Abbott Lawrence, resigned, was confirmed by the Senate of the United States on the 31st ult.

The *Edinburgh Post* says it is confidently affirmed that Mr. Macaulay has abandoned his intention to take his seat for Edinburgh, and that the Whigs have resolved to start Mr. Horsman in his room, as soon as a vacancy is declared. The *Caledonian Mercury* has, however, contradicted this report.

Scotland was never more full of tourists than at present. Throughout the more attractive portions of the Scottish Highlands the hotels are now literally overflowing.

A large staff is now in training in this country to work the electric telegraphs about to be constructed in India.

Nearly 200 paupers have been lately discharged from the Tralee workhouses, while the number of admissions on last board day amounted only to 40. There are not now much over 2500 paupers chargeable to a union that had not many months since little short of 8000 to support and lodge.

The deliveries of tea in London last week were 586,433 lbs.

Mr. John Stuart, Q.C., is appointed a Vice-Chancellor in the room of Sir James Parker.

Lord Malmesbury has appointed Mr. Henry Byron her Majesty's Vice-Consul at Hayti. Mr. Byron is the secretary to the Great Protection to Native Industry Society in Bond-street.

The fine new screw-steamer, the *Cleopatra*, of 1500 tons burthen, sailed on Tuesday for Sydney and Port Philip. She carries a full complement of first, second, and third-class passengers, and 600 tons of coals.

A private soldier of the 30th *dépôt*, named Edward Dunn, aged about thirty, destroyed himself a few evenings ago by jumping off the Shakspeare's Cliff, at Dover, while suffering under a sudden fit of insanity. He has left a widow and two children.

On Saturday morning last a fine youth, aged seventeen, son of Mr. John Benson, of King's Arms-yard, Lambeth, in endeavouring to get on board a vessel at the Adelphi-pier, Strand, fell overboard and was drowned.

The largest *café* in Europe has just been opened at Vienna. Not less than 14 billiard-tables are to be found there, and there are 150 gas-lights. Fountains of water play in each room.

A letter from the Hague announces that two or three cases of hydrophobia have been cured there by the employment of sulphate of quinine combined with opium. The Medical Society of Amsterdam, the letter states, is about to publish an account of the two cases.

A letter from Amsterdam states that the Danube Steam Navigation Company has just engaged in that city 200 shipwrights to work at some new steamers which are to be constructed at Ofen, in Hungary. Each man is to receive 120 fr. a month.

The *Bâle Gazette* gives the following account of the periodical press in Switzerland:—"There were in 1851, 184 journals. In 1850 there were 202; but the number of subscribers was greater in 1851 than in 1850. The total number of copies distributed in 1850 was 7,238,228; in 1851 it was 7,508 985.

About four o'clock on last Saturday morning, a fire broke out in the house No. 26, Brunswick-terrace, Brighton, belonging to Philip Salomons, Esq., High Sheriff of Sussex, which destroyed the building (worth from £3000 to £4000), and seriously damaged the adjoining house.

The *Phare de la Loire* says "that the transport from Paris to Nantes by the railway of the dinner of Chevet, for Queen Christina, had cost 1000 fr. Adding to this the expense from Nantes to Gijon, with all the other charges, the total cost of the dinner cannot be less than 45,000 or 50,000 fr."

An Archæological Society for the county of Surrey is now in course of formation, and a committee has been appointed for the purpose of enrolling members.

On Saturday last, a waggoner, in attempting to leap upon the shaft while his vehicle was passing through Highgate Archway, slipped, fell under the wheel, and was killed on the spot.

Mr. W. H. Kebbel, lately chief warder of the Leicester county prison, has been elected governor of Oxford county gaol, in the room of the late Captain Robins. There were 58 applicants for the situation.

The Exhibition of the works of living artists at Antwerp is now open. The number of works exhibited is 614; of exhibitors, 346. Of the latter not fewer than 141 are foreigners, and amongst them are 22 English.

A *sergent de ville* (police officer) in Paris, died lately of hydrophobia induced by the circumstance of the bite of a rabid dog he had two days before killed falling upon his hand, which had been previously wounded.

An eccentric gentleman named Neild, a barrister, who died last week at his residence in the vicinity of Ashford, in Kent, at the advanced age of 70, has bequeathed to her Majesty the Queen nearly the whole of his property. It consists chiefly of land, scattered in various counties, and is valued at £300,000.

The *Arbroath Guide* states that there was sold on the 19th ult., off the farm of Auchtenny, parish of Forgandenny, a lot of cattle which actually realised 175 per cent. on purchase money for twelve months' keep, after paying railway carriage, agent's commission, &c.

The *Quebec Gazette* announces the arrival in that city of William Jackson, M.P. for Newcastle-under-Lyne. The hon. gentleman, accompanied by his son, crossed the Atlantic in the *Africa*.

A number of officers belonging to the ships of the Royal West India Mail Steam-Packet Company have resigned in order to emigrate to Australia.

A riot occurred at Lynn, Massachusets, on the 22d ult., while the officers were attempting to serve a liquor warrant. Considerable excitement prevailed, and one of the officers named Artemas Chase, was wounded, it is feared, fatally.

The Australasian Pacific Mail Steam-packet Company have received the grant of a Royal charter.

The *Official Gazette* of Munich, of the 2d, publishes the text of the treaty of extradition concluded between Bavaria and Switzerland on the 28th of June last, and now definitively ratified by both powers. It is to be in force for ten years. Its provisions are not applicable to politica. refugees.

On Monday night, a small box was handed in by an unknown person at the door of a lady's residence, in the Charnside, Dundee, which, on being opened, was found to contain a gold watch-chain and trinkets, of which she had been robbed about a twelvemonth before.

A lady residing at Herne Bay was a few days ago watching the action of a threshing machine at Herne Parsonage, when her dress by some means came in contact with the machinery, by which her arm was broken, and other parts of her body much injured.

Considerable damage has been done to the costly stock-in-trade of Mr. Carrell, milliner and haberdasher, 13, Albany-street, Regent's Park, in consequences of a fire which broke out on the premises on Monday evening.

Three extensive seizures of smuggled English cottons were made a few days ago at Lille, and one at Roubaix.

James Baylis, a labouring man, living at the workhouse farm, Longford, near Gloucester, while endeavouring to conceal a gun under his coat, which he had loaded for the purpose of firing at partridges, was shot through the heart by the accental explosion of the weapon.

Recent accounts from Florence say it is believed that the Murray case will be wound up by the liberation of the prisoner, and his banishment from the Roman states, his Holiness having expressed (although not as yet officially) his intention of conforming to the wishes of the British Government.

Ramsgate has not had so many visitors in it at once for some time, the population being 11,000, and now it is calculated there are no less than 30,000.

The Customs duties for the port of Dublin in the last week were £20 100, against £17,500 in the corresponding week of the last year, being an increase of £2600. Tea, £2300; sugar, £4800; wine, £2300; spirits, £800; tobacco, £2800; miscellaneous, £700.

There has been imported into Liverpool lately thirty-six rattlesnakes, which came over in two large cases, accompanied by their owner, M. Van Gordon, who caught them on the Alleghany Mountains.

Mrs. Kerwan, the wife of an artist, was drowned on Monday, while bathing from off an island near Dublin, called "Ireland's Eye."

A poor boy who had been tending sheep on the Spittal-hill, Ashcombe, near Lewes, was killed by the lightning which accompanied the storm of Tuesday. His body was blackened all over, his clothes were wrenched from his back, and the hob-nails were drawn from his boots.

Arrangements have been completed this week, by W. S. Lindsay and Co., for the construction of an iron screw vessel for the Australian trade, of about 2300 tons burden (1600 tons register) with a nominal power of 400 horses to work up to about 940. She is to be completed in April next, and is to be ready to sail in the following June, when she is to take out 850 young women selected by the Family Colonization Loan Society. The vessel is to be named the *Carshine Cushion*.

CHESS.

TO CORRESPONDENTS.

R B T.—We have not room. You will find them in the September Number of the *Chess-player's Chronicle*

GAMBIT, Manchester, INQUIRER, SUBSCRIBER, and Others.—The variation introduced by Prince Carousseff in the Allgaier Gambit is not new, although it has been scarcely touched on by the books. In Bilguer's German "Handbuch" the following is given as a safe sequence to this mode of carrying on the attack:—

WHITE.	BLACK.	WHITE.	BLACK.
1. P to K 4th	P to K 4th	6. Kt takes K P	K takes Kt
2. P to K B 4th	P takes P	7. B to Q B 4th (ch)	*P to Q 4th*
3. Kt to K B 3d	P to K Kt 4th	8. B takes P (ch)	*K to his sq*
4. P to K Kt 5th	P to K Kt 5th	9. P to Q 4th	*K Kt to K 3d*
5. Kt to K R 5th	P to K B 3d	10. Kt to Q B 3d	*B to K Kt 2d*

And Black has the advantage.

RODOLPH, M.S.—The unrivalled work on Chess Openings, by Major Jaenisch, called the "Analyse Nouvelle," &c., may be procured of Williams and Norgate, the foreign booksellers

JUVENIS.—The fault lies with you. No 449. by E A M, is not only perfectly "sound," but has been pronounced by competent judges one of the most beautiful Chess Problems of modern times. Young players are very apt to consider every Problem "impracticable" which they don't find out, and deery every one as "too easy," which they do

H M.—"La Regence," the French Chess Magazine, has ceased to exist for some time

CANTUARIENSIS.—The subscription to the St. George's Club is three guineas per annum; and this entitles you to the use of a library, admirably furnished with all the foreign and English periodicals: admission free to the famous Polytechnic Institution, with which the Club is connected; and practice at Chess with some of the best players in England

SOLUTIONS of PROBLEM No 446, by Sumner Badem, Mandy, Orpen, M P

SOLUTIONS of PROBLEM No 449, by Sigma, O P, Stevens, M P, F B S, Ernest, Rev T M Atom, Camilla, Jady, Henri, I M of Sherburn, Bantam, Pew simple, S S, Dorcvon, B S of Douglas, L S D, D D, Andrew, are correct; all others are wrong

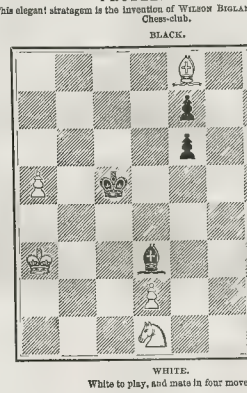
SOLUTION OF PROBLEM No. 449.

WHITE.	BLACK.	WHITE.	BLACK.
1. R to K 4th	R takes B (best)	4. B takes Kt (double check)	K takes B (best)
2. Kt takes P (ch)	K to his 3d	5. R to K 6th, and Mates next move.	
3. Kt to Q 4th (ch)	K to his 2d		

PROBLEM No. 450.

This elegant stratagem is the invention of WILSON BIGLAND, Esq., Lemington Chess-club.

BLACK.



WHITE.

White to play, and mate in four moves.

MR. PETROFF'S GAMES.

The following is one of the great Russian player's games; his opponent on this occasion being the well-known and distinguished amateur Mr. HOFFMANN:—

(Giuoco Piano.)

WHITE (Mr. P.)	BLACK (Mr. M.)	WHITE (Mr. P.)	BLACK (Mr. H.)
1. P to K 4th	P to K 4th	19. Q to K 3d	Castles
2. Kt to K B 3d	Kt to Q B 3d	20. B to Q 3 i	Q to K R 4th
3. B to Q B 4th	B to Q B 4th	21. P to Q Kt 4th (d)	K Kt to Q 4th
4. P to Q B 3d	Q to K 2d (a)	22. B takes K R P (ch)	K takes B
5. P to Q 4th	P takes P (b)	23. Q to K 4th (ch)	P to K Kt 3d
6. Castles	P to Q 6th	24. Q R takes Kt	B takes Kt
7. Q takes P	P to Q 3d	25. P takes B	Q to K Kt 4th (ch)
8. P to Q Kt 4th	B to Q Kt 3d	26. K to R sq	K R to K sq
9. B to K B 4th	B to K 3d	27. K R to K Kt sq	Q to K R 4th
10. B to Q Kt 5th	B to Q 3d	28. P takes Kt	P takes P
11. Q Kt to Q 4th	P to Q R 4th (c)	29. Q R to Q 3d	R takes B
12. Kt to Q B 4th	P takes P	30. P takes B (e)	B takes Q
13. Kt takes K B	P takes Kt	31. P to Q 7th	R to K 8th
14. B takes Q P	Q to K 3d	32. K R to Kt 2d	Q to K 4th
15. B to Q B 4th	Q to K Kt 3d	33. P "Queens"	Q to A 8th (ch)
16. P takes P	Q R to Q sq	34. R to K sq	Q takes K B P
17. Q R to Q sq	B to K Kt 5th	35. Q to Q 6th	P to Q B 4th
18. P to K 5th	K Kt to K 2d	36. Q to K 1i 3d,	

And in a few more moves Black struck his flag.

(a) This is not commendable, although it may be played without much danger. The best move for the second player at this moment, is generally acknowledged to be, 4 Kt to K B 3d

(b) The chief authorities now recommend the retreat of the Bishop to Q Kt 3d.

(c) The advance of this Pawn was ill-timed, and subjects Mr. Hoffmann to serious embarrassment.

(d) After this, Mr. Petroff has his adversary at his mercy, and he certainly gives him no quarter

(e) Better in style than taking with the Rook.

CHESS IN SCOTLAND.

MR. STAUNTON gives the odds of the Pawn and two moves to the Rev. J. DONALDSON (Delta).

(Remove Black's K B's Pawn from the Board.)

WHITE (Delta.)	BLACK (Mr. S.)	WHITE (Delta.)	BLACK (Mr. S.)
1. P to K 4th		23. P to Q B 3d	P to Q Kt 4th
2. P to Q 4th	P to K 3d	24. B to K 3d	P to Q Kt 5th
3. B to Q 3d	Q to K 2d	25. Q R P takes P	Q to Q R 8th (ch)
4. P to K R 4th	P to Q 3d	26. Q to her Kt sq	R takes Q B P (ch)
5. P to K 5th	P takes P		
6. P takes P	Kt to Q B 3d	27. K to Q 3d (c)	Q takes Q
7. Kt to Q B 3d (d)	Q takes P	28. R takes Q	K to Q B 5th
8. Q to K R 5th (ch)	Kt to K B 2d	29. B to Q B 5 h	K to Q B sq
9. B to K 3d	Kt to K B 3d	30. P to K Kt 3d	P to K R 5th
10. Q to K 2d	B to Q 2d	31. Kt to K B 3d	Kt to K 8th (ch)
11. Castles	Q to her Kt 5th	32. K to his 3d	Kt takes K at P
12. Kt to Q Kt 5th	B to Q 3d	33. K R to Kt sq	Kt to K B 4th (ch)
13. P to Q R 3d	Q to her R 4th	34. K to Q 2d	R takes K B P
14. B to Q 2d	Q to her Kt 3d	35. Kt to K 5th	B to K sq
15. Kt takes B (ch)	P takes Kt	36. Kt to K Kt 6 h	B takes Kt
16. B to K Kt 8th	P to Q B sq	37. R takes B	K to B 2d
17. Kt to K B 3d	Castles	38. P to K R 5th	Kt to K 8 5h
18. B to K 3d (b)	Q to her R 4th	39. R to K 8th	P to K 4th
19. Kt to K Kt 2d	Q Kt to K 4th	40. K to Q 4th	Kt to K B 4th
20. P to K B 4th	Kt takes B (ch)	41. R to K Kt 6th	P to K h 5h (ch)
21. Q takes Kt	P to Q 4th	42. K to K 2d	P to Q 8th
22. B to Q 2d	Q to her R 5th		

And after a few more moves White surrendered.

(a) White gave up the Pawn through some misconception of being enabled to gain an advantage in position.

(b) Two matches and countermarches of this functionary avail but very little. Delta had much better have prepared to throw forward his Pawns on the King's side.

(c) If he had taken the Rook, Black must have gained more than an equivalent. For instance:—

WHITE	BLACK.	WHITE.	BLACK.
27. P takes R	Q takes P (ch)	28 Q to Q 3d	Q takes B (ch), and has the better game

CHESS ENIGMAS

No. 761.—By ONICHON.

White to play, and mate in four moves.

No. 762. By ONICHON.

White: K at Q 8th, B at K B 2d, Kt at K Kt 8th; Ps at K Kt 4th, Q 2d and 5th, and Q Kt 3d.

Black: K at Q 3d, Ps at K Kt 2d, K B 4th, Q 2d, and 6th.

White playing first, to mate in five moves.

NAVAL AND MILITARY INTELLIGENCE.

THE MILITIA.

Mr. Beadon, the sitting magistrate of Hammersmith Police Court, and Mr. A. Taylor, the chief clerk, were for some time on Monday engaged in swearing in a number of volunteers to serve in the Royal Westminster Militia. The questions and answers were similar to those required when a recruit is sworn to serve in the army. The number of volunteers required for the Westminster district is 840, and it is only expected that they will be readily obtained without resorting to the ballot.

On Saturday last the colonels of the metropolitan militia regiments commenced recruiting, in order to raise the required number of men to complete their corps. In the city, Colonel Thompson has fixed his rendezvous at the Rose and Crown, Bunhill-row. At present recruits come somewhat slowly in, though bringers are rewarded with 5s., and it is thought that the ballot will be required.

CITY OF LONDON MILITIA.—About thirty young and able-bodied men were sworn in for the City of London Militia on Tuesday, at the Guildhall police-court. The total number required for this district is 600, and, from the facility with which volunteers are being obtained, it is anticipated it will not be necessary to put in operation the ballot. Of the number offering themselves for enlistment, only one was rejected, and that was because he was too drunk to be sworn.

ROYAL ARSENAL.—Great activity prevails at this establishment at the present time, and additional hands have been employed during the week, the orders for work received requiring to be completed immediately. In consequence of this, the engineers' department is to be given up and thrown into the Royal carriage department.

ROYAL MILITARY ACADEMY.—We understand that some cases of severe punishment inflicted by elder cadets upon the younger cadets at Woolwich have recently taken place, and that a culprit has been placed in confinement. One youth's body is perfectly discoloured by the flagellation and kicks he received from his elder cadet.—*United Service Gazette.*

TROOPS IN THE COLONIES.—From a Parliamentary paper just published it appears that the number of troops employed in our colonial possessions during the year 1850, was: Officers, 1675, and men, 38,752, at a cost of £1,329,656. This is exclusive of artillery and engineers.

ROYAL YACHT PROMOTIONS.—Lord Adolphus Fitzclarence, G.C.H., is to be promoted to the rank of Commodore; Commander W. Crapin is to have the rank of Captain; and Mr. Soaife, recently promoted to the rank of Paymaster, is to be made Secretary to the Commodore.

DESERTION OF BRITISH ARTILLERYMEN TO THE UNITED STATES.—The *Ogdensburg* (U.S.) *Daily News* states that "eight British soldiers, consisting of a sergeant, corporal, and six men, forming an artillery company, and attached to that branch of the British service stationed at Quebec, appeared here yesterday, stating that they had been ordered to the fort at Prescott as a reinforcement, but passed over the river some miles above, before reaching Prescott or reporting themselves to the officer there in charge. They were fine looking young men, and sold or exchanged their uniforms, which can be seen in some houses about the town."

ISLE OF SKYE EMIGRANTS.—Her Majesty's ship *Hercules*, an old 74, but now mounting only 10 guns, has been commissioned at Chatham, by Commander Boynton (1841), for the purpose of conveying emigrants to Australia, under the auspices of the Treasury.

ANCHOR TRIALS.—An interesting experiment was made on Tuesday, on the open stretch-ground of the dockyard at Sheerness, in the presence of Commodore the Hon. Montagu Stopford, Captain-Superintendent C Hope, Captain Mundy (of the *London*, 900, Commander H. Bryce (of the *Monarch*, 84), Mr. Ayles, Master-Attendant, and several of the officers of the ships in port, for the purpose of ascertaining the casting properties of the several anchors. The whole of them, eight in number, were placed in a line on their stock end, and a 36-fathom length of chain was successively bent on to each, with cable and running gear attached to it. Upon this a party of marines have smart by until the anchors casted into being positions in the channel. The American anchor achieved a triumph, until it ever immediately the strain was applied. The distances dragged by each of the others before casting was very trifling. Ayles's was drawn 22 inches, which was the greatest of any. In this respect, therefore, there is comparatively little difference between them.

THE GREAT BRITAIN.—This noble vessel was spoken at 8 o'clock in the morning of the 25th ult., in lat. 42.37, long. 12, by the brig *Lisbon*, from Lisbon. The *Great Britain* was crowded with sail, and going at the rate of 13 knots an hour. An estimate of time and distance gives her, so far, about 10 knots an hour.

A MONSTER SHIP.—It is in contemplation by one of the most eminent and enterprising of our Liverpool merchants, to build an iron screw steamship of ten thousand tons burthen for the American trade. The auxiliary power is to be applied to only of a moderate character, and constructed chiefly with a view to overcoming the resistance in getting up the Mississippi. It was confidently stated that the head of one of the most eminent firms in the iron trade and engineering had consented to the undertaking.

SCHOOLS FOR SEAMEN.—Endeavours are now being made, under the patronage of a number of influential shipowners, and other benevolent persons, to establish in London, Liverpool, and the various large ports of the empire, similar to the gratuitous establishment of such adult seamen and boys as practiced to the sea as may unable to read and write, or do so only imperfectly. It is calculated that there are at all times upwards of 4000 adult sailors in the port of London, and about 1000 boys, not of well-conducted habits. Only one-half of this number have received but a very imperfect education many of them, indeed, no education at all. One school has already been opened in London, and it is intended speedily to establish three others in the metropolis. Several, also, will soon be opened in Liverpool, Glasgow, Portsmouth, &c. The hours of school are from six to eight o'clock P.M., for those who can attend by the pilot-masters and other boat-owners every evening; and from three to five in the afternoon for those who are waiting in port for engagements to go to sea. A note is taken of the name, place of birth, history, &c., of each pupil as he enters, when individual particulars will be published in the regular quarterly reports, thus affording an interesting contribution to an important branch of moral statistics.

A letter, signed "G. Smith," published in the *Journal des Débats*, denies, by order of the Duke of Brunswick, that there is any truth in the statement recently made by the *Owlopne Gazette*, that the Duke is about to abdicate his rights; and says that "the Sovereign Duke of Brunswick will never renounce his hereditary rights."

Catherine Willis died lately at Reading, aged 88 years. She was the last of a family of six, whose united ages amount to 540 years. Catherine Willis died in her 88th, her mother in her 90th, her father in his 94th, her sister in her 90th, and her father's sister in her 89th, and another sister in her 88th year.

On Saturday night last an aged woman, named Mary Lewis, of Blackburn, having gone upon the Shrewsbury and Chester Railway, near Perry-bridge, with the intention, as it is supposed, of picking up coke, was killed by an excursion train, which passed over her, and separated her head from her body.

The *South Australian Register* of April 14 states that the deposits at the Adelaide Gold Assay Office on the previous day amounted to 14,297 ozs. 15 dwts. 22 grs.; which, at £3 11s. per oz., is worth £49,107 3s. 6d. Adding the total of previous deposits—namely, £158 478 17s. 6d.—this gives a total up to that day of £193,586 1s.

A few days ago a respectable woman, named Irving, residing at Heath, in the parish of Wexwood, near Wigton, was gored to death by a bull belonging to Mr. John Irving of the above-named place. The unfortunate woman was attacked by the animal in the middle of a field, and was unable to effect her escape.

The *Hereford Journal* states that last week, as some reapers were cutting a piece of wheat in a field at Hampton Water, in the parish of Dockdow, they found eighteen young and two old partridges quite dead, and which were supposed to have been killed by lightning, visible effects of the electric fluid being traced in the immediate neighbourhood.

The Austrian Government is endeavouring at present to give a greater extension to the steam navigation of the Danube. It has engaged in Belgium fifteen captains for its vessels, and they have already begun their departure for Linz, their place of destination. The Austrian steam service will extend from Vienna to the Black Sea.

On the 25th of August Mr. John Ussher, Mr. Sargent, and Mr. R. H. Bulwer, accompanied by the usual number of guides and porters, attempted to ascend Mont Blanc. However, after surmounting almost all the difficulties, and when within about ten minutes advance to the summit, they were obliged to leave the task, and return, in the village of Chamouni, in consequence of being suddenly overtaken by a dense fog, accompanied by most violent wind and hail.

An Archæological Society is about to be formed in Essex.

A congress of German shorthand writers has recently been held at Munich, the government lending for its sittings the concert room of the Odeon. M. Bettner, the Ministerial assessor acting as president, opened the proceedings by an address in favour of stenography and declared that the government was most ready to encourage the propagation of the art. M. Baumgartner, of Vienna, explained his system of taking down in writing instantaneously the notes of any musical piece played. The system, being tried, was found to answer perfectly.

OAK STRUCK BY LIGHTNING IN WESTWOOD PARK, DROITWICH.

WARWICK RACE PLATE.

The subject of the prize plate, contested at Warwick during the past week, has been appropriated from an important event in the history of the county, namely, the indecisive battle of Edgehill, in its southern portion, fought on Sunday, October 23, 1642; and at which was drawn the first blood shed in the Civil War which followed the refusal of Charles I. assent to the Militia Bill. The incident chosen by the Artist is the King's discovery of his standard-bearer, Sir Edward Verner, slain upon the battle-field, between the foot of Edgehill and the town of Kineton

WARWICK RACE PLATE, 1852.—CHARLES I. DISCOVERING THE BODY OF HIS STANDARD-BEARER AT EDGEHILL

This characteristic group has been designed and modelled by E. Jeanrest, and executed in silver by Messrs. Elkington, Mason, and Co., of Regent-street. It is mounted upon an or-moulu pedestal, which bears richly enamelled shields, with the Royal insignia, &c. The weight of the group is about 370 ounces; size 1 foot 8 inches by 1 foot 3 inches, and 2 feet 6 inches in height.

The three Englishmen who have engaged to steer their course down the Danube to Constantinople, reached Vienna the 29th ult. The voyagers hoisted the union jack on entering the Vienna canal.

OAK STRUCK BY LIGHTNING.

During the destructive thunder storm on Tuesday, the 17th ult., a magnificent Oak-tree in Westwood Park, near Droitwich, in the county of Worcester, was shivered and torn out of the ground by a flash of lightning, in a very remarkable manner, as the riven tree, pictured by our Artist here, attests. The stem is sundered into five parts, four of which are torn completely out of the ground.

This is an interesting example of the extraordinary disruptive power of the electric fluid; and the Illustration is altogether a picturesque record of the phenomena of the storm.

Westwood Park is situated about a mile and a half from the Droitwich Railway Station. It is the seat of the Right Hon. Sir John Pakington, her Majesty's Secretary of State for the Colonies. The residence is a fine Elizabethan mansion, built somewhat in the style of Holland House, Middlesex. We shall take an early opportunity of Engraving the ancestral house at Westwood.

HEXHAM LADY-CHAPEL.

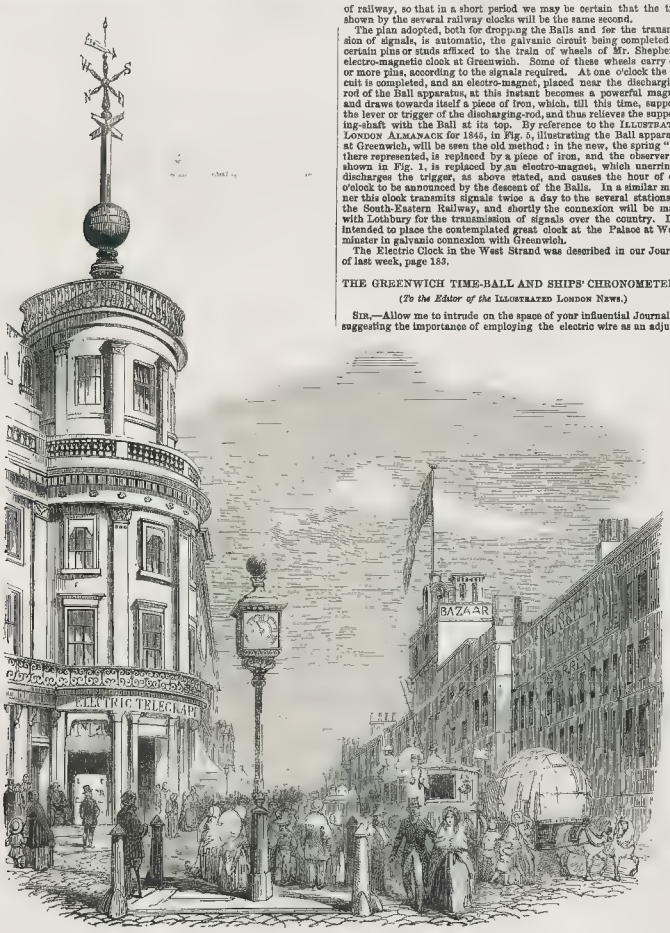
One of the most interesting excursions of the Archæological Institute, during their recent congress at Newcastle-upon-Tyne, was the visit to Hexham, where the Archæologists alighted; and, under the guidance of the Rev. Mr. Turner, examined the remains of the Abbey Church and monastery, which were built after the Roman manner, by St Wilfrid, who flourished in the reign of Egfrid, Saxon King of Northumberland. Together, they constitute a fine example of a conventual establishment. Mr. Turner read a paper on the church; and, among many striking features, the crypt underneath attracted much interest, on account of its peculiar construction, and likewise from the extensive remains of Roman masonry imbedded in the walls, some of the stones bearing remarkable inscriptions; besides parts of cornices, mouldings, and other details of ornamental architecture, by which the site of a Roman station in this part has been inferred. The Lady-Chapel connected with the Abbey Church has long remained in partial obscurity through the erection of houses against it. These having been removed, its remains are revealed in a greatly shattered condition, caused in a great measure by the pressure of the low pitched roof, which has thrown the walls out of their perpendicular, and forced out parts of the mullions and tracery of the windows. The View annexed is given as the Chapel has appeared since the removal of the houses. The ruinous state of this portion of the sacred edifice has furnished grounds for a projected restoration, which, it is expected, will presently be carried out, under the able management of Mr. Dobson, architect.

THE ELECTRIC TIME-BALL.

The erection by the Electric Telegraph Company of a Time-Ball, to be automatically dropped daily in London, simultaneously with that at Greenwich, also dropped automatically, is the first step to the adoption of one time throughout the whole extent of this country. The convenience experienced by using one time at all railway stations to travellers is great, and little or no inconvenience would be felt in any places—even those situated in Cornwall and Devonshire, by the universal adoption of Greenwich time. We believe the South-Eastern Railway Company acted with great liberality in the first instance, by laying down wires, and giving facilities for the transmission of signals to other lines; and that the Electric Telegraph Company have, with the same generous feeling, taken steps for the general transmission of accurate time throughout the kingdom along the various lines

LADY-CHAPEL OF HEXHAM CHURCH, PROPOSED FOR RESTORATION.

THE NEW HARBOUR OF REFUGE, IN COURSE OF CONSTRUCTION, AT JERSEY.—(SEE NEXT PAGE.)



ELECTRIC TIME-BALL AND CLOCK, WEST STRAND.

of railway, so that in a short period we may be certain that the time shown by the several railway clocks will be the same second.

The plan adopted, both for dropping the Balls and for the transmission of signals, is automatic, the galvanic circuit being completed by certain pins or studs affixed to the train of wheels of Mr. Shepherd's electro-magnetic clock at Greenwich. Some of these wheels carry one or more pins, according to the signals required. At one o'clock the circuit is completed, and an electro-magnet, placed near the discharging-rod of the Ball apparatus, at this instant becomes a powerful magnet, and draws towards itself a piece of iron, which, till this time, supports the lever or trigger of the discharging-rod, and thus relieves the supporting-shaft with the Ball at its top. By reference to the ILLUSTRATED LONDON ALMANACK for 1845, in Fig. 5, illustrating the Ball apparatus at Greenwich, will be seen the old method: in the new, the spring "P," there represented, is replaced by a piece of iron, and the observer, as shown in Fig. 1, is replaced by an electro-magnet, which unerringly discharges the trigger, as above stated, and causes the hour of one o'clock to be announced by the descent of the Balls. In a similar manner this clock transmits signals twice a day to the several stations on the South-Eastern Railway, and shortly the connexion will be made with Lothbury for the transmission of signals over the country. It is intended to place the contemplated great clock at the Palace at Westminster in galvanic connexion with Greenwich.

The Electric Clock in the West Strand was described in our Journal of last week, page 183.

THE GREENWICH TIME-BALL AND SHIPS' CHRONOMETERS.

(*To the Editor of the* ILLUSTRATED LONDON NEWS.)

SIR,—Allow me to intrude on the space of your influential Journal by suggesting the importance of employing the electric wire as an adjunct to the present time-ball, which has some serious inconveniences. In the first place, it necessitates a clear atmosphere, which in the vicinity of London is seldom obtainable; and, in the second place, requires personal out-door observation, whereas with the electric wire and the discharge of a piece of ordnance, the time might be known through the medium of sound. And the same method might be adopted at all our ports. A piece of ordnance has already been discharged at Dover by an electric communication with Greenwich, with the greatest precision An allowance for the travelling of sound would be a simple matter.

Z. Y. X.

THE LATE JOSEPH W. ALLEN, LANDSCAPE PAINTER.

MR. JOSEPH ALLEN, whose sudden decease, on Thursday, the 29th ult. has caused so painful an impression, not only in artistic circles, but generally, was a landscape painter of repute, and with a marked style of his own. He was the son of a schoolmaster, and was born at Paradise-row, Lambeth, in the year 1802. He was educated at St. Paul's School, and there acquired enough Latin and Greek to make those languages familiar to him. On leaving St. Paul's he assumed his father's

THE LATE J. W. ALLEN.

avocation as an usher at a school at Taunton; but the employment proved unsuitable to this then clever and vivacious young man; and his talent for drawing and painting having early developed itself, he returned to London, determined to launch into the artistic world on his own account, and at once became dependent on his brush. Unknown and unconnected, he had great difficulties to master, which he delighted to recount to his friends after he had obtained repute and position. He did not disdain to paint a blind; and used to say he did not think his most finished landscape ever produced so much fervent admiration as his imitation of a Venetian blind during this period of his probation; a specimen of this early demonstration of his ability may be seen in a coffee-shop at Mile-end. His deep and earnest love of his art soon carried him beyond this condition: his little fresh, green, and true bits of English nature began to attract the attention of the connoisseurs; and the late Colonel Ansley, Lord Northwick, Mr. Bransby Cooper, and Mr. Procter, and other men who judge for themselves, sought for these firstlings of his pallet. This was followed by the attention of the picture-dealers, so that the young artist found himself gradually obtaining a name. To live, however, it was necessary to paint hard, and he became for a time an *attaché* of a well-known picture-dealer. Here Allen acquired that knowledge of the old masters, and of the pecuniary value of pictures, for which he was remarkable; subsequent sales having often verified his accuracy of valuation in an extraordinary manner.

The talents of Mr. Stanfield and Mr. Roberts having almost made theatrical scene-painting a new art, and Allen having married, he for a time devoted himself to this branch of the profession, and became asso-

ciated with that eccentric genius Charles Tomkins; and also, for a time, with Mr Stanfield. During Madame Vestris's first lesseeship of the Olympic Theatre, Allen painted most of the scenery; and as the fair lessee is remarkable for her excellent taste, Allen's talent was no doubt exemplified in this new field.

The natural bent of Allen's genius, however, was to pastoral landscapes; and he loved to give the homely scenes, the rustic cottages, the wimpling brooks, and all the characteristics that are peculiar to our land and climate; he therefore returned entirely to oil painting. As he proceeded, his talents rapidly manifested themselves, and he became noted as the best painter of a distance. His "Vale of Clwd," exhibited about ten years since, created a considerable sensation; and it certainly imparted to the beholder the dreamy, soothing, and enchanting feeling which the looking on a long line of country and a magnificent distance ever affords the genuine lover of nature. This picture was purchased by an Art Union prize holder for three hundred pounds: and Allen received it in smaller dimensions twice for other liberal purchasers. His "Leith Hill," in the following Exhibition, was almost equally successful, and produced like results. Allen henceforth painted two or three large pictures every year, and became, as we have said, celebrated for the extreme delicacy and yet force with which he rendered his distances. It was, however, not only in this quality he excelled; the details of his pictures were true, and his lines generally beautiful and effective, and his skies are very greatly admired.

Allen took, as is well known, an active part in establishing "The Society of British Artists," and attached himself to it with a devotion which was perhaps more praiseworthy than prudent; refusing, latterly, to exhibit anywhere else in London. His works have, undoubtedly, joined with others, very greatly tended to the Suffolk-street Gallery the repute it possesses for landscape-painting. He was also Professor of Drawing at the City of London School from its foundation; and the liberal contribution to the fund raising for his family, made by the committee and the masters is the best testimonial of the estimation he was there held in.

Allen has left a widow and family of eight children to mourn his premature loss; and look to their father's friends and associates to rescue them from the miseries of extreme poverty. We are happy to hear that the unavoidable appeal to the public has been generously responded to; and that it is hoped a sufficient sum will be raised to place the widow in a way of bringing up and putting out the six younger children, who are solely dependent upon her. Less than a thousand pounds will, however, scarcely accomplish this desirable result.

The immediate cause of Mr. Allen's death was disease in the centre of his heart, for which he had been some time under treatment of an eminent physician, to whom he had been introduced by his excellent and distinguished friend Mr. Cooper.

It is understood that there will be a collected exhibition of our lamented landscape-painter's works. The accompanying Portrait of him a very characteristic likeness—is from a drawing in the possession of his friend, Mr. Charles Marshall.

HARBOUR OF REFUGE, JERSEY.

THE natural advantages of the north side of the island of Jersey, for a naval station had often been recognised before the construction of a Harbour of Refuge near to this point was finally determined on. The north-east side, at St. Catherine's Bay, has, however, been preferred from its being naturally protected from the prevalent south-west winds by the high hills that surround it. The harbour works were commenced in 1847, the plan intended being to extend two arms from the projecting headlands on each side of the bay, leaving only an entrance for ships facing the east; the northern arm to be half-a-mile in extent from the shore, and the southern, one mile. The works at the south arm were suspended in 1849, since which time, the north arm has been carried on more vigorously; about 800 men being employed daily throughout the year. The northern arm is now 820 yards from the shore, and will be completed in about two years' time. The space proposed to be inclosed for the harbour will be about 120 acres to low water mark; the average depth at low water spring tides being 28 feet, and at high water 63 feet, with good anchorage ground.

The foundation of the breakwater is formed of large and small stone, thrown from a height into the sea, from a projecting timber staging; this is allowed to remain until the mass of stone has consolidated the mass, when the upright walls which form the quay are commenced from the level of low water; they are formed of large blocks of stone, from ten to fifteen tons in weight, procured from the quarries adjoining to the breakwater. A contrivance for conveying and adding stone, hard and durable, and admirably adapted for the work. The quarrying is conducted on a very large scale, holes being bored into the rock 60 to 80 feet deep. One blast in 1849 brought down thirty thousand tons of stone, to effect which 9 cwts. of gunpowder were used. The faces of the quarries are more than a hundred feet in height, which gives the approaches an imposing effect. A large point of rock at the north arm, is being entirely separated from the adjourning hills, on which it is proposed to erect strong fortifications. The harbour, when completed, will be of great service to the boats employed in the oyster fisheries, which extend the whole distance between this island and the French coast, the shortest distance between the two being only fifteen miles.

THE OPERATION OF THE "TICKET OF LEAVE SYSTEM" IN AUSTRALIA.—The evil effect's of transportation, especially under the tick t of leave system, upon the social life of the Australian colonies are demonstratively illustrated by various items of news which reach us from time to time from that dis ant quarter, but by none are they indicated with greater clearness than by the last accounts from Victoria, where we find that a woman named Louisa Ferris, who was transported for entering a policeman's house at Bristol, having cleared herself in an exemplary manner while in gaol at Van Diemen's Land, obtained a ticket of leave and almost immediately, afterwards cut another man's throat at Melbourne. She has been tried and sentenced to death. Again, the three principa's in the robbery of £30,000 worth of gold dust from the ship *Nelson* in Melbourne Harbour, were notorious London bank, wire-pulling thieves and swellmobsmen, who having been transported, were, on the r arrival in the colony, at the expense of the public, immediately liberated by means of a "ticket of leave," and, as might be anticipated, had commenced their new theiv nefarious pursuits. Their names are John James, *alias* Johnson, James Morgan, and James Duncan. They, too, have been tried and found guilty, and sentenced to death, but remained (the newspaper from which we have voted a sufficient police force for the protection of the banking, and of the property which may be placed in the same. All foreign goods will be exhibited without previous payment of the duties. The association undertakes to pay the freight and insurance outwards and homewards, between the port of exportation in Europe and New York, as well as the duties incurrence while in the Exhibition Building, on all articles sent through the agency of the Association, excepting on such of them as shall be sold or withdrawn from the Exhibition, the freight and insurance advanced on which will be repayable to the association. It has been decided by the Directors that the exclusive right to the various departments of the Exhibition shall be awarded under the superintendence of capable and eminent persons.

SUBMARINE TELEGRAPH EXTENSION.—The Turin correspondence of the *Gazette de Savoie* refers to a great scheme of submarine telegraphic extension. The lines at Charing-cross, as our readers know, are already connected with the French lines to Lyons, whence the corresponding wires will soon enable them to reach, by way of Chambery, Turin, and Genoa the Mediterranean. From this latter point it is proposed that the Sardinian Government should lay down a line to Spezia, whence the Submarine Company would carry it under water to the Ilots island of Gorgona and across it, and then again under water to Bastia. The French Government, if this scheme be realised, will then take up the work, carrying the line to Corsica, whence a great gutta percha tube will be laid to Cagliari, in Italy. From the latter place to the African coast is supposed to be a practicable distance; and Sig. Bonelli, whose plans are the above are describing, proposes, when that shore is reached, to make Tunis a great telegraphic station, whence lines would carry the electric fluid to Algiers, Tripoli, Barbary, and Egypt, and another system to Tripolis, Alexandria, Cairo, and Suez.

THE PRINCESS WASA.—The *Lloyd* of Vienna states that the marriage of Louis Napoleon with the Princess of Wasa has been postponed, but will take place. The only difference will be, says the journal, that the proclamation of the Empire will precede the marriage. According to the *Lloyd* the postponement arises from the advice given by physicians to the father of the lady, to insist upon delay, as her growth is not fully matured; and from the fact of her mother having to undergo a surgical operation, and requiring the presence of her daughter. The *Lloyd* assures its readers that it has been received to convoke the [illegible] on the question of the [illegible] of the year.

NATIONAL SPORTS.

Doncaster, save Sherborne, is the only racing town mentioned in the catalogue of events to come off next week. The programme, to use a vulgar phrase, is "stunning" to look at, but is not likely to realise all that its plethoric appearance would justify us in anticipating. Thus, the St. Leger will assuredly be contested by a small field; so will the Champagne: and most of the other events are likely to suffer in a similar way from the succession of important meetings that commenced at Goodwood and closed at Warwick. Sherborne is simply a case of "discursus," and united only by Yeovil.

We have only two regattas, and both in the north: the first, on Monday, at Newcastle; and the other, on Wednesday, at Lochlomond.

The cricketers, like the squatic fraternity, are superbusying the end of their lather, their gatherings amounting to five only in number, with a proportionate diminution of interest. On Monday, there will be an All England match at Newcastle; on Tuesday, a Zingari contest with the Scottish gentry at Perth; and on Thursday, matches at Glasgow, Preston, and Esher.

TATTERSALL'S.

THURSDAY.—The only outlay of any amount was on the two favourites for the St. Leger, their partisans being pretty equally balanced in number and zeal; at ins close, anything above 3 to 1 would have been taken about either. Closing averages:—

CHAMPAGNE STAKES.

Even on The Reliver	5 to 2 agst Vindex	10 to 1 agst The Friar
	GREAT YORKSHIRE HANDICAP.	
4 to 1 agst Knight of the Garter	6 to 1 agst Scarecrow	10 to 1 agst Lerryween

3 to 1 — Songstress	7 to 1 — Trousseau	

WARWICK RACES.—TUESDAY.

MATCH, 200 sovs.—Chaffwax (Flatman), 1. Start (Marlow), 2.
THE RACING STAKES.—Ellar (Ashmall), 1. B g by Idas (Wells), 2.
THE GUY PRODUCE STAKES.—Glenlice (Flatman) walked over.
THE LEAMINGTON STAKES.—Lady Evelyn (Flatman), 1. Hirenta (Harding), 2.
THE CASTLE PARK STAKES.—Pastrycook (Denman), 1. Eliza (Whitehouse), 2.
THE QUEEN'S PLATE.—Caliboo (Flatman), 1. Maid (Charlton), 2.
THE FOAL STAKES.—Prince Rupert (J. Dockeray), 1. Br c by Gilbert Gurney, 2.
THE CORINTHIAN STAKES.—Bordeaux (Mr. C. L. Fox), 1. Forester (Owner), 2

WEDNESDAY

THE SELLING STAKES.—b. g. by Idas (Wells), 1. Isabella (Charlton), 2.
THE BOROUGH HANDICAP.—Corybantes (Charlton), 1. Romeo (Crouch), 2.
THE AVON STAKES.—Charley (Charlton), 1. Cintra (Hughes), 2.
THE WARWICK CUP.—Pedestrian (Flatman), 1. Little Harry (A. Cowley), 2
THE WARWICK CUP.—Agis (Captain Little), 1. Clothworker, 2
THE COUNTY STAKES.—Gladiola (Ashmall), 1. Paddy Bird (Bates), 2.
THE TOWN PLATE.—Warwick (Treen), 1. Ephesus (A. Day), 2.
THE SCURRY HANDICAP.—Fitzwilliam (Hibbins), 1. Bordeaux (Marlow), 2.
THE GREAT WARWICKSHIRE STAKES.—Hirenta (a groom) walked over.

CURRAGH RACES, COUNTY KILDARE.—TUESDAY.

The September race meeting at the Curragh commenced to-day, and was very numerously and fashionably attended.

THE SCURRY STAKES.—The Light of the Harem (L. Mahon), 1. Lalage (G. Harrison), 2.
THE ANGLESEY STAKES.—The Deformed (W. Magee), 1. The Light of the Harem (M.Ler), 2.
THE SCURRY CORINTHIANS.—Sister to Batterway (Mr. W. Kennedy), 1. Cockerow (Major Bell), 2.

WEDNESDAY.

STEWARDS' STAKES.—Twig (Gibbons), 1. Colt by Bashful (J. Doyle), 2.
HER MAJESTY'S PLATE Warhawk (Foley), 1. Lancaster (J. Doyle), 2.
HALFWAY AND TENT CLUB HANDICAP.—Dhe-an-Dhurras (Doyle), 1. Honest Tom (D. Doyle), 2.
WELLINGTON STAKES.—Warhawk (Foley) walked over.
SHARAVOGUE STAKES.—Helena (E. Keegan), 1. Colt by Mickey Free (Lynch), 2

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The news from the Cape, stating that the position of affairs was much the same as when the previous mail had been despatched, added to the heavy shipments of specie, gave the impression that the Australian and Turkish loans, and the prospect of a decline in the stock of gold in the Bank of England, have rendered the Consol Market less active. It is tolerably evident, from the great extension of our foreign trade, and the increased demand upon the Bank for gold to invest in various new securities, such as steam navigation and mining companies, bank shares and foreign, together with the increasing wants of the country for gold, that the effect on accumulation of bullion in our coffers as was at one time anticipated. The great efforts now making by our manufacturers to spread their wealth and labour in the most profitable markets favour this impression. With the large shipment nearly £800,000 has been forwarded from London to various quarters; whilst the imports, this week, have amounted to about £200,000, chiefly from New York and Mexico. The whole of the silver arrived by the West India Mail has been sold for shipment to Calcutta. The export trade of the United Kingdom, as shown by the Board of Trade returns, is still in a flourishing state. During the month ending the 31st of July, the value of the exported was £6,589,168; and during the seven months ending as above, it was £40,138,560, against £40 512,056 in 1851, and £37,808,074 in 1850

The whole of the Bank movements are favourable to this country. It is, therefore, most probable that we shall continue to receive remittances in gold from New York, Paris, and Hamburg for some time. News has reached us from Vienna, to the effect that the Austrian Government is anxiously about to be negotiated; but it is proposed to raise the whole amount in Austria within twelve months from the present date. It is stated that the objects of the loan are to repay the late Government debt due to the Bank, to withdraw a portion of the depreciated paper currency, to meet the deficiency in the revenue, and to assist in the construction of rail roads. The French Government have, it appears, repaid another 25,000 000f to the Bank of France, borrowed in December last, and reduced the rate of interest on Treasury bonds. In future it will be as follows. On Bonds, at from four to five months' date, 1½ per cent. interest per annum; on Bonds, at from five to six months' date, 2 per cent.; on Bonds, at one year, 3 per cent. The abundance of money in Paris seems to justify this step.

A notice has been posted in the Stock Exchange for a new Crystal Palace Company in Paris. The capital is £630,000, but a small proportion only will be reserved for England

The dealings in the new Turkish Loan have been very large, at from 5¼ to 9 premium. The first instalment has already been paid, and the semi-annual coupons, at which each bond will receive the high premium, or bonus, of £2.0 per cent, are a considerable inducement to speculation. On account of the Mexican dividends, £72,000 dollars have arrived; yet Messrs. Barings have not yet been repaid the whole of the 800,000 dollars advanced by them to meet the dividends of the January last: the deficiency is about 80 000 dollars. Generally speaking, Foreign Bonds have commanded rather more attention, and the quotations have ranged unusually. On Thursday Austrian Scrip was done at 5¼ to 5¾ prem.; Brazilian small, 104¾; Danish Five per Cents, 101¾; Ecuador Bonds, 4¾; Mexican Three per Cents, 22¾; Peruvian, Deferred, 65¾ to 66; Portuguese Four per Cents, 39½ to 39¾; ditto, small, 40¾; Sardinian Five per Cents, 93½ ¾; Spanish Three per Cents, 49¾; Spanish Passive, 5¼; Spanish Certificates, 9¾ per Cents, 7¾ and ¾ premium; Venezuela Three-and-a-Half per Cents, 43; and Dutch Four per Cents, 99. Obihan Three per Cents have been marked 74. Russian Five per Cents, 118 to 119; and Russian Four-and-a-Half per Cents, 104¾.

Scarcely any change took place in the value of Consols either on Monday, Tuesday, or Wednesday, the leading quotation for the Three per Cents, Money and Time, being 100¾ ¾. On Thursday, owing to several rather heavy sales of Stock having been effected, prices rapidly fluctuated, the Three per Cents having been officially quoted at 99¾ ¾ ¾. The Three per Cents Reduced were 100¾ ¾; and the New Three-and-a-Quarter per Cents 104¾ to 104¾. Consols for the next Account, closed at par. Bank Stock was 227, 229, and 227. Long Annuities sold at 6 15-16 ⅞. India Bonds, £1000, were done at 87s., Exchequer Bills, March, 73s.; June, 71s; Provincial of Ireland, 40; Union of Australia, 50½; Union of London, 17.

Dock Shares have been somewhat on the advance. Commercial have marked 109; East and West India, 166½ to 167; Southampton, 84; and Victoria Dock, 4¼ premium.

Steam-boat Shares have commanded rather more money. Australian Royal Mail 4; General Screw, 2¼; General Steam Navigation, 7¾ to 8; London and Edinburgh, 105; London and North-Western, 121¾; London and South-Western, 93¾ ex div.; Manchester, Buxton, and Matlock, 3¼; Manchester, Sheffield, and Lincolnshire, 39¾; Midland, 77¾ ex div.; North British, 30; Oxford, Worcester, and Wolverhampton, 47¾; Scottish Central, 78¾; Shrewsbury and Birmingham, 70¾; Shrewsbury and Chester, 19¾; South Devon, 20 ex div.; South Eastern, 73¾; South Wales, 8¾; Vale of Neath, 8¾; Waterford and Kilkenny, 6¾; York, Newcastle, and Berwick, 68; Ditto, Extensions, 12 ex div.

LINES LEASED AT FIXED RENTALS.—Cydesdale Junction, 52½ ex div.; East Lancolnshire Guarantee, Six per Cent., 151; Gloucester and Dean Forest, 32¾; Leeds and Bradford, 107¾ ex d.v.; Northern and Eas ern, Five per Cent., 64 ex div.; Great Valley, Six per Cent., 80¾.

PREFERENCE SHARES.—Caledonian (£10) 10¼; Cork and Bandon, 1¼; Eastern Union, Scrip (6 per cent), 17¾; East Lancashire, Quarter Shares (6 per cent), 9¾; Great Northern, Scrip (6 per cent), 13¾ ex div; Great Western (Used at 6 per cent), 108¾; North British, 100; Oxford, Worcester, and Wolverhampton, 6¾; Waterford and Kilkenny (6 per cent), 7¾; York, Newcastle, and Berwick (6 per cent), 103 ex div.; Ditto, Six per Cent., 80¾.

FOREIGN.—Dutch Rhenish, 7¾; Grand Junction of France, 5¼; Great Western of Canada, Shares, 5¾; Luxembourg (Canal), 1¾; Paris and Rouen, 34¾; Paris and Strasbourg, 37¾; and Sambre and Meuse, 7¾.

Mines have been in very moderate request. On Thursday, Aqua Fria were 1¾; British Australian Gold, 3¾; St. John del Rey, 39¾; Coplego, 3¾; Great Polgooth, 4¾; Nouveau Monde, 1¾; Ulamo, 1¾; and Wheal Buller, 1¾.

FRIDAY EVENING.—During the closing of the transfer books, the Bank will make advances upon Stock at the rate of 1¾ per cent. per annum. The Consol Market has ruled steady to-day, and prices have been slightly on the advance. The Three per Cents have marked 99¾ ¾ to 100; the Three per Cents Reduced, 100¾; and the New Three-and-a-Quarter per Cents, 104¾. Foreign Bonds and Railway Shares have been tolerably firm.

THE MARKETS.

CORN EXCHANGE (Friday).—This week's arrival of English wheat coastwise has amounted to 2416 quarters, almost wholly from Kent and Kent and in very moderate condition. For both up-to-day the receipts by land and sea-carriage were very limited; hence the lower examples of both red and white were small. The few old qual ties on offer were most y disposed of at full prices. Fine runners, however, were much neglected, and the inferior red sold as low as 32s per quarter. For forward delivery no transactions took place. Upwards of 23,000 quarters of foreign wheat having come in, the trade has been a very dull one, and low qual ties were offering on some but under terms. Flooding cargoes commanded very little attention; from the limited supply of fine samples, quite as much money was obtained. Barley and shelling were unmarked very little notice, yet importers refused to accept lower rates. We had a slow sale for malt, at Monday's quotations. The arrivals were small—chiefly from Denmark—of foreign, 21,960 quarters. A fair average business was transacted in them at previous currencies. Beans and peas were dull at less than last week's rates.

ARRIVALS.—Eng.ish: wheat, 2416; barley, 460; oats, 1620; flour, 1,-13 sacks, 1050 sacks. Foreign: wheat, 23,663; barley, 1530; oats, 32 980; flour, 420 sacks 3296 barrels.

English.—Wheat, Essex and Kent, red, 32s to 46s; ditto, white, 34s to 54s; Norfolk and Suffolk red, 30s to 44s; ditto, white, 34s to 46s; rye, 27s to 29s; grinding barley, 22s to 27s; chevaling ditto, 28s to 32s; malting ditto 29s to 32s; Norfolk and Lincoln malt, 46s to 53s; brown ditto, 40s to 45s; Kingston and Ware, 52s to 56s; Yorkshire and Lincolnshire feed oats, 17s to 21s; potato ditto, 20s to 24s; Youghal and Cork, black, 15s to 16s; ditto, white, 16s to 18s; tick beans, new, 24s to 31s; ditto, old, 31s to 34s; grey peas, 24s to 34s; maple, 31s to 35s; white, 32s to 34s; boilers, 32s to 35s per quarter. Town made flour, 35s to 40s; Suffolk, 30s to 34s; Stockton and Yorkshire, 31s to 33s per 280 lb.

Foreign.—American flour, 19s to 23s per barrel; French, 20s to 26s, per sack.

Seeds.—The general demand is in a sluggish state, and, in some instances, prices are a shade lower.

Linseed, English sowing, 50s to 52s.; Baltic, crushing, 42s to 46s; Mediterranean and Odessa, 44s to 47s; hempseed, 33s to 40s per quarter. Coriander, 10s to 12s per cwt. Brown mustard seed, 7s to 9s; white ditto, 5s 6d to 6s 6d. Winter Tares, 7s 6d to 8s 6d per bushel English rapeseed, new, £21 to £24 per last of ten quarters. Linseed cakes, English, £5 to £5 10s.; Baltic, foreign, £7 to £7 15s per ton. Rape cakes, £4 6s to £4 10s per ton. Canary, 40s to 48s per quarter. English clover seed, new, 60s to 70s; white ditto, 65s to 68s per cwt.

Bread.—The prices of wheaten bread in the metropolis are from 6½d to 7½d; of household ditto, 5d to 6d per 4lb loaf.

Imperial Weekly Average.—Wheat, 44s 9d; barley, 32s 3d; oats, 20s 3d; rye, 31s 3d; beans, 36s 10d; peas, 34s 6d.

The Six Weeks' Average.—Wheat, 41s 8d; barley, 37s 4d; oats, 20s; rye, 30s; beans, 34s; peas 33s 8d.

Duties.—Wheat, 1s; barley, 5s; oats, 1s; rye, 1s; beans, 1s; peas, 1s.

Tea.—Public sales of about 20,000 packages have been held this week The biddings have ruled steady, at full rates. Privately, only a moderate business is doing, yet prices are supported Common sound congou is quoted at from 8d to 9d per lb. Up to Saturday last only wea and not 20,163 lbs. against 27,791,209 lbs in 1851.

Sugar.—Our market is firm and prices have advanced 6d per cwt. Fine yellow Barbadoes, 37s to 38s; ditto, fine to good, 33s 6d to 36s 6d; low ditto, 32s 6d to 33s 6d; fine yellow Mauritius, 35s to 36s 6d, good white Benares, 36s 6d to 37s 6d, grocery Madras, 37s 6d to 38s; Havana, 32s to 37s; refined, active at 43s 6d for new, and 42s for old.

Provisions.—Irish butter has advanced 4s to 5s per cwt. Carlow, 76s to 79s; Cork, 75s; Limerick, 76s to 77s; English sa'es, 80s to 84s for fine weekly Friesland, 80s to 82s for middling, 67s to 78s for Devon per cwt, and 8s to 9s, per dozen lb, for fresh. Bacon supports former rates. Waterford, landed, 57s to 62s. Hamburg steaks, 54s to 56s per cwt. Lard scarce

Tallow.—P. Y. C. on the spot is selling at from 39s 9d to 39s 6d for old, and 38s 9d for new. To-day sellers for forward delivery are asking 40s per cwt. Town tallow, 35s to 35s 6d per cwt, net cash; rough fat, 2s 2d per 8 lbs. The shipments from St Petersburg are only 15,818 casks, against 31,000 in 1851.

Oils.—Linseed oil is steady, at 29s 6d to 30s on the spot, and 29s for forward delivery. All other oils are dull. Rape, pale, £34; brown, £33.

Hay and Straw.—Meadow hay, £3 to £4 4s; clover ditto, £4 to £5 5s; and straw, £1 13s to £2 2s per load.

Potatoes.—Inferior rates as follows:—Regents, 50s to 100s; Shaws, 87s to 95s, Inferior kinds, 40s to 60s per ton. The supplies come in very freely.

Hops.—(Friday.)—Several parcels of new hops have arrived this week from Sussex and Kent, and are to be seen in Borough. Selected parcels have sold at from 47 to to 49; low and middling, 42 to 45. So per cwt. Picking is now becoming general, and the duty is still called £240,000 in yearling and hops next to nothing is do. g, and the quotations are decidedly lower.

ARRIVALS.—Per Ireland, from Malta, 19 bags Cotton; Hector, Bona, 14s; Holsburn, 3d, Hesse, Leith, 14s; Eden Main, 14s 9d; Hector, Bona, 15s 9d; Haswell, 16s; Stewart's, 15s 9d; Hesse, Leith, 14s; Eden Main, 14s 9d.

Smithfield (Friday).—The show of beasts on to-day's market was but moderate as to number, but the quality of sheep was fully as fine as last week's. Prime beasts were supported, the primest realising nearly 4s per 8lb. Although the supply of sheep was not large, the demand was dull, and prices were 2s lower than last week, at all the above quotations. The best old lambs were worth 6d per 8lb. Calves came freely to hand, but the veal trade was dull, at 4s per 8lb. Pigs were rather more plentiful than of late, but we have no advance to notice in prices. Much cows moved off a sowy, at from £16 to £20 each, including their calves.

Per 8 lb to sink the offal.—Coarse and inferior beasts, 3s 6d to 3s 8d; second quality ditto, 3s 10d to 4s; prime large oxen, 4s to 4s 2d; prime Scots, &c., 4s 2d to 4s 4d; coarse and inferior sheep, 3s 4d to 3s 6d; second quality ditto, 3s 8d to 3s 10d; prime coarse-woolled ditto, 4s 0d to 4s 2d; lambs, 5s 0d to 5s 6d; large calves, 4s to 4s 4d; small ditto, 4s 4d to 4s 8d; prime ditto, 5s 0d to 5s 2d; large hogs, 3s 10d to 3s 6d; neat small porkers, 3s 8d to 3s 10d; lambs, 5s 6d to 6s 6d; suckling calves, 19s to 24s each; and quarter old store pigs, 18s to 19s each. Total supplies: Beasts, 800; cows, 150; sheep and lambs, 19,860; calves, 482, pigs, 340.

Newgate and Leadenhall.—The general demand rules steady, at our quotations.

Per 8 lb by the carcase.—Inferior beef, 3s 4d to 3s 6d; middling ditto, 3s 8d to 3s 10d; prime large ditto, 4s to 4s 2d; prime small ditto, 4s 4d to 4s 6d; large pork, 3s 8d to 4s; small ditto, 4s 4d to 4s 6d; inferior mutton, 3s 10d to 3s 6d; middling ditto, 3s 8d to 3s 8d; prime ditto, 3s 10d to 4s 2d; veal 3s 6d to 3s 10d; small pork, 4s 2d to 4s 6d; lamb, 6s 2d to 6s 8d.

AMUSEMENTS, &c.

ROYAL PRINCESS' THEATRE, OXFORD-STREET, under the management of MR. CHARLES KEAN.—This Theatre will OPEN for the season on SATURDAY NEXT, the 18th of SEPTEMBER, when will be performed a New Petite Comedy, called THE PRIMA DONNA; after which, THE CORSICAN BROTHERS. Fabien and Louis dei Franchi, MR. CHARLES KEAN. To conclude with the farce called ICELAND for an OLIVER.—The Box Office will open on Thursday next.

ASTLEY'S THEATRE.—Open every Evening with Equestrian Performances.—The most decided hit ever accomplished is by MR STOKES and his two American Wonders, Mdlle. ELLA, truly named the wonder of the day for her daring leaps over banners nine feet wide; then YOUNG LEON in his wonderful vaulting act, flying over nine at a fast pace, on the bare back of his horse. Likewise the BROTHERS LEIGHTON on the Perche, the most surprising performance ever beheld, and their curious summersaults on the French vaulting act, a style of talent with a purpose, in conjunction with the numerous Artists engaged, making the evening's entertainments one of the greatest variety ever heard of in any public building.—Doors open at Half past Six, commence at Seven. Half-price at Half-past Eight.

ST. JAMES'S THEATRE.—The TYROLESE SINGERS.—Farewell Engagement.—It is respectfully announced that the TYROLESE SINGERS (Helene Rainer, Rieser, Vier-Reine and Mdlle. Marie) will make their last appearance this SIX EVENING and TWO MORNING CONCERTS during the ensuing week, commencing on MONDAY EVENING next, SEPT. 13, being their last entertainments in London before re-filling some provincial engagements, and previously to their departure for the Elder Thal, in the Tyrol. Between the first and second parts of the entertainment, Vier-Reine will execute compositions on the exquisite musical instrument the "Zither," which has universally excited the greatest admiration.—Treasbar at half past 8, morning at half-past 2. Tickets and seats may be obtained at MR MITCHELL'S Royal Library, 33, Old Bond-street.

STRAND THEATRE.—Manager, MR DUMBOLTON.—EXTRAORDINARY ATTRACTION.—On MONDAY, SEPTEMBER 13, and every evening during the week—First appearance of MR. BAPTIST PANORMO, the celebrated Pianist; and first appearance of LUCY LONG, who will perform her celebrated Dance, in Character; together with the AFRICAN OPERA TROUPE, introducing new Songs, Duets, Choruses, Comic Sayings, &c. For particulars, see bills of the day.

These steamers have most magnificent and spacious saloons for the accommodation of passengers, and their [illegible] Apply

STATUETTE OF HIS GRACE THE DUKE OF WELLINGTON, BY ALFRED CROWQUILL.

STATUETTE OF THE DUKE OF WELLINGTON.

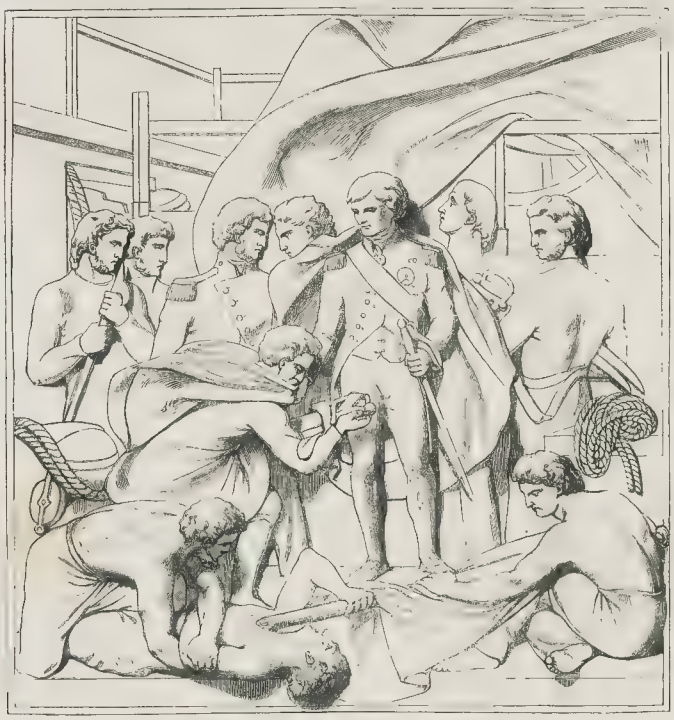
THE model of this very interesting statuette of his Grace the Duke of Wellington, from life, by Alfred Crowquill, was shown at the *soirée* given by the President of the Institution of Civil Engineers, at the close of last session. The likeness of the great original, and the unstudied life-like position of the figure, were the subject of general admiration throughout the evening; and we are happy to find its high character has been appreciated by one of our leading art-manufacturers.

The statuette has been beautifully executed, in parian, by Messrs. Samuel Alcock and Co., of Burslem. "The Duke" is represented as seen seated in the House of Lords; and in addition to the merits we have mentioned above, the dignified expression of the features is very characteristic. The work will, undoubtedly, become very popular.

THE NELSON COLUMN.

AT length, we have the satisfaction to illustrate the completing bas-relief of the Nelson Column, in Trafalgar-square; namely, that which fills the western panel of the pedestal, facing Pall-mall. The design was commenced by Mr. Watson, after whose early death, the subject was completed by Mr. Woodington. It is an impressive scene from the Battle of St. Vincent, at which Nelson gave orders for boarding the *San Joseph* from the *San Nicolas*. The rest shall be told in Southey's words:—

It was done in an instant, he himself leading the way, and exclaiming, "Westminster Abbey or victory!" Berry assisted him into the main chains; and at that moment a Spanish officer looked over the quarter-deck rail, and said they surrendered. It was not long before he was on the quarter deck, where the Spanish captain presented to him his sword, and told him the admiral was below, dying of his wounds. There, on the quarter deck of an enemy's first-rate, he received the swords of the officers; giving them, as they were delivered, one by one, to William Fearney, one of his old *Agamemnon's*, who, with the utmost coolness, put them under his arm; "bundling them up," in the lively expression of Collingwood, "with as much composure as he would have made a faggot, though twenty-two sail of their line were still within gunshot." One of his sailors came up, and, with an Englishman's feeling, took him by the hand, saying, he might not soon have such another place to do it in, and he was heartily glad to see him there. Twenty-four of the *Captain's* men were killed, and fifty-six wounded—a fourth part of the loss sustained by the whole squadron falling upon this ship. Nelson received only a few bruises.



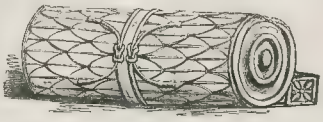
BAS-RELIEF OF THE NELSON COLUMN.—NELSON RECEIVING THE OFFICERS' SWORDS AFTER THE BATTLE OF ST. VINCENT.

The details of the casting we repeat from our Journal of the 21st ult., the weight of the relievo is about four tons; height, 14 feet; breadth, 13 feet 7 inches; and it was cast at the foundry of Messrs. Moore and Co., Baldwin's-gardens, Leather-lane.

THE ROMAN WALL OF LONDON.

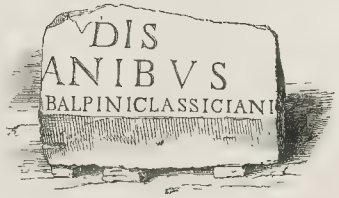
One of the finest fragments of the wall built by the Roman colonists of Britain around their Londinium exists to this day upon Tower-hill; it is 30 feet high, and extends over a considerable length of ground at the back of Trinity-square. It was given up by the Corporation, some few years since, to be pulled down; but, owing to the interposition of the Woods and Forests, the relic has been respited to the present day; and now has arisen a fresh anxiety as to its preservation. In the almost entire absence of any other remains of the great wall which once surrounded the city, it is well worth preserving: the upper part is probably not older than the time of Henry III., but the lower is Roman work. For upwards of two months past, excavations for foundations of buildings have been making close to this fragment, and have revealed some of the original Roman masonry, which had been concealed by houses and other buildings. It was in excellent preservation, the facing stones quite perfect, and the rows of red tiles (such as are usually found in Roman walls) remained to the extent of two or three layers. Close to this portion of the wall, and piled up to a considerable height, was a mass of cut and sculptured stones, which at some remote period had formed part of one or more buildings of magnitude such as abounded in Roman London. Some of these had been foundation-stones, others had been portions of cornices, pilasters and columns, and one was the half of a millstone in Andernach lava. The most attractive of these stones has been deposited in the British Museum. It originally formed part of a composition of very elegant design; it is five feet in length, and at one end is sculptured to represent a roll of foliage, bound round in the middle by a band and strings. The other stones have been carried off to be used, it is feared, for building materials, like many similar remains found in the city in past years. The want of opportunities for their proper examination is to be lamented, as one of the larger flat slabs (upwards of five feet in length) is inscribed with letters, some of which are nine inches in length; they belong to a sepulchral inscription, of which only three lines (two of them incomplete) remain. It is extremely probable that at least other portions of the inscription are upon some of the stones found with this inscribed one, but, as they are now carried away from Tower-hill, there is but little hope of their being examined.

REMAINS OF THE ROMAN WALL ON TOWER HILL.



SCULPTURED END OF ROMAN SARCOPHAGUS, FOUND ON TOWER HILL.

The wall has shared a better fate, and has been enclosed. We have



INSCRIBED ROMAN STONE, FOUND ON TOWER HILL.

engraved it; with one of the fragments, part of a sarcophagus; and the incised stone, the letters on which were found by one of the workmen accidentally tapping it with his foot while eating his dinner. The size of this stone is 5 ft. 4 in. by 2 ft. 6 in., and 1 ft. 2 in. thick.

GREAT RAILWAY PROJECT.—*The Constitutionnel* announces a railway project, which, if carried out, will be of great social as well as political importance. It is a scheme for connecting the three capitals—Paris, Lisbon, and Madrid, by means of a system of iron ways. The three Governments, described as vividly interested in the idea, have engaged to favour by all the means at their disposal the formation of companies willing to execute the works, and to guarantee, so far as each is concerned, the fulfilment of all the conditions stipulated for in the convention. The line is to run from Paris to Madrid, and from Madrid to Lisbon. This will be good news to the hosts of summer tourists whose vacation is confined to a few weeks, and to whom the south-west of Europe has hitherto been a sealed book. With such a road as is here announced, the Alhambra will soon become as well known as St. Mark's—the bull-fights of Madrid as the horse-races of the Corso.

DANISH ARCHÆOLOGY.—On August 26th was held the usual quarterly meeting of the Royal Society of Northern Antiquarians. The Vice-President, Privy Councillor Wegener, exhibited drawings of three stone monuments at Thisted, in Jutland, one of which was a rune stone hitherto little known. Carls Säve, Lector in Archæology in the University of Upsala, afterwards read a sketch of some of the most remarkable antiquities in the Swedish island of Gotland, which is a perfect mine for the antiquary. It has nearly 100 ancient churches, most of them in excellent preservation, and abounding in magnificent sculpture, and all the rich forms exhibited by the architecture of the 13th and 14th centuries.

THE GRAND MUSICAL FESTIVAL IN HEREFORD CATHEDRAL.—(SEE NEXT PAGE.)

MUSIC.

HEREFORD MUSICAL FESTIVAL.

(From our own Correspondent.)

HEREFORD, Friday.

The 129th Festival of the Three Choirs of Hereford, Gloucester, and Worcester, will be completed this morning by the performance of Handel's "Messiah;" and the week's enjoyment will be terminated by an event which, although not immediately connected with the musical gathering, is a very appropriate and graceful finale, namely, the presentation of medals, awarded by the Royal Commissioners to the exhibitors of the county of Hereford and the officers of the Hereford Local Committee, at the Shire Hall, this afternoon.

The week's selection of music reflects credit on the taste of the conductor, Mr. Townshend Smith. The executants, vocal and instrumental, although limited in number, were, on the whole judiciously chosen; but, if the truth be told, it cannot be stated that the performances have exhibited that amount of precision and perfection which the advanced state of musical knowledge exacts. Upon this subject, however, we shall have more to say hereafter. In the meantime it is scarcely necessary to repeat the arguments brought forward on former occasions, to prove that if progress be not made in the Triennial Festivals, they must expire The fact is patent to everybody of the slightest discernment.

There have been four morning performances at the Cathedral, and three evening concerts at the Shire Hall. The general rehearsal took place on Monday morning and evening. The festival was opened on Tuesday, as usual, with Divine service, in the Cathedral. The orchestra and congregation were placed in the noble nave, a temporary screen of canvass separating the former from the choir. The orchestra was under the western arch of the tower; the organ, being under the low arch on the side, was invisible—the player, Mr. Atkins, of Gloucester, obtaining his view of the conductor in a mirror. The leader of the band is Mr. H. Blagrove: amongst the instrumentalists were Cooper, Dando, Willy, Watkins, A. Mellon, J. Loder, Cusins, Patey, Seymour, Hill, Trust, Weslake, R. Blagrove, Lucas, Hamilton, Mr. Phillips, Calkin, Howell, Flower, Severn, Pratten, E. Card, Nicholson, Williams, Baumann, Godfrey, C. and T. Harper, Irwin, Jarrett, Rae, the Smithies, Healy, Andre, Chipp, &c. The mayor and municipal authorities entered in state at seven o'clock, and shortly afterwards the Lord Bishop, the Dean, with the Rev. Lord Saye and Sele, the Ven. Archdeacon L. Freer, B.D., the Archdeacon of Salop, the Dean of St. Asaph, the Canons, Rev. Messrs. Morgan, Huntingford, Musgrave, the Proiector, the Rev. W. E. Evans, the Prebendaries, Vicars, and minor Canons entered the nave in procession

There are many visitors to the Triennial Festivals who regard the first morning's impressions at the cathedral service as the deepest and most earnest of the entire meeting. The time, the place, and the associations are eminently calculated to give effect to the sublimely devotional strains selected for the service; and on this occasion the sensations were not less thrilling. The glorious flood of sunlight, thrown on the nave, with its massive pillars and its semicircular arches, and illuminating the lofty groined roof, with its quaint archæological devices in blue, white, and gold, warmed every heart during the singing of the Old Hundredth psalm, ascribed to Martin Luther, and prepared the mind for the impressive service. The Rev. J. Goss intoned the liturgy; the Rev. Canon Huntingford read the first lesson, and the Ven. Archdeacon Freer the second. The Right Hon. and Rev. Lord Saye and Sele, D.C.L., preached an excellent sermon, his text being the first verse of the fifth chapter of St. Paul's Second Epistle to the Corinthians, "Therefore, seeing we have this ministry, as we have received mercy, we faint not." The musical gleanings were the beautiful pieces, responses, and chant by Tallis; Mr. Townshend Smith's chant for the Psalms; Handel's "Te Deum" (Destitego) and "Gloria Patri;" P. Humphrey's "Jubilate:" Mr. Townshend Smith's anthem, "Behold, God is mighty," after the Third Collect; Mendelssohn's fine psalm 95, "O come let us worship," before the sermon; and Dr. Croft's chorus, "Cry aloud and shout," at the conclusion. Mrs Enderson, Miss Williams, Messrs. Hobbs, H. Barnby, and Phillips, sang the solos in the "Te Deum" artistically; and Messrs. T. Harper and Irwin executed the trumpet passages admirably. The new anthem of the conductor is nicely constructed, and if not marked with individuality, contains some musicianlike writing. The quartet sung by Mrs. Enderson, Miss Williams, Mr. Hobbs, and Mr. Phillips, is well voiced: the chorale had also some good points, especially in the instrumentation. Owing to the non-arrival of Mr. Sims Reeves, who did not reach Hereford until Tuesday night, owing to a severe cold, Mr. Sims Reeves sang at sight very clever the tenor solo in Mr. Smith's anthem and in Mendelssohn's Psalm. The service was over about half past two o'clock, and the ladies then held the doors for the collection, which amounted to £151 1s. 2d, besides two donations afterwards of £10 each. In 1849 the amount was £237. It is anticipated that this morning's collection will, however, bring up the amount for the charity to about the same as at the last meeting. As regards the pecuniary receipts it is not safe to trouble you with the daily items until the festival is over; but the stewards, I fear, will have to make up a large deficiency. The weather, which began so auspiciously on Monday and Tuesday, changed on Wednesday, and this unfavourably always affects the festivals.

Of the general execution of Haydn's "Creation," Spohr's cantata, "God thou art great," Beethoven's Kyrie, Gloria, Sanctus and Benedictus, from his first Mass in C; and Mr. Sims Reeves' energetic singing of Handel's "Sound an alarm," (re-demanded by the Bishop of Hereford) from "Judas Maccabæus," being Wednesday's programme; and of the interpretation of Mendelssohn's oratorio, "Paul," introduced for the first time at Hereford; and of Spohr's "Last Judgment," forming the long programme of Thursday, it will be unnecessary to write at any length. The characteristics of these cathedral readings are well known, and the principal singers, of course, suffer more or less from the unsteadiness of the directing *bâton*. The pieces most familiar to the executants go off themselves, either by tradition or imitation; in the unfamiliar and intricate parts it is either rugged or straggling, and perhaps a *sauve qui peut*. Mr. Townshend Smith, who, it must be mentioned to his honour, seems full of artistic aspirations for the success of these meetings, and who has taken special pains in the selection of classic materials, must not be blamed for the shortcomings. He has followed in the wake of his predecessors in taking a post for which a life's experience, and a daily use of the *bâton* are the essential requirements. It cannot be borne in mind, that it has not been the invariable custom at these meetings for the local organist to be the conductor.

At the evening concerts in the Shire Hall, Mozart's "Zauberflöte" and Weber's "Oberon" were the overtures in the first programme of Tuesday; Beethoven's Symphony in D, and Mr. A. Mellon's clever overture in A minor, were in Wednesday's scheme; and at the third and last concert, Mendelssohn's Symphony in A, and Rossini's "William Tell" were the orchestral displays. The full pieces have been the splendid March Chorus and Quartett from Weber's "Euryanthe," the charming *finale* from Sir H. R. Bishop's opera of the "Mamac," "Home! there's a storm;" the picturesque "Chorus, March, and Dance at Arms," from Spohr's "Jessonda;" Willye's quaint madrigal, "Lady Pride, cease," Macfarren's clever madrigal, "Maidens, never go a wooing," from "Charles II.," and the National Anthem of Dr. John Bull who was organist, by the way, of Hereford Cathedral. Mr. Townshend Smith must be complimented on the selections, in such selections as the above, evincing as they do, that he does not look upon music in an exclusive and narrow-minded view. Another highly interesting feature in the concerts has been the singing of the Glee and Madrigal Union.—Mrs. Enderson, Miss Williams, Mr. Lockey, Mr Hobbs, and Mr. Phillips. The Herefordshire amateurs were certainly not up to the mark in appreciating the exquisite ensemble in these noble specimens of the English glee school. Of the individual displays of the chief *artistes*, the London minstrels will require no information in detail, singing as they did their favourite *morceaux*, rendered so familiar to popular ears by the past season. To notice the magnificent voice of Mdme. Clara Novello, would be to repeat the eulogies bestowed on her during the Birmingham meeting. She stands all schools, oratorio, or oratorio, scena or song, ballad or bravura, and her voice will tell its powerful tale, whenever she is heard. For nice taste and delicate feeling Mrs. Enderson, especially in two songs by Sterndale Bennett, claims observation. Miss Williams has sustained singly the contralto honours with marked success. She always wins an *encore* in Land's ballad, "The slave girl's love," the popularity of which, without meaning any disrespect to the clever composer and charming singer, must be ascribed, not only to her very deep notes, but also to the run just now making on "Uncle Tom's Cabin." Mr. Sims Reeves has taken higher ground at the last two festivals than on any previous occasion. He is acquiring the true singer's art—delicacy, sentiment, and refinement. Lockey has been *hors de combat*, owing to his severe cold; and Herr Formès, after his Birmingham labours, has been roughing it here, prior to his Norwich labours.

The Dean and Chapter have politely thrown open the portals of the cathedral, during the afternoons of the festival, to enable visitors to view the memorials to the late Dean, the Very Rev. John Merewether, D. D.; and to Joseph Bailey, Esq., the M.P. for the county for nine years. The Dean's memorial occupies five windows in the east end of Lady Chapel. The active part he took in the restoration of the cathedral is well known. He is buried at the north-west angle of the Ladye Chapel. The Bailey memorial is on the altar screen, erected at the eastern end of the choir, across the great Norman arch. The sentinel panel is not yet placed. These memorials, by Mr. J. Cottingham, have attracted much attention.

The stewards of the Festival, who undertake its financial responsibilities, are the Bishop, Lord Sudeley, Anderson Freer, D. P. Price, Esq; Panton Corbett, Esq.; W. M. Kyrle, Esq; the Rev. W. T. N. Peneyre, M.A., and T. Evans, Esq. The attendance of the local nobility and gentry has not been so great as in former years. The railroad from Ross and Gloucester will be opened next autumn, and by the time of the next festival, in 1855, there will be three railroads to Hereford: an important difference will then be made in the receipts. Many persons, however, will regret the loss of the ride over the Malvern Hill, through smiling orchards and rich hop grounds. Some visitors have come from London and Dublin, amongst whom is Fitzwilliam Hume, Esq., M.P. for Wicklow, with his family.

The melancholy intelligence of the death of the Duke of Wellington reached here early on Wednesday, but it was only on the arrival of the London papers in the afternoon the inhabitants could be persuaded that the news was too true. A more universal expression of sorrow was never witnessed. The cathedral bell tolled after the morning's performance, and yesterday (Thursday), prior to the commencement of the oratorio "Paul," the orchestra, under the direction of Mr. Townshend Smith, played the Dead March in "Saul," the entire company standing up, evidently deeply moved.

In the list of general company at the Festival just handed to us are the names of Lord and Lady Rathven, Lord W. Graham, Lord Hereford, Lord Bateman, Sir Robert and Lady Price, Sir G. and Lady Lambert, Lady Emily Foley; King King, Esq., M.P.; Captain Hanbury, M.P.; Sir Walters Cornewall, M.P.; T. Booker, Esq., M.P.; Quintin Dick, Esq., M.P.; E. Fitzwilliam Hume, Esq., M.P.; and Miss Hume, H. Arkwright, Esq.; Lady and Miss Cornewall; Rev. Archer Clive; D. Bertha, Esq., &c. The only absentees amongst the stewards were P. Corbett, Esq., and W. A. Kyrle, Esq.

The full attendances yesterday, and the expected influx for the "Messiah," it is anticipated, will produce an average amount of receipts for the meeting.

The Bishop of Hereford has just issued an address on the subject of the restoration of the Cathedral. It is stated that more than £20,000 has been already expended, this sum having been chiefly contributed within the county. The Bishop adds that about £10,000 more would go far towards the completion of the work, and about £5000 might effect the separation of the choir, so that it could be used for divine service. An appeal is therefore made, in which every archæologist in the country must feel deeply interested, as well as every churchman, fully to restore one of the oldest of European sacred edifices. Divine service since March the 1st, 1850, has been performed in the nave, and not in its proper place in the choir.

BIRMINGHAM MUSICAL FESTIVAL.

(From our own Correspondent.)

BIRMINGHAM, Monday.

The general committee met on Saturday at the Town-hall; Lord Leigh, the President, in the chair. Votes of thanks were specially passed to the noble Lord and Lady Leigh, to the Vice-Presidents, to J. P. Ledsam, Esq., the chairman of the committee; to J. O. Mason, Esq., the orchestral steward; to Michael Costa, Esq., the conductor; to Mr. Stimpson, the organist and chorus master to the Birmingham Society of Exeter-hall; and to the various officials connected with the recent meeting. The ball at the Town-hall on Friday night produced only £277 12s., but the total receipts have been the large sum of £11,832 12s. 2d. In 1849 the amount was £10,393. In 1837 it was £11,900, in 1840 £11,613, and in 1846 £11,638. It is confidently anticipated that the balance for the General Hospital will be one of the most favourable net receipts ever known, as the expenditure has been kept under, by judicious arrangements at the festival. The largest take of the morning performances was that of the "Messiah," £762 4s. 11d.; and yet upwards of 200 persons were turned from the doors. On the "Elijah" day the sum was £2504 0s. 7d. The "Creation," "Christus," &c., realised £1,241; and "Samson" £1725 18s. 4d. For the three concerts the sums were—£439 7s the first, £869 the second, and £1001 9s. the last. The sale of books insured £364. Amongst the donations were—Lord Leigh, 100 guineas; T. Corfield, Esq., £100; Earl Aylesford, £50; Madame Viardot and Mdlle. Zerr, £20 each; Mr. Sims Reeves and Herr Formès, 50 guineas each; Miss Williams, 10 guineas; Miss Dolby and Mr. Lockey, five guineas each; the Sacred Harmonic Society, besides the loan of music, £10.

A few words on the performance of "Elijah" will complete our record of this truly memorable meeting. The playing of the overture and the Dead March (quite as fine as that of *Saul*), the clever singing of the florid tenor, and "Why does the God of Israel sleep," by Sims Reeves, the pathetic rendering of the "Lord, O God of Israel," by Miss Dolby; the spirited delivery of the "Honour and Arms," by Formès; the grand interpretation of the lament "Ye Sons of Israel," by Viardot (re-demanded); the brilliant and powerful vocalisation of Clara Novello in "Let the bright Seraphim," with Mr. Harper's superb trumpet obligato; and the wondrous precision and fire with which the choruses performed their functions, rendered this execution of "Samson" not less interesting, and certainly quite as triumphant as that of "Elijah" and the "Messiah." At the close of the oratorio, after the National Anthem had been sung, the burst of cheering from all sides, for Costa, lasted for some minutes, and never was honour more richly merited. He has been the Atlas of the festival, and his artistic and moral influence was never more triumphantly developed.

The Theatre Royal was opened on Saturday night by Mr. Simpson, who had provided a *finale* of the musical week, by the engagement of Tamberlik and Mdme. Castellan for the last act of "Lucia," and Grisi, Mdlle. Bertrandi, Mario, F. Lablache, Susini, Polonini, and Galvani, for "Lucrezia Borgia." Mr. Frank Mori was the conductor. The house was quite filled.

Mdme. Castellan leaves for Lisbon at the end of the week. Tamberlik, Polonini, and Mario shortly depart for St. Petersburgh; for which capital Lablache is due *via* Stettin. Mdme. Clara Novello will start for Madrid after the Hereford Festival.

CREMORNE GARDENS.

The Monster Balloon, the largest that ever ascended in this country, made its first trip on Monday last, under the pilotage of Monsieur Poitevin, from the above Gardens. About thirty persons were in the car and on the boop, with Madame Poitevin and her parachute attached, as well as a large quantity of ballast. The ascent and descent of Madame was admirably arranged, and thus effected: When the balloon had reached an altitude of about half a mile, the aëronaut suddenly let off a large quantity of gas, which causing the balloon rapidly to descend, the parachute was suddenly spread and descended most gracefully, without the least oscillation, and safely landed the fair voyager on Clapham-common. Mdme. Poitevin was hailed with rapturous plaudits on her safe return to Cremorne; as was the omnibus party, some two hours after, on their return from Kent.

HER MAJESTY'S THEATRE.—This great national establishment is in future to be carried on by an association of united capitalists; in its foremost ranks are men distinguished for their patronage of the arts and knowledge of business. The trustees are the Duke of Leinster, the Marquis of Clanricarde, Mr. Frederick Mildred, of the great banking firm of Masterman and Co., and Benjamin Oliveira, M.P. The subscribed capital is £200 000, with an available ready money capital of £70,000. The liability of the shareholders is limited to the amount of their shares. No person (says the *Chronicle*) has yet been officially named as the future director; but if great experience, indefatigable attention to business, courteous manners, and general popularity with the frequenters of the opera, constitute valid claims to the office, we imagine we shall not be far wrong in anticipating that the choice of the committee will fall on Mr. Lumley.

OLYMPIC.—On Monday the burlesque of "Midas" was revived. Mr. Farren himself performed *Midas*, and with precision and point little inferior to his best days. Mr. Compton was a capital *Pan*; and Miss Gordon, as *Apollo*, justified the good opinion we have already expressed of her, both as an actress and a vocalist.

FOREIGN AND COLONIAL NEWS.

FRANCE.

The Prince President has set out on his long tour to the South. His more immediate friends had vainly endeavoured to persuade him, previous to his departure, to lessen the great extent of the circuit which he purposes making through the southern provinces, as they are apprehensive, in the present state of his health, which is by no means strong, of injurious effects resulting from the great fatigue and exposure which he must necessarily undergo in so protracted an excursion. He persisted, however, in adhering to the programme of the route as originally laid down, and as given by us last week. On Tuesday, the day of his departure, he left St. Cloud at a quarter past twelve in an open caleche and four, with postillions. He was in the uniform of a general officer, with the grand cordon of the Legion of Honour and two or three other decorations. His uncle, Marshal Jerome Bonaparte, was by his side, and opposite them sat two aides-de-camp. The carriage was escorted by two bodies of officers—one, of cuirassiers, preceding it; and the other, of carbineers, following it. Each party had the colonel at its head, and all the officers rode with drawn swords. A squadron of carbineers followed at some distance. Louis Napoleon passed down the Champs Elysées, crossed the Place de la Concorde, and then proceeded along the quays to the terminus of the Orleans Railway. There were not many persons collected on his passage, and the cry generally raised was that of "*Vive Napoleon!*" The outside of the terminus was fitted up with masts, ornamented with tricoloured flags, and bearing escutcheons with an eagle on each. The interior was also ornamented in an analogous manner. About half-past twelve, General Magnan, General de Lawoestine, Colonel Isnard, head of the staff, Count de Newerkerque; the Ministers, in full official costume; M. Baroche; a great number of Councillors of State, and of Senators; the Prefect of Police, and a vast crowd of functionaries of every grade, arrived. A great crowd was assembled outside, and the windows in the neighbourhood were filled with well-dressed persons. At one o'clock the drums of the gendarmerie mobile, on duty at the terminus, beat a salute, and in a few minutes after the Prince drove up, and was most warmly received with cries of "*Vive l'Empereur!*" and, occasionally, of "*Vive Napoleon!*" The generals and great functionaries present then pressed forward to receive the head of the State, and immediately after the Prince proceeded to take his place in the train. Sixteen persons were admitted into the railway carriage prepared for the departure, and amongst them were M. Fortoul, the Minister of Public Instruction, and M. de Maupas, the Minister of Police, who are to be in attendance on Louis Napoleon during the first part of his journey. There were also General de St. Arnaud, Minister of War, who is to accompany him throughout his tour; General Roguet, General de Goyon, Colonel Fleury, Colonel Edgard Ney, M. Mocquart, his *chef du cabinet*, and Dr. Conneau. The train was put in motion at 20 minutes past one for Bourges. The Prince's household left by a train at eleven o'clock, and at the same time were despatched twelve new carriages, intended for the President's use during his tour.

The arrival of the President at Bourges took place at six o'clock in the evening. He was received at the station by the Prefect of the Cher, the Mayor of the city, and all the municipal and departmental authorities, both civil and military. The President made his entry into the town on horseback, accompanied by the Ministers of Police, and was attended by a numerous and brilliant staff. The streets were lined with National Guards, soldiers of the line, and artillery, and the houses were decorated with flags, and brilliantly illuminated; the balconies being crowded with elegantly-dressed ladies, who, waving handkerchiefs, joined in the general acclamations which united Louis Napoleon as he rode along. The Hôtel Dieu and the Convent of the Sisters of Charity were especially noticed for their elegant decorations. Over the gate of the latter was placed the inscription, "To Louis Napoleon, the Saviour of Family, the Protector of Religion." The Prince acknowledged with marked affability the salutations of the nuns, who were drawn up in front of their establishment. On his carriage arrived, amidst the pealing of bells and the enthusiastic greetings of the multitude, at half-past six, at the cathedral, when the Cardinal Archbishop of the diocese, the Vicars-General, the Chapter of the Cathedral, and a vast throng of clergy, dressed in full canonicals, were in waiting to receive the President. The Archbishop descended the steps before the grand entrance to meet Louis Napoleon, and having presented him with incense and holy water, gave expression to the sentiments of devotedness, gratitude, and profound respect with the clergy and the people certain for the Prince. Louis Napoleon, in reply, briefly expressed the gratification which his reception afforded him, adding that he was convinced that the wishes addressed to Heaven by the clergy, on his behalf, at the commencement of his journey, must lead to a good termination. He then entered the church, and advanced between a double row of clergy to the choir, where he knelt while the *Domine Salvum fac* was chanted, at the close of which he left the cathedral and proceeded to the Archiepiscopal palace, where he passed the night. At the dinner which took place at half-past seven o'clock, all the officials and people of local distinction, including clergy, military, and laity were present, and during the night the town was the scene of the most festive enjoyments—balls, theatrical exhibitions, &c.

The only Minister who is to accompany the President of the Republic throughout the whole of his journey is General de St. Arnaud, the army being to occupy a prominent part in the pageant in each town. The other Ministers will be in attendance on Louis Napoleon in the following manner:—M. de Maupas, Minister of Police, as far as Moulins; M. de Persigny, Minister of the Interior, from Moulins to Lyons; M. Ducos, Minister of Marine, at Toulon and Rochefort; and M. Magne, Minister of Public Works, will meet the Prince at Angoulême, to inaugurate the railway with him. M. Fould, Minister of State, is not to leave Paris.

The organisation of the Ministry of State has been modified, in order to reduce the expenses of that department of the public serv ce.

The architects of the Crystal Palace in the Champs-Elysées on Monday took possession of the ground destined for that building, and commenced marking it out for the extensive works which are to be constructed.

The sides of the great sewer, which is being constructed in the Rue de Rivoli, fell in on Tuesday evening on seven men, five of whom were got out more or less injured, but two are lost.

The *Echo de l'Aveyron* has received a second warning for publishing an article on the *fête* of the 15th August, which was considered to contain personal and insulting insinuations against the Government.

The Minister of General Police has issued a decree expelling M. Chavoix, a member of the late Legislative Assembly, from the French territory. M. Chavoix had been previously expelled from the French territory by the decree of the 9th of January last, but was subsequently permitted to remain in France.

The linen merchants of Lille addressed a letter to the Chamber of Commerce of that town, praying its influence with the Government to obtain the commencement of the treaty with Belgium of 1845, the interruption of relations with that country having proved of serious injury to the memorialists.

The *Moniteur* contains a decree opening an extraordinary credit of 1,860,930f., for completing the line of electric telegraphic communication throughout France.

An order has been issued by the Mayor of Chatellerault, forbidding all keepers of coffee-houses and wine-shops from admitting youths under sixteen years of age, except they are accompanied by a relative.

SICILY.—THE ERUPTION OF MOUNT ETNA.

Sicily, which, some two years back, was so frequently mentioned in our columns as the theatre of political outbreaks, has again, by occurrences out of the ordinary course of events, begun to afford materials for the journalist. On the present occasion, however, the convulsions to be noticed are not political, but physical. The celebrated volcano, Mount Etna, which has now so long kept its internal fires dormant, has, within the last three or four weeks, resumed a most fearful activity, which at the present moment threatens desolation to one of the most fertile and beautiful districts on the globe. We have represented the scene presented by the mountain in the Illustrations, at page 212 of the present Number.

The latest accounts from the spot state that, on the 3rd of August, the broad stream of lava which issued from the mountain had arrived within a very short distance of the village of Zaffarana, and that the strong heat which it emitted was most sensibly experienced in the village. The manner in which the fearful torrent advanced was most singular. It moved on slowly, without interruption; the most advanced wave shot up at the slightest obstacle it met in its path, dispersing rivulets to all sides; the mass circled round them, grew smooth again,

and proceeded. A continued crashing and bursting was to be heard, as of glass in the fire, no other sound, and in the meanwhile immense damage was done. Every now and then a stoppage denoted that the stream had encountered a large obstacle, or water.

By day all this great mass had a reddish grey aspect, with something glassy and polished. It is impossible to describe its appearance by night. The stream of living fire, the clouds of cinders and sulphurous vapours, baffled description. It was horribly sublime. The river of lava, as the eruption proceeds, has become a species of coating above the surrounding lands, and as it grows cold, fresh sheets of fire spread over it.

The misery and losses occasioned to the unhappy region are incalculable; for the southern bed, through which streams of lava are now pouring, is the most fertile and best cultivated portion of the whole island. Vineyards, every species of fruit and vegetable production, houses, farms, &c., are all destroyed by the eruption. It is more than 300 years since lava flowed from Mount Etna in the direction of Zaffarana. Much damage is also occasioned by the cinders and burning sand poured forth from the crater, beneath the Monti di Cassone and the Valle del Bue. The volcano continued, at the latest accounts, throwing up forth such flames of fire as to illuminate the whole country distinctly as far as Catania (distant 14 miles), like a gigantic lighthouse.

UNITED STATES.

Accounts from New York to the 4th inst. would lead to the inference that the Fisheries dispute was in effect completely settled. Congress has been adjourned, much business that remained to be dispatched having been postponed. On the 30th ult., the day previous to adjournment, the Senate adopted a resolution providing for the purchase and fitting up of vessels intended for the exploration of Behring's Straits, the China Seas, Straits of Gasper, and Java Sea.

The "Order of the Lone Star," whose general purpose and object is declared to be "to extend the area of freedom," and whose immediate aim at present appears to be "to annex Cuba" to the United States, has openly commenced operations in New York. On Saturday, the 28th ult., a meeting of the "Empire division, No. 1" of the order was held in that city, when Dr. John V. Wren, special agent of the order, from New Orleans, was presented with a magnificent diamond star, the emblem of the order, and with some gold ornamental appendages. Fervent speeches were made on the occasion, and "Spanish tyranny in Cuba" much talked of. It is hinted that a revolution may be expected in Cuba early in November, the latest accounts from which island (dated the 29th ult.) state that the prisons there are all full, and that fresh arrests were made every day. In the capital (Havannah) the Government authorities had succeeded in seizing the press of a revolutionary journal, which was printed in secret, and we called the *Voice of the People*. They had also arrested the publishers and sent them to prison; and, acting upon the information of a French creole, they despatched a force of 50 cavalry to a *café*, and surprised a party of 140 persons engaged in making ammunition and ball-cartridge.

A new treaty of commerce and navigation has been made with the Netherlands, giving to Dutch and American vessels reciprocally privileges similar to those enjoyed by the national vessels of either country.

From the Mississippi Valley and "the Far West" generally, we learn that the cholera was raging in different localities there, especially in Missouri and in Buffalo.

At Cincinnati much damage had been occasioned by a fire. Very destructive storms had occurred in the south. The lower part of Mobile was entirely submerged, buildings were blown down, vessels injured, and a great number of lives lost. The damage in that vicinity was estimated at 1,000,000 dols. The same storm had destroyed much property in various parts of the Union; at Memphis much corn and cotton were washed away. At Augusta, state of Georgia, the loss was estimated at 1,000,000 dollars. The lighthouse on Ocracoke Island had been washed away, and the water had made a canal three quarters of a mile wide through Ship Island.

At Savannah the destruction of life and property had been very great; both bridges across the Savannah river had been carried away, together with all the canal bridges. There were four feet of water in the streets, and the mails had to be taken to the Post-office in canal boats.

From San Francisco we have advices to the 31st July. The news is not very important. The sheriff of Contra Costa county had been shot at and mortally wounded, while in the discharge of his duty, by a man named Hardy, who had leased a piece of land and refused to give up possession to the owner when the lease had expired. The outrage had caused great excitement at the place where it occurred, and it was feared Lynching would be resorted to.

2200 sheep had arrived at Woodland Ranch, twenty miles from the Sacramento, from the Salt Lake; they were upwards of twelve months on their journey, having left St. Joseph's in June, 1851.

The crops of grain and grass had sustained great injury from fire in the valley of the Upper Sacramento.

The gold miners were in general prevented working by the want of water.

From Mexico the news is deplorable. The insurrectionary movements were spreading to such an alarming extent, that it was anticipated an extra session of Congress would be called to devise means for their suppression, though what the said Congress can do, with an empty treasury, and no practical means at command, is more than can be divined.

THE RIVER PLATE.

By the advices, dated August 3rd, which have been received by the usual monthly mail steam communication from Buenos Ayres, we are informed of the demise of the Provisional Government which had been established by General Urquiza, on the banishment of Rosas, and which was to have conducted the administration until the congress of the Confederated Provinces that was to meet on the 31st of August had definitively organized a permanent form of Government. The cessation of the Provisional Government had been brought about by the resignation of its chief, Doctor Don Vicente Lopez. The retirement of Lopez, whose well-known ability, honesty of purpose, and enlightened views were universally recognised, was greatly regretted by the public. In his letter to Urquiza, upon retiring from office, Dr. Lopez says:—

> Wills and interests being ill-harmonised, and from the want of unity in the general views to arrive at those results to which freely I hoped to place the rudder of public interest in free deference to all social relations, my services must become a useless sacrifice on my part. My authority is already called in question, and such circumstances I am bound to facilitate frequently by place every step that may deign to exist in the matter as a definitive resolution which I have adopted, of separating myself from public life, returning to your house, collecting the authority which you conferred upon me, asserted in the name of the Treaty of San Nicolas (I see on the expiration of Lopez).

Urquiza replies by accepting the resignation with regret, and assuming the temporary direction of the province, as vested by a council, but only for the time necessary to reconstitute authority.

We are also apprised by these advices of the continuance in the provinces of San Juan and Santa Fe of the revolutionary movement against the Government appointments which had been made there by General Urquiza, in accordance with the dictatorial authority assumed by him as Provisional Director of the Confederated Provinces. The Provisional Government of San Juan had addressed a manifesto to the people, in which it announced the Governor, General Benavides, as a mere creature and tool of Rosas; and had, on the 6th of July, issued a formal fiat of deposition against him, charging him with every possible and imaginable crime, and prohibiting him from returning to the territory of the province for the term of one year, and even then not without a special and express sanction and permission of the authorities. General Urquiza's Government had replied to these proceedings in an energetic tone, in which he says:—"The Provisional Director cannot tolerate acts of this nature in the Confederation. They would undermine the basis of public order, and place its very existence in danger." Thus the matter rests for the present.

The financial difficulties of the Government were so great, that, on the 21st of July, it was obliged to have recourse to the very questionable proceeding of exacting from the Bank a forced loan of 10,000,000 dollars. The affair had created much dissatisfaction in commercial circles.

The new Council of State of Buenos Ayres was installed on the 26th of July, Don Nicolas Anchorena being appointed president, Don Salvador Maria Corail vice-president, and Dr. Edwards Lahitte secretary. These appointments are regarded as a proof of Urquiza's honest and patriotic views and intentions in assuming the supreme government for the present. Urquiza had also appointed Dr Pena Minister Plenipotentiary to Brazil, for the purpose of concluding a definitive treaty of peace, but having expressed a desire that the negotiations should be continued in Buenos Ayres, the Brazilian Cabinet consented, and Senor Limpo de Abren was shortly to proceed thither.

The long-agitated question of the independence of Paraguay has at last been decided. It was to be recognised on the 17th of July by the representative of the Confederation, and will be ratified in due course by the Provisional Director. The navigation of the Parana being conceded to Paraguay as an independent State, England may claim the same, on the principle of the "most favoured nation," consigned in the treaty with the Argentine Republic

At Rio de Janeiro, it was stated that the Argentine Confederacy having unconditionally acknowledged the independence of Paraguay, to obtain this object the whole of the territory claimed by the provinces had been ceded to the Confederacy. It was believed in Rio that the Anglo-French mission would be productive of no result Mr Schenk, the American Minister, who preceded the British and French envoys, Sir C Hotham and the Chevalier St. George, was told by General Urquiza that the question of the navigation of the rivers must first be settled with the Riverains, and even that object could not be effected until after the meeting of the Federal Congress. In all probability a similar answer would be given to the representatives of the two European Powers.

The Governors of the provinces of Salta and Jugay, and the Minister Plenipotentiary of Cordoba had adhered to the compact of San Nicholas (mentioned above).

A note had been received from the Government of Tucuman, announcing the deposition of General Gutierrez, and the substitution of Don Manuel A. Espinosa, as governor and captain-general of the province. The Chamber of Representatives had expressed an unqualified approbation of the compact of San Nicholas, and passed a vote of thanks to General Urquiza for the invaluable services he has rendered the Republic.

The Oriental Republic have awarded a medal to General Urquiza, as an acknowledgment of his public services.

THE NORTH AMERICAN FISHERIES.

On this subject a memorial to Sir J. G. Le Marchand, the Governor of Nova Scotia, accompanied by a petition to her Majesty, has emanated from a very large and influential meeting, held at Halifax, in that colony, on the 2d inst., and the two documents have been forwarded to the Imperial Government in London. Both the memorial and the petition enter fully into the history of the present Fisheries dispute with the United States, and of the treaties referring to the subject; and then insist upon the necessity, for the interest of the British North American Colonies, of maintaining unimpaired the restrictions which are laid by existing treaties upon attempts of United States fishermen to exercise their avocations within the prohibited British colonial waters. They reject as valueless the offer of the American Government to grant to British fishermen the same liberty to fish on the United States coasts as they (the Americans) demand for themselves in British colonial waters. They conclude thus —

> "Your memorialists deprecate all negotiation—all compromise on the subject the Americans will not—probably they cannot—grant an equivalent for the privilege they seek: and the only security for the colonies is the entire maintenance of the present negotiations. Your memorialists most earnestly entreat your Majesty that the existing safety restrictions may be preserved in their integrity, and that your Majesty's power may be put forth to prevent their violation. And your petitioners, as in duty bound, will ever pray, &c."

A series of resolutions, conceived in the same uncompromising spirit as the petition to the Queen, and agreed to at the same meeting, are appended. The two last of these resolutions indicate forcibly the tone of public feeling in the colonies on this subject. They are as follows:—

> "Resolved—That the cession of the Aroostook territory, and the free navigation of the St. John, the right of registry in colonial ports, and the free admission of the productions of the United States into British America at revenue duties only, have been followed by no corresponding concession of the commercial interests.
>
> "Resolved—That while more than one-half of the sea coast of the Republic bounds states, whose labouring population cannot be trusted upon the sea —the coasts of British America include a frontage upon the ocean greater than the whole Atlantic seaboard of the United States. The richest fisheries in the world [illegible] could it be—abounds at the most convenient points. Two millions of adventurous and industrious people already inhabit these provinces, by a few seasons' [illegible] would indeed deplore the sacrifice of their interests by opposing to the legions of their people—the full force of which has been twice put forth on British America within the memory of this generation; and, in a just cause, with the aid of the mother country, could be broken again."

STEAM COMMUNICATION WITH AUSTRALIA VIA THE ISTHMUS OF PANAMA.

—The project which has been so long and anxiously desired, of traversing the vast Pacific Ocean by means of steam, is on the eve of being accomplished. The Australasian Pacific Mail Steam Company, which has been recently incorporated by Royal charter, has entered into arrangements and formed contracts for the immediate construction of five first-class iron screw steam ships which are to ply across the Pacific from the Isthmus of Panama to Sidney in New South Wales, calling at the islands of Tahiti and New Zealand as intermediate stations. The vessels are to be of 1860 tons burden and 300-horse power; and as they are to be constructed of iron, it was considered more conducive to harmony of action for the ship and engines to be included in the same contract; accordingly, the builders of the ship will also manufacture the machinery. Mr. R. Napier, of Glasgow, is building two of the ships; Messrs. Caird and Company, of Greenock, one; Messrs. Reid and Company, of Port Glasgow, one; and Messrs. Miller, Ravenhill and Company, of London, one. The first vessel is to be ready in nine months from the present date, and will be at once despatched to Sidney as a pioneer of the line, and thence to Panama, to Pacific station on Panama. The highest rate of speed possible has been fixed upon as a condition imposed on the contractors, and it is, therefore, expected that these vessels will provide for the most rapid and regular route to Australia. The communication each way is to be monthly, and the Australasian Company's steamers from Chagres to Southampton. It is anticipated that Sidney will thus be reached in fifty to fifty-five days from Southampton.

POSTAGE IN THE UNITED STATES.—

A very important alteration has been made by the Congress of the United States in the postage charges on newspapers and other publications. An act has been passed which declares that on and after the 15th of the present month of September, newspapers, periodicals, and all printed matter not exceeding three ounces in weight, may be sent by post to any part of the United States for one cent, or about a halfpenny, each additional ounce to be charged one cent. If the postage be paid in advance quarterly or regularly, and at the office where the papers are mailed or at that where they are delivered, one-half of the above rates only to be charged; and the same in the case of newspapers not weighing more than one ounce and a half, when circulated within the county in which they are published. Packets of small newspapers published monthly or oftener, to be charged half a cent per ounce. All postages to be prepaid, or charged double. Books, bound or unbound, not weighing more than four pounds, to be charged one cent per ounce under 3000 miles; for greater distances, double that sum, provided they are prepaid; if not, the charge to be increased 50 per cent. A curious clause directs that "all printed matter chargeable by weight shall be weighed when dry." Permission is given by the new act to publishers of newspapers and periodicals to send to each other, free of postage, one copy of each publication; and also to send to each circulating subscriber, enclosed in their publications, bills and receipts for the same, free of extra postage. These reductions and arrangements show an earnest desire on the part of the Legislature to afford every facility to the diffusion of information; but the penalties are wanting in uniformity and simplicity—points of imminent importance to the public as well as to the post-office. The spirit evinced in the promulgation of this act will doubtless soon remedy any defects that may be found to exist when it comes into practical operation; and its exhibition at the present moment augurs well for the progress of the movement now being made in this country towards a system of cheap and uniform international postage.

CALIFORNIAN GOLD.—

Advices from California, to the 16th of July, state that one of the most splendid specimens of gold ever seen in San Francisco had been dug at Viscita, Calaveras county, by Mr. William Wilson Dorman. It weighed upwards of 28 lbs., and, with the exception of a few specks of quartz, which can be removed with a knife, the mass was a solid mass of pure gold. This was found 60 feet below the surface, in a drift of nearly 30 feet from the main hole.

PATENT FUEL A FATAL CARGO.—

From Monte Video, South America, we have this week the intelligence of the loss of the *Anadiez*, of Liverpool, Captain William Morgan, loaded with patent fuel, for Coquimbo, her cargo. The crew, twenty in number, escaped in the long boat and the boat, burnt at sea in lat. 33.30 S., and long. 54 W., from spontaneous ignition of and were picked up by the packet *Anchi*, from the Falkland Islands, and landed at Monte Video.

LAW AND POLICE INTELLIGENCE.

In the Insolvent Court, on Wednesday, Mr. Edgar George Papworth, the eminent artist, sought the protection of the Court, but was opposed by two creditors in person. The insolvent had been an unsuccessful competitor for the Peel monuments at Tamworth and Salford, and attributed his insolvency chiefly to the expenses incurred in preparing the models for competition. Mr. Commissioner Law adjourned the case till Nov. 6, for the production of some evidence. Bail was renewed.

AN UNFORTUNATE PLANTAGENET.—In the London Insolvent Court, on Monday, an insolvent, named George Henry de Strabolgie Neville Plantagenet Harrison, sought the benefit of the act, passed for the relief of insolvent debtors. His description was very voluminous, comprising residences in almost every quarter of the globe in South America as well as North America and Europe; had been general of the armies of Yucatan and Peru, lieutenant-general of the Danish army and the army of the Germanic Confederation. Upon being examined, he said he was baptised as George Henry Harrison, but had adopted the names of De Strabolgie Neville Plantagenet as being the direct representative of those families. He had been called Prince Plantagenet Harrison in Germany, and had received the Rank of marshal in Peru. He had received from 1847 about £1500 from friends, and had won at play about £1200 in the same period. He received in the years 1844, 1845, and 1846 about £2000 as military pay.—Mr. Commissioner Law remarked, that the insolvency was attributed to the peaceful state of Europe (Laughter).—After some opposition, Mr. Commissioner Law ordered the insolvent to be discharged after eight calendar months from the date of the vesting order.

COURT OF BANKRUPTCY.—Mr. Brougham, the nephew of Lord Brougham, has been appointed to act *pro tem.* as registrar in Mr. Commissioner Holroyd's Court. Mr. Brougham has for some years been registrar of the Liverpool District Court of Bankruptcy.

THE ACCOUNTANT-GENERAL OF THE COURT OF CHANCERY.—Under the improvements effected by the Suitors in Chancery Relief Act (15th and 16th Victoria, c. 87), it was decreed that the Accountant of the Court of Chancery from the 28th of October next shall be paid a salary of £2500, in lieu of "brokerage" hitherto received by him, in addition to the salary and allowance now made for books and stationery. The "brokerage" heretofore received by the Accountant-General is to be paid by him to the Suitors' Fee Fund.

BALLOONING.—THE ALLEGED CRUELTY TO ANIMALS.—The question as to whether persons taking up with them in balloon ascents animals suspended from the car of the balloon infringe the law thereby or not, has been the subject of two conflicting legal decisions this week. In both cases the charge was brought by Mr. Thomas, on behalf of the Society for the Prevention of Cruelty to Animals, against M. and Madame Poitevin, the aëronauts, and Mr. Simpson, the lessee of Cremorne Gardens, whence the ascents were made. The first case, in which the charge referred to the alleged cruelty having been inflicted on a heifer which had been attached to the balloon, was heard on Saturday last before the magistrates at Lord Petre's Petty Sessions; viz., Messrs. Davis (chairman), G. Fry, O. Musgrave, and M'Naughten; the balloon having made its ascent in the Upton district. The defendants pleaded guilty, and were fined £5 each; Mr. Simpson giving an undertaking that such exhibitions, in future, should not take place.—In the second case, which referred to the infliction upon of the alleged cruelty upon a pony, the defendants pleaded "not guilty," the charge having been heard at the Westminster police-court. The proceedings were very voluminous and the evidence conflicting; and Mr. Arnold, the magistrate, took time to consider his judgment, as noticed in this paper last week. On Monday last he gave it as his opinion that the law, whilst strongly condemning those exhibitions as discreditable, and cruelly exposing the animal intended to be made prominent, he was nevertheless decided of opinion that the acts charged against the defendants did not come within the meaning of the act of Parliament, the words of which are—"If any person shall cruelly beat, ill-treat, overdrive, or torture any animal," that he could be liable to certain penalties; and he therefore came to the conclusion that the charges against the defendants must be dismissed.

CHARGE OF FRAUD AGAINST A SOLICITOR.—At the Surrey Sessions, on Wednesday, before Thomas Hutchinson, Esq., and a full bench of magistrates, Thomas Russell, formerly a solicitor at Hammersmith, but now a prisoner confined in the debtors' side of Horsemonger-lane Gaol, was indicted for obtaining money under false pretences from Mr. Barnard, the proprietor of a stand at Epsom Races, which broke down at the Spring Meeting, 1850, and severely injured Mr. Page, a resident of Northfleet; he (the prisoner) falsely pretending that he was solicitor to the last-named party, and was instructed by him to settle the action brought against the proprietor of the stand by Mr. Ainsworth House or Caravans in Jermyn-street, Lord George Bentinck and other noblemen, which did not gain him a very enviable notoriety.

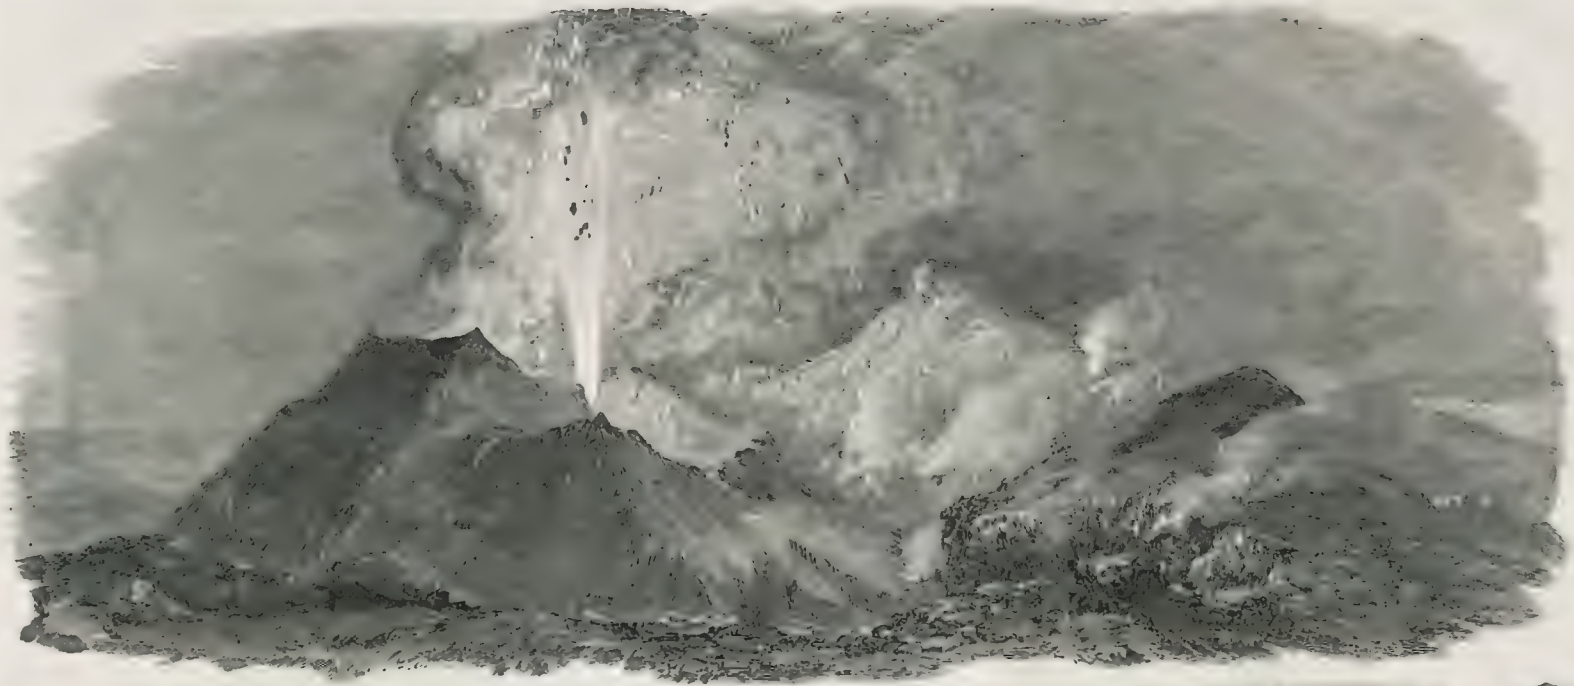
APPREHENSION OF A RAILWAY DEFAULTER.—Mr. Sutton, the station-master at the Porchester station on the London and Portsmouth Railway, and who was also proprietor of Porchester Castle and pleasure grounds, having effected the escape from the custody of the police of one who had arrested him at the instance of the directors of the South-Western Railway Company, on a charge of embezzling several large sums of money belonging to them, and received by him as their agent, was arrested in Cork, on Tuesday last, by an officer of the detective police.

A GAMEKEEPER CONVICTED OF POACHING.—At the magistrates' office, Hatton, Lewisham, gamekeeper at Fitzroy-park, was charged by George Sykes, gamekeeper of Sir John Lister Kaye, with trespassing upon Highworth Moor, with a gun, in pursuit of game, without leave. As it appeared he had been previously warned not to trespass upon those preserves, he was ordered to pay the full penalty of £2, with £1 4s. expenses. James Scholefield, of Longwood, labourer, who had been engaged in "driving" the game towards Sykes, was convicted in the mitigated penalty of 12s., with £1 4s. costs.

THE PERILS OF A SUCCESSFUL SUIT.—At Bow-street police-office, on Monday, Mr. Robert Laurence Walker, a gentlemanly-looking man, described as a farmer of Tewersham, near Cambridge, was charged upon a warrant with having addressed a hostile letter to Mr. David Mathews, late a clerk of Canterbury, "inviting him to fight a duel." The evidence adduced on the occasion disclosed these facts:—Both of the gentlemen had been paying their addresses to a certain young lady, who had been residing at the village of Kingston. Mr. Mathews, however, being the successful suitor, the parties came up to London with the view of a matrimonial alliance. On Saturday morning last the wedding was appointed to take place, and was suddenly put off in the latter in question, in which he was politely invited to communicate with the writer's "friend" in reference to an appeal to certain "instruments" by no means expressive of agreeable associations. An application was therefore made to Mr. Henry, the magistrate, who immediately issued his warrant, under which the rejected and benighted suitor was arrested and brought to the office. Mr. Mathews, who appeared much younger than the complainant, having pleaded guilty to the charge, was ordered by the magistrate to enter into his own recognizances in £150, and to find two sureties of £75 each, to keep the peace for six months to Mr. Mathews, and all other of her Majesty's subjects. This order having been immediately complied with, the defendant was discharged.

STATISTICS OF INSANITY.—From the reports of the visiting justices of Hanwell and Colney-hatch Lunatic Asylum, some very interesting facts have been obtained, and afford ample matter for consideration and contemplation of the philanthropist. At the Hanwell Asylum during the year ending Michaelmas last, 1851, the admissions and [illegible] orders of the males being moral 69; physical 34; total 103. The causes of [illegible] being unascertained. For the females, the moral causes were 5, and physical 10. The moral causes in the males are thus enumerated:—Poverty, 5; domestic unhappiness, 2; disappointed affection, 3; grief, 3; disappointed hopes, 1; over study of religious subjects, 3; anxiety, 2; political excitement, 1; [illegible] Lon, 1; fright, 1; poverty, 2; grief, 1. On the female side—Disappointed affections principles as follow:—Church of England, males, 48; females, 56; Roman Catholic, males, 6; females, 4; not ascertained, males, 32; females, 23. [illegible] ages education the following results were obtained:—Write and cast accounts, 1; read, write, and cast accounts, 2; [illegible] read and write, males, 33; females, 41. At the Colney-hatch Asylum 41 [illegible] admitted in all others [illegible] the following causes of disorders:—Males, moral, 89; physical, 19; [illegible] females, moral, 9; physical, 14. In [illegible] causes of the malady were ascertained. Moral causes, 90; physical, [illegible] moral causes of the males are thus enumerated:—Domestic grief, 1; [illegible] persuse of wife, 7; dread of poverty, 7; want of employment, 6; [illegible] of friends, loss of property, &c., 12; loss of wife or children, 5; disappointed affection, 3; unhappiness at home, 1; erroneous views of religion, 3; sudden shocks, fright, &c., 29; jealousy, 3; pride, 3; over anxiety, 3; sudden loss of several cows, 1; resent for a theft, 1; suicide of a brother, 1; over excitement at the Great Exhibition, 1. On [illegible] the sudden stands thus:—Domestic misery, from domestic [illegible] [illegible] husband, children, parents, &c., 14; [illegible] [illegible] shock on information of sudden death of relatives, &c., [illegible] neglect, 6; through reading the trials of Mannings, &c., [illegible] [illegible] erroneous views of religion, 1; despondency on [illegible] long duration, 2; accidental possession of a daughter, 1; [illegible] fright, 14; loss of property, 3; over-indulgence of parents, 1; [illegible] [illegible] write, and cast accounts, 71; females, 27. read only, males, 63; females [illegible] education, male, 9; females, 3. Religion: Church of England, males, 24; females, 414: Roman Catholic, males, 35; females, 74; [illegible] females, 102: unknown, males, 3 [illegible]

TREATMENT OF PAUPER LUNATICS.—At a recent meeting of the vestry of St. Pancras [illegible] resolved to appoint a com[illegible] into the allegations made against [illegible] Robinson (the house-[illegible] of lunatics, in compliance with the application of that [illegible] It is in contemplation to erect a permanent [illegible]



ETNA IN ERUPTION.

In our Journal of the 4th instant we described the splendid Eruption of Etna, which commenced on the 20th ult. We now present our readers with a view of the phenomenon, with further details. The scene is stated to have been indescribably grand: heaven and earth presenting one magnificent glare of light—Etna above vomiting its sulphuric flames; the Colossi below belching forth its dense masses of smoke, lurid from the furnace below, the huge mountain pouring out prolonged moanings; without, the hurricane roaring in all its awful majesty. Within the crater forty small furnaces were burning awfully; these, as they reached Catania, seemed to amalgamate.

Another account, dated Catania, August 30, states:—"On the 20th and 21st of this month Etna began to give signs of unusual activity, which was followed by the opening of two new craters, below the original cup, and towards the east, near a spot known by the name of Pietra Mussora. The mountain commenced its labours on this occasion by throwing up clouds of small stones and ashes which curled about in the air and assumed a variety of forms owing to eccentric currents of wind, which appeared to proceed from the chasms of the mountain. Molten lava followed the eruption of ashes and stones; and from the newly-opened fiery mouths of the mountain a burning stream of liquid stone lit up the masses of smoke which towered and more than a thousand feet upwards, while the country around is frequently rocked. The lava flows in two distinct streams, one in the direction of Mascali and the other towards Zaffarana, burning up every tree and shrub within sixty yards on either side. The few dwellings scattered near either of the streams are deserted, and the direction of the destructive element is anxiously watched, as one stream threatens a valley rich with vegetation and the vine. As I now write, a sort of booming thunder rumbles in the bowels of the earth, a fiery vapour quivers about the clouds of smoke, from which a shower of ashes falls like rain, and is carried as far as the sea. The effect at night is very grand. The sky is illuminated by a red glare, and the immediate vicinity of the mountain is terrific."

It is worthy of note that the above eruption of Etna occurred on the same day as the shock of an earthquake was felt through most parts of Cornwall, and referred to at the time by the daily papers.

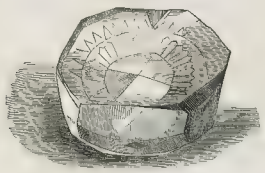
ETNA, FROM THE TARGOLA OF CATANIA.

ETNA, FROM NICOLOSI.

COORG HARVEST FESTIVAL, MADRAS.

THE KOH-I-NOOR.

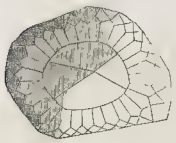
The descriptions by Eastern travellers of the magnitude, brilliancy, and beauty of this famous diamond, designated "The Mountain of Light," caused exaggerated notions to be entertained upon these points in the Western hemisphere, and when, denuded of ornament, it was placed before the eye in the Crystal Palace, the criticisms of the public, as may be well remembered, were by no means complimentary. The most competent judges, however, were unanimous in admitting that this apparent dulness was mainly owing to the peculiarities of its Oriental cutting; and immediately after the close of the Exhibition steps were taken to ascertain whether this could not be remedied by subjecting it to the process of re-cutting, upon the improved principles of modern art; and finally it was determined to submit it to this operation, and Messrs. Garrard, of Panton-street, Haymarket, the Crown jewellers, received directions to that effect.



THE KOH-I-NOOR DIAMOND, ORIGINAL STATE.

Of the commencement of the work by his Grace the Duke of Wellington, and of the *modus operandi* by which it was to be effected, a notice appeared in this Journal of the 24th of July last.

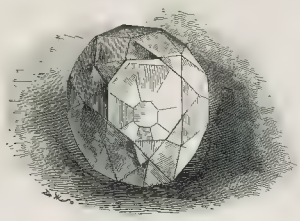
We have now to announce the successful completion of this work, under the superintendence of M. Guillaume Coster, a skilful lapidary, and the London partner of the firm M. E. Coster, at Amsterdam, by two cutters, Fedder and Voorzanger, from their establishment. The diamond has now assumed a new shape, that of an oval brilliant.



PLAN.

It is now reversed: what was the lower face is now the upper, and a part which was irregularly shaped, and was supposed not to be quite perfect, has been cut away.

The effect of the operation has been entirely to remove the apparent dulness of the stone, and to develop to a wonderful degree its surpassing clearness, brilliancy, and beauty. It has proved to be, without doubt, a gem of the finest water, and is now, perhaps, the most valuable diamond in the world. The two smaller diamonds, its accompanying pendants, have undergone a similar transformation, with a like gratifying result. The Koh-i-noor, it is understood, will form the centre ornament of a tiara or Royal diadem; and the smaller gems, it is supposed, will form portions of a collar of diamonds; but their exact appropriation is not yet determined.



THE KOH-I-NOOR DIAMOND, RE-CUT.

The greatest diameter being now taken, through what was an oblique line gives, of course, a larger space.

COORG HARVEST FESTIVAL.

The presence of the ex-Rajah of Coorg and his daughter in London has, doubtless, awakened some curiosity as to the manners and appearance of the inhabitants of that beautiful portion of the Madras Presidency. We have, therefore, engraved the accompanying Sketch of a Coorg Festival, celebrated annually at the ripening of the harvest. It differs from an English harvest-home in that it precedes, instead of succeeding, the gathering in of the grain; in fact, no Coorg would think of putting his sickle into his fields until this Festival had been celebrated with all due ceremony. The dance, too, unlike our harvest-home, when lads and lasses meet in the merry ring, is performed solely by the men, the women remaining spectators of the sport. Seated beneath the spreading branches of some fine tree, they, with the elders and children, patiently wait till the setting of the sun permits them to partake of the harvest supper, at which there is no lack of good cheer; for the Coorgs, though Hindoos, have few Hindoo prejudices; and, like the mountaineers of some other countries, are fond of their "own mountain dew."

They invite the English strangers to witness their dances and games of agility, and when he visits their houses the women invariably come forward to make their salaam of welcome to the newly-arrived guest.

In the great respect paid to the elders of the tribes, and in several other observances, there is much patriarchal simplicity; we have shown in the foreground of the Sketch a young man greeting an elder.

Coorg is divided into districts called Naads, and the inhabitants o

INAUGURATION OF THE STATUE OF THE LATE SIR ROBERT PEEL, AT BURY — (SEE NEXT PAGE.)

each Nasd celebrate this Harvest Festival among themselves in some central spot, generally chosen for its smooth space and fine trees.

The dances generally commence with a slow measured step, each performer making many bows to his neighbour, and waving a shawl or handkerchief round his head; this is succeeded by another dance, performed in much quicker time; and the handkerchiefs are exchanged for a couple of sticks, which each man brandishes, first over his own head, and then clashes against his neighbours' weapons. The musicians are placed at a short distance; their instruments are colliery horns and tom-toms. To the dances succeed single combats with shield and stick.

STATUE TO PEEL AT BURY.

THE inhabitants of Bury have shown their appreciation of the merits of their celebrated townsman, the late Sir Robert Peel, by erecting, in the market-square of their town, a noble bronze statue, at the cost of £2500, which was publicly uncovered on Wednesday week, in the presence of a very crowded assembly. Among the more distinguished members who assisted on the occasion were Mr. Frederick Peel, M.P., son, and the Very Rev. the Dean of Worcester and Mr. Lawrence Peel, brothers of the lamented statesman; Mr. W. Brown, M.P., Mr. Wilson Patten, M.P., and a great number of the local gentry and leading inhabitants of Bury. Previous to the ceremony of the inauguration, a numerous company assembled at one o'clock, at Chamber Hall, about half a mile from Bury, the house in which the late Sir Robert Peel was born. It is now the residence of Mr. Edmund Hardman, who also owns the adjacent print works, a great portion of which were the property of the first Sir Robert Peel. It is a substantial double-fronted brick building, lying a little to the west of the East Lancashire Railway, and has long been a subject of curious interest to the traveller. The company were shown over the house by Mr. Hardman, who pointed out, among other things, the bed-room in which the late statesman first drew breath. About half past one o'clock a procession, headed by the band of the 6th Regiment, was formed upon the lawn, consisting of the Independent Order of Odd Fellows, three a-breast, followed by the Freemasons; and after them the Improvement Commissioners of Bury, the magistrates of the division, the committee, Mr. Baily, R.A. (the sculptor), and the subscribers by whose aid the monument was raised.

The procession arrived at the market-square shortly after two o'clock, the concourse present at the moment being little short of 20,000 persons. Immediately after the arrival of the procession, amidst the enlivening strains of the military band, which played "Rule Britannia," the chiming of bells, and the cheers of the vast multitude, the Statue was uncovered. The effigy is 10 feet high, and the attitude easy but commanding. The statesman is represented standing with his left hand resting on his side, the right hand slightly raised and extended, the chest well thrown out; and the uncovered head, though erect, is natural and life-like. The nature is that so generally worn by the late Baronet; and the sculptor, Mr. E. H. Baily, R.A., has succeeded in placing the open surtout in a manner exceedingly characteristic. The features are truthful and striking. The figure looks rather massive in regard to breadth, but it was very much admired and highly spoken of by those present who were best acquainted with Sir Robert Peel. The figure rests upon a piece of rockwork, also in bronze, 18 inches high, placed upon a massive square pedestal of Aberdeen grey granite, 12 feet high, and is surrounded by a handsome railing in bronze. In front of the pedestal is the word "Peel," with the family arms. The letters stand out prominently in granite, and similarly carved, on the back of the pedestal is the memorable quotation from Sir Robert's speech:—

> It may be that I shall leave a name sometimes remembered with expressions of goodwill in the abodes of those whose lot it is to labour, and to earn their daily bread by the sweat of their brow, when they shall recruit their exhausted strength with abundant and untaxed food, the sweeter because it is no longer leavened by a sense of injustice.

On the other sides of the pedestal are bas-reliefs in bronze, one representing "Commerce," and the other "Navigation."

Mr E. Grundy, of the Wylde; Mr. O. Cunliffe, of the Bury Improvement Commissioners; and Mr. T. Bazley, President of the Manchester Chamber of Commerce, having briefly delivered some observations appropriate to the occasion, the boys of the Bury Grammar-school sang the National Anthem, and thus the ceremony of the inauguration closed.

The occasion was celebrated by a dinner at the Town-hall in the evening, at which Mr. Grundy, of the Wylde, presided, and on his left were the Very Rev. John Peel, D.D., Dean of Worcester; Mr. F. Peel, M.P., Mr. Bazley and Mr. R. Peel Willock; on the right were Mr. Joshua Knowles, Mr. T. Wrigley, Captain Hort, and Mr. Baily (the sculptor). The re were also present Mr. R. Ashton, Mr. J. R. Kay, Mr. T. Calrow, Mr. J. W. Sunswick, Mr. J. Lomax; Mr. E. Grundy, of Bridge hall; Mr. W. Grant, Mr. W. Openshaw, and Mr. Hardman. Letters of apology were read from the Duke of Wellington, Sir J. Graham, the Earl of Ellesmere, Mr. Cobden, and other distinguished men.

The speeches and toasts were of the usual character on these occasions.

THE WOKING CEMETERY.

On Tuesday about 250 gentlemen, churchwardens, and overseers of London parishes proceeded to Woking-common, for the purpose of inspecting the ground about to be occupied by the Necropolis Company, under act of Parliament. The object of the visit was to enable the parochial authorities to decide for themselves, and report to the different parishes the nature of the accommodation provided by the company for the burial of the city dead.

The company has at Woking 2000 acres of land suitable for burial ground, which they will allot to parishes, so that each lot would be as much under the control of the parish as a churchyard is at present. Taking the annual metropolitan mortality of 60 persons to the 1000, it is computed that the company's ground would not be filled with one layer of bodies in 400 years. It is also estimated that bodies may be conveyed from London to the ground by the South-Western Railway, the funeral service be duly performed, and the mourners return to London, in two hours.

In the centre of a large portion of the ground an edifice will be erected, where the service of the Church of England will be performed. Wherever a parish may wish to have a burial ground distinct to itself, ground may be so secured, and thus the individuality of a parochial graveyard may be preserved. Spots will be appropriated where the various denominations of Christians may be interred with the forms and ceremonies which are most congenial to their own convictions. A portion will also be left wholly unconsecrated, for the use of those who object to any ministerial interference in the burial of their dead.

From a suitable depository at the Waterloo Station of the South-Western Railway, the bodies will be periodically transmitted by trains to the reception station at Woking. The mourners, supplied with free tickets, will be conveyed in separate conveyances or carriages, the cost of the journey to and from Woking being fixed in the tariff of charges. Arrived at the private station of the Necropolis at Woking, the funeral train will be formed. Although ministers of religion will be present at the cemetery, the grounds will be open to all parish authorities or individuals who may wish to commit their own feelings on the attendance of the spiritual head of their particular parish or community. There is a clause in the act by which the churchwardens of the several parishes from which bodies are removed will receive a certain recompense for their services, while they will be relieved from the performance of their ministerial duty.

A cold collation having been provided, under a marquee, of which the party partook, a resolution was agreed to, to the effect that the Necropolis Company possessed a "national cemetery," admirably adapted for its purpose; and that the company, consequently, were entitled to the support of the public.

DEATH OF MR. PUGIN, THE ARCHITECT.—Mr. Pugin, the celebrated architect, whose name is identified with the revival of Gothic architecture in England, and the extension of the Roman Catholic religion in this country, died on Tuesday evening, at his residence on the West Cliff, Ramsgate, after a few hours' illness.

SLAVERY IN THE UNITED STATES.—"KILLING NO MURDER."—We find the following in the Richmond (United States) *Times*:—"A gentleman named Ball, overseer for Edward T. Taylor, finding it necessary to chastise a field hand for insolence or idleness, attempted to do so in the field, when the negro resisted, made fight, and being the stronger of the two, gave the overseer a very severe beating, and then betook himself to the woods. Mr. Ball, as soon as he could do so, mounted his horse, and proceeding to Mr. Taylor's residence, informed him of what had occurred. Mr. Taylor, in company with Ball, repaired to the negro field, to which the negro had returned, and demanded to know the cause of his conduct. The negro replied that Mr. Ball had ordered him to whip him, but that he would not submit to it. Mr. Taylor said he should, and ordered Mr Ball to give the negro the hands, directed Mr. Ball to take hold of him. Mr. Ball dismounted, and proceeding that the negro had drawn a knife, and Mr. Taylor, at the same instant springing from his horse, and, drawing a pistol from his pocket, shot the negro dead at his feet." Upon this the Richmond *Republican* comments as above. Mr. Taylor knew what every man who has the misfortune to be a slave-owner should do—enforce obedience or kill them."

MAGNETIC BALLOON ASCENT.—Applications have, it is said, been made to the proprietors of the different public places of entertainment from which balloons usually take their departure, by an individual who wishes to make an ascent, unsupported by any car, but merely by a few feet below the ear, by magnetic attraction. The method by which he proposes to accomplish this feat is this: he possesses a magnet, the power of which is such as will sustain a weight of 150 lb.; this is to be hung by a line 50 feet below the car: round his body is fixed an iron zone, which on being brought near the magnet firmly attaches itself thereto.

CALENDAR FOR THE WEEK.

SUNDAY, September 19.—15th Sunday after Trinity. Battle of Poictiers, 1356.
MONDAY, 20.—Battle of Newbury, 1643.
TUESDAY, 21.—St. Matthew.
WEDNESDAY, 22.—New Post-office opened, 1829.
THURSDAY, 23.—Length of day 12h. 6m.
FRIDAY, 24.—Butler the poet died, 1680.
SATURDAY, 25.—Porson died, 1808.

THE ILLUSTRATED LONDON NEWS.

Next SATURDAY, SEPTEMBER 25th, will be published

A DOUBLE NUMBER,

WITH

SPLENDID ILLUSTRATIONS

OF THE

DUKE OF WELLINGTON'S GLORIOUS CAREER.

Many of the most celebrated Artists in London are specially engaged for this work.

The ILLUSTRATIONS of the FUNERAL of the noble DUKE will appear in another DOUBLE NUMBER, on SATURDAY, OCTOBER 2nd. Orders must be given immediately to secure copies.

198, Strand, London.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, SEPTEMBER 18, 1852.

We have elsewhere fully recorded the circumstances attending the death of the Duke of Wellington—he, who but a few days ago was the greatest of living men, and who now, that he has submitted to the last universal law of humanity, leaves behind him a name and a fame as pure and as mighty as ever adorned the page of history, or dwelt upon the breath of tradition. We have nothing to add to that complete record of his military services, drawn up by one who was himself a soldier; but shall on some future and early occasion take the opportunity to narrate at greater length his useful career as a statesman. Amid the universal regret which his death has occasioned, the people of England may, and will, have the mournful satisfaction that the man whom they so honour in his death—and to whom, if permitted by the recorded wishes or directions of the illustrious dead, they will give a public funeral, such as was never before seen or imagined in any other country—was as much honoured and beloved in his life as it was possible for a man to be. Ingratitude is by no means a crime which may be charged against this nation. Those who gain great victories for the English people are always valued at their proper worth; and, if their character be pure, as the Duke's was, invariably receive the tribute of grateful affection. History records that years rolled on without allaying the general sorrow which ensued on the death of the Black Prince. In the Wars of the Roses, the Lancastrian watchword "Agincourt and Harry of Monmouth!" would always rally the wavering. "Henry the Fifth, that made all France to quake" was a recollection which eventually restored his descendants to the throne. Sovereign and subjects gladly gave peerages, palaces, and pensions to Marlborough; but the same gifts and honours, and many more, however largely lavished upon the Duke of Wellington, seemed never to fill up the measure of public satisfaction. The people of England doated on his fame.

In political as in private life; in the greatest movements of the State, so often depending on his single course of action; in the minutest occurrences of his domestic life, so quaintly and agreeably methodical, the Duke was incessantly talked of and thought of. No great show of state ceremonial or state rejoicing was considered complete or satisfactory without the presence of the Duke. But it is needless to further urge a truth which all will readily admit; and it requires no prophetic powers to foresee that the British people will cherish the memory of this, their mightiest soldier.

Yet amid the regret of the nation—a regret which will long endure—we cannot join in the lamentations of those who consider the removal of the great Duke to be a national calamity that may injuriously affect the future course of events, either at home or abroad. The hero had done his work; and England at no period since his health and strength began to decline, was in a position to reflect that national work was to be done, with no man to do it. Time produces its own men. Events bring out their own heroes; and a combination of circumstances, similar to, or still more critical and remarkable than, those which raised up a Wellington in the hour of his country's need, will, under the favour of Heaven, it would be unwise to doubt, produce another man as honest and as serviceable as he was, to meet, like him, the same reward, the approval of a good conscience and the gratitude of his own and future generations.

In proportion as the time draws near for the opening of Parliament, the subject of the Property and Income-tax grows in importance. It is felt that on the continuance or discontinuance of that tax the fate of the Administration may be made to hang. We, in common with most of our contemporaries, have often pointed out the grievances of the present act; but we must say that the grievances are far more apparent than the remedy. The new system—suggested by Mr. Hume, and by some actuaries, who, finding, in their limited sphere of usefulness, no difficulty in discovering the relative value of a few hundred ages, imagine they can as easily calculate for the almost endless sources of incomes belonging to the whole kingdom—is not by any means so simple as it appears. Their plan, however sound in theory, might be found, in practice, to be surrounded with greater difficulties and hardships than those endured under the present act. The Corn Laws being defunct, past hope—or, rather, past fear—of revival, and the people having tasted the luxury of the cheap loaf, naturally look for the abolition of import duties upon other articles of consumption, such as tea and coffee; and it is becoming clear, if there is to be any revenue at all, that we must look to direct taxation as the source from which it is to flow. It is, therefore, of the highest importance that direct taxation should be justly imposed, and that it should not do violence to common sense and common honesty. Mr. Hume's plan and that of the actuaries, under which every source of a man's income is to be valued, is on one point even more objectionable than the present mode of levying the tax. If Schedule D, which only touches one source of income, that derived from trade &c., is stigmatised as inquisitorial, for compelling A to tell B—who is perhaps his next-door neighbour, and his rival in business—what he makes by his profession and trade, how much more inquisitorial will be the system which is to lay bare every source of income to the eyes of district officials? It is an extension of the evil in one direction, without any advantage in another; and we are convinced that, under its operation, evasion and fraud would be increased. Leaving out of consideration the complicated questions that have been raised as to the valuing of all incomes whatsoever, and whencesoever derived, the main point for the Government would be to satisfy the earners of income that the tax, as regards them, is fair and just, and subjects them to no unreasonable scrutiny or annoyance. There is no difficulty as regards the Property Tax; and we think that if the tax were continued at three per cent., as now, upon all realised property whatsoever, whether under the single line of £150 per annum or not, and reduced to two per cent. upon all incomes above £150 per annum, that the justice of the case would be satisfied, and that we should hear no more complaints from those persons now assessed under Schedule D. This arrangement would obviate a whole host of difficulties. The tax is not unpopular in itself. It is only unpopular because it is felt to be unfair to the hard-working man who earn precarious incomes. These very men would cheerfully pay it if the State would but recognise the difference between the transitory and the permanent; between the perishable salary and the annuity derived from funded or landed property. We know that the tax has advocates, who insist that income ought to pay exactly as much as realised property; and others, who go still further, and assert that income being the more perishable in times of peril, revolution, and invasion, ought to pay all the more heavily for the protection it enjoys from law and Government; but this course of reasoning is not popular. It is because we are in favour of the principle of that tax, as the best and fairest that can be levied, that we so earnestly desire it to be reconciled to the feelings of the people. The worst thing that could befall the country at the present time would be his abolition.

THE COURT.

BALMORAL.

The Queen and the Prince Consort are enjoying the retirement of their Highland home, under the favourable circumstances of fine weather, of which her Majesty and the other members of the Royal family take every advantage. The Queen walked every morning in the grounds, and generally drives out during the day; the Prince Consort devoting himself to the sports of grouse-shooting and deer-stalking, the latter being generally preferred, owing to the wildness of the birds. On Wednesday night a gloom was thrown over the Court, on receipt of the melancholy intelligence of the demise of his Grace the Duke of Wellington, which, despatched to Edinburgh by electric telegraph, was forwarded thence to Balmoral by special messenger. It was fully expected that the Prince Consort would leave Balmoral on Thursday, for London, for the purpose of condoling with the members of the Duke's family, and consulting with them as to the arrangements for the funeral of this great and lamented man.

The Court Newsman thus chronicles the movements of the Queen and the Royal family during the past week:—

On Wednesday, the 8th instant, her Majesty drove to Gairn Shiel, the residence of Mr. and Lady Catherine Cavendish. The dinner party on the same evening included her Royal Highness the Duchess of Kent, her Serene Highness the Princess Hohenlohe Langenbourg, and Lady Augusta Bruce.

On Sunday, the 9th instant, her Majesty and his Royal Highness Prince Albert, accompanied by the Prince of Wales, the Princess Royal, the Princess Alice, the Princess Helena, and Prince Alfred, drove to Castletown to be present at the annual gathering of the Highlanders on Dee-side. The Royal party was received on the ground by the Farquharson, Duff, Clarkie, and Forbes Highlanders, fully equipped. Mr. Farquharson, of Inverceauld, and Mr. James Duff, of Carrenmuirle, conducted her Majesty to the terrace of Braemar Castle, Baroness in the usual Highland games were carried on with great spirit. The Royal party returned to Balmoral at six o'clock.

On Friday, the 10th instant, her Majesty and the Princess Royal drove to the forest, where his Royal Highness Prince Albert went out deer-stalking. In the evening, her Majesty and his Royal Highness Prince Albert went to a *ball à la Highlandaise* given, given at Carrienuirle Cottage, by Lady Agnes Duff, at which all the Highlanders of the Duff and Farquharson clans were present.

On Sunday her Majesty and his Royal Highness Prince Albert attended divine service in the parish church of Crathie. The service was performed by the Rev. A. Anderson. The Countess of Desart, the Hon. Mary Seymour, the Earl of Derby, Colonel the Hon. C. B. Phipps, and Lieut.-Colonel the Hon. A. Gordon, were the attendants in waiting.

On Monday afternoon her Majesty drove, accompanied by the Princess Royal, Princess Alice, and Princess Helena, to Invercauld House, and remained there during the afternoon. The Countess of Desart was in attendance on her Majesty. His Royal Highness Prince Albert went out deer-stalking. In the evening her Majesty and his Royal Highness Prince Albert were present at a ball given at Abergeldie by her Royal Highness the Duchess of Kent to the tenantry and servants on the estate.

On Tuesday the Queen and the Prince Consort went to Balloch Buie, accompanied by the Princess Royal. The dinner party in the evening included her Royal Highness the Duchess of Kent, her Serene Highness the Princess Hohenlohe Langenbourg, Lady Augusta Bruce, Mr. James Duff, Mr. Duff, and Lady Agnes Duff, and Mr. Brooke.

Archdeacon Tattam has arrived at Balmoral, and had the honour of dining with her Majesty on Monday.

The Earl of Malmesbury has left Balmoral, and has been succeeded by the Earl of Derby, who remains in attendance upon her Majesty.

His Excellency the French Ambassador and the Countess Walewski, who have been on a visiting tour in the Highlands, returned to the embassy, in Grosvenor-square, at the close of last week.

Their Excellencies the Count and Countess de Lavradio and suite have left town for the Continent. Their Excellencies are expected to return to the Portuguese Legation in the course of a month.

His Excellency Baron Bentinck, the Netherlands Minister, left London last Sunday for Rotterdam, on leave of absence for a few weeks. His Excellency will resume his diplomatic functions in this country towards the end of next month.

The Duke and Duchess of Beaufort, and the Ladies Somerset have arrived at Troy House, from Lingcombe Park, Monmouthshire. The Duke and Duchess of Bedford are at present staying with their Graces.

Lord Brougham entertained a large party of the nobility and gentry of the vicinity, at Brougham Hall, on Wednesday, the 8th inst., to celebrate the coming of age of his nephew, Mr. Henry Brougham. The festivities closed with a ball and supper to the noble Baron's household.

The Hon Mrs. Norton passed through Inverness, last week, for Aberdeenshire, on her return from Dunrobin Castle.

We regret to learn that the Hon. Selina Denison, daughter of Lord Londesborough, died on the 11th inst., at Piccadilly-terrace, aged only fifteen.

THE LATE DUKE OF WELLINGTON.

Walmer Castle, which is now, and will be hereafter, celebrated as the place in which the illustrious Duke of Wellington expired, is situated on the south coast of England, within ten minutes' walk of Deal, a small port about five miles from Dover. The Duke of Wellington has for many years occupied this interesting place, in right of his office of Chief Warden of the Cinque Ports. The Castle, in former times, was well fortified, and has withstood the wear of ages without any perceptible marks of decay.

The interior of the Castle is fitted up in a remarkably plain manner, yet possessing every comfort. On the occasion of the Queen's visit to Walmer, in 1842, her Majesty was so charmed with the simplicity of the place, that she begged to be allowed to extend her visit a week longer than she at first intended; and it may be remarked, that, when intimation was received that the Queen intended to honour the Duke with a visit, the only preparation made at Walmer Castle was to put out a plate-glass window, to enable her Majesty to have a better view of the sea. A stand for a time-piece was required for Prince Albert, and the Duke sent for the village carpenter, who made it of common deal wood, and it is now a fixture in the bed-room. Her Majesty is stated to have been much delighted at this simplicity of the Duke.

The furniture of the Castle, as already remarked, is plain throughout; and we are informed by a correspondent who visited the Castle a few months ago, that the Duke had only indulged his fancy in two ornaments—one a small ivory statuette of Napoleon, and the other, a common plaster cast of Jenny Lind: these, with some common engravings of former Wardens of the Castle, were the sole things in the shape of ornament throughout the Castle.

"The Duke (says the same correspondent) occupied only *one room*; this was his library, his study, and his bed-room. The bed consisted of a small iron bedstead, three feet wide, with a mattress only of about three inches thick, with a slight covering—no blankets. The Duke always removed his pillow, and took it as part of his luggage.

"The Duke's mode of living was simple. He was an early riser, and was generally out of doors before seven o'clock; he breakfasted at nine o'clock precisely, taking tea and bread and butter only, eating little, and generally abstaining from taking food between breakfast and dinner. He generally dined at seven o'clock. He then partook heartily of the best French dinner to be procured, seldom or never drinking anything except iced water. After dinner he usually withdrew to his room, and there remained until he retired to rest. During the Queen's visit the Duke frequently joined the party in the drawingroom, but scarcely ever remained more than an hour after dinner.

"In one part of Walmer Castle may be seen a room, not more than eight feet wide, with walls three feet thick. This was the room where the celebrated William Pitt used to meet Lord Nelson. In that room were planned the future victories and proceedings of the English fleet during the wars of the French Revolution.

"The Duke of Wellington regularly took up his abode in this interesting place in September, and resided in it two months every year. He was beloved by the population of the district, who were grateful for his invariable kindness and condescension."

FRIDAY AFTERNOON.

The second edition of the *Morning Post* contains the following:—"We have just heard that the mortal remains of the late Duke will be removed from Walmer Castle to Apsley House to-morrow (Saturday). Mr. Holland, the undertaker, has left town with the leaden coffin. The Duke has left it in his will that his remains are to be at the disposal of his Sovereign.

TREATY OF COMMERCE BETWEEN FRANCE AND ENGLAND.

A statement was published in the *Morning Chronicle* on Monday last, from which it would appear that a commercial treaty between the two countries, with a view to the mutual reduction of the tariffs of both, was on the point of being concluded. The statement was as follows:—

It has, we understand, been rumoured at St. Cloud during the past week, that M. de Persigny has settled, with the British Cabinet, the basis of a treaty of reciprocal Free-trade between England and France. It is stated that the principle of the arrangement on which the two Governments have agreed is, that all the commodities of each country shall be admitted into the other, on payment of a low duty, the highest impost levied by either on the productions of its neighbour not to exceed 15 per cent. It is added that the rate of postage between the two countries is to be reduced to seven sous, instead of sixteen, as at present.

In reference to this, the *Morning Herald*, which is regarded as the official organ of the Derby Cabinet, states that the announcement by its daily contemporary was "premature," thus leading to the inference that there were grounds for the original announcement. The *Chronicle* on Thursday, notices the apparent contradiction of the Ministerial organ, and reiterates its assertion that "the basis" of such a treaty "has been settled."

It should be observed, however, that the official organ of the French Government, the *Moniteur*, contradicts the announcement of the *Chronicle*.

Sir Henry Lytton Bulwer arrived at Rome on the 4th instant. This visit of the British Ambassador to the Papal Court is mainly caused by the complicated Murray affair, to which Sir Henry Bulwer has all along been giving his active attention.

It is stated to be the intention of the London and North-Western Railway Company forthwith to increase the speed of one train daily between London and Birmingham, and *vice versâ*, so that the distance shall be performed in two hours. Engines adequate to the task have been constructed under the superintendence of Mr. M'Connell, and are nearly ready for delivery. Before the end of the month it is expected that London may be reached in the brief space specified.

There are now six large first-class vessels lying at the quays of Bristol bound for Australia; and it is estimated that, in addition to 1695 passengers who have already left, the number of emigrants during the present year will be 4000. In addition to its own immediate district, a number of emigrants leave the port of Bristol from the Midland Counties, Devon, Cornwall, and South Wales.

As Mr. John Parcels, aged 45, late expositor of Burford's Panorama, was proceeding to his residence, Haverstock Hill, on Tuesday night, the shaft of a brewer's dray struck him on the head, knocking him down, when the wheels passed over his head, smashing it to a jelly.

A retired drayman, formerly in the employ of Messrs. Truman, Buxton, and Co., came from the country a few days ago, and presented £50 to the London Hospital, in token, he said, of his gratitude for the great kindness and attention he had received when an inmate of that institution thirty years ago. At the same time he gave £50 to the Licensed Victuallers' Asylum.

A little girl, 11 years of age, named Mary Davies, residing with her mother in Peel's-buildings, Mount Pleasant, while in the act of cleaning one of the windows, fell to the pavement beneath (30 feet). She sustained a compound fracture of the thigh and a concussion of the brain, from the effects of which she died soon afterwards.

METROPOLITAN NEWS.

Bank of England.—A general court of the governor, directors, and proprietors of the Bank of England was held at twelve o'clock on Thursday, for the purpose of considering of a dividend, and also as a quarterly court, according to the charter; Thompson Hankey, jun., Esq., Governor of the Bank, in the chair. The Governor said:—"The net profits of the half-year ending on the 31st of August last have been £518,465, which, added to the rest remaining after the payment of the last half yearly dividend, would leave a sum of £3,340,535 available for a dividend; and the directors recommend to the court to declare a dividend of £3 10s. per cent., without any deduction on account of income-tax, leaving the rest at £3,031,180. I have, therefore, to propose that a dividend of 3½ per cent., free of income-tax, be declared."

Christ's Hospital.—On Tuesday next, being St. Matthew's Day, the Lord Mayor, Aldermen, Sheriffs, and Governors of the several Royal Hospitals will attend divine service at Christ Church, Newgate-street, where a sermon will be preached by the Rev. John L. A. Airey, of Pembroke College, Cambridge, one of the masters of Merchant Taylors' School; after which they will repair to the Great Hall of Christ's Hospital, where four orations on the "Benefits of the Royal Hospitals" will be delivered by four of the senior scholars, according to annual custom—in Latin, by E. A. Lloyd; in English, by H. D. Sweeting; in Greek, by Hackwater Stone; in French, by J. G. Saunders. Seven poems will next be recited by others of the senior scholars; viz.:—Latin Alcaics, on Naples, by Thomas Armfield; Latin Elegiacs, on "Alfred the Great," by Henry Ievers; Greek Iambics, translations from Shakspeare, by "Henry V.," by John Doran; Latin Sapphics on "Ulysses Redux," by J. M. McLean; Latin Hexameters, translation from Young's "Last Day," by Olaude Farry; Greek Sapphics, on "Diamedes Fluvius," by H. Ludlow; English poem on "Our Indian Empire," by C. W. P. P. Watts. Also, H. D. Sweeting will recite a prize composition in Latin Hexameters, for which there has been made to him the first award of a medal (to be transferred given annually) under the will of the late Rev. George Richards, D.D., a governor, and formerly an exhibitioner of Christ's Hospital.

The Learned Societies.—The Treasury having received a communication from the President of the Royal Society on the subject of the admission duty free of scientific publications, intended for learned institutions and individuals of eminent literary attainments in this country, as well as for the Smithsonian Institution in the United States of America, their Lordships have been pleased to approve of the institutions mentioned and included in a list enclosed in a letter of the President of the Royal Society, with the addition thereto of the Electrical Society, on the usual conditions; and their lordships have also approved of the proposed arrangements for the delivery of books duty-free to such individuals as may be nominated by the Royal Society for the enjoyment of that privilege; and also for the delivery duty-free of publications addressed from the Smithsonian Institution in the United States of America, and the observatories at Bombay, the Cape of Good Hope, Hobart Town, Madras, Toronto, and Trevandum, on Royal Society giving the requisite undertaking for their exportation for that purpose.

The Registration.—Revision of the Metropolitan Lists of Voters.—Mr. M'Christie, the barrister, who has been appointed by the Lord Chief Justice for the revision of the lists of voters for the city of London, in the return of members to Parliament, held his court in the Court of Common Pleas, at the Guildhall, for that purpose, on Thursday morning, at ten o'clock. The different parishes, wards, &c., were taken in rotation alphabetically.—In the borough of Finsbury, Mr. John Fraser Macqueen is the revising barrister, and he also opened his court on Thursday, in the Lords Justices' Court, at Lincoln's-inn-fields.—In the county of Middlesex the revising barrister commenced holding his court on yesterday (Friday), at the Castle Inn, Brentford, at 11 A.M. On the 18th instant (this day) he will hold his court at the Black Dog, Bedford, at 11 A.M.; on Monday next, at 10 A.M., at the Sussex Hotel, Bouverie-street, Fleet-street, for the parishes within the city of London.—On Tuesday, the 21st instant, the barrister will hold his court at the Lords Justices' Court, Westminster-hall, at 10 A.M. for Ealing-in-the and parishes within the city of Westminster; and so on, by rotation, taking the various townships, hamlets, parishes, &c., within the county of Middlesex.

The City of London Registration.—It is a singular fact, that on the present registration for the city of London, the right to vote has been objected to in the case of no fewer than 475 Freemen and Liverymen, while, on the other hand, only two persons have claimed to be placed on the registry.

Metropolitan Sewers Commission.—On Tuesday a special court was held at the Greek-street office, at which the following Commissioners were present: Richard Jebb, Esq. (chairman), Sir John Burgoyne, Sir Charles Pasley, Major Dawson, Laurence Redhead, Thomas Hawes, William Hoskings, and George S. Smith, Esqrs. After several communications had been read by the secretary, Mr. Woolrych, the commission agreed to a resolution for the advance of £20,000 from the Royal Exchange Assurance Company, as a loan to the commission, for five years, at four per cent., to be secured by a mortgage on the several district rates.

The City Commissioners of Sewers.—On Tuesday the Commissioners assembled at Guildhall, after a vacation of six weeks.—Mr. Deputy Peacock in the chair. The inspectors reported very favourably of the condition of most of the narrow and confined localities, of the general state of which they have been in the habit of complaining to that court. Numbers of the wretched tenements, against which the medical officer of health had reported, had been abandoned, and some had been completely removed by the active interposition of the authorities.

Balloon Night Ascent, with Fireworks.—On Tuesday last, Mr. H. Coxwell and three friends, viz. Mr. Chapman, of Fleet-street; Mr. H. Jones, Boar's Head, Cannon-street, City; and Mr. J. Dalton, jun., Blackheath, ascended in Mr. Coxwell's balloon, the Sylph, at nine o'clock, from the Pavilion Gardens, North Woolwich, and, after a very pleasant trip of sixty-five minutes, descended safely at Chadwell Heath, Essex.

Fire.—On Sunday morning, a fire broke out in one of the large warehouses, numbered 30, in London-wall, occupied conjointly by Messrs. Brown and Co., extensive dyrsalters; Messrs. Gubbins, Brothers, varnish manufacturers; Mr. Thomas Taro, carpet weaver; Messrs. Springfield and Co., silk merchants; and Messrs. Dobson and Co., ale and porter merchants, which was considerably injured, and the contents much damaged by fire and water. Only a portion of the property was insured.—About two o'clock in the afternoon of the same day a fire suddenly broke out on the premises occupied by Mr. White, linendraper and silk mercer, and Mr. Balham, a private gentleman, at No. 6, Middlesex-street, Somer's Town. All the inmates escaped, with much difficulty, escaping one of Mr. Balham's children, a boy only three years and a half old, who unfortunately perished in the flames.

Fatal Accident on Board a Woolwich Steamer.—On Tuesday afternoon, between three and four o'clock, as the old Woolwich Company's steam vessel, the *Nimble*, was proceeding on her passage from Woolwich to Hungerford-market, and had arrived off Billingsgate, a fishing smack swung out of the tier at the fish-market, to proceed down the river, and a sudden gust of wind catching her main sail as the *Nimble* passed her stern, the boom swept over the steamer's deck, knocking the passengers down and striking the funnel, which fell amongst the passengers. The *Nimble* was instantly stopped, when it was found that three persons were lying crushed beneath the funnel. They were instantly extricated and removed without loss of time to Guy's Hospital, when it was found that one, named Jackson, residing at 30, Paris-street, Lambeth, was dead, and the two others severely injured.

Births and Deaths.—The births registered in the metropolis for the week ending Saturday, September 11 were—males, 749; females, 688; total, 1437. The deaths during the same period were—males, 491; females, 445: total, 936; which exhibits a further decline in mortality. There is an evident improvement in the health of the in ant population, who generally suffer so much from the summer epidemic. Last week smallpox was fatal in 10 cases, measles in only 4; the cases referred to typhus are 32. Diarrhœa, dysentery, and cholera steadily decline; they were most fatal in the first week of August, when the deaths caused by the three diseases were collectively 241; their decrease since that week is shown by the following weekly numbers: 219, 228, 148, 120, and last week 101. On the other hand, scarlatina appears to be making some progress, and last week 58 children were its victims.

Meteorological Observations.—At the Royal Observatory, Greenwich, the mean height of the barometer in the week was 29.789 inches. The mean temperature of the week was 60°7 deg., which is 1°4 deg. above the average of the same week in ten years. The wind blew generally from the north.

Death of the Centenarian, James Coleman, of St. Martin's-in-the-Fields.—This very interesting old man departed this life, in full possession of his faculties, on Wednesday evening, at half-past seven o'clock, having attained the great age of 102 years 7 months.

The Recent Six-mile Bridge Riot.—Informations were on Monday sworn before Frank Thorpe Porter, Esq., at the head police-office, Dublin, against Zachariah Wallace, proprietor of the *Anglo Celt*, Cavan newspaper, for a libel upon certain officers of the 31st Regiment, and the regiment generally. The libel states that they lost their feelings by cowardice, and now they were criminal. The informations were by Col. Stretton, Capt. Eager, and another officer of the corps. The usual proofs of proprietorship were given.

Telegraphing the St. Leger.—By means of wires taken up to the racecourse at Doncaster, the result of the run was communicated in five minutes to all the principal places in the kingdom for the, local papers and betting-houses.

Destructive Fire.—A fire, supposed to have originated in other than accidental means, broke out on Tuesday morning, in a large hay-rick in the farm-yard of Mr. John Hawke, at Darnall, a village about two miles from Sheffield. The flames soon communicated to the corn stacks adjoining, and, notwithstanding every exertion possible was made to stay their progress, they destroyed nineteen stacks of corn, containing in the aggregate about 1000 loads, the entire produce of seventy acres. The farm buildings were, however, preserved from damage. The loss is estimated at upwards of £1000, and Mr. Hawke is insured only to half that amount. The heat emitted by the burning stacks was most intense, and in an orchard which adjoined the stack-yard, the apples were baked as they hung on the trees.

POSTSCRIPT.

THE LATE DUKE OF WELLINGTON.

The Marquis of Douro arrived at Dover yesterday (Friday morning) at 5h. 35m. A.M., from Frankfort, by the Ostend boat. His Lordship, after partaking of some refreshment at the Ship hotel, proceeded to Walmer.

The Right Hon. William Beresford, the Secretary at War, according to precedent, performs the functions appertaining to the office of Commander-in-Chief of the Forces until a successor to the Duke of Wellington shall be appointed.

It is stated that the Deputy-governor of Dover Castle, R. H. Jenkinson, Esq., will execute the functions of Lord Warden of the Cinque Ports *pro tem.*

As a mark of respect to the late lamented Commander-in-Chief, his Grace the Duke of Wellington, K.G., &c., an order has been issued that the customary "tattoo," which is beaten at the different metropolitan barracks every night at ten o'clock, to warn the men to quarters, be dispensed with until further notice.

The following district order was on Thursday issued by the acting Lieutenant-Governor of Portsmouth garrison:—"Until further orders no music is to play in public, expect what may be absolutely necessary for the performance of duties."

City Registration.—Mr. M'Christie, the Revising Barrister for the City of London, sat in the City Common Pleas Court at ten on Friday morning, and disposed of a great number of objections. Mr. Acland, one of the agents, was fined in several sums varying from 10s. to £30.

Departure of Emigrants from St. Martin's Parish.—Yesterday (Friday) morning the *Topaz* steamer started from the Adelphi pier with 60 emigrants—viz. 30 men, 18 women, and 12 children—who had had their passage to Adelaide paid for by St. Martin's parish. On arriving at Gravesend they were immediately taken on board the *Calcutta*, which soon afterwards started for Port Adelaide.

Fatal Accident.—A young man named Charles Bern, a carter to Mr. Jones, the market-gardener, of Ealing-lane, Brentford, while proceeding to Farringdon market yesterday (Friday) morning, with a load of vegetables, accidentally fell in front of his vehicle, the wheels of which passing over him, occasioned his death.

LATEST FOREIGN NEWS.

FRANCE.

By our advices of yesterday (Friday) from Paris, we learn that the papers of that city, with the exception of the *Constitutionnel*, all speak with great propriety and good taste of the loss England has sustained by the death of the Duke of Wellington.

The latest accounts received of the Prince President's tour, represent his reception at every place he visited as most enthusiastic. Shouts of "*Vive L'Empereur!*" and "*Vive Napoleon!*" greeted him on every side. At Nevers, where the Prince arrived after he had left Bourges, M. Charles Dupin presented to Louis Napoleon the General Council, which had unanimously adopted a resolution in favour of the stability of the Government; M. Dupin adding that the whole population were then present to give that resolution an unmistakeable sanction. The Prince thanked the General Council for the kind expression of its wishes, and concluded by saying:—"When it is the general interest that is in question, I always endeavour to anticipate public opinion; but when it is an interest which appears to me to be personal, then I follow public opinion." The latter declaration has naturally produced considerable effect, as it is now considered certain that the restoration of the Empire is resolved upon. The *Liberté* of Arras has received a second warning for having published false news.

The Chambers of Commerce of Algiers are averse to the release of Abd-el-Kader, as they think it would prove highly injurious to the cause of order in that colony.

THE OVERLAND MAIL.

The subjoined intelligence has been received by electric telegraph, *viâ* Marseilles:—"Marseilles, Sept. 15. Half-past 9 P.M.—The East India Mail has arrived. Calcutta, Aug. 8; Bombay missing. Nothing important."

DESTRUCTIVE STORM IN WORCESTERSHIRE.

In our Journal of last week we recorded the destructive effects of the storm of Sunday, the 4th inst., which concentrated its violence over the county of Worcester. We engrave from the next page Our Views of the localities of the devastation, in the district of country watered by the Teme and tributary brooks, from Tenbury to its entry into the Severn. The loss of sheep stock in the vale of Teme has been lamentable. In one instance, a poor labourer, who had twenty sheep feeding on Powick Ham, lost nineteen head, and many other cases have occurred equally distressing. We are glad to hear that efforts are making by subscription for the relief of the more needy sufferers by the flood.

Nothing could exceed the miserable appearance of Powick Ham, and the scene altogether along the course of the Teme to the Severn. In the hedges numbers of dead sheep were to be seen caught by their fleeces in the bushes, while the owners were sorrowfully searching among the carcasses for their missing property; parties of rustics were busily engaged in rescuing cattle and horses from the spots amid the waste of waters on which they had happily found refuge during the horrors of the night.

The devastation was nowhere more fearful than at Bridges Stone Mill, the residence of Mrs. Dandsy, who, with her two daughters and son, and a female attendant, narrowly escaped with their lives. The house, which stands a short distance from the mill, and contiguous to the brook, received the full force of the flood, which stove in the greater portion of the wall on the west side, rushed through the apartments, and utmost immediately afterwards the wall at the opposite extremity gave way, so that a free passage was made for the water through the dwelling. A couple of huge poles, singularly enough, entered the apartments on the ground floor, and becoming fixed in transverse positions, they proved a firm support for the chimney stack, which was now the mainstay of the standing portion of the place. Nearly all the furniture was swept away; flag stones were forced up from the kitchen and carried to the meadow adjoining; the garden walls were levelled. The mill, from its position, did not sustain very serious injury, but the weir was carried away, and the bridge totally destroyed.

At the locality known in the third Illustration (Storridge) the only case of loss of human life took place: here, close to the stream, stood a stone-built house, two stories high, called "The Bower," inhabited by Sarah Draper, a widow, aged 87, and her son. Both were at home on Saturday night, and, according to the man's account, his mother had been refused to complete helplessness from fright at the storm. Seeing the impending danger from the upper window (for both had retreated upstairs on the first approach of the water), he called to his mother, who was then on her knees praying, to get upon the bed, to which he at last helped her. At this moment the whole building was hurled down with a tremendous crash, though faint in comparison with the din and roar of the waters rushing furiously past. The poor woman was first swept away, by the rapid current, the roof apparently falling upon her. The man floated 300 yards, and was twice unsuccessful in grasping at the projecting branches of the trees; but just as his strength was becoming exhausted, he was suddenly thrown on dry ground. The stones of the house were scattered over a great space, the whole of the goods being destroyed.

Houses and bridges were swept away; some orchards were totally destroyed, the trees being washed and wrenched out of the earth; great timber trees were laid prostrate, and their huge arms snapped or torn asunder. The water searching in about the bases of the banks brought huge landslips into the boiling torrent, and it is amazing to observe the distance that large masses of solid brickwork have been carried. Huge fragments of the parapets of the bridge, and masses of the garden walls at Hopton, the beautiful seat of A. S. Featherstonhaugh, Esq., were removed from their sites dozens of yards.

The stabling, outbuildings, &c., of Hopton, have been injured to a very serious extent. Receiving the full force of the rushing waters, the high wall on the west side of the mansion was instantly driven in, the flood covering the spacious garden, and rushing on to the house, the lower apartments of which were soon filled to the depth of three or four feet. The rent obtained by these means for the im-

THE INUNDATIONS IN WORCESTERSHIRE.

THE INUNDATION AT POWICK HAM.

petuous torrent was however insufficient, and the archway and wall at the north end giving way, the large court-yard in the front, together with the stables, were inundated to the depth of upwards of four feet. At length the wall on the south side fell with a crash, and the water escaped into the road. One of Mr. Featherstonhaugh's tenants, Mr. Burraston, has lost three acres and a half of beans. Mr. James Essex lost several sheep, and had a narrow escape with about thirty fine cattle which had to swim for life, but fortunately succeeded in reaching an asylum from the raging waters in a cottager's garden.

RUINS OF BRIDGE'S STONE-MILL.

RUINS OF "THE BOWER."

THE FLOOD AT HOPTON COURT, THE SEAT OF A. S. FEATHERSTONHAUGH, ESQ.

H.M.S. "WINDSOR CASTLE."

THE Government, anxious to augment our naval forces, some time since issued instructions to the officers of the Royal Dockyard, Pembroke, to launch this leviathan line-of-battle ship, with screw propeller, 140 guns, with all possible despatch. Accordingly, the utmost exertion was made to complete this vessel by Tuesday, the 14th instant, the day officially fixed for the ceremony of the launching. The interest taken in the matter was very great. On Monday week the admissions to the Royal Dockyard numbered 500: carriage, horse, and foot passengers thronged the establishment throughout the day, with great interruption to the public service.

The novelty of the build of the *Windsor Castle*, having originally been constructed for 120 guns, then cut in two by a remarkable and unheard-of process, and lengthened in midships some 23 feet, and the application of the screw-propeller for the first time to so stupendous a war-vessel, have tended to render her an object of peculiar interest. Her midships lengthening was for the purpose of giving the necessary increase of displacement for the engines, boilers, coals, &c., and that abaft for the accommodation of the screw-propeller. The midship lengthening was performed by cutting the ship asunder at "dead dist," or the midship section, and launching the after half, weighing about 2000 tons, the distance of 23 feet. This was done on the 3d of February last, and occupied about seven hours, viz. 7 ft. 6 in.

Ditto of keel for tonnage, 201 ft. 11 1-3 in.
Extreme breadth, 60 ft.
Breadth for tonnage, 59 ft. 2 in.
Ditto, moulded, 58 ft. 4 in.
Depth in hold, 24 ft. 8 in.
Power of engines, 800 horse. Burthen in tons, 3759 4-94.
Estimated weight of hull, 2732 tons.
Ditto, when fully equipped for sea, 5571.
Number of guns, 140.

The comparative advantages of screw propulsion, as applied to this leviathan vessel, are thus explained in an admirable report by Lieutenant Labrousse, of the French navy:—

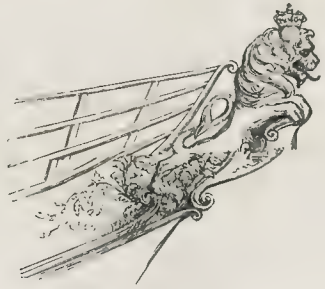

FIGURE-HEAD OF THE "WINDSOR CASTLE."

"The use of the screw as a means of propulsion, is far from diminishing a ship's sailing qualities: it is, on the contrary capable of adding to the certainties of navigation; and the advantages of its application to ships of the line become so incontestable, and so striking, even to persons not acquainted with steam navigation, that it seems useless to enumerate them. Let us imagine two ships together, one using the screw, and the other sails—what inequality will there not be between these two ships, one of which will be able to move about the other in all directions, with at least the common velocity of a ship (at the time and with the sails in action), without anything being able to alter her moving power, whilst the other can only move in certain directions by the help of sails, which are wholly exposed to the enemy's shot!"

The use of the screw for propelling vessels was first suggested, if not acted on, in France in 1730. The contrivance was that of M. Duquet, and its application was to draw vessels up a river against a current. In 1768, M. Panoton advocated the use of the *ptérophore* to move boats instead of the oar. The *ptérophore* being an instrument composed of a circumvolution of a helical blade about a cylinder, the radii in this blade being at right angles to the axis. In 1785, Joseph Bramah patented the screw, "for the purpose of rowing or forcing ships and other vessels in calm weather." This was followed by [illegible] for a propeller similar to a smoke-jack, to be placed under the rudder, and to be worked by a universal joint. In 1832 Mr. Bennet Woodcroft obtained a patent for a "revolving spiral paddle," and Captain Ericson and Mr. Francis Smith patented their mode in 1836. Since that time the progress of the introduction of the mode of screw propulsion has been rapid, and, as an auxiliary power, it now applied in numerous ships where speed is required.

In the Great Exhibition were shown sectional models (on the scale of a quarter of an inch to a foot) of the *St. Jean d'Acre*, *Agamemnon*, *Impérieuse*, *Arrogant* (the first frigate built for auxiliary steam power, constructed in 1844, by the advice of the Right Hon. Sidney Herbert, then Secretary of the Admiralty), *Tribune*, *Cruizer*, *Archer*, and *Reynard*. These vessels are fitted with screw propellers, and so constructed that their engines, &c., do not interfere with their armament; and all that have been tried have proved themselves to be perfect men-of-war without the aid of steam-power, and have answered remarkably well when working under steam and sails combined.

The *Windsor Castle* will be the largest ship afloat in the whole world, and with the addition of her screw propeller, will form a floating battery of immense power. Her figure-head, which we have Engraved, is a noble piece of carving, containing upwards of 70 cubic feet of timber. It was brought to Pembroke Dockyard by the *Widgeon*, which vessel has superseded *Prospero*, a steam-tug, tender to *Saturn* guard-ship. H.M. steam-frigate *Simoom* has also arrived at Milford, with masts and rigging for the *Windsor Castle*.

THE LAUNCH.

On Tuesday afternoon this noble vessel, built from the designs of R. Abthell, Esq., master shipwright, the most powerful in armament, and the heaviest tonnaged ship afloat, was launched from one of the building slips of her Majesty's dockyard at Pembroke.

From an early hour on Tuesday morning conveyances of every description commenced swarming into Pater, the little town which surrounds the dockyard, and every description of passage-boat from Carmarthen, Tenby, Haverford-west, Milford, and other places, lent their aid in conveying to the scene some of the thousands who, throughout the day, thronged the neighbourhood of the dockyard.

At three o'clock in the afternoon, the gates of the yard were thrown open to the public. Arrangements had been made inside the slip for accommodating the friends of the dockyard officers with seats placed in front and partly around the vessel; all parts of the docks and quays of the adjacent slips, wherever a sight of the launch could be obtained, were crowded with spectators, among whom were many in the picturesque dresses of the neighbouring towns and villages of South Wales.

At a few minutes past five the *Windsor Castle*, for by that name is she to be launched in the usual manner by Lady Pasley, the wife of the Superintendent of the Dockyard, the detaining dog-shore was knocked away, and the mighty man-of-war began to descend to the water; the enthusiasm of the assembled multitude at this time was indescribable, and the course of the vessel towards the water was slower than we remember to have seen it on similar occasions, adding greatly to the interest of the scene. When the vessel reached the end of the slip, and was fairly afloat, she lingered before the mouth of her late abode, giving every person within an excellent bow view of her tremendous proportions.

In the harbour, in front of the ship, lay her Majesty's ships *Simoom*, *Inflexible*, and *Dapperule*; the *Sidon* line-of-battle ship; and numerous yachts and smaller boats, gaily dressed with colours.

The *Windsor Castle* will be coppered in the course of a few days.

ARRIVAL OF THE SWEDISH YACHT "SVERIGE" AT COWES.

(From our own Correspondent.)

Some months ago an intimation was made to the members of the Royal Yacht Squadron that this swedish schooner yacht might be expected to visit these waters during the Royal Yacht Squadron Regatta; and, consequently, the noble Commodore, the Earl of Wilton, and the members of the squadron caused the match for the Royal Yacht Squadron Cup, which, it had been originally fixed, should be sailed for only by yachts of the squadron, to be open to all foreign yachts. This alteration, in the event of the Swedish yacht arriving in time, would have afforded her the opportunity of testing her sailing qualities in comparison with those of the Royal Yacht Squadron. The yacht, it appears, could not be put ready in time to take advantage of the compliment, owing, as we learn, to the delay and difficulty in obtaining appropriate spar.

On Saturday afternoon last, however, the yacht arrived at the rendezvous at Cowes, after a splendid passage of four days, from Gottenburg, during which a speed of 13½ knots per hour was attained. At her departure it was intended to have kept company with a fair-sailing brig, in order to test her sailing qualities, but the superior speed of the yacht obliged the commander to part company.

In general appearance the hull much resembles the celebrated *America*, but we think she is handsomer about the stern, and more after the model of our own yachts. She has some very elegant gilded scroll-work for the arch-board, both which is the Royal Swedish and Norwegian arms. There is also scroll-work on her quarters, instead of quarter galleries or badges. She has considerable spring forward, which gives her bows a lofty appearance, and they are more flaring and lengthened than those of the *America*. She has a rakish stern, which is surrounded with a rail; and branching transom, on either side, in the place of main boards, are gilded scrolls, which improve her appearance. She is rigged as a fore-and-aft schooner: her lower masts and topmasts are in one, or rather snarled, and the hoops, consequently, are unsightly. We learned that her spars were only temporary, from the disappointment in obtaining others of more suitable dimensions; and that she has been hurriedly dispatched to this port, where she is to be fitted out after the manner of our own yachts. Her accommodations are also temporarily fitted up; they nevertheless present a good dance of space for accommodation and comfort. The height of her after-cabin, in mid-ship there are four berths, besides sofas, is about 6 feet; and of her main cabin, or saloon, which extends between the masts, from 7 to 8 feet.

In consequence of Captain Beckman proceeding to town shortly after his arrival in the yacht, we are prevented, as yet, furnishing full particulars of her dimensions, &c. We have, however, ascertained that she is about 111 feet o'er all, Swedish measurement, and about 25 feet in extreme breadth; with a draft of water of 12 feet aft and 7½ feet forward; and we should adjudge her to be about 200 tons (English O.M.) She is a very sightly yacht, and her build altogether does great credit to her constructor, Mr. Andersen, of Stockholm. She belongs to the Swedish Yacht Club, or Sailing Society, called the "Stockholms Segel Sal sceapp," whose royal patron or burgee also carried in the main (being white with a blue border, and S. S. S. in the centre, surmounted with the Royal crown). Her ensign is the Swedish Union flag, viz., swal ow-tailed. Blue ensign with yellow cross, and the Swedish and Norwegian flag in the upper quarter or canton of the flag; in the centre of the cross is the crown over a wreath. Her canvas is after the American plan, and also laces to the booms.

THE BRAEMAR GATHERING.

This event came off on Thursday and Friday se'nnight, and was honoured, as on former occasions, by the presence of the Sovereign.

The gathering took place, as has been the case for several years back, in the Castle-park.

The clans mustered early in the morning—the Fife men at Corrieny'sie, and the Inverca'd men at Mar Castle; the latter were the most numerous body. They carried two handsome white silk banners, emblazoned with the Inverca'd arms. The Fife retainers carried three silk banners, two with the Fife and one with the Erroll arms. Both parties were handsomely attired in dresses of the Duff and Invercald tartan respectively, with black velvet coats; and their appearance was order y and imposing.

The clans marched about one o'clock into Castleton, and soon after proceeded to the Castle, where, in the meantime, a very respectable company had assembled.

The games, which consisted mainly of the usual feats of strength, commenced immediately after two o'clock, and at three the Royal party drove in sight, and were greeted with a cordial burst of cheering. The Royal party consisted of her Majesty, Prince Albert, the Royal children, the Duchess of Kent, and accompanying them were the Earl of Malmesbury, the Countess of Desart, and Miss Seymour (as Ladies in Waiting), the Princess Hohenlohe, &c. Her Majesty was attired in a Victoria tartan dress, and black velvet polka trimmed with deep lace; she wore a satin scarf of the Victoria tartan, and a plaid to suit it drawn bonnet. Prince Albert wore a full Highland costume of Royal stewart tartan. The Royal children were also dressed in tartan. Her Majesty and suite sat on the terrace on two sofas of Farquharson tartan, under which was spread a carpet of the same pattern. Seats of crimson and other cloths were provided for the other visitors.

Her Majesty enjoyed the scene, particularly the dancing, much for about two hours, and left about five o'clock, returning to Balmoral, which was reached ten minutes before six.

A fine specimen of the rare and beautiful moth *Melopsilas Neriï*, was caught at Brighton, on the 11th inst., measuring 4¼ inches in expansion of wings, and body of 2¼ inches.

DEATH OF ANCIENT MONUMENTS FOR THE NEW CRYSTAL PALACE.—This *Sidele* (Paris paper) communicates the following intelligence on this subject:—Several journals have stated that workmen are at present employe in taking a cast of the great Sphinx in the Egyptian Museum at the Louvre, for the purpose of having it reproduced in bronze, and placed at the four corners of the Pont des Arts. There is at present no truth in that statement. Casts are at present being taken, not only of the great Sphinx, but also of a certain number of the finest statues, Egyptian, Greek, Roman, and French; the whole being destined to form part of a great exhibition to be formed in the New Crystal Palace near London. Last year the French Government made an application to the administration of the British Museum for leave to have casts taken of some Greek monuments there, which would have been useful to French artists. The board at once refused. This year the administration received the application made to it by the founders of the Crystal Palace. The English will now soon be enabled to admire the casts of the finest pieces of sculpture in the French museum."

DEATH OF MISS LAURA ADDISON.—Miss Laura Addison, the actress, who arrived a few months since in New York, died suddenly on the morning of the 2d inst. on board the steamer *Oregon*, on her passage from Albany to that city. The deceased had been to Niagara Falls for the benefit of her health.

A SERIOUS AND DANGEROUS MANUFACTORY OF FORGED PASSPORTS has been detected by the police of Prussia. An individual who took up his residence at a German seaport (not mentioned) had established a regular office for issuing false papers at the cheapest price—and this with great skill and success. When arrested, he had upwards of thirty false official seals in his possession, and his imitation of the signatures of police and diplomatic agents are said to have been perfect.

HOP GAMBLING.—The Central Office of Inland Revenue in Broad-street, having ascertained that it is the intension of private parties again to assertain the amount of duty before it reaches the office, intend to take such steps as will prevent a repetition of hop gambling, which was carried on to a great extent last season.

NAVAL AND MILITARY INTELLIGENCE.

The two screw steam-frigates, *Dauntless*, Captain Halsted, and *Highflyer*, Captain Matson, ordered to be ready for sea at Sp'head, on Wednesday, will proceed at once to Jamaica, there to await the arrival of Vice-Admiral Sir G. F. Seymour, the Commander-in-Chief of the West Indies.

THE ROYAL YACHT PROMOTIONS.—The annual promotions of officers of the Royal yacht, *Victoria and Albert*, have been officially made, and include the Hon. Frederick Curzon, third son of Earl Howe, to the rank of commander; Viscount Gilford, eldest son of Earl Clanwilliam; and Lord Gilbert N. Grosvenor, second surviving son of the Marquis of Westminster, to the rank of lieutenant.

TESTIMONIAL TO LORD F. FITZCLARENCE, G.C.H.—Lieutenant-General Lord F. Fitzclarence, G.C.H., the newly appointed Commander-in-Chief at Bombay, received a very handsome piece of silver candelabra from the inhabitants of Portsmouth on Saturday afternoon, as a testimonial of their esteem for his conduct during his command of the garrison and district. The presentation took place at the Portland Hotel, Southsea, by the Mayor, B. Bramble, Esq., in the presence of a large number of subscribers and other friends of his Lordship. The following inscription was on the base of the piece:—"Presented to Lieutenant-General Lord Frederick Fitzclarence, G.C.H., in the mayoralty of B. Bramble, Esq., as a testimonial from the borough of Portsmouth and vicinity, in grateful remembrance of the many local improvements effected in the borough during a five years' residence in this garrison as lieutenant-governor, and commander of the south western district; for his uniform support of the civil authority, and his urbanity and unostentatious charity." His Lordship (in a chair) thanked the mayor and subscribers for this mark of esteem; and at half-past four o'clock a drawing of a colossal being entered on Southsea Common in remembrance of his Lordship's connexion with the borough was also presented by the Mayor, who delivered an appropriate address on the occasion. His Lordship again returned thanks in a speech indicative of deep feeling.

LAUNCH OF A FIFTY-GUN STEAM-FRIGATE.—On Wednesday the *Imperieuse*, commenced November 23, 1850, was launched at Woolwich, in the presence of Lord Adolphus Fitzclarence, and other naval officers, and named by Lady Walker. The following are the dimensions of the *Imperieuse*, which has the figure-head of an armed woman:—Length from it s fore part of the figure-head to the abside of taffrail, 245 feet; length between the perpendicular, 212 feet; length on the upper deck, 215 feet 7½ inches; length of the keel for tonnage, 160 feet 7½ inches; breadth, extreme, 50 feet 6½ inch, breadth for tonnage, 49 feet 6½ inches; breadth moulded, 48 feet 8½ inches; depth in hold, 16 feet 8½ inches. Burthen in tons, old measurement, 2,357.68 94; burthen in tons, new measurement, 1,692 80; burthen in tons of the engine-room, 544 73; register tonnage, 1,120 07. The *Imperieuse* was towed to Woolwich, to be fitted with her screw-propeller engines of 350-horse power, by Messrs. John Penn and Son.

THE ARSENAL VOLUNTEERS.—It is strongly rumoured that the men employed in the Royal Arsenal, Woolwich, somewhere about 1500, will be armed and into a corps, to be called the Royal Arsenal Volunteers Corps, and the drill to be similar to the Rocket Brigade—an hour of an evening after the working hours, and the same rate of pay.

LAUNCH OF A SPANISH WAR STEAMER FOR THE DEFENCE OF CUBA.—On saturday morning last a splendid steam-ship, built by order of the Spanish government, and intended for the defence of Cuba, was launched from the building-yard of Mr. John Thompson, of Rotherhithe, in the presence of a large number of spectators. The vessel received the name of *El Princero*. In six weeks she will be ready for sea.

CONDEMNED STORES.—The Master-General and Board of Ordnance, having made an official tour of inspection round the Channel islands to see the efficiency of the defences of the coast, have condemned nearly 100 guns as unfit for Government service, and ordered them to be sent by the *Queen*, cutter, to the Royal Arsenal as condemned stores, and to be replaced by new ones.

TROOPS IN THE COLONIES.—The amount of her Majesty's regular troops employed in the Colonies in 1847-8 was 1655 officers and 29 991 non-commissioned officers and men. The cost for pay was £1,404,854. In 1848-9 the amount was 1,728 officers and 30,402 non-commissioned officers and men. The cost for pay was £1 390,769; the same year there were 1673 officers and 28,782 non-commissioned officers and men; and the cost of pay was £1,329,606.

CLARKSON'S LIFE-BOAT.—A trial of Clarkson's life-boat took place at Dover, on Tuesday last, before Captain Hall, R.N., and Monbiaco Gore, Esq., which, as far as it went, was highly satisfactory. The boat was thrown from the pier into the sea, bottom upwards, and immediately righted itself, at the same time delivering the six of water; and in every subsequent trial proved its self-worthy.

DEATH OF THE LAST SURVIVOR OF KEPPEL'S ACTION.—Mr. D. F. Ramsdelin, of Devonport, died on the 3d inst., aged 92: he was supposed to be the last survivor of Keppel's action. He was also at the celebrated relief of Gibraltar, at the capture of St. Eustatia and other West India islands, in the *Monarch*, which led the van in the memorable battle of the 12th of April, the French fleet off Plymouth, and in the *Royal George*, on the 29th May and 1st of June—for the 20th latter of which he had the medal with two bars.

THE KEYHAM DOCKS.—These works are proceeding towards completion very steadily. The lock basin has been excavated to the requisite depth, and is capable of receiving vessels at any time. It has been announced that the dock were to be formally opened during the present autumn, by his royal Highness Prince Albert, but no day has yet been fixed upon for the ceremonial.

POWDER MAGAZINE AT STONEHOUSE.—Some considerable anxiety has been occasioned among the inhabitants of Stonehouse, of late, on finding that a building, the erecting of which has just been completed on land adjoining the Marine Barracks, is to be used as, or is built for, a powder magazine. A memorial is in course of signature on the subject, and it will be presented in the proper quarter in a few days.

MILITIA.—The enrolment of volunteers for the new militia force appears, on the whole, to proceed satisfactorily, and except in some few districts, there are little or no obstacles entertained that a resort to the ballot will be necessary. In Manchester and its neighbourhood the number of volunteers has as yet fallen very short of that which is required.

The Queen has appointed Arthur Kennedy, Esq., now Governor of her Majesty's settlements on the river Gambia, Captain-General and Governor-in-Chief in and over the colony of Sierra Leone and its dependencies. Her Majesty has also appointed Major Luke Smyth O'Connor to be Governor and Commander-in-Chief in and over her Majesty's Settlements in the river Gambia and their dependencies.

THE LOBOS ISLANDS.—We are authorised to state, for the information of the public, that two ships of war have been sent by the Peruvian Government to defend the island of Lobos Afuera, and that a small military force has likewise been permanently stationed there. The whole of the Peruvian islands have been formally annexed to the adjacent provinces of the mainland, and placed under the control of the respective authorities, the Lobos islands being included in the number; and the vessels of any nation found with the Peruvian Government are now allowed to load guano at those islands, for which permission has already been already granted. By a late 213 of the new laws of commerce it is provided that vessels found with cargoes of guano on board, not having the necessary documents, shall be confiscated; and if, in addition, guano is found on board, the masters and crews shall be delivered over to the ordinary tribunals, and shall be tried as guilty of piracy, which law will doubtless be put in force in the event of the capture of any vessels loading guano at Lobos Afuera.

ADVICES FROM TAHITI, in the Pacific Ocean, to the middle of May, state that the English Protestant Ministers had been forbidden to preach until they had formally acknowledged the French Protectorate Government as their head, and promised to submit themselves to its decrees. The Rev. Mr. Crisholm, employed by the London Missionary Society, had been prohibited from preaching out of a certain district under pain of arrest and banishment. No native was allowed to preach without first obtaining the sanction or the Government.

AURIFEROUS EARTH is said to have been found in some boxes of Hobart Town (Van Diemen's Land) potatoes which were landed lately at San Francisco, in California; two ounces of "dust" were washed out from the imported diggings.

RAILWAY COLLISION.—On Monday morning, shortly before eight o'clock, a collision took place on the London and North-Western Railway, near Leighton station, between a down train and a pilot engine, by which the front of the engine of the down train was stove in. Happily, no injury was done to any person, with the exception of one gentleman, who had his face severely cut with the glass of a carriage-window, and a policeman, who was on the pilot engine, and who had one of his hands bruised.

SURREY AMATEUR DAHLIA COMPANY.—The annual exhibition of this society was held on Wednesday afternoon, in Camberwell Hall, Grove-lane, Camberwell, when, in addition to the society's prizes, three large silver cups, of the value of £5 5s. each, were awarded for dahlias, miscellaneous collections, and verbenas. Prizes were also awarded for fuchsias, bouquets, roses, cut flowers, &c.

INCREASED CONSUMPTION OF TEA.—The official returns just issued show that in the month ending the 5th of August, 1852, the quantity of tea entered for home consumption was 2,616,761 lb.; in the period of 1851, 4,730,126 lb.; and in the month ended the 5th ult., 4,914,700 lb.

THE MUSK RAT OF THE EAST INDIES.—A gentleman named Campbell, residing at Edmonton, has lately brought over with him from the East Indies a singularly-formed animal, called and distinguished by the name of the "musk rat." He says that it is one of the most disgusting pests that is experienced in that country, for whatever it passes over or comes in contact with it imparts to the same a rancid musky odour, which is total rally disgusting. This vermin is very unseemly, being shaped like a shrew-mouse, but with as large as an English rat. The tail is quite nude of air, and its snout is like that of a pig.

CHURCH SERVICES, &c.

The chancel of Stradishah having been very much out of repair, Lady Harland, with liberality, has restored it at her own expense.

The Bishop of Limerick sean of Limerick have subscribed £20 each to repair the cathedral.

The Lord Bishop of Sierra Leone, Dr. Vidal, delivered his last discourse at Bow Church on Sunday preparatory to departure for his new mission. His Grace and his predecessor, Bishop Weeks, advocated the cause of the United Kingdom Benevolent Fee result was a handsome contribution at the close of the discourse.

It is stated that the Revarneford has recently transferred £5000 to Joshua Watson, Esq., H. Inglis, Bart., and Joseph Sewell, Esq., with directions for the such fund to be appropriated for the purposes of "The Society for the Employment of additional Curates in populous Places," preferences being given to applications of incumbents (*cæteris paribus*) whose stations within that part only of the diocese of Gloucester and Bris heretofore comprised the diocese of Gloucester.

The Rev. Robert Eden, S.A., vicar of North Walsham, Norfolk, and ch plain to the Lord Norwich, has been collated to the prebend and dignity of an Hereon in the cathedral church of Norwich, with a stall annexed. Patron, the Bishop of Norwich.

PREFERMENTS AND APPTS.—The following preferments and appointments have recently be—*Canonry*: The Rev. J. H Pindar, to Wells Cathedral *Honorary Ch*e Rev. R. Eden, to the Cathedral Church of Norwich. *Chancellors* Rev. J. W. Trevor, rector of Llanbeulan, to be Chancellor of th of Bangor. *Rectories*: The Rev. R. Mann, to Long Whatton, Leics. the Rev. T. Clarkson, to Chillenden, Kent; the Rev. D. Whatmore, to Wainfleet, Lincolnshire, the Rev. T. P. Platten, to Chelsworth; the Rev. F. Cobb, to Kingsworthy, Hants. *Vicarages*: The Rev. Mer to Aldbourne, Wilts; the Rev. E. P. Cooper, to Daby Parva, Leics. The Rev. W. Harvey, M.A., to Warbling, Sussex. The Rev. Dirnold, M.A., F.R.A.S., has been elected chaplain at St Mary's Hospital, on.

TESTIMONIALS.—The following gymen have recently received testimonials of esteem and r'he Rev. Richard Stephens, vicar of Bakewe com Bedall, from a subscription, the Rev. W. Y. Nutt, on resigning the curacy of Burrow, inhabitants; the Rev. S. C. Mason, senior curate of Sherborne, from the tual children of the Sunday school; the Rev. J. Lukes, minister of St. Graham, from the Free Church congregation; the Rev. R. T. Paton the parishioners of Netherbury, the Rev. Samuel Sandberg, from ishioners of Knottingley; the Rev. F. Thompson, incumbent of St. Graham, from the Prince Albert Lodge of Odd Fellows in that city; the Rev. Wilson, curate of Swaffham Bulbeck, from the inhabitants, on his m; the Rev. W. C. L. Aslmall, from the parishioners of Oldbury, on his promotion; the Rev. James Bonwell, incumbent of St Paipney, from his congregation, the Rev. W. G. Tucker, from the congref the church of St. Mary, Tullamore, in the diocese of Toronto.

VISIT OF ANOTHER AN BISHOP.—The Right Rev. Dr. Whittingham, Bishop of Mary's arrived in England, and has joined the Bishops of Western New York again at Leeds.

GAWSWORTH CHURCH.—) to assist in raising the funds necessary for the repair of Gawsworth, the Earl of Harrington last week threw open the gardens of Elvaston Castle, by which the sale of tickets, an expedient which realised £147 8s. afternoon the noble Earl entertained at dinner 150 of his Gawsworth to

NEW CHURCH AT MOULTON, HALIFAX.—A church, in the decorated style of architecture is immediately erected by voluntary subscription in the village of Moul. near Halifax. Mrs. Lancaster and Mrs Brooke, of Birks Hall, hanly presented an eligible site and £400 towards this object. Most of the principal church families in and about Halifax are to be found in the list of cors.

NORTH WALES THEOLOGICAL INSTITUTION.—A movement is in contemplation by the clergy of disabled Church in the principality, which has for its object the establishm Theological College or Institution in North Wales. The want of sending to and forth young men duly qualified for the Welsh ministry has been felt, and never more than at the present juncture.

SALE OF THE OLD FRENCH AT INVERNESS.—It is stated that the purchase of this building has been completed by Ronald Munro Cumming, Esq., the African traveller, we believe, intended to be converted into a museum or depository for curiosities, &c., collected by Mr. Cumming in the course of his travels; the African deserts and wilds of Caffraria. The price agreed upon is said 100.

NATIONAL EDUCATIONINSTRUCTION IN DRAWING.

Circulars have been issued bommittee of Privy Council for Education to the inspectors of National Schools ing them to aid, by every means in their power, the system proposed bDepartment of Practical Art for causing elementary drawing to become of national education. It is intended to teach the very simplest elementary principles in the schools willing to bear a small proportion of the nexpense, and then to admit the qualified scholars to study in a central g-school in every town. The importances of the new scheme thus set on ll be fully appreciated, when it is remembered that, until the public ign in such matters is removed, no extensive successful effort can be madise the standard of taste in design among our manufacturers.

The Department of Practica'so has taken up the subject. Having for some time past had numerous ations made to it to establish elementary drawing schools in throughout thry, the department has had the following questions appertaining to the proposed and recently issued :—

To enable the Board of Trade nsider, with reference to claims from other places, the application dated —— day of ——, from ——, for assistance in forming an elementary school, it is necessary that replies to the following loquiries be returned secretary of this department.

1. What public schools for sex already exist in ——— which make any charge whatever for instruct Underline those schools where drawing of any kind is taught.]

2. State the name of every in ——— the managers of which would be willing to accept the advantage tion from a drawing master appointed by the Board of Trade, who sgive in that school an hour's lesson publicly, at least once a week, to all tibers; for which instruction those managers would be willing to pay a sum not exceeding the sum of £5 a year.

3 Are the committee of ement of this proposed drawing school of opinion that they would be aform a class for teaching drawing to students occupying a ing or position derly than artizans, and who would pay at least one sh illing a week?

4. Are the committees of inment of opinion that they would be able to obtain subscribers, say of £1 pwards a year, who might have the privilege of presenting students to thposed school, to pay a lower fee than 6d. a week for the artizan class, anwer fee than is, for the general class?

5. Would the committees of ing school, if necessary for encouraging the teaching of the simplest elements of ng in the local public schools, be willing that every student under statems of age, before admittance to the proposed drawing-school, should be ref to possess the ability to draw the letters A Q S in fair outline, of the t of twelve inches?

Marlborough House, Pall-london, 1852. W. R. DYKEBELL, *Secretary.*

NEW GOVERNMENT INTORS OF SCHOOLS.—The Committee o. Council on Education have ated the following gentlemen to be her Majesty's Inspectors of Schools:—The Rev. F. R. Meredith, M.A., rector of East Chalbrough, Somerset, and statistical. Henry Moseley, the Rev. Robert Little Kne, M.A., incumbent of St. Mary, Yalding, Kent; the Rev. John G. C. Fussell, M.A., incumbent of Chantrese Frome; the Rev. William Birley, M.A., incumbent of Chorley, near Manchr; and the Rev. Thomas Wilkinson, M.A., vicar of Stanwix, Cumberlar

SUBTERRANEAN LINE ELECTRIC TELEGRAPH BETWEEN LONDON AND DOVER, IN CONNE WITH THE SUBMARINE CABLE.—In a few weeks we shall be supplied a ne line of electric communication, in connexion with the Continental telegraphetween Dover and the metropolis. It has been promoted by the European Tmph Company, and one of its peculiar merits is that it is being laid down c ties old coach road, through Deptford, Greenwich, Shooters-hill, Dartfordwesend, Strood, Rochester, Sittingbourne, Faversham, Canterbc &c., to Dover. Some 200 or 300 workmen are now actively employed day and night on the works. The copper wires, six in number, are encased in gutrchs; and about the middle of the route, constructed of kyanised timbr is laid in a trench dug in the road, a foot and a half wide, and six feet deep. The wires, by which the w ns are proved, are erected every mile. A mi e and a half is completed per day. According to present arrangements, the six wires to be apportioned—two to Paris, two to Brussels, and two for the Mediterran route. The telegraph is completed as far as Canterbury from Cornhill.

NEW PALACE AT BALLAL.—It has been determined to build a new palace for the Queen at moral, on the site between the river and the present castle, fronting the th, and is estimated to cost from £80,000 to £ 90,000. The architecture wn modern, and will combine the ornamental with the useful. A new bridge hse thrown across the Dee; and the public road which now leads through the st of Balochbine is to be shut up, and a better road provided along the south e of the river. The old palace is to be entirely removed. The new pa is already staked out.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

The King and Queen of Sweden and Norway arrived at Basle on the 3d inst., having passed through Zurich, Schaffhausen, Interlachen, Lucerne, and Berne. Their Majesties received at Basle a visit from the Grand Duchess Stephanie of Baden. Their Majesties left on the 4th inst. for Mannheim, whence they are to proceed to visit King Louis of Bavaria at Wilhelmshöhe.

Mr. G. C. Glyn, who has been, since 1845, chairman of the board of directors of the London and North-Western Railway Company, has resigned that office, in consequence of recent delicacy of health. He, however, has consented to act until his successor is appointed.

There were 10,205,787 eggs imported into this country in the month ending the 5th inst.

Among the passengers who embarked at Portsmouth last week, on board the *Devonshire* Indiaman, for conveyance to Calcutta, were Father Mathew, the noted teetotaller, and five other Roman Catholic priests. Their business in India is, it is reported, the foundation of a Romish see at Hyderabad.

Monday was the eve of the Jewish New Year 5613, which was kept strictly for two days, Tuesday and Wednesday.

Two persons who had been residing at Cross-y-Ceilog, South Wales, were lately poisoned by eating some fungi of a highly deleterious character, which were mixed with mushrooms they had dressed for their supper.

The Scottish papers mention the recovery of Mr. Macaulay from his recent illness, and speak hopefully of his being able to meet the electors of Edinburgh at no dis ant day.

The official statistics of the French departments prove that the average duration of human life is from six to eight years longer in the districts which are the most advanced in respect to education. In the like manner the inhabitants are most healthy in those departments where agriculture is most improved, manufactures most extended, and commerce most active.

The very large quantity of 1100 tons weight of copper ore has been brought by a vessel from Adelaide, Australia, consigned to order.

On Sunday morning, between eleven and twelve o'clock, a boat containing four men in the employ respectively of Mr. Freeman and Mr. Tiddeman, wharfingers, of East street, Blackfriars, was capsized opposite Limehouse, and three of them were unfortunately drowned.

Some of the Madrid journals have for some time past been demanding the suppression of bull-fights. In opposition to them, a petition, praying the Queen to establish a school of tauromachia, has been signed by several thousand persons, and presented to her Majesty by the Duke de Veraguas.

The Danish war-steamer *Mercurd* is at present in Sunderland Dock, taking in wire-rope from Messrs. Newall and Co., of Gateshead, for the submarine telegraph to connect Copenhagen with the mainland of Denmark.

It is understood that Mr. Page, the Government architect, contemplates the employment of electricity in lighting up the suspension bridge now in progress at Che sea—four elegant towers intended to receive the lamps appearing in the design.

The Order of the Black Eagle has been presented by the King of Prussia to the Duke of Cambridge.

A vessel just arrived from Galway has brought an entire cargo of marble, amounting to 150 tons weight, the produce of that part of the sister island; and another vessel arrived in the river on the same day from Arklow, brought 100 tons weight of pyrites, the produce of that district of Ireland.

A field of corn of seven acres was last week cut at Daisy Knoll Farm, near Middlesbro', belonging to Mr. Isaac Sharp, which yielded the large crop of 100 tons an acre.

There were between two and three hundred whales captured at Lerwick, in Scot and, last week, and the blubber sold at an average of thirteen pounds per ton.

The two last West India mail steamers have brought to England a large quantity of copper ore from the mines recently discovered in Jamaica.

The deliveries of tea in London last week were 809,480 lbs.

The Cork Exhibition was brought to a close on Saturday last with a grand musical festival and promenade.

On Monday, a man named Pitman, aged 60, while conducting a water cart along the Hish-street, Stoke Newington, was thrown from his seat upon his head and killed on the spot.

A duel, with pistols, took place a few days ago in the Bois de Vincennes, near Paris, between two sub-officers, named Loubet and Ader. Loubet received a mortal adversary's ball in the region of the heart, and died instantaneously. Ader has been arrested.

A great scarcity of silver is felt in most parts of the country, and in consequence of the sums taken by emigrants, the demands on the part of some of the banks in the north have been larger than could be met by the supplies from the Mint.

Teignmouth, one of the ports on the line of the South Devon Railway, has been constituted by the Commissioners of the Customs an "independent port," with the same bonding privileges usually allowed to ports of corresponding amount of trade.

The Dudley Gallery of Pictures and Sculpture, containing the celebrated statue of the Greek Slave, by Hiram Power, also a Venus by Canova, is still open to the public (free), at the Egyptian Hall, Piccadilly, without orders or cards, as Mondays. Visitors are only required to write their names in a book kept for that purpose.

The opening of the Liverpool exhibition of model paintings and sculpture took place on Tuesday.

Mr. David Rees of Cemenrig, in Wales, was on Saturday evening last struck dead by lightning, while standing with his grandson, a boy about seven years old, at his own door during the prevalence of an awful thunder storm. The child, who was also struck to the earth by the electric fluid, has since perfectly recovered.

The last advices from Central America state that the expedition of Force against the State of Ecuador was entirely broken up, the Chilian part of his forces having deserted, with the steamer *Reinstruador*. Some reports state that it was likely he would be taken prisoner, others again say that he will endeavour to renew his attempt.

On Tuesday morning Mr. William Millhard, formerly in the army, and lately residing at 45, Jan es-street, Manchester square, was found dead in bed by his servant, upon her going to call him. He retired to bed at eight o'clock the previous night in his usual good health.

On Monday morning Mrs. Hope Pritchard was found insensible in her apartments, 6, Northumberland-street, New-road, and expired before medical aid could arrive.

A dispatch was forwarded by electric telegraph from Vienna, at half-past two o'clock p m on Monday, and arrived in London at half-past five o'clock on the same day—two Vienna to London in three hours!

There is living at Waterford an old lady in her 112th year. She recent y received extreme unction, but unexpectedly rallied again, and recovered her usual health. Last year she went to London to see the Great Exhibition.

Mr. Cort Henry Marquard, late superintendent of the K division of police, while under medical treatment, swallowed by mistake on Sunday a wineglass full of an embrocation instead of his medicine, and died in a few hours afterwards.

Mr. Lowe, the new member for the borough of Kidderminster, was entertained by his constituents and friends at a public dinner on Tuesday evening last.

A few nights ago a young female was discovered under the dark arches of the Adelphi, in the last stage of illness and destitution. She was promptly conveyed to St. Martin's Workhouse, where she soon afterwards expired.

On Thursday morning a fire occurred at the Holborn Casino stores, which destroyed a large amount of property that was not insured.

Sheridan Knowles, the well-known dramatic author, was some time ago baptised by immersion by the Rev. Dr. Innes, of Edinburgh, and has since connected himself with the Baptist church in Bloomsbury.

On Wednesday evening, as George Barnwall, aged fifty, was painting the third-floor windows at 3, Montague-street, Montague-square, he fell into the street, the hel hs of thirty feet, fracturing his skull, and severely injuring his spine. There is not the faintest hope of his recovery.

Mary Rasbury, aged thirty-five years, who resided at No. 9, Shipcourt, Horseferry-road, Westminster, was burned to death on Wednesday morning, in consequence of her clothes having taken fire from a lighted candle with which she came in contact, while lighting her pipe, and in a state of intoxication.

Mr. Thompson, the Comedian, who had been one of the regular corps at the Manchester Theatre Royal, since the opening night of the new edifice, died suddenly from disease of the heart.

As some workmen were making excavations in Bath last Saturday, they discovered several massive stone coffins of extreme antiquity, containing rare coins, and bones, in some nearly the whole skeleton. The workmen, in their eagerness to discover more coins, unfortunately broke the coffins, but one or two still remain at some depth below the surface.

CHESS.

TO CORRESPONDENTS

W R. of Gla sow, G D An An ymous Subscriber, and others complain that My Dixon's last problem "like too in any of his former ones upon the same basis." In consequence They remark that Mr. Dixon may possibly be reflected in four moves if Black play for his first move K Kt to Q 4th; or even if, after playing the more Mr. D recommends of 1 Q Kt takes Kt, Black take the Q Pawn with his Kt

Eryeus.—You have not solved the difficulty we pointed out. Black plays 2 Q to R sq.

3 Q to K 8th and wins in the Mate?

Dunolinus Student.—Place the pieces in Paul Poquin's Problem thus:—*White:* K at K 8th, Q at Q B 2d, and Kt at Q 8th. *Black:* K at Q 5th; and then Mate in *two* moves.

D D M.—Your solution of No. 447 is not much more satisfactory than the author's own.

F R S.—The second edition of Jaenisch's work (Moscow, 1852) is the most valuable. The first edition of 1969 may be procured for a few shill ings on the Continent.

B W K W is referred in the *Jury number* of the *Chess Player's Chronicle*.

S W h. Hull.—The game sent to be examined and rep ried on next week. We shall be glad to know the day appointed for the assembly ing of the York shire Chess Association as soon as possible.

I W Liverpool.—A private communication has been forwarded.

Solutions of Problem No 449, by Q to P 1st.

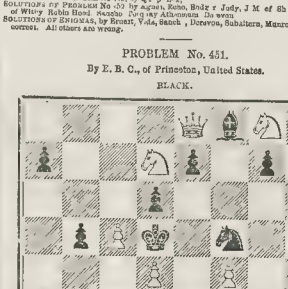
Solutions of Problem No 450 by Agnes, Echo, Bridg r Judy, J M of Sheffield, George Try Hoyle, a Constant Reader, Corydon, Corydon by Athenian Captive, and Ben.

Solutions of Enigmas, by Ernest, Viola, Sancho, Dorcvos, Subaltern, Mauro, Rev. W B, are correct. All others are wrong.

PROBLEM No. 451.

By E. B. C., of Princeton, United States.

BLACK.



WHITE.

White to play, and mate in five moves.

CHESS IN THE METROPOLIS.

The following admirable little game was lately played between Mr. Buckle, an amateur of the first rank among European players, and Mr. Shulden, a rising celebrity from Germany.

(*Giuoco Piano.*)

BLACK (Mr. B.)	WHITE (Mr. S.)	BLACK (Mr. B.)	WHITE (Mr. S.)
1. P to K 4th	P to K 4th	17. P to K B 4th	P takes P
2 Kt to K B 3d	Kt to Q B 3d	18 R takes P	Q to her 2d
3 B to Q B 4th	B to Q B 4th	19. Kt to K 8th (e)	Q Kt to K t sq
4 Kt to Q B 3d (a)	Kt to K B 3d.	20. K Kt to K t 6th	R to K R 2d
5. P to Q 3d	P to Q 3d	21. P to Q R 5th	B to Q B 2d
6. Castles	P to K R 3d	22. P to Q B 3d	P takes P
7. Kt to K 3d	Kt to Q R 4th (b)	23. B takes P	P to K 4th
8. B to Q Kt 3d	P to Q Kt 4th	24. R to K B 8th (f)	Q R to Q Kt sq
9. Kt to K Kt 3d	B to Q Kt 3d	25 Q to K Kt 4th (g)	Q to K 3d (h)
10. K to R sq	P to Q B 4th	26 Kt takes Kt (ch)	Kt takes Kt (i)
11. B to Q 2d	Kt to Q B 3d	27. R takes K P (k)	Q takes R (l)
12. P to Q R 4th	P to Q Kt 5th	28 Q to K R 3d (m)	Kt takes K P
13 B to Q B 4th (c)	Kt to K 2d	29. P takes Kt	Q takes P
14 Kt to K R 4th	B to K Kt 5th (d)	30. R to K sq	Q takes R
15. P to K B 3d	B to K 3d	31. R takes Q	
16. B takes B	P takes B	And White ultimately lost the game.	

(a) The present variation in the "Giuoco Piano" opening has not received much attention at the hands of the authors. It may be adopted, we believe, in perfect safety; and will be found to exhaustion, 4 *Kt to Q B 3d* pres ents an agreeable variety

(b) If played for the express purpose of taking the adverse King's Bishop, this move is unobj ectionable, but as W is does not exchange pieces, we are somewhat puzzled to account for he playing the P to such a loc ality.

(c) We do not see that Mr Buckle derives any more advantage from the Bishop being posted here than from his standing at Q B 3d, and if so, this move is considered "a lost time." If we mistake not, he might have played the Kt to K R 4th at once. For supposed mistake.

BLACK.	WHITE.	BLACK.	WHITE.
13 Kt to K 4th	Kt takes K P (if)	14 B takes K B P (ch)	K takes B

(If he play the King to B sq or K 2d Black may check with his Kt at K Kt 6th, &c)

15 Q to R 5th (ch) K to Kt sq (best) 16 P takes Kt

And Black has much the vantage

(d) Quiet now!

(e) The attentive, the young player may be told, to take the Kt with his Rook for nothing, since it White capture his Rook in return, he would ha his Queen.

(f) The game now increases in anima tion move by move until it attains a climax of remarkable stirring and beauty

(g) The move can evidently be made with impuni v.

(h) Retiring into the Hon's mouth! He should rather have p'layed his Q to K B 8d, we believe

(i) If he had taken with the K Kt Pawn, Black would have captured the K's Pawn with his Rook, even still more effectively, as regards safety.

(k) Very well executed.

(l) This was a fatal error. He should have taken the Queen with his Kt, although, even in that case, Black would have had the better game.

(m) A most pity coup de repos, almost compelling White to immolate himself. After this, the game is hopeless.

CHESS IN SCOTLAND.

Mr. Staunton gives the odds of the Pawn and two moves to the Rev. J. Donaldson ("Delta").

(*Remove Black's K B Pawn from the Board.*)

WHITE ("Delta.")	BLACK (Mr. S.)	WHITE ("Delta.")	BLACK (Mr. S.)
1. P to K 4th	P to K 3d.	17. P to Q Kt 3d	B to Q R 6th (ch)
2. P to Q 4th	P to K 3d.	18. K to R 2d	K R to K sq
3 B to Q 3d	P to Q B 4th	19. P takes Q P	P to Q 4th
4. P to K Kt	P to K Kt 3d	20. Q to K sq	P takes Kt
5. P to K R 4th	P takes Q P	21. P to Q Kt 4th	Kt to Q 3d
6. P to K B 4th (a)	Kt to K 2d	22. P to Q 5th	Q to Q R 5th (ch)
7. P to K R 5th	P to K Kt 4th	23. K to Kt sq	Kt to Q B 4th (d)
8. P to K R 6th	Q to her R 4th (ch)	24. B to Q B 3d	Kt to Q 6 h
9. B to Q 2d	Q to her Kt 3d	25. Q to Q 2d	B takes Q Kt P
10. K to Q B 2d	Kt to K B 4th	26. B takes B	Kt takes B
11 Kt to Q B 4th	Q to Q B 3d	27. Kt to K 2d	Kt to Q 6th
12. Q to K R 5th (ch)	K to Q sq	28 Kt to Q B 3d	Q to Q 4 6th
13 B tak e Kt (b)	P takes B	29. K to R sq	P to Q B 4th
14 Q to K 2d (c)	P to K R 5th	30. Kt to K R 5th	P to K B 4th
15. Castles	P to Q Kt 3d	31. Kt to Q Kt sq	Q to Q R 4th
16. P to Q B 3d	B to Q R 3d	32 R takes K B P	Q takes Q P

And White surrenders.

(a) White plays this opening in the most approved way, and obtains a capital attack; but, as we have before said, when resolving these odds, the drift may is not to gain an attack, but to maintain it; and it is on this account that so few players ever fairly surmount he Pawn and two moves

(b) The is not well judged, since it enables Black to carry his Queen across to the K side.

(c) Taking the Pawn would have been very perilous; but we should have proceeded even that risk to commence all attack.

(d) The winning move, play what White will.

CHESS ENIGMAS.

No. 703.—Curious Problem, composed by the ingenious E. A. M. M., of India.

White: K at K B 4th, Q at Q Kt 6th, B at Q R 3d, Kts at K 4th and Q B 5th; Pa at K 3d and Q 4th.

Black: K at his 2d, Rs at K Kt 3d and K B 2d, B at Q Kt 2d, Kt at K Kt sq, and Q at K 8th.

Whichever party plays first can mate his adversary in two moves, or compel his adversary to mate *him* in two moves.

No. 764.—By C M. Ingleby, Esq

White: K at his sq, Q at K Kt 4 h, B at K B 7th.

Black: K at K R 6th, Kt at K Kt 2d, and K B sq, B at Q 8th.

White to p ay, and mate in six moves

No. 765.—By a Cambridge Undergraduate.

White: K at his B 4th, Q at Q Kt 4th, Kt at K 5th, Pa at K 2d and K Kt 5th.

Black: K at Q 4th.

White to play, and mate in three moves.

THE BRITISH ASSOCIATION AT BELFAST.—EXCURSION TO THE GIANT'S CAUSEWAY.

(From our own Correspondent.)

The meeting of the British Association having been brought to a conclusion on Wednesday week, the excursions to the objects of interest in the neighbourhood took place on the following day. The wonderful scenery at the Giant's Causeway, an Engraving of which we gave last week was the main object of attraction to the visitors. The Harbour Commissioners of Belfast having kindly placed at the disposal of the Association the *Stork* steam-vessel, about one hundred and fifty ladies and gentlemen assembled on board at seven o'clock on Thursday morning, and shortly after the vessel, gaily dressed in her colours, and saluted from the several vessels in the harbour, and from a battery on Queen's Island, proceeded on her way down the harbour to Portrush, the nearest port to the Causeway. The various points of interest along the road, including Carrickfergus and Chichester Castles; Garron Point, the seat of the Marquis of Londonderry; the beautiful town of Glenarm; the bold and precipitous cliffs at Fairhead; the three distinct "moles," known as the Great, Middle, and Little Causeway, which lie near each other, and the extremities of which are lost in the sea. The number of basaltic pillars forming the three causeways has been estimated at 40,000, varying in diameter from 15 to 20 inches. Each pillar or column is formed of several distinct joints, closely articulated into each other, the convex end of the one joint fitting accurately into the concave of the next. The greatest length of any of the pillars above the ground is in a range of columns which, from their peculiar form, has been called the "Giant's Loom," and the tallest of which is about 33 feet, and two feet in diameter. It is said that there is but one triangular pillar throughout the whole Causeway, but three of nine sides, comparatively few of four or eight, while the proportion of ninety-nine in a hundred have either five, six, or seven sides. Nearly every combination or range of these columns has received its particular name among the guides. There are, for instance, the Giant's Gateway, the Giant's Chair, the Giant's Theatre, the Giant's Organ, the Giant's Well, the Chimney Tops, the Giant's Fan, the King and his Nobles, &c. "Grace Staple's Cave" is a remarkable arrangement of columner pillars as regular as if placed together by the hand of the most skilful mason. It is very similar to some of the famous caves of Staffa.

Port Coon Cave, of which we gave a Sketch last week, was once, according to the legend, the residence of a giant hermit, who made a vow that he would never eat food brought him by mortal hands, and was fed in his rocky retreat by seals, which were kind enough to bring him food in their mouths every day with the utmost punctuality. Boats may be rowed in the cave to a considerable distance, and a bugle sounded in it produces the most extraordinary and delicious echoes.

In the course of the examination of the Causeway, Mr. MacAdam delivered an address upon the geological features of the district; after which Mr. Phillips, the secretary of the Association, pointed out the resemblance of the rocks at the Causeway to those which are found in countries where there are existing volcanoes, and also mentioned the possibility that the trap formations might be portions of lava streams that had come down from a considerable distance. He gave a very ingenious explanation of the convex and concave extremities of the basaltic joints, and alluded to the experiments of Mr. Gregory Watt, in the fusion of masses of basalt, and their subsequent cooling, under pressure, which enabled him (Mr. Watt) to obtain results which accounted for the formation of columns like those found at the Causeway.

Shortly after five o'clock the party embarked on their return to Belfast, where they arrived at about half-past twelve at night.

A Princely Horticulturist.—The splendid country palace, extensive gardens, and unique collection of plants of the various *castes* tribes, belonging to his Royal Highness Prince Joseph of Salm Reifferscheid Dyck, at Dyck, near Neuss, is as well known throughout the Rhenish provinces (of Prussia) as the Prince is himself well known to the learned, and especially to the botanical, world. On the 6th instant the palace and vicinity were the scene of unusual festivity. The whole neighbourhood assembled at daybreak the 79th birthday of this amiable, liberal in every sense of the word, and distinguished Prince, who, although so far advanced in years, is still full of mental and bodily vigour, and gives every promise of living to complete his valuable and really-illuminated botanical work, the "Hortus Salmicusis," which is already far advanced, and in print at Cologne.

MAJORITY OF THE EARL OF DALKEITH.—CELEBRATION AT SANQUHAR.

Thursday week, the 9th inst., being the day on which the heir to the Dukedom of Buccleuch attained his majority, the tenantry and population on the vast estates of that house celebrated the occasion with great festivity. Every hamlet, village, and town situated within the property of the Duke of Buccleuch joined in manifestations of public rejoicing. At Dalkeith, the principal seat of his Grace, about ninety gentlemen dined; and there were largely-attended dinners at Melrose, Selkirk, and Hawick. The ancient burgh of Sanquhar was also prominent in the festivities, for which funds were raised by the Town Council.

Here it was a day of universal jubilee. A procession was formed, headed by the Provost, three Bailies, and Town Clerk abreast; succeeded four deep by the members of the Town Council; then a new flag unfurled waved beautifully in the breeze, representing a buck caught by the antlers in a thicket, with the words "In favour of the Earl of Dalkeith, the hopeful son of a worthy stock;" next, the members of the inhabitants' committee, the fencers and small cattle tenants, the 6th incorporated trades; the carpet-weavers employed by the Sanquhar Carpet Company, all wearing aprons of their own manufacture, and preceded by a flag of the same; the general public, a second band of music, the Society of Oddfellows in their costume, and closed by the Society (old and young) of Teetotallers.

Provost Williamson having addressed the assembly, the command "march" was given, and the procession moved towards the town; the two bands striking up their liveliest airs, and parading down the High-street to the old fort or castle, where they passed underneath the principal arch of the ruins which once formed the main entrance from the front approach; and within the precincts of this ancient stronghold, where Royalty has feasted and slept, and which has been taken and re-taken more than once by powerful contending factions—within these now peaceful precincts, green with turf, and pastured by sheep, Mr. Orr, parochial schoolmaster, requested the assembly to unite with him in three lusty cheers for the Duke of Buccleuch; which were given with the utmost enthusiasm. On the southmost and loftiest summit of the old walls was elevated a long pole, to the top of which was attached a large crimson flag. Along the line of High-street, also, a number of beautiful flags were displayed. The procession then made a long *détour*, and beneath a succession of beautiful arches returned by the old road to Queensberry-square, where Mr. M'Queen, Town Clerk, called for three cheers before parting, in honour of the younger members of the Buccleuch family—a call which was responded to with promptitude and earnestness. Upon the proposition of Bailie Kay, three cheers were given for our most gracious Queen. The Harmonic Society sang the Queen's Anthem, which was also played by the two bands.

The rejoicings in the evening consisted of two dinners, attended by 100 and by 50 gentlemen respectively; a ball, a splendid display of fireworks, and an illumination.

Sanquhar is an old historical town. It is situated in the very centre of the beautiful valley of the Nith, in Dumfriesshire. The first mention we have of it is in the middle of the ninth century (849). Its castle, now a ruin, was built by Edgar, the son of Dunegal, chieftain of Strath, about six hundred years ago. Many a curious incident is connected with this feudal structure. It was one of the important strongholds in the time of Edward I., who, in 1296, had all the castles from Carlisle to Ayr in his possession. It was rescued by William, the brave knight of Douglasdale, when the whole garrison was put to the sword. It came into the possession of Crighton, who married the heiress of Ross, of Ryehill, in the immediate neighbourhood. King James VI., on his re-

OPENING OF THE MORAYSHIRE RAILWAY.—THE TERMINUS AT LOSSIEMOUTH.

turn to England, after a tour through Scotland, as Spotiswood, the historian, informs us, lodged in this castle on the last day of July, 1617, when great festivities were observed in its halls. This King erected the town into a royal burgh, which, from time immemorial, had been a burgh of barony. Thirteen years after this the barony of Sanquhar came into the possession of Douglas of Drumlanrig. The Marquis of Queensberry lived in the stronghold before he built the princely mansion of Drumlanrig. The edifice is now in ruins, but the crumbling walls exhibit the former strength of the structure. "Crighton Peel," as it is called, is still the pride of the inhabitants, who frequently convene there on occasion of any of their great festivals; and truly, a greater and finer assemblage was rarely ever held in the place than that which met there on the 9th inst.

OPENING OF THE MORAYSHIRE RAILWAY.

THIS new line of railway, which connects Elgin closely with the Moray Firth, was opened for passenger traffic with great ceremony, on the 10th ult., which was a grand gala day in Elgin and Lossiemouth, and throughout the lower part of the county. At an early hour two bands of music, the SIX INCORPORATED TRADES, with their banners, the Directors of the Morayshire Railway, the magistrates and town-council, and a great number of the inhabitants walked in procession to the Railway Station, where a large triumphal arch had been erected. Among those who joined the Directors of the Railway in the procession and on the platform at the station, were Mr. Isaac Forsyth; Mr. James Grant, of London; Mr. Munro, of London; Mr. Warren, of London, &c. There were also a number of ladies on the platform, who took their seats by the first train.

The signal for starting having been given, the steam was applied, and off dashed the first regular passenger train on the Morayshire Railway, amid the huzzas of the assembled thousands. The time occupied between Elgin and Lossiemouth was fourteen minutes. The reception here mouth was cordial and enthusiastic; every house in Lossiemouth and Branderburgh had its banners waving, and from the mast of every boat and ship in the harbour colours were streaming. The south and east brow of the Coulart-hill was one mass of living beings; and, from the elevation, no less than from the bold appearance of the hill at this point, the effect was truly picturesque.

Captain Brunton, of the preventive service (with his men from Burghead and Lossiemouth, in full uniform), were stationed at the northern point of the old harbour, and as the first train drew up at the station-house, they fired a *feu de joie*. Some cannon, belonging to Colonel Brander, of Pitgaveny, placed on the brow of the hill, announced the arrival and departure of the first few trains. A grand triumphal arch was erected over the railway and near the station; and the station-house was tastefully decorated with flowers and evergreens, and surmounted with flags.

The accompanying Illustration shows the Station at Lossiemouth, sketched from the old harbour.

As train after train arrived at Lossiemouth, the people scampered off, singly or in parties, as their taste dictated. A great point of attraction was the sands on the eastern side of the Lossie, where a series of games and races came off between twelve and four o'clock. The Directors of the Railway were received at the Lossiemouth Station by the Directors of the Stotfield Harbour Company, who invited them to partake of wine and cake with them at Branderburgh. On the top of the Coulart Hill, and almost overlooking the station, the Railway Company had a marquee erected, with seats for about 40 or 50; and between two and three

CELEBRATION OF THE MAJORITY OF THE EARL OF DALKEITH, AT SANQUHAR.

o'clock, the Directors, with a number of ladies and other friends there partook of an elegant *déjeûner*. Dr. Manson presided, and a number of toasts in connexion with the great event of the day were drunk.

We learn from the Company's statement that the average cost of this line of railway has been little more than £5000 per mile; and but for the opposition, the cost would not have been much above £4000. The average cost of of English railways made up to this year, according to the *Times*, is £28 290; of Irish railways, £16,693; and of Scotch railways, £30,731 per mile. The average cost of all the lines in Great Britain and Ireland, is £35,448. The Mornyshire is thus constructed at a little more than a seventh part of the average cost of all the railways made in this country up till this year.

The permanent way of the Morayshire is laid with the patent fish joints. The engines are light six-wheeled tank engines on Mr. Samuel's system, and from his design, and have been made by Messrs. Neilson and Co., of Glasgow. The carriages are built of teak wood, and are similar to those in use on the North Woolwich branch of the Eastern Counties Railway, and have been built by Messrs. Marshall and Co., of Birmingham.

The contractors were Messrs. Thomas Hutchings and Co.; the sub-contractor, Mr. Parker. The contractor's engineer was Mr. Simmons; the Company's engineer, Mr. Samuel, of London.

TESTIMONIAL TO MR. SIMPSON.

IT will be recollected that at the recent election for High Wycombe, Mr. Simpson, of Hammersmith, obtained a very large amount of sympathy

THE SIMPSON TESTIMONIAL.

from the working-classes of the borough, but failed in securing his return. In testimony, however, of Mr. Simpson's exertions, a fund was opened for presenting him with a silver vase, by the subscriptions of the non-electors; and, a sufficient sum being raised, the plate was purchased, and presented, at a public demonstration, on August 9th, at High Wycombe, in an orchard lent for the occasion by the Mayor. The vase, which we have engraved, bears the following inscription:—

Presented to Wm. Simpson, Esq., of Bradmore House, Hammersmith, by the non-electors of High Wycombe, at a public meeting, held on August 9th, 1852, as a tribute of respect for his unflinching zeal and energy as a candidate for a seat in the present Parliament, and as the advocate of those great constitutional principles which are for the benefit of all classes, and which are so dear to the hearts of every Englishman.

THE DONCASTER RACE PLATE, 1852.

THE prize still conventionally known as "the Doncaster Cup," which was run for on Thursday last, consists of a spirited episode from the memorable Battle of Flodden, A.D 1513, wherein John the sixth Lord Lumley is in fierce encounter with the Earls of Montrose and Crawford, both of whom were slain, with many other of the Scottish nobility. In the group, each figure is distinguished by the coronet, crest, and other heraldic devices proper to the noble personages; while the costume is that of the richly-decorated period of Henry VIII. On the base, in alto relievo, are panels showing a continuation of the battle from Sir W. Scott's "Marmion:—"

With that, straight up the hill there rode
Two horsemen drenched in gore,
And in their arms a helpless load,
A wounded knight, they bore.
His hand still strained the broken brand,
His arms were smeared with blood and sand;
Dragg'd from among the horses' feet,
With dinted shield and helmet beat,
The falcon crest and plumage gone—
Can this be haughty Marmion?—
Canto vi., v. 28.

On the reverse side are the names of the race and winner; and at either end, the names of the stewards.

We have only to add that Mr. Brown's clever group has been ably executed in silver by Messrs. Hunt and Roskill.

THE DONCASTER RACE-PLATE, 1852.—CONFLICT AT FLODDEN FIELD.

SEVRES AND OTHER PORCELAINS AT THE EXHIBITION OF ART MANUFACTURES.

WE this week engrave a view of the group of ornamental pottery which forms one of the most interesting features of the Exhibition of Art Manufactures now on view at Marlborough House, under the department of Practical Art. This collection has been made for the use of the students of the special class for instruction in the principles and actual practice of painting on porcelain, which is about to be opened under the superintendence of Mr. Simpson, a gentleman who has for some years been employed by the Queen to make copies of paintings in enamel, and who originally came from the Potteries. The principal feature in the group consists of some of the finest specimens of Sèvres porcelain, which her Majesty has graciously allowed to be removed from Buckingham Palace to the museum, where they will remain for the instruction and guidance of students, until the return of the Court in the ensuing spring.

The specimens were originally brought to this country by George IV., who, it is said, spared no expense in order to obtain the finest works of ceramic art which had adorned the halls of Versailles prior to the first revolution. In the collection are to be seen several vases which at the present time would fetch at public sale above £1000 each. This, at first sight, may seem a large sum to give for such articles; but the price will seem less unreasonable when it is considered that in each of the specimens there will be found united the highest triumphs of chymistry, the most exquisite skill of the modeller, and the finest achievements of the painter. Following the example of her Majesty, Mr. T. Baring, M.P.; Mr. Minton, Mr. Webb, Mr. Farrar, and other collectors, have generously permitted the department to make selections from their cabinets; so that the student who desires to trace the excellence of past ages in the art of pottery has an opportunity now presented to him which has never before occurred. Although the French porcelain necessarily occupies the first place, there are also included in the present exhibition some noble examples of Dutch earthenware, obtained from the collection of M. De Huyvetter, of Ghent, which would be well entitled to form a part of any historical museum of manufactures.

SEVRES CHINA FROM THE MUSEUM OF ART MANUFACTURES, AT MARLBOROUGH HOUSE.

COUNTRY NEWS.

SIR JAMES GRAHAM AND THE GAME-LAWS.—The following circular has been addressed to the tenantry on the Netherby estate:—"Sir James Graham, mindful, has pleasure in notifying to his tenantry that they have his permission to hunt and kill hares and rabbits on their several and respective farms, between the hours of sunrise and sunset—the time for killing hares being limited to the usual period, from the 27th of September to the 27th of February. Neither guns nor snares to be used. This permission will be continued from this present date until further notice. During its continuance Sir James Graham begs to express a confident hope that such a concession on his part will induce all his tenants, by themselves and their servants, to preserve the winged game on their respective farms to the utmost of their power, for the amusement of himself, his family, and friends. He begs also that they will cordially co-operate with him in putting down the baneful practice of poaching; and would suggest that every tenant, acting up to the up rit of the obligation contained in his agreement, should, when suspicion fix servants, make it a condition that any unfaithfulness discovered on their part, in respect to the preservation of game, be considered sufficient ground for immediate dismissal."

ROYAL BUCKS AGRICULTURAL ASSOCIATION.—The annual dinner of the members and subscribers of the Royal Bucks Agricultural Association was held on Wednesday, at the Swan and Castle Inn, Buckingham. The Chancellor of the Exchequer was to have been present, but the secretary of the society received a letter from the right honorable gentleman, stating that it would be impossible for him to attend, as he was so overwhelmed with business in preparatory to the approaching session of Parliament, that he could not spare a moment either for pleasure or recreation. The right honorable gentleman concluded a eulogy for the Bucks Agricultural Association by subscribing £5 5s. Mr. R. Little Mayor of Buckingham, occupied the chair, and the attendance of members was very numerous. After the usual loyal toasts had been given and drunk, the rewards in favour of the success for competitors in the ploughing matches, &c.

THE CROPS.—The harvest may now, generally speaking, be considered completed, and, taken altogether, proves highly satisfactory. Notwithstanding that a large quantity has been carried in bad condition, the late rain is said to have improved the quality of the Lent corn, and, where time was given to cut, the former rain did not do the amount of damage which was once supposed.

MR. HORSMAN'S TESTIMONIAL.—The *late* honourable member for Cockermouth's friends have decided that the testimonial to be presented to him shall be a candelabrum, after a design submitted to them by Messrs. Storr and Mortimer, of London. It will consist of three female figures, representing Justice, benevolence, and commerce. The cost will be 120 guineas.

UNIFORMITY OF TIME IN THE PROVINCES.—At a meeting of the Town Council of Bristol, held on Tuesday, it was resolved, by a majority of 27 to 5, that, in order to obviate the many inconveniences resulting from the want of uniformity in the time kept by the public clocks and the railways, Greenwich time be kept by all the clocks under the management of the council, and that a committee be appointed to confer with the persons in charge of the various other public and private clocks. In the course of the observations the mover of the resolution remarked that he understood the municipal bodies of Exeter, Plymouth, and Devonport, were waiting the result of the meeting at Bristol previously to their deciding on the course they would pursue.

THE ESTATE OF CRANSTOUN, ARGYLESHIRE.—This fine property, with its beautiful and romantic seat, Cranstoun Castle, and the interesting associations of Scarbs and Garvellachs, have lately been purchased by Mr. N. Macrae, land agent, Inveraray, for R. C. T. Glasgow, Esq., Yorkshire, and his lady—relations of Mrs. Campbell, Kilravock Castle. Mr. and Mrs. Glasgow's good works in Ireland during the famine are widely known.

THE NATIONAL LAND SCHEME.—The inquiry directed by the Court of Chancery under the Act of Parliament for winding up and closing of the estates of this company, terminated on Tuesday at Richmond, when, so far as regards the first estate located under the title of O'Connorville. The proceedings were directed to the purpose of fixing the future rents to be paid by the allottees in possession, who have had established, the tribunals, and with the view not of assessing the aggregate value of the estate for the purpose of sale, but in order to be able to fix the amount of rent to be paid by each allottee. The inquiry was conducted by Mr. Woolthorpe, surveyor, for Mr. Goodchap, the official manager, assisted by Mr. Roskrugh, assistant to Mr. Mr. J. Tucker, its solicitor, were upon the principle defined by the Act to Parliament, which directs that the allottees shall be entitled to their respective allotments, subject to the payment to the company and their assigns of a perpetual fee-farm rent charge for the allotment, to be fixed by the official manager, and calculated according to the annual value of the allotment for occupation at the time of fixing the rent. Proceeds of this principle the two-acre allotments were valued at a rent of £6 12s.; the three-acre allotments at £9 8s.; and the four-acre allotments at £12 4s. to £11 10s. The valuations made by Mr. Roche and Mr. Caffell, on behalf of the allottees were respectively £4 15s. for the two-acre allotments; £6 12s. for the three-acre allotments; and £8 4s. to £9 2s. for the four-acre allotments. After the examination of some of the allottees on the spot, and considerable discussion, the official manager announced the future rents payable at the end of the first year, which were fixed at the rents of the valuers. The next question of "back rent" was then raised, that is to say rent not paid by the present occupiers somewhat in advance, amounting almost to a remission of rent in several cases, were made.

MRS. CHISHOLM IN IRELAND.—On Monday Mrs. Caroline Chisholm proceeded from Limerick to Tower-hill, at Queenstown, near Cork, for the purpose of receiving emigrants and others, some a voice to the emigrants about voyage and on landing in Australia. The meeting was numerously attended, as by great numbers assembled to witness the proceedings.

AFRICAN COTTON.—Mr. T. Boothman, secretary to the Manchester Chamber of Commerce, recently received, through a gentleman connected with the cotton trade of London, a specimen of cotton grown on a plantation at Winnebash, Gold Coast, West Africa. Accompanying the sample was a memorandum to the effect that the grower had 30 000 plants in bearing and lost, in addition, 10,000 by the drought. Coast, West Africa. Accompanying the sample was a memorandum to the effect that the grower had 30 000 plants in bearing and lost, in addition, 10,000 by the drought. The sample has been inspected by Mr. T. Bazley, president of the Chamber, who considers it of a good and useful kind, and worth in the market 7d. to 7½d. per lb.

THE MAILS FROM THE SOUTH.—A Carlisle paper says, that on the last of October there will be a great acce eration of the mail trains; that which leaves London at 8 45 P.M., and now comes in, or ought to come in, at Carlisle at 5 A.M., will arrive at 6; and the mail which leaves at the same hour in the morning is to be due here at six in the evening. The alteration is design ed to benefit the towns in the north, principally Dumfries, Edinburgh, and Glasgow.

FEARFUL ACCIDENT.—A fearful accident happened on board the Peninsular packet *Iberia*, a few hours before she arrived at Southampton, on Sunday night. An elderly man, belonging to the steamship Great Britain, was found lying dead in the fore part of the vessel, entangled in a crank that is near the ground, and it literally tore the foot off, and with it carried away sinews enough to extend the length, that ran up the leg. He had just gone to the fore part of the vessel when he was picked up dead in dock. As soon as possible he was conveyed to the South Hants Infirmary, but it is feared that he cannot survive.

NATIONAL SPORTS.

No less than eleven meetings are crammed into the racing fixtures for next week, including three of very considerable interest, viz. Eglinton Park, Manchester, and Bedford. The arrangements stand as follows:—Monday—Tewkesbury, Redditch Cheadle and Walsall. Tuesday—Ledbury, Oxford, and Bedford. Wednesday—Eglinton Park, Leicester, and Liverpool Hunt. Thursday—Manchester.

The only Aquatic fixtures of any importance are the Chester Regatta, on Tuesday, and the Prince of Wales's Yacht Club match from Brackwall to Gravesend and back, on Wednesday.

CRICKET APPOINTMENTS.—An All England match at Kelso, and matches at the Bric stock Ground and Kennington Oval; Tuesday, an All England match in Scotland (place not named); and Friday, a match at Broughton, Yorkshire.

DONCASTER RACES.—TUESDAY.

The FITZWILLIAM HANDICAP STAKES.—Alfred the Great (Charlton), 1. Dividend (Webb), 2

The GREAT YORKSHIRE HANDICAP.—Hungerford (Hiett), 1. Alonzo (W. Sharpe) 2.

The CHAMPAGNE STAKES.—Viudex (J. Marson), 1. Orinoco (Bartholomew), 2. MATCH, 80. —Lady of the Grave (Simpson), 1. Orpheus (Gunton) 2.

The STAND PLATE.—Morning Star (Abdale), 1. Sir Rowland Trenchard (Hiett), 2.

The SELLING STAKES.—Priam the Third (Carrol), 1. Cyclops, 2.

WEDNESDAY.

MATCH; 200 sovs.—Pelion (F. Bullock), 1. Cut, by Don John (Charlton), 2.

The DON. LEGER.—Stockwell (N rman), 1. Harbinger (Fi tcam), 2.

The DONCASTER STAKES.—Lambton, 1. Alfred the Great, 2.

TOWN PLATE.—Lenny Wells, 1. Ap, 2

THE LATE JOHN CAMDEN NEILD, ESQ.

The funeral of this gentleman took place on Thursday, the 9th inst, at North Marston, Bucks, the body having been unostentatiously removed from his residence, No. 9, Cheyne-walk, Chelsea, on the day preceding. The coffin was of oak, with solid handsome brass furniture, and inscribed, "John Camden Neild, Esq. Died 30th August, 1852, aged 72 years."

As several erroneous statements respecting the ci aracter and place of interment of the late Mr. Neild have appeared, it is right to mention, that although of most penurious habits, and always insisting upon the enforcement of what was legally his due, Mr. Neild was never known to degrade himself beneath the character of a gentleman.

Mr. John Camden Neild was born on the 31 of May, 1780; was a barrister-at-law, of Lincoln's Inn, and for many years a magistrate of the county of Middlesex. He was of very retired habits, and it is believed that he only received visitors on matters of business; the principal object, and, indeed, the only apparent occupation of his life, being the interest of the vast wealth left to him as sole heir by his father. He continued his support to the various charitable institutions to which his father had subscribed in his life time, and was not backward in responding to appeals made to him on behalf of local charities connected with the schools and other institutions in the parishes in which he resided, or where his estates were situated.

The only sister of Mr. Neild died in infancy, and his only brother died unmarried, leaving the subject of our present notice the only descendant and heir at law of James Neild, Esq., of Cheyne-walk, Chelsea, who was a most benevolent man, and co-operated with the late Mr. Howard, of Lotham, in establishing the Society for the Relief and Discharge of Persons Imprisoned for Small Debts. Mr. John Camden Neild thus became the possessor of an ample fortune. He held, in addition to a large funded property, extensive landed estates, principally in Buckinghamshire, and likewise in the neighbourhood of Romney Marsh and Ashford, in Kent. The value of his property thus amassed is variously estimated, but probably it is not much short of £800 000. We understand that the whole of this accumulated wealth has been bequeathed by Mr. Neild's will to his only son, Henry Harper Neild, Esq., of Cheyne-walk, Chelsea, who was a most benevolent man, and co-operated with the late Mr. Howard, of Lotham, in establishing the Society for the Relief and Discharge of Persons Imprisoned for Small Debts. Mr. John Camden Neild thus became the possessor of an ample fortune. He held, in addition to a large funded property, extensive landed estates, principally in Buckinghamshire, and likewise in the neighbourhood of Romney Marsh and Ashford, in Kent. The value of his property thus amassed is variously estimated, but probably it is not much short of £800 000. We understand that the whole of this accumulated wealth has been bequeathed by Mr. Neild's will to his only son, Henry Harper Neild, Esq. His finished pictures he bequeathes to the trustees of the National Gallery, and, with the exception of two large ones, the whole are to be placed in one or more rooms, to be called "Turner's Gallery," and if no rooms are to be set apart or erected for such purpose within a specified time, which, by a subsequent codicil, he has extended from three to ten years—the pictures, in the meantime remaining in his late residence, Queen Ann-street, Cavendish-square, are then to be sold; and, in such event, he leaves, from the sale thereof, to the Royal Academy, £1000; and to the Artists' General Benevolent Fund, the Foundling Hospital, and the London Orphan Fund, £500 each. The legacies and annuities are of small amount, with the exception of two large ones, the one in memory of St. Paul's Cathedral, at an expense of £1000. The residue of his property, real and personal, to be converted into funded property, and employed in the erection of a building to be called "Turner's Gallery," for the maintenance and support of decayed male artists of English birth.

The will of the late Vice-Chancellor Parker has been proved by Archibald Smith, Esq., one of the executors. The whole of his property, real and personal, he has bequeathed to the trustees under his marriage settlement for the benefit of his widow and children. His late residence in Russell-square is in his own handwriting, bears date 16th Nov., 1851, and is very closely written on a sheet of note paper, occupying the entire four sides, and witnessed by his butler and footman.

The will of the late Mr. Neild, which has lately caused so much excitement, on account of its having left the bulk of his large property to her Majesty, is likely to be disputed, two caveats having been entered on behalf of the next of kin against the proof of the will—it is supposed on the ground of insanity.

The will of John Squire, Esq., banker, Pall-mall, was proved under £60,000 personalty.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The great demand which has continued for some time past for both gold and silver coin to ship to Australia in return for bullion, the heavy exports to China and the Continent, and the large advances made by the Bank of England, as well as by private bankers, to the commercial body, added to the limited purchases, loubers, almost generally, have become rather shy of stock. As might, therefore, be anticipated, prices of securities have sown a retrograding, notwithstanding that our foreign advices, almost without exception, are favourable. It is understood that the corpo ation has decided upon making some modification in the terms upon which advances will in future be made, and the existing aspect of affairs appears to warrant the expectation of a return of any funds now with any peculiar wealth upon our merchants. The immense metallic resources of the Bank, and the heavy stock of bullion in Paris—upwards of £24,000,000 sterling—are great and important features in the commercial era.

The imports of bullion have been confined to about £120,000, chiefly in gold, from New York. From that port numerous parcels have yet to arrive, as we learn the several heavy shipments have been made from San Francisco to England and New York. It must, therefore, be observed that a large portion of the arrivals from the United States has been the result of success in the gold fields, and not of any actual line of trade existing between the countries; nevertheless, it is evide t that the demand for British-manufactured goods abroad is very extensive, as the whole of the foreign exchanges continue favourable to this country, and some f t ese have shown a material improvement of late. Most of the silver lately received here has been disposed of for India.

The transfer books of the Three per Cents Reduced, the New Three-and-a-Quarter per Cents, and the Long Annuities are closed for the Dividends. During their closing the Bank of England will make advances upon stock, at a rate of ¼ per cent. per annum. On Monday the Three per Cents, Money, were done at 109¾, and for the account 109¾; the price declined to 109 per on the two following days. On Thursday recently any business was done, and the Three per Cents for immediate transfer were 99¾ ; and 99¾ 100 for the next Account. The unfunded debt has rather lower. India Bonds, under £1000, were 85s. premium. A transaction took place in Bank Stock for the Account, at £224, Exchequer Bills (Small) were 71s., and June, 70s. 67s. premium. These continue very low as regards the result of the increasing amounts which continue to find their way into other channels. The rates of discount are—First class bills are done at 2½ to 3½; second class, 3½ to 4; and other kinds, 4½ to 5 per cent. per annum. Advances prices, the demand is rapidly increasing. Money on "call" is worth only 1½ per cent.

Although the transactions in the Foreign House have been comparatively small, the general quotations have been fairly supported. Messrs. Baring and Co have advertised the payment of the interest upon the Chilian Loans at the Stock Exchange, also upon the Brazilian Bonds. The medium which the new Turk six Loan has been sought out has given general satisfaction; hence large operations have taken place in it at from 10 to 11 premium. It is asserted that the interest on the Turkish Government will receive material assistance from it; whilst it is evident that Turkey need not be involved in a much better position than hitherto. Doubtless, extensive economical reforms will be effected, and a check given to usurious practices. On Thursday, the Six per Cent. Turkish Loan had fallen to 5⅞. Buenos Ayres were at 103¾ to 104; Danish Five per Cents, 105; Grenada Deferred, 22½; Mexican Three per Cents, 20¾; Portuguese, for the Account, 66; Portuguese Four per Cents, 39½; Russian Five per Cents, 1.84 ex div; Spanish Five per Cents, 46½; Ditto, New Deferred, 23½; Ditto, for the Account, 23¾; Ditto, Passive, 6; Ditto, Two and a Half per Cents, 8½; and Dutch Four per Cents, 97½.

In the railway shares have ruled very firm, and prices have continued high. British North American have marked 58 57½; Colonial, 16 16½; London Chartered Bank of Australia (£2 10s paid), 4¾ ⅝ 2 ½; London and County, 24¾; London and Westminster, 23¾; Union of Australia, 50¾ ½; Ditto, New, 6; Union of London 16¾ 17. Shares in the new English, Scottish, and Australian Bank have touched 1¾ prem.

Dock shares have supported previous rates. Commercial have sold at 105; East and West India, 168¾ 167; London, 1.9; St. Katharine, 80½; Southampton, 84½; Victoria (£3 paid), 6¾.

In Steamboat Shares little has been doing. Australian Royal Mail have been done at 4. General Screw, 50; London and Edinburgh, 1¾; London Oriental, 8; ditto, New, 3¾; Royal Mail, 78¾; and North of Europe, 3-16 premium.

There has been less activity in the Market for Railway Shares, the prices of which have shown a tendency to decline. The last week's receipts were £237,754, or at the rate of £9 9 r mile. Income from the 1st July to the present time amounts to £2 270,668; for the corresponding period of 1851 to £3,414 811; and for the same period in 1850, £2 867 345, showing a decrease, as compared with 1851, of £146,146; and an increase, compared with 1850, of £241 3.7. The following are the official closing prices on Thursday:—

ORDINARY SHARES AND STOCKS.—Caledonian, 42; Chester and Holyhead, 9½; Eastern Union, Class A, 7¾ ; Ditto, B and C, 6½; Lancashire, 102; Lancashire and Yorkshire, 85½; Ditto, Half B, 41; Ditto, Half B, 41⅝; Great Western, 56½; Lancashire and Yorkshire, 85½; Leeds Northern, 85½; London and Blackwall, 8½; London and Brighton, 104½; London and North-Western, 121½; Ditto, Fifths, 10½; London and South-Western, 91; Londonderry and Enniskillen, 16; Manchester, Sheffield, and Lincolnshire, 59; Midland, 77¾; Norfolk, 43¾; North British, 30¾; North Staffordshire, 12¾; Scrarborough and Birmingham, 7½; South-Eastern, 72¾; South Wales, 40; Thames Haven Dock and Railway, 58; York, Newcastle and Berwick, 57; Ditto, Ex'ensions, 11⅝; York and North Midland, 45½.

[illegible] powerful, small, new [illegible] Telescope, [illegible] from all other [illegible] Telescopes, [illegible] and [illegible] which, in fact, [illegible] the shadow [illegible] the [illegible] Telescope, [illegible] and [illegible] Telescope, [illegible] and [illegible] Telescope, [illegible] and

"IN THE CLOUDS;"

OR,

SOME ACCOUNT OF A BALLOON TRIP WITH MR. GREEN.

BY HENRY MAYHEW.

I AM naturally a coward constitutionally and habitually timid—I do not hesitate to confess it. The literary temperament and sedentary pursuits are, I believe, seldom associated with physical courage. Fear, or the ideal presence of prospective injury, is necessarily an act of the imagination; and the sense of danger, therefore, closely connected with a sense of the beautiful and the esthetic faculties in general. Your human bull-dogs are mostly deficient in mental refinement, and perhaps if there be a class of characters more fanciful than the rest of the world, they are those who are said to belong to the "*fancy*." My creed is that all imaginative men are cowards; and that I am one I have at least moral courage and honesty enough to acknowledge.

Then why go up in a balloon?

Yes, why? These are times when men's principles of action are sure to be canvassed; so, to prevent the imputation of any false motives, I will make a clean breast of it, and confess that it was merely "idle curiosity," as the world calls it, that took me into the air.

I had seen the great metropolis under almost every aspect. I had dived into holes and corners hidden from the honest and well-to-do-portion of the cockney community. I had visited Jacob's Island (the plague spot) in the height of the cholera, when, to inhale the very air of the place was almost to breathe the breath of death. I had sought out the haunts of beggars and thieves, and passed hours communing with them as to their histories, habits, natures, and impulses. I had seen the world of London below the surface, as it were, and I had a craving to contemplate it far above it—to behold the immense mass of vice and avarice and cunning, of noble aspirations and humble heroism, blent into one black spot; to take, as it were, an angel's view of that huge city where, perhaps, there is more virtue and more iniquity, more wealth and more want huddled together in one vast heap than in any other part of the earth; to look down upon the strange, incongruous clump of palaces and workhouses, of factory chimneys and church steeples, of banks and prisons, of docks and hospitals, of parks and squares, of courts and alleys—to look down upon these as the birds of the air look down upon them, and see the whole dwindle into a heap of rubbish on the green sward, a human ant-hill, as it were; to hear the hubbub of the restless sea of life below, and hear it like the ocean in a shell, whispering to you of the incessant struggles and chafings of the distant tide—to swing in the air far above all the petty jealousies and heart-burnings, and small ambitions and vain parades, and feel for once tranquil as a babe in a cot—that you were hardly of the earth earthy; and to find, as you drank in the pure thin air above you, the blood dancing and tingling joyously through your veins, and your whole spirit becoming etherealised as Jacob-like, you mounted the aërial ladder, and beheld the world beneath you fade and fade from your sight like a mirage in the desert; to feel yourself really, as you had ideally in your dreams, floating through the endless realms of space, sailing among the stars free as "the lark at heaven's gate;" and to enjoy for a brief half-hour at least a foretaste of that elysian destiny which is the hope of all. To see, to think, and to feel thus was surely worth some little risk, and this it was that led me to peril my bones in the car of a balloon.

It is true that the aërial bulls and gones of late had taken nearly all poetry from the skies, reducing the ancient myths to the mere stage trickeries of an ethereal Astley's; true that the depraved rage for excitement—that species of mental dram-drinking which ever demands some brutal stimulant—had given a most vulgar, prosaic character to a voyage which, when stripped of its peril, is perhaps one of the purest and most dignified delights that the mind is capable of enjoying; still, quickened with a love of my own art, and heedless of any silly imputations of rivalry with quadrupeds and mountebanks, I gladly availed myself of a seat in the car which Mr. Green had set aside for me.

At about a quarter to seven o'clock, six of us and the "veteran aëronaut" took our places in the large deep wicker buck-basket of a car attached to the Royal Nassau Balloon, while two gentlemen were seated immediately above our heads, with their backs resting against the netting and their legs stretched across the hoop to which the cords of the net-work are fastened, and from which depends the car. There were altogether nine of us—a complete set of human pins for the air to play at skittles with—and the majority, myself above the number, no sylphs in weight. Above us reeled the great gas-bag like a monster peg-top, and all around the car were groups of men holding to the sides of the basket, while the huge iron weights were handed out and replaced by large squabby bags of sand.

In the course of about ten minutes all the arrangements for starting were complete; the grapnel, looking like a bundle of large iron fish-hooks, welded together, was hanging over the side of the car. The guide-rope, longer than St. Paul's is high, and done up in a can vas bag, with only the end hanging out, was dangling beside the grapnel, and we were raised some fifty feet in the air to try the ascensive power of the machine that was to bear us through the clouds. Then, having been duly dragged down, the signal was at length given to fire the cannons, and Mr. Green loosening the only rope that bound us to the Gardens, we shot into the air—or rather the earth seemed to sink suddenly down, as if the spot of ground, with all the spectators on it, and on which we ourselves had been lately standing, had been constructed on the same principle as the Adelphi stage, and admitted of being lowered at a moment's notice. The last thing that I remember to have seen distinctly was the flash of the guns, and instantaneously there appeared a multitude of upturned faces in the Gardens below, the greater part with their mouths wide open, and a *chevaux de frise* of hands extended above them, all signalling farewell to us. Then, as we swept rapidly above the trees, I could see the roadway immediately outside the Gardens, stuck all over with rows of tiny people, looking like so many black pins on a cushion, and the hubbub of the voices below was like the sound of a distant school let loose.

And here began that peculiar panoramic effect which is the distinguishing feature of a view from a balloon, and which arises from the utter absence of all sense of motion in the machine itself. The earth appeared literally to consist of a long series of scenes, which were being continually drawn along under you, as if it were a diorama beheld flat upon the ground, and gave one almost the notion that the world was an endless landscape stretched upon rollers, which some invisible sprites were revolving for your especial enjoyment.

Then, as we struck towards the fields of Surrey, and I looked over the edge of the car in which I was standing, holding on tight to the thick rope descending from the hoop above, and with the rim of the wicker work reaching up to my breast, the sight was the most exquisite delight I ever experienced. The houses below looked like the tiny wooden things out of

DESCENT OF MR. GREEN'S BALLOON, ON FIRBRIGHT COMMON, NEAR GUILDFORD.

a child's box of toys, and the streets like ruts. To peer straight down gave you an awful sense of the height to which the balloon had already risen, and yet there was no idea of danger, for the mind was too much occupied with the grandeur and novelty of the scene all around to feel the least alarm. As the balloon kept on ascending, the lines of buildings grew smaller and smaller, till in a few minutes the projections seemed very much like the prominences on the little coloured plaster models of countries. Then we could see the gas lights along the different lines of road start into light one after another all over the earth, and presently the ground seemed to be covered with little miniature illumination lamps, such as may be seen resting on the grass at the edge of the gravel walks in suburban gardens of amusement. The river we could see winding far away, undulating, as it streamed along, like a man-of-war's pennant, and glittering here and there in the dusk like grey steel. All round the horizon were thick slate-coloured clouds, edged with the orange of the departed sun; and with the tops of these we seemed to be on a level. So deep was the dusk in the distance, that it was difficult to tell where the earth ended and the sky began; and in trying to make out the objects afar off, it seemed to be as if you were looking through so much crape. The roads below were now like narrow light-brown ribbons, and the bridges across the Thames almost like planks; while the tiny black barges, as they floated up the river, appeared no bigger than insects. The large green fields had dwindled down to about the size of kettle-holders, and the hedges were like strips of *chenille*.

When we were about a mile above the ground some of us threw pieces of paper into the grey air, and these, as we rose and left them below, fluttered about like butterflies as they fell. Then some of the more noisy of the crew struck a song; while I heard a dyspeptic gentleman immediately behind me, as I was kneeling down (for there was but one seat), and stretching my head over the side of the car, contemplating the world of wonder below, confess to feeling a little nervous, saying that he was a man of natural moral courage, but his body overcame it as he was subject to fits of indigestion and as a preventive to extreme nervousness had taken nothing but vegetables for dinner that day. And I must confess myself that, poised up high in the air, as we were, with but a few slender cords to support us, I could not help thinking of the awful havoc there would be if the swigs of the wicker car were to break and the bottom to give way.

On what sharp church steeple thought I should I be spitted, and as I looked down the beauty of the scene once more took all sense of fear from my mind, for the earth now appeared concave with the height, and seemed like a huge black bowl—as if it were the sky of the nether regions. The lights of the villages scattered over the scene, were like clusters of glow-worms, from the midst of which you could here and there distinguish the crimson speck of some railway lamp.

"There, I've thrown over a letter, directed to my house," said one of the passengers, "telling 'em we're all safe up here"—and as I stretched over the car I saw the little white fluttering thing go zigzagging down the air, while we still mounted the sky.

Then some of the passengers, who had supplied themselves with an extraordinary stock of courage previous to starting, by means of sundry bottles of "sparkling champagne," which had the effect of making them more noisy than agreeable in such a situation, must needs begin quarrelling with a rose-water Captain in the hoop, as to whether they belonged to the "Snobocracy" or the "Nobocracy," and at one time their words were literally so high that could the pair have got to close quarters the dispute would certainly have assumed a more serious character, for jammed tight together as we were in the car, the least attempt at violence would certainly have ended in discharging the whole human cargo into the railway station below. But as it was, it certainly did appear most ludicrous that two rational beings must choose that place of all others for engaging in some paltry squabble as to the vulgar division of the human family into "Nobs" and "Snobs."

Silence, however, was soon restored by Mr. Green reminding the disputants that we were descending at a rapid rate, and it was time they began to look out for their safety.

The dyspeptic passenger, who during the dispute had evidently been suffering from another attack of nervousness, was at length terrified beyond human endurance by the gentleman who was rather the worse for champagne indulging in even warmer language than he had yet given vent to.

"For mercy sake don't swear up here, my good man," shivered out the poor invalid, "Wait till you get down below, if you must swear. We are always in the hands of Providence; but up here, it strikes me, that our lives are literally hanging by a thread."

The collapsing of the bottom part of the balloon to which Mr. Green here drew our attention as evidence of the rate at which we were descending, soon restored order, and made us anxiously attend to the directions of the aëronaut. We could now hear the sounds of "Ah bal-loon" again rising from the ground and following in our wake, telling us that at the small villages on our way the people were anxiously looking for our descent. A bag of sand was presented to each of the passengers to let fall at a given signal, while Green himself stood with the grapnel ready to loose immediately he came to a fitting spot. Presently the signal for the descent of the ballast was given, and as it dropped it was curious to watch it fall; the earth had seemed almost at our feet as the car swept over the fields, but so long was the heavy bag in getting to the ground that, as the eye watched it fall and fall, the mind was filled with amazement at the height the balloon still was in the air. Suddenly the sound as of a gun announced that the bag had struck the soil, and then we were told all to sit low down in the car and hold fast; scarcely had we obeyed the orders given than the car was suddenly and fiercely jerked half round, and all within it thrown one on top of another; immediately after this, bump went the bottom of the car on the ground giving us so violent a shake that it seemed as if every limb in the body had been simultaneously dislocated. Now the balloon pitched on to its side, and lay on the ground struggling with the wind, and rolling about, heaving like a huge whale in the agonies of death.

"For heaven's sake hold fast," shouted Mr. Green, as we were dashed up and down in the car, all rolling one on the other, with each fresh lurch of the giant machine stretched on the ground before us, and from which we could hear the gas roaring from the valve, like the blast to a furnace.

"Sit still, all of you, I say!" roared our pilot, as he saw some one endeavouring to leave the car.

Again we were pitched right on end, and the bottom of the car shifted into a ditch, the water of which bubbled up through the wicker work of the car, and I, unlucky wight, who was seated in that part to which the concussions were mostly confined, soon began to feel that I was quietly sitting in a pool of water.

To move, however, was evidently to peril not only one's own life, but that of all the other passengers, but still no one came to us, for we had fallen in a swamp, which we afterwards found out was Firbright-common, situate some half-dozen miles from Guildford.

Presently, however, to our great delight, some hundred drab-smocked countrymen appeared, almost as if by magic, aroun i the edges of the car; for some little time they were afraid to touch, but at last they got a firm hold of it, and we were one after another extricated from our seats.

To tell the remainder of the adventure would be tame and dull: suffice it, after some two hours' labour, the aërial machine, car, grapnels, and all, was rolled and packed up in a cart, and thus transported, an hour after midnight, to Guildford; the voyagers journeying to the same town in a tilted cart, delighted with their trip, and listening to the many curious adventures of the veteran aëronaut who had successfully pilot-d them and some hundred others through the air; and who, no that the responsibility of their lives rested no longer in his hands, seemed a thoroughly different man: before he was taciturn, and almost irritable when spoken to: and now he was garrulous, and delighting all with his intelligence, his enterprise, his enthusiasm, and his courtesy. Indeed, long shall we all remember the pleasant night we passed with the old ethereal pilot on his 500th ascent with the Royal Nassau Balloon.

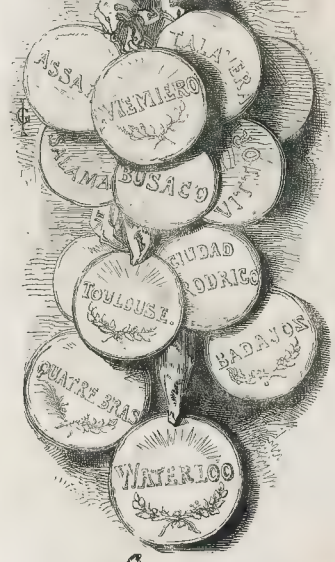
LIFE OF THE DUKE OF WELLINGTON.

SUPPLEMENT TO THE ILLUSTRATED LONDON NEWS

No. 580.—VOL. XXI.] SEPTEMBER 18, 1852. [TWO NUMBERS, 1s.



DEATH OF THE DUKE OF WELLINGTON.

THE Duke of Wellington is dead. The great soldier, the wise statesman, the able administrator, the profound thinker, is no more. We cannot but call the event, which has deprived the country of the living presence of so illustrious a man, a national calamity. Yet the star of his usefulness had culminated and fallen; and his death, when he was full of years and of honour, is an event that was yearly, if not daily expected. It will excite no poignant sorrow, because it was natural and timely, but it will call forth that manly and general sympathy which death always demands, especially in the case of individuals so great and so good as he was. Nor will the influence of the event or the sympathy of the multitude be confined to his own country. Throughout Europe, Asia, and America, the news will fall amid the universal condolence of grateful nations.

Since the time when English history became emancipated from mere tradition, and since the influence of the past began to be sensibly felt and understood in the great events of the present, there never arose in this realm a man who conferred so many services on his country as Arthur Duke of Wellington. His fame is entirely pure. There is not a dark spot upon it. As a soldier and a conqueror the annals of no period and of no country can show a reputation more brilliant or deeds so unselfish, as well as so grand and so beneficial, as his were from his youth to his maturity, and from his maturity to his venerable old age. If Alexander were a greater soldier, which is doubtful, he was not such a patriot or friend to humanity. The sword of Wellington was never drawn to enslave, but to liberate. He was never the oppressor, but always the friend of the nations amongst whom he appeared, and to him, under Providence, we mainly owe our present position at the very head and front of the freedom, the enterprise, the glory, and the civilisation of the world. Whatever we are we might not have been, had that one man been less brave and less virtuous than he was. If Cæsar, Timour, Genghis, Charles of Sweden, or Napoleon gained victories as great—considered as mere battles—they never gained any so great, considered in the purity of their motives or the benign influence which they exercised upon the fortunes of mankind. Those mighty combatants, Wellington and Napoleon, though human, seemed super-human. Their stupendous struggle has no parallel in ancient or modern history. All other persons and events of our time have been dwarfed by comparison with these two and their deeds. When Napoleon fell, and Wellington conquered, the world had time to breathe, and to be at rest. The result has been, up to the time at which he died, thirty-seven years of international peace, worth more for the real progress of humanity than any two or three centuries in the history of the world.

Yet it was not simply as a soldier, great as he was, that the Duke

BATTLE OF ASSAYE.

of Wellington rendered such infinite service to his country. He was a high-minded, disinterested, and honest statesman, and possessed in a remarkable degree a clear, sound, sagacious, and straightforward intellect. No subterfuges escaped his penetration; no sophistry could stand against his sturdy common-sense. As a politician these qualities were of inestimable value to himself and to Great Britain. Though he had his political predilections he never became the slave of prejudice. Open to conviction, he always knew how to yield when resistance would have been unwise or perilous; and more than once, in a crisis of his country's history, his submission to overpowering truth and necessity was almost as brilliant a victory in the public cause as Waterloo itself.

What he himself said of Sir Robert Peel, his great friend and ally in political life, might be said with even more justice and emphasis of himself. His great and paramount characteristic was his love of truth. He had as keen a perception of it in men and things, as an ardent love of it. "TRUTH and DUTY," "DUTY and TRUTH." These were his guiding stars throughout the whole of his career. They shone in his face, they illuminated his mind, and they made his actions what they were—lucid and intelligible to all men, and as unmistakeable in the purity of their aim and object as in their origin and inspiration. And with this solid intellect he never took liberties. Its massiveness prevented even himself from trifling with it. No man ever suspected him of insincerity and double-dealing; and even at that unhappy time, when popular clamour was raised against him, and when he, "father of the nation," as he might have been considered, was obliged to barricade his windows against the assaults of an ungrateful people who owed their liberties to his integrity and his courage, no one ever dreamed of accusing him of want of political principle or of personal honesty. It was because the temporarily excited mob believed him to be so honest, that they were embittered against him. But all this was evanescent. The English are a just people. They go wrong at times, but they invariably come right again; and if they have one characteristic more strongly developed than another, it is their love of fair play. It was the peculiar privilege of the Duke of Wellington, as we think it was the peculiar honour of the English people, that the ebullitions of political ill-feeling during the time of the Reform excitement so speedily wore themselves out, and, that the longer the warrior lived, the more popular he became, even [illegible] sound as if the mob, struck with remorse that it had, in a moment of blindness, aimed a blow, or launched a insult word against the almost sacred head of their defender, endeavoured to make amends for the angry injustice of a day by the love and admiration of all future time. For the last six or seven years of his honoured and honourable life, his public appearances were public ovations; and he was as affectionately loved, and as sincerely respected, by the humblest street-boy as by any whom he met in his daily walks, as he was by the noble-hearted few with whom he associated in public, in welfare in private and domestic life.

WALMER, Wednesday Evening.

THE sudden decease of [illegible]ace the Duke of Wellington took place yesterday afternoon, [illegible] a quarter past three o'clock. It was on Monday morning that the noble Duke last took open-air exercise by walking out in the environs of the Castle. Up to the morning of Tuesday his Grace's health continued to all appearance in its usual satisfactory state, considering his advanced age. The Duke retired to rest on Monday night quite well, and in his customary good spirits. It is believed that he passed a comfortable night. At all events, he did not summon his attendant to wait upon him. On Tuesday morning his valet called him, as usual, between six and seven o'clock, but his Grace did not rise to dress; and after the lapse of about an hour, the valet's attention was aroused by a sound resembling faint moanings issuing from his master's chamber. He thereupon went into his Grace's room, when the Duke, who had not left his bed, inquired if his apothecary (Mr. Hulke, of Deal) lived near, and directed that that gentleman should be sent for, as he (the Duke) wished to see him. This was the first intimation received by any member of the household that his Grace felt indisposed. The intelligence was immediately communicated to Lord and Lady Charles Wellesley, who occupied adjacent apartments in the Castle, and they at once proceeded to his Grace's chamber, where they remained with him constantly until he breathed his last. In the meantime a groom had been despatched for Mr. Hulke, who arrived at about half-past eight or a quarter to nine. Mr. Hulke found his Grace suffering from an epileptic fit of a rather violent character, somewhat similar to the attack which the Duke experienced several years ago; and no serious apprehensions were at this time entertained as to his safety. Mr. Hulke, therefore, left the Castle for the purpose of preparing some medicines to administer to his Grace, in the hope that they would afford him effectual relief; but, during his absence, the noble Duke grew worse, and it was necessary to send for Dr. Macarthur, of Walmer, his regular medical attendant. Mr. Hulke and his son (who also belongs to the medical profession) speedily returned, when an emetic was administered to the noble patient, but unfortunately without any good result. The Duke's condition gradually became more dangerous; he was seized by a second convulsive fit of greater violence than the first; and the alarm of his son and daughter-in-law, Lord and Lady Charles Wellesley, painfully increased. At this critical emergency a messenger was despatched to the telegraph office at the Deal railway station, for the purpose of immediately summoning Dr. Hume from London to his Grace's assistance. In case Dr. Hume should be absent from town, the message specified that Dr. Ferguson should be next applied to; but, unfortunately, it so happened that both of these eminent physicians were in Scotland when the message reached their residences. This failure having been reported to the noble inmates of the Castle, Lord Clanwilliam (Captain of Deal Castle) recommended that Dr. Williams, of London, should be summoned to Walmer. Dr. Williams was accordingly telegraphed for from Deal; and set off to the South-Eastern railway station at London-bridge, to take the train. He did not reach Deal, however, in time for his services to be of any avail. The noble Duke's state became gradually more perilous; and he suffered a third attack, still more severe than the preceding ones. When the members of his family and his medical attendants spoke to him, he appeared to be conscious that they were addressing him, and attempted to articulate a reply. His answers, however, were not distinct enough to be intelligible; but, indeed, not a syllable that he uttered from the moment when he received his apothecary to be sent for, could be understood. About three o'clock he had a fourth and final attack, of redoubled intensity, which rendered him perfectly insensible, and ultimately carried him off at the hour above stated.

The painful intelligence was immediately transmitted by submarine telegraph to his Grace's eldest son, the Marquis of Douro, who is now staying with his family in Germany. It is believed that the noble Marquis is at Frankfort, since the last communication received from him was dated from that place. Until his arrival nothing will be decided respecting the interment of the remains of his illustrious and lamented father; but there can be little doubt that they will, in the first instance, be removed to Apsley House.

The noble Duke had, on the day of his death, an appointment to meet the Countess of Westmoreland at Dover, on her return to Vienna, for the purpose of seeing her on board the packet which was to take her across the Straits to the Continent; but information was conveyed to the Countess at an early hour that illness would prevent his Grace from fulfilling his engagement. The Countess received the intelligence with great concern, and drove over last evening from Dover to Walmer, to ascertain the nature of the noble Duke's ailment, when she learned the sad intelligence that his Grace was no more.

The quiet village of Walmer, and also the adjacent town of Deal, have experienced a most painful sensation at the melancholy event. Yesterday all the shops in both places were partially closed; and the flags at every public building, at Deal Castle, and at various other elevated points, were lowered half-mast high in token of reverence for the memory of the departed. At Dover, likewise, the mournful tidings excited similar manifestations; and from the Castle Keep, from the Admiralty station, the Harbour-house, the Pilot-house, &c., the union-jack drooped, half-struck, as a symbol of public woe.

Seldom has there been witnessed in London such a feeling of regret, save on the death of a Sovereign, as was evinced when the news was circulated that the illustrious Duke was no more. Ships and vessels of all nations, from the large Indiaman or trader to the small coaster or collier, all dropped their colours half-mast high. From the pier-heads of St. Katharine's, London, East and West India Docks, the flags were also dropped, as well as from the numerous large factories and other establishments on the banks of the Thames. The large fleet of steamers belonging to the General Steam Navigation Company were amongst the first to drop their colours from the fore, main, and mizen; and ere the morning had far advanced, scarcely a craft was seen going up or down without displaying the emblem of mourning.

At the Trinity House, on the death of the Master of this Honourable Corporation being communicated to the Elder Brethren, they at once directed the usual partial closing of the establishments on Tower-hill and Deptford, and the hoisting of the colours half-mast high at the Trinity-stores, at Blackwall, and other parts of the coast. A similar mark of respect was exhibited at the different light-houses and ships as soon as the intelligence reached them.

The different offices of the Tower garrison and *dépôt* were partially closed on the intelligence being received of the death of his Grace, who for some years had held the important office of Constable of the Tower of London. The bell of St. Peter ad Vincula, the church of the fortress, was tolled at intervals during the day.

Throughout the provinces the same sensation was produced. At Liverpool and Manchester the tidings caused a general feeling of depression. The flags on the various public buildings were lowered, and the shutters of many of the shops closed, in testimony of respect to the late Duke.

BIRTHPLACE OF THE DUKE OF WELLINGTON, 114, GRAFTON-STREET, DUBLIN.

whose accumulated honours sink before the single designation "Wellington."

The illustrious Duke was fourth son (an elder brother of his own name had died in infancy) of Garrett, second Baron and first Earl of Mornington, by Anne, eldest daughter of Arthur Hill, Viscount Dungannon. Some doubt has arisen as to the actual place of the Duke's birth, but it now seems certain that he was born in St. Andrew's parish, in Dublin, at the Earl of Mornington's residence, Mornington House, No. 114, Grafton-street, now the Royal Irish Academy, opposite the Provost's dwelling, Trinity College. Mr. Montgomery Martin states that the fact was so told him by the Duke's brother, the late Marquis Wellesley. Another received opinion assigns the honour to the now crumbling ruins of a venerable p[illegible]le, Dangan Castle, in Meath, the home of the Duke's childhood.*

The date of the birth of Wellington has also been the subject of misapprehension, even on the part of the late Colonel Gurwood, the editor of his Grace's "Despatches." In the registry of St. Peter's parish, Dublin, the entry of his Grace's baptism has been lately found, which proves him to be a day, if not more, older than he is thought to have been. The entry is:—

"1769. April 30.—Arthur, son of the Right Hon. Earl and Countess of Mornington. Baptised."

And immediately beneath is the attesting signature of "Isaac Mann, Archdeacon." Dr. Mann was consecrated Bishop of Cork and Ross in 1772, and occupied that see until his death, in 1789.

The paternal ancestors of the Duke of Wellington were the Colleys, of Castle Carbery, founded in Ireland by Walter Cowley, Solicitor-General of Ireland in 1537, whose elder son and heir, Sir Henry Colley, of Castle Carbery, was a Captain in the army of Queen Elizabeth, and a Privy Councillor in Ireland. He married Catherine, daughter of Sir Thomas Cusack, the Lord Chancellor, and had two sons, Sir George Colley, of Edanderry, and Sir Henry Colley, of Castle Carbery, Seneschal of the King's County, and Constable of the Fort of Philipstown. From Sir Henry, the Duke of Wellington was sixth, in a direct line. His Grace was not in any way descended from the Wesleys. The name of Wesley was first adopted by his grandfather, Richard Colley, Esq. (afterwards first Lord Mornington), in 1728, on succeeding, by bequest, to the estates of Garrett Wesley, Esq., of Dangan, M.P. for Meath, whose mother was a Colley. As "Arthur Wesley," the Duke obtained his first commission; and it was not until 1797 that the spelling of the name was changed to Wellesley by the late Lord Wellesley, on his Lordship being created a Marquis.

The father of the Duke of Wellington, as just stated, was Garrett, first Earl of Mornington. This nobleman married, 6th of February, 1759, Anne, eldest daughter of Arthur, Viscount Dungannon, and died on the 22d of May, 1781, at Kensington, leaving a family of five sons and one daughter, viz. Richard, second Earl of Mornington, since Marquis Wellesley, who died the 26th September, 1842; William, successor to his brother as third Earl of Mornington, who died in 1845 (leaving a son, William, now Earl of Mornington, and head of the family); Arthur, Duke of Wellington; Gerald Valerian, D.D., Prebendary of Durham, who died October 24, 1848; Henry, Lord Cowley, who died the 27th of

* Dangan Castle is situated within two miles of the village of Summerhill

DANGAN CASTLE, COUNTY MEATH, THE RESIDENCE OF THE MORNINGTON FAMILY.

MEMOIR
OF
THE LIFE AND MILITARY SERVICES
OF
THE DUKE OF WELLINGTON.

To compress within limited bounds the story of a life filled with incidents, and associated intimately with the closing scenes of the greatest political drama enacted within a century, is certainly a difficult undertaking. Unlike commonplace biographies, where a few startling events have marked an ordinary existence with additional interest, that of the illustrious subject of this memoir would demand far more space than even our columns can afford, to follow, from its first dawning to the zenith of its glory, the unequalled career of the Soldier-Statesman.

Arthur Wellesley, Duke and Marquis of Wellington, Marquis of Douro, Earl of Wellington, of Wellington, in the county of Somerset; Viscount Wellington, of Wellington, and of Talavera; Baron Douro, of Wellesley, in the county of Somerset, in the Peerage of the United Kingdom; Prince of Waterloo, in the Netherlands; Duke of Ciudad Rodrigo, and a Grandee of the first class, in Spain; Duke of Victoria; Marquis of Torres Vedras and Count of Vimiera, in Portugal; a Knight of the Garter; a Privy Councillor; Commander-in-Chief of the British Army; a Field Marshal in the services of Great Britain, Russia, Prussia, Austria, Portugal, and the Netherlands; Captain-General in Spain; Colonel of the Grenadier Guards; Colonel-in-Chief of the Rifle Brigade; G.C.B.; G.C.H.; Knight of the Golden Fleece in Spain; of the Black Eagle in Prussia; of the Tower and Sword in Portugal; of the Sword in Sweden; of St. Andrew, in Russia; of Maria-Theresa, in Austria; of the Elephant of Denmark; and of many minor orders. Constable of the Tower, and of Dover Castle; Lord Warden of the Cinque Ports; Lord-Lieutenant of Hampshire, and of the Tower Hamlets; Ranger of St. James's, the Green, and Hyde Parks; Chancellor of the University of Oxford; Commissioner of the Royal Military College and Asylum; Vice-President of the Scottish, Naval and Military Academy; Master of the Trinity House; a Governor of King's College, and of the Charterhouse; a Trustee of the Hunterian Museum; and a D.C.L.—such were the names, and such the titles of one in the parish of Larracor (memorable from its recollections of Swift), and is distant seventeen miles from Dublin, in a north-west direction. A ruin itself, it stands in the centre of a once fruitful but now deserted demesne, that has been completely "cleared" by the woodman's axe. Close [illegible]nd is the basin of a drained lake. Of the castle the mere shell is standing, in a portion of which a straw-thatched peasant's hut has been erected. Dangan was evidently a fortress of the Fitz Eustaces, Lords Portlester, and was probably founded early in the fourteenth century by one of that family. From them it passed to the Earls of Kildare, and from them, through the Plunkets (Lords Killeen) to the Wesleys or Parleys, whose name of Wesley devolved on the ancestors of the illustrious warrior, our present theme. The Marquis Wellesley sold Dangan to Colonel Burrowes, by whom it was leased to Mr. Roger O'Connor (father of Feargus O'Connor), during whose tenancy the whole house was dismantled by conflagration. No attempt has been made to rebuild or restore it.

April, 1847; and Anne, married, first, to the Hon. Henry Fitzroy, and, secondly, to Charles Culling Smith, Esq.: she died the 16th December, 1844.

The Duke's father was poor—and, on his death, the Earl of Mornington's estates were found to be heavily encumbered. His eldest son, the late Marquis Wellesley, correctly appreciating the value of his excellent mother, confided the management of the property to her care, and at once assumed the payment of his father's debts—an act, on his part, most honourable, because it was entirely discretionary.

"Between the illustrious brothers of the house of Mornington, had any speculator on the future career of both, how erroneous would have been the conclusions! At his first school, Wellesley gave certain promises of a distinguished manhood; Wellington did not; and yet how easily can this be reconciled! The taste and fancy that afterwards produced the senator, were germane to the classic forms of Eton; while those mental properties which alone can constitute the soldier, like metal in a mine, lay dormant until time betrayed the ore, and circumstances elicited its brilliancy.

"That Wellington, beyond a fair and creditable proficiency, exhibited no marked superiority at Angiers, is acknowledged; while Napoleon, his contemporary, at Brienne, displayed martial propensities, in everything connected with his studies or his sports."

On the 7th of March, 1787, Arthur Wellesley obtained his first commission, being gazetted to an Ensigncy in the 73rd Regiment; and, on the 24th of the following December, he was promoted to a Lieutenancy in the 76th. In the succeeding month, he exchanged into the 41st; and, on the 25th of June, was appointed to the 12th Light Dragoons. On the 30th of June, 1791, he was promoted to a Company in the 58th Foot; and, on the 31st of October, 1792, obtained a troop in the 18th Light Dragoons.

At the general election, which occurred during the summer of 1790, Captain Wellesley was returned to the Irish Parliament for Trim, a borough whose patronage belonged to the house of Mornington. His personal exterior must have been very different from what those who have only seen him in his after life would imagine. Sir Jonah Barrington describes him as "ruddy-faced and juvenile in appearance;" adding, "that he was popular among the young men of his age and station;" and, alluding to his parliamentary *début*, he observes, "his address was unpolished; he spoke occasionally, and never with success; and evinced no promise of that unparalleled celebrity which afterwards he reached."

Soon after he had obtained a seat in Parliament, Captain Wellesley was placed as *aide-de-camp* upon the staff of the Earl of Westmoreland, the Viceroy of Ireland; and his professional career was also steadily progressive.

At this period the war of the Revolution was raging, and the Republican armies had been increased to nearly half a million of men. The extraordinary success which attended these raw and undisciplined levies roused the energies of Britain, and compelled her to prepare herself for a contest on which, not only her liberties, but her existence as an empire, were dependent.

The best means to interrupt this victorious march of Democratic power and principle on the Continent, the British Government decided would be by creating a political re-action in France itself, and, by a powerful demonstration from abroad, re kindle the smouldering flame of Royalty, which it was believed existed extensively, although it still continued dormant. To effect this object, a landing on the coast of Brittany was proposed, an expedition promptly fitted out, and the Earl of Moira appointed to the chief command.

Among other regiments that received orders of readiness for the coast of France, the 33rd was included. "Ardent as Lieutenant Colonel Wellesley was for an opportunity of meeting an enemy in the field, and that too in the command of a battalion, one cause alloyed his satisfaction, and occasioned him painful uneasiness. His circumstances were embarrassed—he wanted means to discharge his debts, and he determined not to quit the country and leave unsatisfied creditors. It is true, that his parliamentary privilege secured him from personal annoyance; but to have obligations he was unable to discharge, to one of his sensitive feelings, was intolerable. One course only was left, and without hesitation he adopted it. He called upon a gentleman with whom he had extensive dealings—Mr. Thomas Dillon—enumerated his debts, stated his inability to pay them, and proposed to allocate the whole of his disposable income for their discharge, so that they might be liquidated by degrees. The honourable proposition was accepted, and a power of attorney left with Mr. Dillon, that gentleman accepting a trust which he continued to hold until the last shilling of Colonel Wellesley's liabilities was discharged. Adversity tests principles severely. A man exempted from financial inconveniences can only conjecture how far his firmness would have enabled him to overcome, with scanty resources, a large amount of pecuniary embarrassment. Yet, he who was indebted to a tradesman for assistance, and by a rigid limitation of his personal expenses was enabled to pay off his debts, lived to be possessor of a princely income after, by the integrity of his name alone, supporting an army in the field, when his military chest was almost left without a guinea."

The intended descent on Brittany, however, was abandoned—the Duke of York's unsuccessful operations in the Netherlands obliging the Government to change the destination of the expedition; and, instead of proceeding direct to the coast of France, the troops were landed at Ostend.

The history of that unfortunate campaign we must pass over, and confine ourselves merely to the first affairs, in which Lieutenant-Colonel Wellesley had an opportunity afforded him, of displaying his ability in command of a battalion.

In an intended attack on the Republican army, immediately after clearing the village of Schyndel, the mounted pickets of the enemy were observed, drawn up upon a plain of considerable extent, skirted by a thick grove of fir trees. The English Dragoons advanced to drive them in, supported by two regiments of Guards, with the 33rd and 44th; the 12th and 42nd being held by Abercrombie in reserve. The French Hussars retired leisurely, and the British as boldly advanced, until the opening of a numerous artillery, which the Republicans had masked within the fir-wood, betrayed the immediate presence of the enemy in force, and, of course, rendered it necessary on the part of the assailants to fall back on their reserves. At first, the regressive movement was steadily effected; but, as the ground became more difficult, and the road narrowed, the light cavalry got mobbed with a household battalion, and the whole were thrown into confusion. The French Hussars advanced to charge, and, for a minute, the situation of the embarrassed troops was most alarming. Perceiving the disorder, Colonel Wellesley deployed the 33rd into line, immediately in rear of the household troops: opening his centre files, he permitted the broken cavalry to retire, and then closing up his ranks, occupied the road, and held the enemy in check. The French advanced with their usual confidence, and the 33rd, reserving their fire, waited coolly until the enemy were forming for a charge. At that moment the regiment received their Colonel's command, and delivered a close and searching volley, that fell with murderous effect into the crowded ranks of the Republicans; and the rapid and well-directed fusilade which was kept up, completed the enemy's repulse. In turn, the French were obliged to fall back in confusion; and the English retreat was accomplished without any further molestation, excepting a slight cannonade, that, from its distance, was ineffective.

Again, when the Republicans advanced suddenly on Meteren—held as an advanced post by the 33rd Regiment, a squadron of Hussars, and a couple of guns Colonel Wellesley highly distinguished himself.

Obliged to fall back for support upon the British lines, the impetuosity with which the Republicans came on, at first, bore down all opposition, and, for a moment, they obtained possession of the guns; but the remainder of the 33rd coming opportunely to his assistance, Colonel Wellesley was enabled to charge into the village, repulse the enemy, and retake the cannon; and, although pressed closely by the Infantry, and threatened by the Hussars, he succeeded, with trifling loss, in retiring upon the post of Geldermalsen, where, with the 42nd and 78th Highlanders, the 33rd maintained themselves, although efforts were repeatedly made by the Republicans, with fresh troops, to carry the place. Night ended the combat, and the French abandoned the attack, after sustaining a severe repulse from a force in every arm their inferior.

We have noticed at some length the first affairs in which Colonel Wellesley's talents were called into action. The school of war generally imposes a rough ordeal on the soldier, and the career of "the Great Captain of the Age" commenced under circumstances anything but encouraging to the military aspirant. The campaign in the Low Countries was marked by continued disasters—in the steps of the raw levies of the Republic, victory appeared to tread, and the military character of Britain had reached its lowest point.

In this season of defeat, could Wellesley have imagined that, in the zenith of their fame, it was reserved for him to stay that career of conquest, and win from the victors of an hundred fields, the laurels they had so profusely gathered? Such, however, was the case; and the commander of the worn-out rear guard in Holland, was destined to direct the closing charge at Waterloo!

"Between Napoleon and Wellington many circumstances of early life are strongly coincident: their birth in the same year—their education at the same schools—and the commencement of their military career—were nearly contemporaneous. The influence which each had on the fortunes of each other would be a curious speculation. What might have been the present state of Europe, had Napoleon perished a nameless man, in tracing out his first battery at Toulon, or Wellington as ignobly died, the leader of a broken host, among the swamps and dykes of Holland!"

After the army had returned to England, and the 33rd had been rendered fit for service, an order was issued for the regiment to embark for the West Indies; subsequently its destination was changed; and in the April of 1796, the 33rd sailed for India, and, after a stop at the Cape of Good Hope, reached Calcutta early in the following February.

That Colonel Wellesley commenced his Indian career under most favourable auspices, may be inferred from his brother (Lord Mornington) having been selected to the Chief Government. The appointment was a proud but a dangerous distinction, for there never was a period in the history of Britain when her salvation rested so entirely on the firmness and sound judgment of her Executive. Embroiled with half the Continent—still writhing under the loss of America—anarchy spreading rapidly abroad—sedition working busily at home—her colonies everywhere endangered; all these, in themselves, sufficiently alarming, sank before one mightier dread; and that was occasioned by the precarious situation in which her eastern dominions were placed. Tippoo Sultaun was endeavouring to influence Zemaun Schaw to make a diversion on the northern frontier of the English territory, and pressing the Mahratta Powers to join the league, and make common cause against the British. Scindiah was notoriously devoted to the French; and, of course, the Court of Deeoua was unfriendly. The Rajah of Berar was more than suspected of disaffection; and Holkar, if not a declared enemy, could not be regarded as a friend. But, although that the British interests in India were threatened on many points, the great cause of alarm centred in the Capital of Mysore. The Sultaun was a deadly and a dangerous enemy. Taught from a child to detest the English, he seemed to have inherited, with the Musnud, his father's hatred of the British name. The war which Hyder had commenced, Tippoo continued, until, deprived of foreign assistance by the Treaty of Paris, he was obliged to accept terms which he had formerly declined—but the splendid success that attended the invasion of the Mysore, in 1792, while it reduced his resources one-half, confirmed him in an undying antipathy to the conquerors.

The Sultaun continued to pursue his usual duplicity in negotiation with the Governor General, while at the same moment he was actually in correspondence with Buonaparte at Cairo. But his designs had been long since penetrated. The season, in which operations in the Mysore country should commence, had already set in. No reply whatever had been vouchsafed to the last letter of Lord Mornington, and as the reduction of Seringapatam had been determined upon, the failure of Lord Cornwallis in 1791, from the sudden rising of the Cauvery, induced the Governor General to take a decisive step, and issue a declaration of war. This was accordingly done, on the 22nd of February, 1799.

On the advance of the grand army towards his capital, Tippoo Sultaun endeavoured to impede the progress of the invaders, and on the 6th of April, made an unexpected attack on an advanced brigade at Sadaseer, but was severely repulsed.

Near Mallavilly, on the 27th of March, the Mysore army were discovered in position—an action ensued—and Tippoo was again defeated. On this occasion the 33rd regiment behaved with its usual gallantry. Among the Mysore troops the Kerim Cutcheris, the Sultaun's favourite cushoon, was particularly distinguished. Coming boldly forward, and advancing in excellent order, it halted in front of the 33rd, and coolly delivered its fire. The volley was returned with effect, and Colonel Wellesley's regiment lowered their bayonets and advanced. This imposing movement European troops have rarely withstood—Asiatic never. The Mussulmans wavered broke, and turned, while Floyd's cavalry dashed into their disordered ranks, and accomplished with the sabre what the bayonet would have inevitably effected.

On the evening of the 1st of April, the allied army halted within four leagues of Seringapatam, the Sultaun falling back upon the fortress, and contenting himself with annoying the pickets with musketry and rockets, from broken ground on which he had formed a strong line of posts in front of the city. The annoyance was severely felt, and it was deemed advisable to dislodge the enemy from the enclosures.

The command of the troops was given to Colonel Wellesley; and the 33rd and 2nd Bengal regiments, with the 19th and two battalions of sepoys, under Colonel Shaw, assembled at nightfall, and advanced, the one against the tope, and the other to seize the aqueduct and ruined village. Both these services were partially achieved; Colonel Shaw carried and held the village, and Colonel Wellesley forced the enclosure of the tope. The enemy, anticipating the attack, had, however, strengthened their posts, and immediately opened a tremendous fire of musketry and rockets. The night was extremely dark; and the interior of the tope everywhere intersected with canals for irrigating the betel plants, confused the assailants, and in the deep obscurity rendered any advance impracticable. No alternative was left but to retire the troops, and remove them out of fire. Unfortunately, twelve of the grenadier company of the 33rd lost their way, and were made prisoners; and Colonel Wellesley, who was far advanced in the tope, was struck on the knee by a spent ball, and narrowly escaped falling into the hands of the enemy, having wandered for several hours in the darkness before he could regain the camp.

We allude to this affair the more particularly, because the true causes of the attack not having proved successful, were neither fully understood nor fairly represented. The failure at Sultaun-pet, however, has the useful result; for it decided—had any doubt existed—the time on which the assault upon the city should be given. Had Seringapatam being assailed at night, it would, in all human probability, have turned out a sanguinary failure—and the reduction of Asseerghur, and the storm of Bhurtpoor proved afterwards how desperately an Indian fortress can be defended.

The next morning the attack was renewed in broad daylight, and on this occasion Colonel Wellesley was successful, and the enemy were deforced, with loss. A few days afterwards Seringapatam was carried by assault, its truculent master perishing, as he so well deserved, in the *melée*, among a crowd of slaughtered Mussulmans.

We may remark, *en passant*, that the capital of Mysore fell through the stupid folly of Asiatic pride. Tippoo's eternal phrase was, "Who shall take Seringapatam?" "Obstinate to all advice, he took no means to construct interior defences; and, had he been counselled by Meer Ghoffar and his French engineers, and showed himself less a fatalist, and more a soldier, removed his scaffolding, and retrenched the breach, the assault upon the city, on the 4th, could never have succeeded, and the reduction of Seringapatam would have cost more blood than Badajos, Rodrigo, or San Sebastian."

PARTITION OF THE CONQUERED DISTRICT.—COMMAND IN THE MYSORE.

After the capture of the city, a Commission, of which Colonel Wellesley was a member, was nominated by the Governor-General, to partition the conquered districts among the allies, according to a pre-existing treaty, and appoint a successor to the vacant Musnud. With the inauguration of the youthful Rajah, the labours of the Commission terminated, and Colonel Wellesley resumed the command in the Mysore, to which he had been officially gazetted, on the 11th of September, 1799.

Here, the conciliatory system adopted towards the vanquished gradually removed the prejudices and dislike they had at first evinced towards the conquerors. Colonel Wellesley's active superintendence, discernment, impartiality, and decision, in the arduous and important duties of the civil, as well as the military administration of his command, were such as to have fully warranted his brother's judicious selection, and deserved and obtained the gratitude of the conquered people.

The Mysore, with the exception of the eastern districts, had been generally pacified, and all bore the semblance of returning tranquillity, when, suddenly, the quiet of the country was interrupted, and the romantic appearance of a singular individual caused an alarm, as serious as it had been unexpected.

On the capture of Seringapatam, several prisoners were found in the dungeons of Tippoo Sultaun—a brother of his own amongst the number—and they were at once liberated, without any inquiry being made as to the causes of their incarceration. One of the captives thus delivered from a hopeless bondage—for such, dependant on a tyrant's caprice, has commonly proved—was a Mahratta trooper, called Dhoondiah Waugh. He was a nameless man, one who had entered the service of Hyder, deserted at his death, became a freebooter, committed sundry depredations in the Mysore, was fool enough to listen to the false promises of Tippoo, returned, was employed, suspected, imprisoned, made a Mussulman, and then left to perish in irons and a dungeon, by the greater ruffian of the twain. At the capture of the fortress, his fetters were stricken off, and Dhoondiah lost no time in leaving the capital of the Mysore "many a coss behind him."

In a disbanded army there were many spirits like himself, and Dhoondiah Waugh found no difficulty in recruiting a numerous troop. He had already gained a robber reputation—generally a first step in Eastern history to the foundation of a throne. Dhoondiah was a bold and dangerous adventurer; cruel, sordid, crafty, with great personal courage, and some little military skill. In a very short time the number of his banditti had increased to an extent that rendered this daring marauder more to be dreaded than despised.

DHOONDIAH WAUGH.

Among the first of the freebooter's exploits, was an incursion into the Bednore Province, from which he levied heavy contributions and accompanied robbery by every species of savage cruelty. Dhoondiah Waugh, who had elevated himself to the throne under the unpretending title of "King of the Two Worlds," in a brief space made himself master of several towns and hill forts, while crowds of disbanded soldiers flocked to the standard of the daring adventurer. At last it became imperative on the British Commander to crush "The King," and Colonels Stevenson and Dalrymple marched in pursuit of him on the 21st of July.

The expedition was successful, and a part of the marauders were overtaken and cut to pieces. Dhoondiah with difficulty escaped, and crossing the Mahratta frontier, which the English generals respected, the freebooter calculated on being permitted to remain in security there. But here he was assailed by Gookhah, a commander of the Peshwah; his followers dispersed, his guns, elephants, and bullocks captured; himself escaping by flight to the mountains, attended by a handful of banditti. Of what had afterwards befallen the defeated monarch, nothing for a time was known, and the general belief was, that the King of Two Worlds, had taken his departure to a third one.

Nearly a year elapsed—the Mysore was tolerably quiet, and, anxious to achieve its pacification, Colonel Wellesley declined an overture made him by his brother, of taking a joint command of an expedition preparing to attack the Dutch possessions in Batavia. At this period the Mysore was startled by the sudden intelligence that Dhoondiah Waugh had re-appeared in strength more formidable than ever, and in conduct and design, even more audacious than before he had been defeated on the Tumboodra.

It was full time for the Commander-in-chief of the Mysore to turn his serious attention to the marauder, for one of his intended operations was to surprise Colonel Wellesley while hunting. His old antagonist, Gookiah, had attacked him, and been defeated; and Dhoondiah, every hour, was becoming more formidable. Accordingly, preparations were made to "kill and not scotch the snake," and, with a sufficient force, Colonel Wellesley proceeded to arrest the career of an adventurer, which, if suffered to proceed unchecked, might prove dangerous to a country but partially tranquillized, like the Mysore provinces.

Passing over the successful operations by which Dhoondiah's camp was surprised, and all that it contained taken, by the allied Cavalry, we shall come to the final affair which closed the history of this daring brigand, and the career of two Worlds without a successor. A letter addressed to Major Munro, by Colonel Wellesley, details the particulars; and the light and sketchy style then adopted by the Great Captain, forms a striking contrast to the terse and laconic character of his correspondence in after life The letter is dated—

"Camp at Yenulpurry, Sept. 11, 1800.

"I have the pleasure to inform you that I gained a complete victory yesterday, in an action with Doondiah's army, in which he was killed. His body was recognised, and was brought into camp on a gun attached to the 19th Dragoons. After I had crossed the Malpoorba, it appeared to me very clear that if I pressed upon the King of the Two Worlds with my whole force, on the northern side of the Doaub, his Majesty would either cross the Toombudra with the aid of the Petan chiefs, and would then enter Mysore, or he would return in Savanore, and play the devil with my peaceable communications. I therefore determined, at all events, to prevent his Majesty from putting those designs into execution; and I marched with my army into Kaungherry. I sent Stevenson towards Deodroog, and along the Kistna, to prevent him sending guns and baggage to his ally, the Rajah of Soorapoor; and I pushed forward the whole of the Mahratta and Mogul cavalry in one body between Stevenson's corps and mine.

"I marched from Kaungherry on the 8th, left my infantry at Nowly, and proceeded on with the cavalry only; and I arrived here on the 9th, the infantry at Chinnoor about fifteen miles in my rear.

"The King of the World broke up on the 9th from Malgherry, about 25 miles on this side of the Raichoor, and proceeded towards the Kistna; but he saw Colonel Stevenson's camp, returned immediately, and encamped on that evening about nine miles from hence, between this place and Burmoor. I had early intelligence of his situation, but the night was so bad and my horses so fatigued that I could not move. After a most anxious night I marched in the morning, and met the King of the World with his army, about 500 horse, at a village near Canahgull, about six miles from hence. He had not known of my being so near him in the night—had thought that I was at Chinnoor, and was marching to the westward, with the intention of passing between the Mahratta and Mogul cavalry and me. He drew up, however, in a very strong position as soon as he perceived me; and the victorious army stood for some time with apparent firmness. I charged them with the 19th and 25th Dragoons, and the 1st and 2nd Regiments of Cavalry, and drove them before me till they dispersed, and were scattered over the face of the country. I then returned and attacked the Royal camp, and got possession of elephants, camels, baggage, &c. &c., which were still upon the ground. The Mogul and Mahratta cavalry came up about eleven o'clock, and they have been employed ever since in the pursuit and destruction of the scattered fragments of the victorious army.

"Thus has ended this warfare; and I shall commence my march in a day or two towards my own country. An honest Killadar of Chinnoor had written to the King of the World by a regular tappal, established for the purpose of giving him intelligence, that I was to be at Nowly on tue 8th, and at Chinnoor on the 9th. His Majesty was misled by this information, and was nearer me than he expected. The honest Killadare did all he could to detain me at Chinnoor, but I was not to be prevailed upon to stop, and even went so far as to threaten to hang a great man sent to show me a good road to a different place. My own and the Mahratta cavalry afterwards prevented any communication between his Majesty and the Killadar."

A circumstance most creditable to the humanity of the victor deserves to be recorded. When the baggage of the freebooter was overtaken, a beautiful boy of four years old was found and brought to Colonel Wellesley's tent. His name was Sukbuth Khan, and he proved to be the favourite son of Doondiah. Not only did Colonel Wellesley afford his protection to the orphan, but, on leaving the East for Europe, he deposited a large sum of lmoney with Colonel Symmonds to defray the expenses of his future maintenance and education. Sulabuth grew up a handsome and intelligent youth, was placed in the service of the Rajah of Mysore, and there he continued till his death.

APPOINTMENT AT TRINCOMALEE.

In the meanwhile, the attempt on the Dutch possessions was abandoned; and Colonel Wellesley was appointed to a new appointment at Trincomalee, from which place, however, he removed the troops to Bombay. The Governor General pressed his brother to accept a command under Sir David

BATTLE OF TALAVERA.

Baird, of the army directed to reach Egypt through the Desert; but fever prevented him from accompanying the expedition, and subsequently he was re-appointed to the Government of the Mysore.

It is said that Colonel Wellesley painfully regretted the untoward event which prevented him from accompanying the Egyptian expedition. When he did, the page of destiny was closed; and he little dreamed of that brilliant career which lay immediately before him. The tranquillity of the East was overclouded again—a formidable hostility to British interests had been gaining strength among the Mahrattas, and India was once more hurrying to the customary termination of Oriental diplomacy—an appeal to the sword.

INVASION OF THE MAHRATTA COUNTRY.

The progress of Indian intrigue, which led to subsequent hostilities, must be hastily passed. Lord Mornington decided on invading the Mahratta country and on the 26th of April, 1803, Colonel Wellesley had been gazetted a Major-General, and was appointed by Lord Mornington to the command of a division, which was intended to form an advanced corps to the army of Madras, then on its march towards the banks of the Toombuddra.

By extraordinary exertions, General Wellesley reached Poonah. On the 13th of May, the Peshwah entered the capital, and it was hoped that Scindiah would return quietly to his own country. This hope was vain; Scindiah and the Rajah of Berar, who were together in the field, made a menacing movement towards the frontier of our ally, the Nizam. Information was also received of a secret and active correspondence between Scindiah and Holkar; and it was privately known that a league hostile to the British was on the eve of being concluded.

Scindiah, having been required to retire behind the Nerbudda, and separate his troops from those of the Rajah of Berar, evaded the demand, under the usual pleas used in Eastern diplomacy. General Wellesley, who only waited the conclusion of the negotiation, on learning that the envoy, Colonel Collins, had quitted Scindiah's camp, instantly took the offensive, and advanced upon Ahmednuggur.

This fortress is one of the strongest in India, built of solid stone and chunam, surrounded by a deep dry ditch, with large circular bastions at short intervals, and armed with three or four guns in casemated embrasures, with a terrace above, and loop holes for musketry. The bastions are usually lofty; the curtains short and low, with loop-holes in their narrow ramparts for musketry. The guns (some sixty pieces) upon the bastions were numerous, ranging in their calibre from twelves to fifty-twos; but the casemates were too confined to allow their being effectively employed. The glacis was so abrupt as to cover nearly thirty feet of the walls, affording shelter for an enemy, if they could only get close to the place.

This formidable place of arms was carried by assault in the most gallant style imaginable—and on the 12th, the surrender of the fort followed that of the city. The reduction of such a place was certainly a most gallant exploit, and "Gookiah, a Mahratta chief, residing in our camp," says Colonel Nichols, "with a body of horse, wrote thus to his friends at Poonah—'These English are a strange people, and their General a wonderful man. They came here in the morning, looked at the Pettah walls, walked over it, killed all the garrison, and returned to breakfast! What can withstand them?'"

General Wellesley continued his operations. On the 26th he was reinforced by the first battalion of the 10th regiment under Major Dallas, who had escorted safely from Bellary, two thousand bullocks loaded with supplies, with three lacs of pagodas, for the use of the army. The march had been made in nineteen days without a halt; and the opportune arrival of the convoy enabled the English Genera to continue his advance towards Aurungabad, which place he entered without opposition on the 29th.

Scindiah, on finding that Aurungabad had fallen made a movement, as

SPANISH GUERILLAS.

THE STORMING OF BADAJOZ.

PASSAGE OF THE DOURO.

if to threaten Hyderabad; and, for the double purpose of protecting that city and securing large convoys on their route to join his army, General Wellesley, by marching on the eastern bank of the Godavery, effected these important objects. Colonel Stevenson was also actively employed. He carried the fort of Jaulna by assault; and, by a night attack, dispersed a considerable body of the enemy. Hitherto the confederated chiefs had only hung upon the flanks of the English, with an immense cavalry force, supported by an inconsiderable body of matchlock men; but now they were joined by sixteen battalions of regular infantry, and a train of artillery, amounting nearly to one hundred guns; the whole *corps d' armée*, at a moderate computation, exceeding fifty thousand fighting men.

The confederates had encamped at Boherdun, and it was determined that the corps under General Wellesley and Colonel Stevenson should make a combined attack upon them without delay. Two routes, running east and west, led through the hill country between Budnapoor and Jalna; and as the defiles were narrow and difficult, it was arranged that Stevenson should move by the western, and Wellesley by the eastern line, and then, with united forces, fall upon Scindiah and his confederates.

BATTLE OF ASSAYE.

The position of the allied chiefs extended from Boherdun to the village of Assaye, having the Kaitna in their front; and, from the steepness of its banks, that river was impassable to carriages, except at the fords of Peepulgaon and Warsoor. Nothing could be more picturesque than the appearance of the Marhatta camp—nothing more imposing than the multitudinous force, drawn up in order of battle. "The sight was enough to appal the stoutest heart." Thirty thousand horse, in one magnificent mass, crowded the right; a dense array of infantry, powerfully supported by artillery, formed the centre and the left; the gunners were beside their pieces, and a hundred pieces of cannon in front of the line, stood ready to vomit forth death upon the assailants. Wellesley paused for a moment, impressed, but not daunted, by the sight. His whole force, as Colonel Stevenson had not come up, did not exceed eight thousand men, of whom sixteen hundred were cavalry; the effective native British were not above fifteen hundred and he had only seventeen pieces o cannon.

On a rapid *reconnaissance*, General Wellesley, with excellent judgment, changed his design of attacking the right of the Mahratta army, and determined to fall on its left, which was entirely composed of infantry. The decision was correct. Scindiah's left was formed on a flat peninsula, between the Kaitna and the Juah—the surface was inconsiderable—the enormous cavalry masses had no room to act; and, moving by his left, the English General forded the river at Peepulgaon and deployed his infantry, under a heavy fire of the enemy's artillery.

"The order of battle being thus skilfully changed, the infantry of Scindiah was compelled to present a new front—and they done so with greater ease than was expected. The line they now formed reached with its right up to the Kaitna, and its left rested upon the village of Assaye, on the Juah. The front now presented by the enemy was one vast battery, especially towards the left—so numerous and weighty were the guns, and so thickly were they disposed near the village. The fire was rapid, furious, and terrible in execution; the British guns, few in number, opened as the line advanced but were almost on the instant silenced. Their gunners dropped fast, and the cattle fell killed or lacerated beside them. With the fierceness of the struggle, and the fearfulness of the hazard, the undaunted spirit of the General rose. He at once abandoned the guns, and directed an advance with the bayonet. With the main body, he soon forced and drove the enemy's right, possessing himself of their guns by a resolute charge."

To support this daring movement, the 74th Regiment pressed orward, crossing a space of ground swept like a glacis by the fire of the Mahratta cannon. and although this weak battalion lost men by twenties, still its forward movement was continued; and, though the line was severed in many places by showers of grape, it never receded a single inch, but still maintained its ground.

Perceiving its disorder, a cloud of Mahratta horsemen stole round the enclosures of Assaye unperceived, and charged furiously into ranks already half destroyed. The moment was most critical. The Mussulman sabres were crossing the bayonets of the 74th, and "feeble and few, but fearless still," that gallant regiment was desperately resisting. "Colonel Maxwell, who had watched the progress of the fight, saw that the moment for action had arrived. The word was given—the British cavalry charged home. Down went the Mahrattas in hundreds, beneath the fiery assault of the brave 19th, and their gallant supporters, the Sepoys; while, unchecked by a tremendous storm of grape and musketry, Maxwell pressed his advantage, and cut through Scindiah's left. The 74th and the Light Infantry rallied, reformed, pushed boldly on, and the second line coming forward to their support, completed the disorder of the enemy, and prevented any effective attempt to renew a battle, the doubtful result of which, was thus in a few minutes decided by the promptitude of that well directed charge."

Any subsequent attempts to retrieve the battle by Scindiah were unavailing. The 78th, which had been kept in hand, stormed the village; and Maxwell's cavalry, whohad re formed their ranks, dashed through the broken infantry of the Mahrattas, while it was endeavouring to form on a fresh column; and the whole, reduced to a mingled mob of all arms, were hurried in wild confusion from the field. "Never was a rout more complete. The sun, at noon, had shone on a proud array of fifty thousand men, drawn up in perfect order; he set upon a broken host, flying in dispersed bodies from a field on which the whole *matériel* of an army had been abandoned."

It has been asserted that General Wellesley was blameable in hazarding an action with such enormous force, and without the assistance of the remainder of his troops, who were advancing under Colonel Stevenson; but, everything considered, the course he adopted, bold as it may appear, presented the best chances of proving ultimately successful. General Wellesley was deceived by his Hircarrahs; and, instead of the enemy being twelve miles distant at Boherdun, by the extension of their line eastward, they were within six miles of him at Assaye. It was only, and when in the presence of the enemy, that the mistake in his information was discovered; and had he then attempted to retire upon Naulliah, he must have fallen back exposed to the cavalry, and thus sustained a considerable loss, besides endangering his baggage, which was but weakly guarded. It is true that, when relative numbers are considered, Wellesley, becoming assailant at Assaye, looks like an act of temerity difficult to justify; but, situated as he was, "the most audacious course was, in such circumstances, the most prudent;" and if the report of the prisoners could be believed, an engagement

WATERLOO.—THE CHATEAU OF HOUGOMONT.

was inevitable, for Scindiah had determined on attacking, when he earned that Stevenson had been detached, and that, consequently, he should have but half his enemies to encounter.

LAKE'S VICTORIES.

The success of the British arms was not at this time confined to the Deccan. Lord Lake's brilliant campaign in the north of India, annihilated the French power on the Jumna, and crushed the influence Scindiah had acquired over the native princes, and which he had both inclination and ability to have turned to mischievous account. The brilliant succession of Lake's victories would require a history for themselves—the defeat of Perron —the storm of Allighur—the capture of Delhi and Agra—and the crowning triumph at Laswarree, formed an uninterrupted tide of conquest, which seldom has marked the good fortune of an individual. In Cuttack, Colonel Harcourt was eminently successful; while Colonel Woodington, with the Bombay army, added Gujerat to the British possessions in the Indies.

While these fortunate operations were in progress elsewhere, Wellesley had detached Stevenson's division to harass the scattered *debris* of the once magnificent army of Scindiah, and reduce the fortresses of Burhampoor and Asseeghur. On the 8th October, 1803, Wellesley moved his army in the direction of Aurungabad; but intelligence which he received at Phoolmurry, determined him to move down the Ghaut, and unite with Stevenson, who had reduced the fortresses against which he had been detached.

Believing that Scindiah had been so severely defeated, that, for a time, he would be rendered incapable of taking a formidable attitude in the field, General Wellesley selected the Rajah of Berar as the object he should strike at.

Having clearly ascertained that the Rajah's route tended to the banks of the Godavery, Wellesley pushed his corps through the Adjuntee Ghaut, and marching in a southerly direction, soon found himself in the vicinity of his enemy. An attack upon an enormous convoy advancing towards the British army, was gallantly repulsed by the native escort who protected it; and an armistice with Scindiah enabled the British General to turn his undivided attention to the Rajah of Berar.

BATTLE OF ARGAUM.

The Mahratta chief, however, had never intended to observe the conditions which were to lead to a suspension of arms, but continued in close communication with his ally—the Rajah. Wellesley, united with Stevenson, instantly decided on attacking both. On reaching Partenley, the Mahrattas had decamped; and a mass of cavalry, forming their rear-guard, was observed moving over the high ground beyond the village of Sersooley. The proud story of Argaum is best told in the words of the victor —

"The troops had marched to a very great distance on a very hot day, and I therefore did not think it proper to pursue them; but, shortly after our arrival here, bodies of horse appeared in our front, with which the Mysore cavalry and skirmished a part of the day; and, when I went out to push forward the pickets of the infantry to support the Mysore cavalry, and to take up the ground of our encampment, I could perceive distinctly a long line of infantry, cavalry, and artillery, regularly drawn up on the plains of Argaum, immediately in front of that village, and about six miles from this place, at which I intended to encamp.

'Although late in the day, I immediately determined to attack this army. Accordingly I marched on in one column, the British cavalry leading in a direction nearly parallel to that of the enemy's line; covering the rear and left by the Mogul and Mysore cavalry.

"The enemy's infantry and guns were on the left. Scindiah's army, consisting of one very heavy body of cavalry, was on the right, having on its right a body of Pindarries and other light troops. Their line extended above five miles, having in their rear the village and extensive gardens and enclosures of Argaum; and in their front a plain, which, however, was much cut up by watercourses, &c.

"I formed the army in two lines; the infantry in the first, and the cavalry in the second, and supporting the right; and the Mogul and Mysore cavalry the left, nearly parallel to that of the enemy's left. Some little time elapsed before the lines could be formed, owing to a part of the infantry of my division which led the column having got into confusion. When formed, the whole advanced in the greatest order; the 74th and 78th Regiments were attacked by a large body (supposed to be the Persians) and all these were destroyed. Scindiah's cavalry charged the 1st battalion 6th Regiment, which was on the left of our line, and were repulsed, and their whole line retired in disorder before our troops, leaving in our hands thirty eight pieces of cannon, and all their ammunition.

"The British cavalry then pursued them for several miles, destroyed great numbers, and took many elephants and camels, and much baggage. The Mogul and Mysore cavalry also pursued the fugitives, and did them great mischief. Some of the latter are still following them; and I have sent out this morning all of the Mysore, Mogul, and Mahratta cavalry, in order to secure as many advantages from this victory as can be gained, and complete the enemy's confusion.

"For the reason stated in the commencement of this letter, the action did not commence till late in the day; and, unfortunately, sufficient daylight did not remain to do all that I could have wished; but the cavalry continued their pursuit by moonlight, and all the troops were under arms till a late hour in the night."

This splendid success was followed by the capture of Gawilghur by storm, a place hitherto considered to be impregnable. Among the slain, were Beny Sing and the Killidar of the place. The former, had fought with all the desperation of a man resolved to die; and it was said, that several of the assailants had fallen by his hand. Having determined not to survive the capture of the fortress, Beny Sing issued orders that his wives and daughters should be immolated, and thus preserved from the humiliation of captivity. The Rajpoots, to whom the revolting duty was intrusted, from unskilfulness, or probably from a better cause, executed the task of murder but indifferently. Of the devoted victims three only were found dead; while the remainder had escaped unhurt, or received slight wounds, from which they subsequently recovered. From the conqueror they experienced a different treatment from that which they had been taught to expect. General Wellesley visited them himself, and ordered that every attention should be paid to those unfortunate women which their rank and distinction required.

Added to the decisive defeats of Assaye and Argaum, the capture of a fortress hitherto believed invulnerable, convinced the native princes that the sword would not avail, and that amicable terms must be renewed with the British Government. In two days, a treaty highly favourable to the victors was concluded with the Rajah of Berar—Scindiah's submission followed—and General Wellesley received from the Governor General and Court of Directors, the most flattering testimonials of their approbation.

RETIREMENT FROM THE COMMAND.

The rest of General Wellesley's Eastern career was marked with activity and intelligence, in following out the advantages which the gallantry of the Anglo-Indian armies had obtained. The inhabitants of Calcutta presented him with a sword—and a dispatch, received from the Colonial Office, while it announced General Lake's elevation to a peerage, intimated that his conqueror's brilliant services had been duly appreciated by his King. The letter, in alluding to General Wellesley, announces, that in consideration also, of the eminent and brilliant services of Major General Wellesley, his Majesty has been graciously pleased to direct that the insignia of the most honourable Order of the Bath should be transmitted to that officer, and that he may immediately evince his sense of Major-General Wellesley's merits and services, his Majesty has further directed that he shall be created an extra Knight Companion of that order, and that his creation and investiture shall not wait for a succession to a regular vacancy therein.

At this period, General Wellesley signified a wish to retire from his command in the Mysore. Disliked by the Peshwah, and occasionally annoyed by Government restrictions, he found that he could not comfortably carry out the measures which he wished. "Whether from these causes, or that he was prompted to return to Europe by that hidden law which so often makes the temporary vexations of men, selected by Providence for special purposes, the means of turning them into their appointed theatre, he felt the influence of that mysterious yearning, which, even in the midst of honours and power, prompts the destined actors in great events to pant for higher glories."

On the determination of General Wellesley being made known, many public bodies addressed him; and his old companions in arms, thus conveyed their flattering testimonial of admiration and respect.

"The officers who served with the division of the army under your immediate command in the Deccan, are desirous of presenting you a pledge of their respect and esteem; and, to express the high idea they have of the gallantry and enterprise that so eminently distinguish you, they request your acceptance of a golden vase, of the value of 2000 guineas, on which it is proposed to record the principal event that was decisive of the campaign in the Deccan.

"In conveying to you this mark of their esteem, they sincerely add their wishes for your future welfare and prosperity; and their hopes, that when the public claims on your talent allow you repose, this vase may give pleasure to your social habits, in bringing to your remembrance events that add so much to your renown."

On the 9th of March, General Wellesley issued a farewell address to the troops he had so honourably and fortunately commanded, and on the 18th, embarked on board the *Trident* man-of-war, and looked his last upon the scene of his earlier triumphs.

"In reviewing General Wellesley's Indian career, strong evidence will be found to prove how much the actions of military commanders are obnoxious to misrepresentation, and how little their most brilliant efforts are appreciated or understood. At Seringapatam, the night attacks upon the Sultaunpet were set forth under Wellesley as a defeat, and under Baird as an achievement, and yet, in point of fact, no analogy existed between them. To enter an undefended post is an exploit on which no soldier plumes himself; and, on the night of the 4th of May, the whole position did not contain a matchlock. On the 5th, the entire chain of posts, tope and aquaduct, village and enclosures, all were crowded with the Sultaun's best troops; and in the dense darkness an attack failed, which in daylight proved successful. Regarding the battle of Assaye, still more absurd remarks were hazarded; and the victor was accused of rashness in risking an engagement, when the most brilliant consequences resulted from its successful issue. Never were conclusions more fallacious than in asserting that Wellesley's attack at Assaye was a hasty or incautious experiment. It was a daring but a deliberate effort, for no alternative was left. Deceived by false intelligence, and once fairly in presence of the enemy, retreat was vain, and quick decision and iron nerve alone saved General Wellesley in this alarming exigency.

"To family influence, Wellington's earlier success has been mainly attributed; and none will deny that the patronage of his gifted brother first opened to the young soldier that arduous path which ultimately led to fame and fortune; but who shall assert that the outbreakings of a master-mind were not discernible from the first moment when he received an independent command; and that, in an affair which was little more than the destruction of a brigand, the same system of quick but cautious movement, the seizure of momentary advantage in attack, were not as clearly demonstrated in the suppression of the robber horde as when he defeated his scientific opponent at Salamanca, or, by beautiful combinations, achieved his triumph at Vittoria? To compare events like these may appear preposterous; but let it be remembered, that intuitive ability and military tact may be as fully exhibited in bringing off a picket when endangered as in conducting the retreat of a division.

"In Wellesley's earlier success, two circumstances connected with them strike us as being most remarkable; the enormous masses of organised men over whom his triumphs were achieved, and the scanty means with which these brilliant victories were effected. Small as the latter were, in examining the proportionate strength of his armies, his British soldiers did not exceed a fourth of the whole; and with his native troops—Mussulman opposed to Mussulman—Scindiah was routed at Assaye, and Gawilghur, esteemed hitherto impregnable, carried by assault."

RETURN TO ENGLAND.—MARRIAGE.

On his return to England, Major-General Wellesley obtained a command under Lord Cathcart, in an expedition intended for the Continent. The news of Austerlitz, however, induced the British Government to abandon all idea of creating any important diversion, and the fleet and army were recalled.

His next appointment was the command of the Sussex district; and on the death of Lord Cornwallis, the 33rd Regiment was given General Wellesley, he having been its Lieutenant Colonel for nearly thirteen years.

Shortly before he obtained his regiment, the Major-General was returned to Parliament for the borough of Rye. On the 10th of April, 1806, he married Catherine, third daughter of Edward Michael, second Earl of Longford. Two sons were the issue of this marriage—Arthur, Marquis of Douro, born the 3rd of February, 1807, in Harley-street, London; and Charles, born at the Chief Secretary's Lodge, near Dublin, 16th of January, 1808. Both entered the army at an early age, and both have attained the rank of Lieutenant Colonel.

CHIEF SECRETARYSHIP IN IRELAND.

In 1807, the Portland Administration came into power, and the Duke of Richmond succeeded the Duke of Bedford in the Irish Lieutenancy. The important situation of Chief Secretary having been offered to Sir Arthur Wellesley, he accepted it conditionally—that it should not impede nor interfere with his military promotions or pursuits; and, repairing immediately to Dublin Castle, he undertook the duties of his laborious and responsible appointment. Although the enactment of the Insurrection Bill conferred upon the Irish Secretary extraordinary powers, he appears to have used them with extreme moderation; and even his political opponents admitted, that his acts were generally distinguished by impartiality and good sense.

EXPEDITION TO DENMARK.

The treaty of Tilsit occasioned in England additional apprehension. It was determined that the navy of Denmark should not be added to the enormous resources of Napoleon; and, with immense dispatch and profound secrecy, the means were completed for obtaining its possession. A powerful fleet, accompanied by an army of 20,000 men, were got ready for service; the former commanded by Admiral Gambier, the latter by Lord Cathcart.

Sir Arthur Wellesley, who held the second command, on the landing of the army, was detached with a corps to disperse the Danish regular troops and militia, which had assembled in force at the village of Kioge. This service he effected with little loss, although a severe one was inflicted on the enemy. Many of the Danes were killed; 60 officers and 1100 men were taken prisoners; and ten pieces of cannon, and a quantity of small arms, were found upon the field.

The result of the expedition was that a fine fleet, consisting of sixteen sail of the line, nine frigates, fourteen sloops, and many smaller vessels, were brought away. The ships were laden with masts, spars, and cordage, besides which ninety transports were filled with naval stores; and, of five vessels on the stocks, two were taken to pieces and brought to England, and the remainder destroyed.

As every anecdote connected with the Iron Duke has interest, we may mention the following:—Lord Rosslyn had brought with him a favourite mare, which he rode occasionally during the operations in Zealand. At the time she proved in foal, and, after her safe return to England, a colt was the produce. The colt was named "Copenhagen," and that horse carried the Duke of Wellington throughout the glorious day of Waterloo. Full of honour and of years "Copenhagen" died in 1835, at Strathfieldsaye.

RESUMPTION OF THE IRISH SECRETARYSHIP.

On his return Sir Arthur received the thanks of both houses, and resumed his Irish Secretaryship. In Ireland then, as it is to day, it would be impossible to please both parties, and, while some approved and others condemned the measures he introduced, on one point all bore honourable testimony—and that was to the zealous and impartial manner with which the official matters under his control were carried out.

EXPEDITION TO PORTUGAL.—BATTLE OF ROLIEA.

But now the grand epoch was opening in his history. A large expedition, collected at Cork, had been intended, as report went, to act against the South American possessions of Spain but a more glorious scene was destined for its action. It was intended to operate on the Peninsula—and Wellesley was happily selected to command it.

On the evening of the 9th of April, 1808, the embarkation was completed; on the 12th, the fleet weighed anchor, and, on the 20th, Sir Arthur Wellesley reached Corunna, in the *Crocodile* frigate, and, after a conference with the Gallician authorities, proceeded to Oporto. There, on a consultation with the authorities, a landing in the Mondego was decided on, and, between the 1st and 5th of August, it was successfully accomplished.

The junction of General Spencer's corps—a landing effected on a difficult coast with great casualties—and the intelligence that two divisions were preparing at Ramsgate and Harwich, to strengthen the army destined for service in the Peninsula, were circumstances that omened well; still the satisfaction that Sir Arthur felt must have been considerably abated, by an announcement that Sir Hew Dalrymple was nominated to the chief command, and Sir Harry Burrard to the second. It was further intimated, that the ill planned expedition to the Baltic, under Sir John Moore, which had recently returned to England, had received orders of readiness for Portugal. Thus, three officers might be immediately expected in the country, all of whom were of superior rank to himself. But, as he was strongly enjoined to strike an immediate blow, if possible, and had the strongest discretionary powers as to the nature of the operations he should adopt, private feeling yielded at once to public principle, and the campaign in the Peninsula opened as it closed—in victory!

On learning that a British army had actually made a landing, Junot, who commanded in Portugal, determined to check the progress of the invaders. Laborde was detached from Lisbon, and Loison from Estremos, to unite at Leyria; while Junot remained to watch the capital, and prevent the insurrectionary movements which were dreaded.

But Wellesley's advance prevented the intended junction. Laborde fell back from Batalha to Roliça: and on that sweet spot, the first trial of strength between the conquerors of Europe and the deliverers of the Peninsula, took place, on the 17th August, 1808.

After describing the advance from Obidos, Sir Arthur Wellesley details the result of the first conflict on a soil, which, to British soldiers, will ever bring the proudest recollections:—

"Major General Hill and Brigadier-General Nightingale advanced upon the enemy's position; at the same moment Brigadier General Fane's riflemen were in the hills on his right, the Portuguese in a village upon his left, and Major-General Ferguson's column was descending from the heights into the plain. From this situation the enemy retired by the passes into the mountains with the utmost regularity, and the greatest celerity; and, notwithstanding the rapid advance of the British infantry, the want of a sufficient body of cavalry was the cause of his suffering but little loss on the plain.

"It was then necessary to make a disposition to attack the formidable position which he had taken up.

"Brigadier General Fane's riflemen were already in the mountains on his right; and no time was lost in attacking the different passes, as well as to support the riflemen as to defeat the enemy completely.

"The Portuguese infantry were ordered up a pass on the right of the whole. The light companies of Major-General Hill's brigade, and the 5th Regiment, moved up a pass next on the right, and the 29th Regiment, supported by the 9th Regiment, under Brigadier General Nightingale, a third pass; and the 45th and 82nd Regiments passes on the left

"These passes were all difficult of access, and some of them were well defended by the enemy, particularly that which was attacked by the 29th and 9th Regiments. These Regiments attacked with the utmost impetuosity, and reached the enemy before those whose attack were to be made on their flanks.

"The defence of the enemy was desperate; and it was in this attack principally that we sustained the loss which we have to lament, particularly of that gallant officer the Hon. Lieut.-Col. Lake, who distinguished himself upon this occasion. The enemy was, however, driven from all the positions he had taken in the passes of the mountains, and our troops were advanced in the plains on their tops. For a considerable length of time the 29th and 9th Regiments alone were advanced to this point, with Brigadier-General Fane's riflemen at a distance on the left; and they were afterwards supported by the 5th Regiment, and by the light companies of Major-General Hill's brigade, which had come up on their right, and by the other troops ordered to ascend the mountains, who came up by degrees.

"The enemy here made three most gallant attacks upon the 29th and 9th Regiments, supported, as I have above stated, with a view to cover the retreat of his defeated army, in all of which he was, however, repulsed; but he succeeded in effecting his retreat in good order, owing principally to my want of cavalry; and secondly to the difficulty of bringing up to the passes of the mountains with celerity a sufficient number of troops and of cannon to support those who had at first ascended The loss of the enemy has, however, been very great, and he left three pieces of cannon in our hands.

"I cannot sufficiently applaud the conduct of the troops throughout this action. The enemy's positions were formidable; and he took them up with his usual ability, and defended them most gallantly. But I must observe that, although we had such a superiority of numbers employed in the operations of this day, the troops actually engaged in the heat of the action were, from unavoidable circumstances, only the 9th, 29th, 5th, the riflemen of the 95th and 60th, and flank companies of Major General Hill's brigade; being a number by no means equal to that of the enemy. Their conduct, therefore, deserves the highest commendations."

There is no reminiscence of the Peninsula which the soldier recalls with more pride than the small but brilliant action of Roliça. It is true that the scale was limited, and that the mighty masses with which after battle-fields were crowded might be wanting for effect, but nothing could be more perfect than Wellesley's attack—nothing more scientific than Laborde's resistance. Other circumstances add to the interest of this affair. It was the first trial of the hero of Assaye opposed to European troops; and these also, troops that, with no absurd pretension, had claimed the title of invincible.

The day after the action, the arrival of General Anstruther, with a brigade from England, was announced, and, on the 20th, another reinforcement landed, under the command of General Acland. Thus strengthened, Sir Arthur had decided to march direct on Mafra, and turn the French position at Torres Vedras; but, unhappily, Sir Harry Burrard superseded him in the command of an enthusiastic army, whose onward march of victory was instantly arrested under the most unmilitary excuses. It was in vain, that Wellesley pointed out to his Fabian successor the impossibility of remaining quiet—because, if they did not advance to attack the enemy, the enemy would assuredly advance and attack them. It was in vain, that he represented the great advantage which the arrival of Sir John Moore landing in the Mondego, and cutting off Junot's retreat. Sir Harry was not to be convinced. He remained obdurate to every argument employed to induce him to adopt the offensive; and Wellesley returned to his camp, convinced "that the military incapacity of his superior officer would, when it paralysed early success, as it did that of Roliça, entail upon the expedition ulterior disaster and disgrace. It was otherwise decreed; and the decision of an enemy, wrested the laurel from Wellesley's brow, of which the timidity of a feeble-minded colleague would have robbed him."

BATTLE OF VIMIERA.

Junot, on being informed that Laborde had been defeated, hurried from Lisbon, and assumed the command. By a singular coincidence of circumstances, he found his own situation precisely similar to his rival's. Delay would involve ruin; he must strike at once, he had not provisions for a second day; and he had reason to apprehend that the arrival of every courier would convey the intelligence that Lisbon was in arms. With prompt decision, he determined to assail the invading army; and, after a long night-march, on the morning of the 21st of August, he halted a league from the English pickets.

In relative strength, the rival armies were nearly equal. Junot had three divisions of infantry, one of cavalry, and twenty-three guns. In the first arm, Wellesley was stronger, weaker in the second, and in artillery pretty equal. The French Marshal hurried his preparations to attack—and at ten o'clock the action of Vimiero commenced. An extract from the official report made by the successful General will best detail the result of this glorious affair —

"The enemy first appeared about eight o'clock in the morning, in large bodies of cavalry, on our left, upon the heights on the road to Lourinha; and it was soon obvious that the attack would be made upon our advanced guard, and the left of our position; and Major General Ferguson's brigade was immediately moved across the ravine to the heights on the road to Lourinha, with three pieces of cannon; Brigadier-General Acland and his brigade, and Brigadier General Bowes with his brigade. These troops were formed (Major General Ferguson's brigade in the first line, Brigadier General Nightingale's in the second, and Brigadier-General Bowes and Acland's in columns in the rear) on those heights, with their right upon the val ey which leads into Vimiera, and their left upon the other ravine, which separates there heights from the range which terminates at the landing-place at Maceira. On the last mentioned heights, the Portuguese troops, which had been in the bottom, near Vimiera, were; osted, in the first instance, and they were supported by Brigadier-General Crawfurd's brigade.

"The troops of the advanced guard, on the heights to the southward and eastward of the town, were deemed sufficient for its defence, and Major General Hill was moved to the centre of the mountain on which the great body of the infantry had been posted as a support to these troops, and as a reserve to the whole army; in addition to this support, these troops had that of the cavalry in the rear of their right.

The enemy's attack began in several columns upon the whole of the troops on this height; and on the left they advanced, notwithstanding the fire of the Riflemen, close to the 50th Regiment, and they were checked and driven back only by the bayonets of that corps. The second battalion, 43rd Regiment, was likewise closely engaged with them in the road which leads into Vimiera, a part of that corps having been ordered into the churchyard to prevent them from penetrating into the town. On the right of this position they were repulsed by the bayonets of the 97th Regiment, which corps was successfully supported by the second battalion of the 52nd; which, by an advance in column, took the enemy in flank. Besides this opposition given to the attack of the enemy on the advanced guard by their own exertions, they were attacked in flank by Brigadier General Acland's brigade, in its advance to its position on the heights on the left; and a cannonade was kept up on the flank of the enemy's columns by the artillery on those heights.

"At length, after a most desperate contes', the enemy was driven back in confusion from the attack, with the loss of several pieces of cannon, many prisoners, and a great number of officers and soldiers killed and wounded. He was pursued by a detachment of the 20th Light Dragoons, but the enemy's cavalry were so much superior in numbers that this detachment suffered much, and Lieutenant-Colonel Taylor was unfortunately killed.

"Nearly at the same time, the enemy's attack commenced upon the heights on the road to Lourinha. This attack was supported by a large body of cavalry, and was made with the usual impetuosity of French troops. It was received with steadiness by Major General Ferguson's brigade, consisting of the 36th, 70th, and 71st Regiments, and these corps charged as soon as the enemy approached them, who gave way, and they continued to advance upon him, supported by the 82nd, one of the corps of Brigadier-General Nightingale's brigade, which, as the ground extended, afterwards formed a part of the first line, by the 91th Regiment, and by Brigadier General Crawfurd's brigade and the Portuguese troops in two lines, advanced along the heights on the left. In the advance of Major General Ferguson's brigade, six pieces of cannon were taken from the enemy, with many prisoners, and vast numbers were killed and wounded. The enemy afterwards made an attempt to recover part of his artillery, by attacking the 71st and 97th Regiments, which were halted in a valley in which it had been taken. These regiments retired from the low grounds in the valley, to the heights, when they halted, faced about, and fired, and advanced upon the enemy, who had by that time arrived in the low ground, and they thus obliged him again to retire with great loss.

In this action, in which the whole of the French force in Portugal was employed, under the command of the Duke d'Abrantes in person, in which the enemy was certainly superior in cavalry and artillery, and in which not more than half of the British army was actually engaged, he has sustained a signal defeat; and has lost thirteen pieces of cannon, twenty-three ammunition waggons, with powder, shells, stores of all descriptions, and 20,000 rounds of musket ammunition. One general officer has been wounded (Brenier) and taken prisoner, and a great many officers and soldiers have been killed, wounded, and taken

Roliça and Vimiero gave glorious promises of the boundless gallantry of British soldiers, which future and greater fields confirmed. At the former, Lake died in the centre pass, at the head of his noble regiment (the 29th), Colonel Taylor (20th Light Dragoons) was shot through the heart, charging an overwhelming mass of French cavalry; and in humbler individuals the same enthusiastic gallantry was extensively displayed. The grenadier piper of the 71st, when brought to the ground with a broken leg, seated himself on a knapsack, and played the regiment into action. "I can na gang wi' ye, lads," exclaimed the gallant Highlander, "but de'il tak my saul, if ye shall want music!"

Like the victory at Roliça, that of Vimiero was robbed of its glorious results by the arrival of another imbecile commander—Sir Hew Dalrymple. Instead of pushing success, already gallantly obtained, to a glorious termination, and obliging the French army to submit to an unconditional surrender, Sir Hew and Sir Harry—"both slang names," as Cobbett said—entered into negotiations, which concluded in the Convention of Cintra.

RETURN TO ENGLAND.

On the completion of this infamous treaty—of which the victor of Roliça and Vimiero heartily disapproved—Sir Arthur threw up his command, and returned to England.

In the military history of Britain, the next epoch that followed was Sir John Moore's invasion of Spain, and subsequent retreat upon Corunna. The results of this ill advised operation unfortunate as it was, from its commencement to its close—had well nigh proved fatal to the liberties of the Peninsula, by extinguishing the martial spirit of England. Still, to keep the battle at a distance, appeared the best policy of the British Cabinet, while the folly of employing old school commanders was made manifest by the Court of Inquiry, to whose consideration the Convention of Cintra had been referred. After its conclusion, Sir Arthur Wellesley received the thanks of both houses for his conduct at Vimiero, and re assumed his duties as Chief Secretary of Ireland.

After Sir John Moore had crossed the frontier on his disastrous expedition, the command in Portugal devolved upon Sir John Cradock. When the evacuation had been actually decided upon, the unexpected rupture between Austria and France induced the English Ministry to reconsider the policy of withdrawing the army. Sir Arthur Wellesley was privately consulted by Lord Castlereagh; and an able memorandum he returned on the defence of Portugal, confirmed the wavering opinions of the English Ministry, and led to the adoption of that policy, which restored freedom to the Continent, and sealed the ruin of Napoleon.

The grand principle in Sir Arthur's *projet* was to raise the Portuguese military establishment to 30,000 regular troops and 40,000 militia; that this army should be assisted with money and *matériel*, and commanded exclusively by British officers. The obstacle to the plan was supposed to lie in the pride or jealousy of the Portuguese; but, fortunately for Europe, on this occasion the good sense of the Government prevailed, and overtures were made to Great Britain, which, on her part, were liberally accepted. By these arrangements the Portuguese army was taken in o English pay, placed under English officers, organised, and, on the same system, subjected to the same regulations, and in every respect made, for the time being, an integral portion of the British army. The chief command of the Portuguese army was of course to be vested in a British officer. Sir Arthur Wellesley declined it, and General Beresford eventually was appointed to a trust, which through out the subsequent campaigns, he executed with admirable good sense and admitted talent.

SECOND APPEARANCE AND COMMAND IN THE PENINSULA.

While Cradock was reinforced from England, and Beresford was actively engaged in organising the native army, Sir Arthur Wellesley was nominated Commander-in-Chief, and, with increased powers, he was, at this eventful crisis, despatched to the Peninsula. Having resigned his secretaryship in Ireland, and vacated his seat in Parliament, Sir Arthur embarked on board the *Surveillante* with his staff, left Portsmouth on the 16th of April, and, after a dangerous but quick passage, anchored in the Tagus, on the 22nd.

After an enthusiastic reception at Lisbon, Sir Arthur instantly applied himself to prepare the army for active operations; and having ascertained that the armies of Soult and Victor were too widely separated to permit of any unity of operations, Sir Arthur Wellesley decided on attacking the Duke of Dalmatia without delay; and, if successful in the north, to return rapidly to the Tagus, and, in conjunction with Cuesta's corps, fall subsequently upon Victor.

We must here remark, that full of interest as the minor operations which ended in the most glorious results of the Peninsular campaigns occasionally proved, of necessity, we must pass them over for want of space, and confine ourselves to the more star ling scenes of the mighty drama then enacting. For the proceedings of the Spanish armies—the history of the reign of usurpation—the details of the Iron Duke's foreign and home diplomacy—a reference must be made to military annalists. Our object shall be confined to placing the proud events which marked the career of the Great Captain of the Age succinctly before the reader, and giving in rapid review the greater occurrences which rendered the name of Wellington immortal.

PASSAGE OF THE DOURO.

With the Allied Commander, to plan and execute were synonymous. The army was speedily in march towards the Douro, and the initial movements gave happy promise of success. Unchecked by any opposition the enemy offered to his advance, on the morning of the 19th, the Allies reached Villa Nova, and the whole were ready for action.

But no general, and he victorious, was more painfully situated than Sir Arthur Wellesley. A river, deep, rapid, and three hundred yards across, rolled its dank waters in his front; a bold and vigorous enemy lay beyond it; no means of transportation were provided, and on the instant passage of that formidable stream more than success depended: for not only the enemy might elude his attack, but an isolated corps was endangered.—"Soult might retire unmolested into Galicia if he pleased, or by attacking Beresford singly, overpower him by superior force, and enter Beira. Danger often stimulates bravery to startling, but successful, enterprises; and in this emergency, Wellesley decided on as bold an effort as modern warfare parallels—the crossing of the Douro."

From the heights, which concealed his own troops, Sir Arthur Wellesley commanded an uninterrupted view of the country for miles around—and the Vallonga road at once fixed his attention.

Dust rose in thick clouds—baggage could be seen occasionally—and the march of Soult's column was readily detected. Directly opposite, and on the heights of Serra, a building of great extent encircled by a wall which surrounded aconsiderable area, was discovered.

The Seminary was particularly strong. It had but one entrance, and that communicated with the Vallonga road, and was secured by an iron gate. Could this edifice be occupied, Wellesley might open a passage for his army but where were means to be obtained by which troops could be thrown across the stream, and the seizure of that building effected? A barrier, to all appearance impassable, was unfortunately interposed. When no hope presents itself the most ardent spirit will yield. Before Wellesley rolled the Douro, and "Alexander the Great might have turned from it without shame!"

There is an air of romance in the means by which this singular difficulty was surmounted. Colonel Waters had been despatched, on what appeared a forlorn hope, of finding some means of transport. Fortune unexpectedly befriended him: a barber of Oporto had eluded the vigilance of Soult's patrols, and paddled his skiff across the river. Him the Colonel found in company with the Prior of Amarante; and the latter, having volunteered his services, the barber consented to assist, and with these unmilitary associates Waters crossed the stream, and in half an hour returned, unperceived, with several large barges.

The passage of the Douro, a fit pendent to the daring of Wellesley, at Assaye, is thus detailed in an extract from the victor's despatch —

"The ground on the right bank of the river at this ferry is protected and commanded by the fire of cannon, placed on the height of the Seuva Convent, at Villa Nova; and there appeared to be a good position for our troops on the opposite side of the river, till they should be collected in sufficient numbers.

"The enemy took no notice of our collection of boats, or of the embarkation of the troops, till after the first battalion (the Buffs) were landed, and had taken up their position under the command of Lieutenant-General Paget, on the opposite side of the river. They then commenced an attack upon them, with a large body of cavalry, infantry, and artillery, under the command of Marshal Soult, which that corps most gallantly sustained till supported successively by the 48th and 66th regiments, belonging to Major General Hill's brigade, and a Portuguese battalion of detachments belonging to Brigadier-General Richard Stewart's brigade.

"Lieutenant-General Paget was unfortunately wounded soon after the attack commenced, when the command of these gallant troops devolved upon Major General Hill.

"Although the French made repeated attacks upon them, they made no impression; and, at last, Major-General Murray having appeared on the enemy's left flank, on his march from Avintas, where he had crossed, and Lieutenant-General Sherbrooke, who by this time had availed himself of the enemy's weakness in the town of Oporto, and had crossed the Douro at the ferry between the towns of Villa Nova and Oporto, having appeared upon their right with the Brigade of Guards and the 29th regiment, the whole retired in the utmost confusion towards Amarante leaving behind them five pieces of cannon, eight ammunition tumbrils, and many prisoners.

From the Douro, which had witnessed his opening success, Wellesley advanced towards the Tagus, intending to co-operate with Cuesta's army, which occupied the banks of that river. The object was a united attack on Victor. Unfortunately, however, no unanimity in views or objects existed between the British and Spanish Commanders. "Whilst Cuesta desired, above all things, that the armies of the two nations should be united—that they should fight side by side, and follow up to the utmost any advantage which they might obtain, Sir Arthur Wellesley was guided by other motives, and restricted his designs to a narrower, but a much safer and surer field."

BATTLE OF TALAVERA.

After Cuesta's obstinacy had nearly proved fatal to the Allied army, on Joseph Buonaparte's advance, Wellesley took a position to receive battle at Talavera.

The town stands on the northern bank of the Tagus, the houses reaching down to the water's edge. The Allied armies were drawn up in line—the British on the left, extending from the town nearly to the Sierra de Gata, its extreme flank occupying a bold height near Alatuza de Segusella, having in its front a difficult ravine, and on its flank a deep valley—while to the Spaniards the right was assigned. Their battalions were stationed among olive groves, with walls and fences interspersed, and an embankment, running along the road, that formed an excellent breast-work, and rendered their position nearly unassailable. It was necessary to secure the point of junction, where the British right touched Cuesta's left; and, to effect this, ten guns were placed in battery on the summit of a bold knoll, with an English division to protect them, and a strong cavalry corps in reserve.

Talavera was rather a succession of sanguinary combats than what is termed a general action. The divisions of Lapisse and Ruffin crossed the Alberche, and advanced so rapidly on the Casa de Salinas, that the English General, who was at the moment in the house, had scarcely time allowed to enable him to mount and ride off. Victor, animated by the success of his first operation, followed Donkin with Villate's division, and the whole of his light cavalry and guns—while the Fourth Corps and French Reserve, which were directed against the right, sent their cavalry forward, to induce the Spaniards to unmask their line of battle.

On the advance of the French cavalry, after delivering a general volley, upwards of 10,000 of the Spaniards broke, and ran off the field. "The panic spread, and the French would fain have charged; but Sir Arthur Wellesley, who was at hand, immediately flanked the main road with some English squadrons. The ditches on the other side rendered the country impracticable, and the fire of musketry being renewed by those Spaniards who remained, the enemy lost some men, and, finally, retreated in disorder."

A night attack was made against the ridge upon the left, which Victor considered the key of the English position—and the sudden assault of superior numbers was at first successful, the British left was turned, and the height crowned by the enemy. General Hill, who had advanced to Donkin's assistance with the 48th Regiment, mistook the French for British stragglers, and rode hastily into their ranks. His brigade-major was shot dead, and his own horse seized by a grenadier: but the general shook him off, galloped down the hill, placed himself at the head of the 29th, led that regiment up the heights, and gallantly re tored the battle.

It was at this time so dark, that the blaze of musketry alone displayed the forms of the assailants. The leading company of the 29th poured in a volley when close to the bayonets of the enemy—and the glorious cheer of the British infantry accompanied the charge which succeeded. The rest of the regiment arrived in quick succession, and forming on the summit in close column, speedily drove everything before it. The enemy was pursued down the hill, abandoning the level ground on its top, thickly strewed with dead bodies or wounded men. No second attempt was for some time made to carry this most important point, and the 29th remained in possession of the ground, lying on their arms in the midst of fallen enemies

Soon after day-break the battle was renewed—Two heavy columns of chosen troops, the grenadiers of Lapisse's division, were formed in front of the height in question. "The formation was marked by a furious cannonade, under cover of which the columns pressed forward; and desperate and numerous were the efforts which they made to render themselves masters of the summit; but nothing could exceed the gallantry and steadiness of the brave men who opposed them. The brigades of General Tilson and R. Stewart were here, they permitted the enemy again and again to arrive within a few paces of the ridge, and then drove them back in admirable style with the bayonet, till, disheartened by so many repulses, they at last retreated altogether, leaving the ground covered with their dead.

"The fighting, which had continued without intermission from day-light, had produced an enormous loss of life; and, at nine o'clock, by a sort of tacit consent, each party ceased hostilities. The day was oppressively hot, a small stream flowed through the centre of the battle ground, and the soldiers of both armies hurried to the rivulet to obtain water. The men approached each other fearlessly, threw down their caps and muskets, chatted to each other like old acquaintances, and exchanged their canteens and wine-flasks. All asperity of feeling seemed forgotten. To a stranger they would have appeared more like an allied force, than men hot from a ferocious conflict, and only gathering strength and energy to recommence it anew. But a still nobler rivalry for the time existed; the interval was employed in carrying off the wounded, who lay intermixed upon the hard-contested field; and, to the honour of both be it told, that each endeavoured to extricate the common sufferers, and remove their unfortunate friends and enemies without distinction. Suddenly the bugles sounded, the drums beat to arms; many of the rival soldiery shook hands, and parted with expressions of mutual esteem, and, in ten minutes afterwards, they were again at the bayonet's point."

The assault upon the British centre, by Sebastiani's corps, renewed the battle, and added another to the French repulses. "The English regiments, pushing the French skirmishers aside, met the advancing column with loud shouts, and, breaking in on their front, and lapping their flanks with fire, gave them no respite, and pushed them back with a terrible carnage." Ten guns were taken; but, as General Campbell prudently forbore pursuit, the French rallied on their supports, and made a show of attacking again. Vain attempt! The British artillery and musketry played furiously upon the masses, and, a Spanish regiment of cavalry charging on their flank at the same time, the whole retired in disorder, and the victory was secured in that quarter.

Such incident added to the horrors of a battle-field. From the heat of the weather, the fallen leaves were parched like tinder, and the grass was rank and dry. Near the end of the engagement, both were ignited by the blaze of some cartridge papers, and the whole surface of the ground was presently covered with a sheet of fire. Those of the disabled who lay on the outskirts of the field, managed to crawl away, or were carried off by their more fortunate companions, who had escape l unhurt; but, unhappily, many gallant sufferers, with "mediciable wounds," perished in the flames, before it was possible to extricate them."

The most gallant and unsuccessful occurrence of the day, was a movement made by Anson's brigade; and, in attempting to charge French infantry formed behind a hidden ravine, the 23rd Light Dragoons were almost annihilated.

With a furious assault on the English Guards, the French efforts at Talavera ended—they came on with imposing steadiness, and they were bloodily repulsed.

At six o'clock the battle terminated. The French, covered by a tremendous fire of artillery, retired to their own position, leaving seventeen guns in the possession of the victors. The marvel is, that any trophy could be won. The English, worn out by fatigue, and literally starving, with now scarcely 14,000 men embattled, were incapable of further exertion; while their useless allies, though fresh and unharmaged, dared not to be employed, as they were not even to be trusted when behind banks and breastworks, and were utterly unequal to attempt the simplest evolutions.

The losses at Talavera were enormous. The British casualties amounted to 5423; the French to 7389. This amount is taken from the returns of Jourdan and Lamele; but it is generally asserted and believed that the French had 10,000 *hors de combat*.

The junction of the light troops, which had been despatched from England to reinforce the army in Spain, was effected under circumstances so highly distinctive of the chivalrous regiments which composed it, that we cannot pass it over. By an unparalleled exertion, the Light Brigade, consisting of the 43rd, 52nd, and 95th (Rifles), arrived on the 27th upon the battle-ground, and immediately took outpost duty. The regiments, after a march of twenty miles, were bivouacked for the night, when intelligence reached their commanding officer that Sir Arthur Wellesley was on the eve of a battle. After a short halt, the brigade got under arms, with a fixed determination to share the glory of the coming field. As they advanced, Spanish fugitives, hurrying off in crowds, informed them that the struggle was already ended, that the English army was totally defeated, and Sir Arthur Wellesley killed. "Indignant at this shameful scene, the troops hastened rather than slackened the impetuosity of their pace; and, leaving only seventeen stragglers behind, in twenty-six hours they accomplished a march of sixty-two English miles. To estimate this extraordinary effort made by these splendid regiments, it should be recollected that it was executed in heavy marching order, over a country where water was scarce, and under a burning sun. As a march, none on military record has exceeded it."

Whatever good consequences might have arisen from the victory of Talavera were speedily neutralised by the infamous conduct of the Spanish authorities. Starvation actually reigned in the British cantonments; sickness ensued; and the troops became so enfeebled that they could scarcely accomplish an ordinary march. To prevent his camp from becoming a mighty hospital, it must be instantly moved from the insalubrious neighbourhood of the Guadiana; and, in five marches, the army fell back upon the Portuguese frontier, and Badajoz was made head-quarters.

We have described Lord Wellington's habits when in the field, and we will follow him now into a period of inaction, but not of repose to him.

The duties of his bureau were manifold and laborious; and the few hours he could snatch from the confinement an extensive correspondence required were devoted to field sports, or consumed in visiting his hospitals. Early in October, he set out for Lisbon; and the object of that journey engrossed the undivided attention of the army. The general belief was, that its final departure from the Peninsula was an event not distant; and, indeed, all circumstances tended to strengthen this opinion. The melancholy state to which sickness had reduced the English battalions; the proven worthlessness of their Spanish allies, the astounding success which had attended the arms of Napoleon, and placed the ascendancy of France upon a pinnacle of strength it had never reached before, while his union with "a daughter of the Cæsars" to all appearance had established its solidity; all these things denoted that the abandonment of Portugal was an inevitable event, and that an army, brave and successful in every previous trial, must of necessity yield to a power no longer to be opposed, and decline farther contest with a nation "emerged victorious from eighteen years of warfare."

THE LINES OF TORRES VEDRAS.

But these conjectures were erroneous. To hold the country, and not

WATERLOO.—"UP, GUARDS, AND AT THEM!"

abandon it, was the object of his visit to the capital of Portugal; to plan the lines of Torres Vedras had been the object of his journey; and the ability that designed these extensive defences was only equalled by the promptness with which they were executed. If the architect of St. Paul's trusted for immortality to his works, Wellington might have safely rested a soldier's fame on his.

The line taken up by Lord Wellington to defend the Portuguese frontier formed the segment of a circle, of which the convex part was opposed to the quarter from whence the invasion was expected. Guards, Celerico Pinhel, and the west bank of the Coa, were its four main points; the Coa, with its tributary streams, flowing in front of the line along the greater part of its extent.

Ney had already invested Rodrigo, when Massena, on the 24th of June, took command of the grand army of Portugal. On the 25th, the French commenced breaching; and on the 11th of July, when the counterscarp was blown in, and the columns of assault were forming to carry a breach, over which carriages might have driven safely, the old Governor, Herasti, hoisted the white flag, and surrendered a fortress he had so admirably defended.

The fall of Rodrigo was followed by the action on the Coa, between the Light Division, under Craufurd, and a strong corps commanded by Soult. It was an affair most injudiciously brought on, as no results could justify the risk to which the division was unnecessarily exposed—and a more brilliant affair was never more idly nor unprofitably hazarded.

The siege of Almeida followed; and accident reduced a place in twenty-four hours which should have held out as many days. An unlucky shell exploded the grand magazine, destroyed the whole town, and made a breach in the place; blew all the guns, excepting three, into the ditch; destroyed the ammunition, excepting ten or twelve barrels of powder; and killed or wounded the greater part of the artillerymen.

The crisis of the campaign came on; Massena moved forward on Vesen, and Wellington retired by the left bank of the Mondego. Leaving Craufurd's division and the cavalry on the Crez, at Martagoa, the English General retired behind the Alva. Massena's intention to move direct on Lisbon was now apparent; and Wellington fell back, and took a position at Busaco.

BATTLES OF BUSACO AND BAROSSA.

On the 27th of September, Massena assailed the position of the Allied General. The French attack was made in five columns, and on two distinct points, about a league apart from each other. Regnier, with two columns, mounted the mill at Antonio de Cantara; and Ney, with three, in front of the Convent of Busaco. "Regnier had less difficulties to overcome, as the face of the Sierra by which he advanced was more practicable; and, favoured by the mist, his skirmishers were mingled with the light troops of the third division almost as soon as the pickets had discovered that the enemy were in motion. The Allies resisted vigorously, and the British artillery swept the face of the Sierra with a destructive storm of grape; but the French pressed forward, forced the right of the division back, threw a Portuguese regiment into disorder, and gained the crest of the ridge between Picton's and Leith's divisions. The enemy instantly endeavoured to secure the height they had won with their advanced battalions, and, with the remainder of the corps, pressed rapidly along the ridge of the hill. But in front, volleys of musketry checked them; their flank was torn by the fire of the British guns; while the 45th and 88th came forward with the bayonet, and, charging furiously, drove all before them, and forced the shattered column down the hill, 'the dead and dying strewing the way, even to the bottom of the valley.'"

The attempts on every part of the position were equally desperate, and equally unsuccessful. Scarcely a gleam of momentary promise had attended the efforts of the French—and the obstinacy with which they were continued, only added to the slaughter of the assailants. The losses were, consequently, disproportionate: while that of the Allies did not amount to 1300 *hors de combat*, the French casualties, on a moderate estimate, exceeded 5000.

The roar of battle ended; and, beyond now and then a dropping shot, Busaco was undisturbed, and nothing indicated the recent conflict but the melancholy tokens which mark "a foughten field." In front of the Light Division, the hill was thickly covered with the dead and dying; and permission was granted by Craufurd for the French to remove their wounded. That interval, honourable to the humanity of civilised warfare, was charitably employed on both sides; and French and English intermingled with perfect confidence and good humour, each seeking and taking off their wounded men, and occasionally offering a mutual assistance.

The victory of Busaco was never for a moment doubtful. All had been ably conceived—all was happily executed and, in the words of a staff offi-

WATERLOO.—"THE OLD GUARD NEVER SURRENDERS."

cer, "there was something exhilarating to a degree in the whole day of Busaco. As it advanced, a bright sun shone on the armies; no event had occurred to counteract the full tide of success attending the defensive warfare adopted by L.. Wellington; strength of position, with great firmness of purpose, had enabled the allies to repel very serious attacks with comparatively trifling loss; and the glacis of the mountain-barrier on which they stood was heaped with bodies of the enemy."

An immediate retreat upon the Lines of Lisbon succeeded; and there Wellington had justly calculated that, intact and unassailable, he should starve his opponent out. The result proved that his conclusion was correct. Massena, after lying six weeks in front of an impregnable position, was obliged to retire from before the Lines, and cross the Spanish frontier.

Two occurrences subsequently marked the progress of the campaign. The total defeat of Mendizabel's Spanish army under the walls of Badajoz, and Graham's superb action at Barosa—one of the noblest triumphs in Peninsular exploits.

Badajoz unfortunately fell; and to La Pena's villanous misconduct at Barosa, Jose de Imaz' treachery placed Spanish dependence below trust. With the last, the anecdote connected with his infamy is interesting, and we shall give it.

Rafael Menacho, a gallant old man, was Governor of Badajoz when Soult invested the city. In the personal direction of a sortie, to prevent the covered way from being crowned by the French, the brave Governor was killed by a cannon shot; and, unfortunately, a mercenary poltroon succeeded him. Never was a garrison more defensible. Of provisions and ammunition Imaz had an ample supply, and his garrison comprised 8500 effective men. The besiegers were sadly reduced by sickness and fatigue; the breach was impracticable, and the telegraph at Elvas informed him that Massena was in full retreat, and Wellington advancing to raise the siege—an assurance confirmed by a private letter, which a confidential messenger succeeded in delivering. "Imaz read the letter, and instantly surrendered; handing over, at the same moment, the intelligence thus obtained to the enemy."

"But national pride required that some honourable token of respect should be offered by the enemy, as an attestation of his bravery; and Imaz demanded and obtained permission that his grenadiers should defile through the breach. Alas! that *fête* was more difficult than he had imagined. The fracture in the escape was found too small, and Imaz was obliged to enlarge the opening himself. Not a French soldier would assist; they all stood looking on in silent contempt, while, with Spanish stateliness and in all the pomp of full-blown ignominy, the Governor of Badajoz marched out 9000 men, in the presence of a besieging force which did not much exceed the number of his own garrison!"

The fall of Badajoz concluded Soult's brilliant operations, and he resumed the siege of Cadiz. In fifty six days, the French Marshal had taken more prisoners than exceeded the effective strength of his whole corps, when he marched from Seville to commence his operations. He had placed 10,000 more *hors de combat*, reduced four fortresses, and obtained the mastery of Estremadura. "Yet, great and daring and successful as his operations had been, the principal object of his expedition was frustrated; for Massena was in retreat, and Lord Wellington's admirable combinations had palsied the hand of the conqueror."

The details of Massena's beautiful retreat from Portugal would be too tedious for a hurried memoir of his able opponent. Never did French generals exhibit greater daring and ability—and never did a pursuing commander test it more severely. The splendid affair at Sabugal wound up these gallant passages of arms; and also established what in military history had been held heretical before, namely—that infantry in line could withstand and repel the *colonne serre*, which won half the battles of the Revolution.

"We have given," says Lord Wellington, "the French a handsome dressing, and I think they will not say again that we are not a manœuvring army. We may not manœuvre so beautifully as they do, but I do not desire better sport than to meet one of their columns *en masse* with our lines. The poor 2nd corps, received a terrible beating from the 43rd and 52nd on the 3rd."

The severe repulse at Sabugal cost the French upwards of 1200 men. Regnier retreated on Rendo. On the 4th, Massena retired on Ciudad Rodrigo; and on the 5th, his rear-guard crossed the Spanish frontier, leaving Portugal without an invader.

The losses which Massena sustained in his unfortunate campaign may be faithfully collected from official data. When he entered Portugal, his army mustered 65,000 effective men; Drouet joined him, at Santarem, with 12,000; and, during his retreat, 9,000 troops of all arms reinforced him. Belmas, in the *Journal des Sieges*, says, that on re-entering Spain he could but muster 35,000 effectives, 2,000 cavalry only were in serviceable condition, and his artillery was reduced to 12 guns.

A rash, but most gallant encounter at Campo Mayor, was followed by a very brilliant cavalry affair at Usagre. Wellington determined to invest Badajoz; while Massena, to protect that fortress and relieve Almeida, advanced with an army, re-organised and reinforced, from Salamanca.

Wellington's effective strength was only 32,000 infantry, 1,500 cavalry and 42 guns; while Massena mustered 45,000 men, of whom 5,000 were splendid horsemen. Disproportioned as the strength of the respective armies was, the Allied General determined to risk a battle, rather than allow Almeida to be relieved, and with this intention took up ground on a table land between the Duas Casas and the Turones.

FUENTES D'ONORO.

The centre of the Allied position was in front of Alameda, the left flank

[illegible] AT HIS GRACE THE DUKE OF [illegible]

[illegible] OF THE ALLIED SOVEREIGNS [illegible]

resting on Fort Conception, and the right in the village of Fuentes d'Onoro; and it had this advantage, that "the French General could not, with any prudence, venture to march, by his own right, against Almeida, lest the Allies, crossing the ravine at the villages of Alameda and Fuentes d'Onoro, should fall on his flank, and drive him into the Agueda. Hence, to cover the blockade, which was maintained by Pack's Portuguese, and an English regiment, it was sufficient to leave the 6th Division near Fort Conception, and the 6th Division opposite Alameda. The 1st and 3rd were then concentrated on a gentle rise, about a cannon-shot behind Fuentes d'Onoro, where the steppe of land which the army occupied turned back, and ended on the Turon, becoming rocky and difficult as it approached the river."

On the 2nd of May, the French army moved from Badajoz, and crossed the Azava, while the Light Division, leisurely retiring, crossed the Dos Casas, and occupied Fuentes d'Onoro.

This lovely village had been alternately possessed by the Allies and the enemy; and, by a very singular good fortune, it had hitherto been respected by both. "It stands in a valley, on the left bank of the Dos Casas with rising grounds on either side. The road to Cuidad Rodrigo passes through the hamlet, and a morass extends on that side, until it is bounded by a thick wood; while, on the other, the ground undulates considerably, and the surface is rocky and uneven. There were many stone inclosures in Fuentes, which would yield good protection to the infantry that might be engaged in its defence; and the heights behind afforded a rallying point for troops, if forced from the lower village, and also a means of feeding them with reinforcements from the divisions posted in their rear. The upper part of the village stands upon the edge of the ravine, which rises boldly from the channel of the Dos Casas, and the old chapel and a few houses which crowned the height, were, from a situation of difficult approach, particularly defensible."

In giving a summary of the battle which ensued, it is necessary to remark, that in every arm Wellington was weaker than his assailant—in cavalry he was frightfully inferior; and, although the outline of the position was good, still it was most dangerous, as, had occasion required the Allied army to fall back, the narrow bridge at Castello Bom, was the only passage across the Coa by which artillery could be retired.

The assault on Fuentes d'Onoro was furiously made, and it was as fiercely repelled. Oppressed by a heavy cannonade, the lower village was gradually abandoned to the enemy, but the chapel and craggy eminence above it were desperately maintained. Loison redoubled his efforts; Wellington reinforced his hard-pressed battalions; and when night fell, the lower houses of Fuentes remained in possession of the French, and the upper village was occupied by British regiments.

Massena, on the 4th, determined to carry the opposite flank of the position, drove the Guerilla cavalry over the Turon, stormed the village of Poco Velho, and established his cavalry on the grand plateau of the position. In their weak state the British horsemen offered a most gallant, but unavailing, resistance, and, overpowered by numbers, they were obliged to fall back upon the infantry for protection. This appeared the crisis of the day—the certain opening to victory—and the mass of French cavalry instantly pressed forward.

With other troops a bloody defeat must have ensued; but at this fearful moment their own gallantry and discipline saved the British soldiers. Although surprised by the sudden rush of the Cuirassiers, the Chasseurs Britanniques threw themselves behind a broken fence, and maintained a rolling fire that fell upon the assailants with murderous effect, and checked the onward career of the enemy. At one place, however, the fury of the fight seemed for a time to centre. "A great commotion was observed amongst the French squadrons; men and officers closed in confusion towards one point, where a thick dust was rising, and where loud cries, the sparkling of sword blades, and flashes of pistols indicated some extraordinary occurrence. Suddenly the multitude was violently agitated, an English shout arose, the mass was rent asunder, and Norman Ramsay burst forth at the head of his battery, his horses breathing fire, and stretching like greyhounds along the plain, his guns bounding like things of no weight, and the mounted gunners in close and compact order protecting the rear."

Never was the fortune of a field more critically circumstanced. The Allied right was turned, the divisions separated, and a fresh formation indispensable. It was an operation which only a master of the art of war would venture to adopt, and British soldiers have nerve to execute. To retire troops across a level plain, the outer flank having a surface of four miles to traverse, surrounded by heavy masses of French cavalry, flushed with the full assurance of approaching victory, and waiting one false movement to fall on, was certainly a daring resolution.

Slowly, and in perfect order, the squares of the 1st, 7th, and light divisions retired for many miles, "flanked on either side by the terrible Cuirassiers of Montorun, flushed with the recent glories of Wazram, and pressed in rear, by the columns and batteries of Ney's corps, which had broken the Russian army at Friedland. In vain their thundering squadrons swept round these serried bands, and the light of the British bayonets was, for a time, lost in the blaze of the French cuirasses; from every throng the unbroken squares still emerged, pursuing their steady way amidst a terrific fire, and the 7th division successfully accomplished its long semi-circular sweeps, crossed the Turon, and took up its ground between that stream and the Coa; the centre of the army soon gained the ridge of heights for which it was destined; while the left, with invincible firmness, still made good the crags and the Chapel of Fuentes d'Onoro." When the whole had taken up their ground, Massena recalled from the prospect of attacking such an enemy, as he had now combatted, posted as they were in dense masses on a ridge not two miles in length, and covered on either flank by a steep ravine; and confining himself to a cannonade along its front, redoubled his efforts on the left, where he sent the whole division of Count D'Erlon against the village of Fuentes d'Onoro.

The contests for possession of this disputed hamlet were sustained, repeated, and most sanguinary. The French artillery poured an incessant shower of shot and shells upon the devoted village; and, under the crushing fire of their guns, the enemy's battalions advanced only to be repelled. At last, determined to carry the place, Count D'Erlon ordered a final effort to be made. "Preceded by a cloud of Voltigeurs, a heavy column advanced up a street heaped with 'the dying and the dead;' and, unchecked by a well-directed fusilade, the enemy crowned the chapel ridge, and announced, with loud cheers, that Fuentes was at last their own. This triumph was a short one. Colonel Mackinnon directed the British battalions to advance, and gallantly that order was obeyed. Supported by the 71st and 79th, Colonel Wallace led his own regiment on, and his brief address—'Let them, Highty-Eighth' was answered with the soul stirring huzza with which an Irish regiment rushes to the onset. The Imperial Guard waited and received the charge; bayonet crossed bayonet, and the combatants fought hand to hand. But it was the struggle of a moment, and the best soldiers of France gave way before the Connaught Rangers. In the awful shock, many were impaled and lifted fairly from the ground; while broken, trodden down, and slaughtered, the routed enemy were forced in wild disorder by the Irish and Highland soldiers through the same street by which, in all the confidence of approaching victory, they had so recently and gallantly advanced."

The losses sustained on both sides were severe. The allied returns placed theirs at 1800, *hors de combat*, and, undoubtedly, the French casualties more than doubled that amount.

Of Wellington's generalship at Fuentes, it will be only necessary to say that it was a fine display of military genius, united to the daring which iron nerve only could resort to. Massena's was a tissue of mistakes. "He wasted his strength upon the village of Fuentes d'Onoro; and with the key of the position in his possession, he allowed this advantage to remain profitless, when, through Poza Velho he could have poured his whole force upon the plateau, and overwhelmed the British right wing by mere numbers. To indirect cause his failure has been ascribed. He had been superseded by Marmont; and, no unusual circumstance, his Generals of Division were quarrelling among themselves. The Imperial Guard did not charge at his order. Junot did not second him cordially; Loison neglected his instructions. Drouet sought to spare his own divisions in the fight; and Reguier remained perfectly inactive. Thus, the machinery of battle, being shaken, would not work. Whatever the cause might be, the movements of the French Marshal throughout the 5th, were marked by irregularity and delay; and his attacks upon opposite flanks, which, to ensure success, should have been simultaneous, were made with a considerable interval between them. In short, Massena's genius seemed asleep, and none could have imagined that the victor of Aspern, was he who failed so signally at Fuentes d'Onoro."

On the evening of his unsuccessful attack on Fuentes, Massena withdrew the 6th corps from before the village, and both armies bivouacked where they stood in action. On the 7th, he continued in front of the army he had assailed in vain, and, on the 8th, he retired by the road leading to Rodrigo.

With that unblushing assurance, however, for which the French Marshals had been remarkable, defeat was tortured into conquest, and Massena did not hesitate to call Fuentes D'Onoro a victory. But the falsity was self-apparent the avowed object for which the battle had been fought was unattained—he failed in succouring the beleaguered city, and Almeida was left to its fate. At this period an untoward event occurred. Brennier, the Governor of Almeida, succeeded in destroying the works of the fortress, and carrying off his garrison.

SIEGE OF BADAJOZ.

Early in May, Badajoz was invested by Marshal Beresford, Wellington having gone to Elvas. The siege was interrupted by Soult, and the sanguinary battle of Albuera resulted. That was the bloodiest transaction in Peninsular history—commencing at nine o'clock it closed at two—and of 6500 British soldiers on the battle ground 4407 were placed *hors de combat!*

Almost all the field officers were killed or wounded. Houghton died cheering his men on; and Myers and Duckworth, at the heads of their respective regiments. Stewart, Cole, Inglis, Ellis, Blakeney, and Hawkeshaw, were wounded. Few regiments could muster, in the evening, a third of the number with which they went into action; and the loss sustained by the 57th—known afterwards by the *undying* name of the "die-hards"—stands without a parallel. Its strength, when led into fire, was about five hundred and seventy bayonets; and its casualties, at two o'clock, were twenty-three officers, and above four hundred rank and file.

On Soult's retreat the siege of Badajoz was resumed. On the 3rd of June the allied batteries commenced breaching. On the 6th San Christoval was assaulted without success. On the 9th a second trial failed, and, on the 10th, the siege was raised.

On the French advance the allies crossed the Guadiana on the 17th, and, on the 19th, the French convoys reached Badajoz in safety, and the fortress was abundantly relieved. Wellington took a position on the Caya: a battle was expected; but, after a month's delay in Estremadura, the French Marshals separated, Marmont marching northward, and Soult retiring on Seville.

CIUDAD RODRIGO.

The recession of the French armies produced an immediate change in the position of the allies; and Lord Wellington, leaving Hill in the Alentejo in observation of Girard, changed his head quarters from the Quinta de St. Joaõ to Portalegre, and, subsequently, to Fuents Guinaldo. The occupation of the line of St. Coa was highly desirable: it placed the posts and villages in the more immediate vicinity of Cuidad Rodrigo in the possession of the allied commanders, and thus cut off all casual supplies from a fortress already straitened by the Guerillas of Julian Sanches, and separated from its covering army by a space of fifty miles. In fact, Rodrigo was the object a which Lord Wellington had secretly aimed, and measures had been taken to get up a powerful siege train from Lisbon, and forward all necessary arrangements for the immediate reduction of a fortress, which he justly considered, in a military point of view, to be invaluable.

Unable to besiege, Wellington closely blockaded the fortress; and his presence on the Coa paralysed the operations of the French Marshals, who were deterred from undertaking any distant operations by the threatening attitude the allied General had assumed. The introduction of a convoy and supplies was necessary to enable the place to hold out; and to escort it, a grand union of the corps of Marmont, Souham, and Dorsenne, was decided on.

This junction of the French corps produced a magnificent army. Their total strength was over sixty thousand men, of which the cavalry might be reckoned at nearly seven thousand, and the artillery comprised one hundred and ten guns. A finer army, for its numbers, was never ranged beneath the Eagles of Napoleon; for all the reinforcements were veteran soldiers, and of these, a large proportion had been detached from the Imperial Guard.

Aware of the intentions, but not well informed as to the amount of force the French Marshal was bringing against him, Lord Wellington concentrated his divisions to prevent it, and the subsequent operations produced the affairs of El Bodon and Aldea da Ponte, on the 25th and 27th of September. After retiring the third division from the former, one of the finest and boldest operations on military record, Wellington, to save his light division, ventured and achieved a more daring exploit, than that when he crossed the Katua, at Assaye, by boldly taking a position in front of Marmont with 13,000 infantry and 2500 horsemen on the heights of Fuente Guinaldo.

For the un-professional reader to understand the amount of nerve such a determination would require, he must keep in recollection that Marmont had 50,000 men in hand, and that the allied divisions were widely separated. The left wing of the army was ten miles from Guinaldo, at Nava d'Aver, the 5th division, twelve miles off at Payo, and the light troops, still a league more distant, at Cespidosa.

"Early in the morning, a singular and formidable spectacle was presented to the isolated divisions resting on the crest of El Guinaldo. The French cavalry which had bivouacked in the woods, after escorting, rather than assailing, the third division on its retreat, appeared first in compact array, as if waiting for the signal to push on. By-and-by, nine battalions of infantry, attended by a proportionate quantity of artillery, made their appearance, and formed into columns, lines, echelons, and squares. Towards noon, twelve battalions of the Imperial Guard came upon the ground in one solid mass; and as each soldier was decked out with feathers and shoulder-knots of a bloody hue, their appearance was certainly imposing in no ordinary degree. The solid column, however, soon deployed into columns of battalions—a movement which was executed with a degree of quickness and accuracy quite admirable; and then, after having performed several other evolutions with equal precision, the guards piled their arms, and prepared to bivouac. Next came another division of infantry in rear of the guards, and then a fresh column of cavalry, till it was computed that the enemy had collected on this single point, a force of not less than 25,000 men. Nor did the muster cease to go on, as long as daylight lasted. To the very latest moment, we could observe men, horses, guns, carriages, tumbrils, and ammunition waggons, flocking into the encampment; as if it were the design of the French General to bring his whole disposable force to bear against the position of Fuente Guinaldo." We have been particular in noticing the position in which Lord Wellington was placed, as it is characteristic of the impassive determination which evinced on many trying occasions, obtained for the conqueror of Napoleon, the title of "the Iron Duke."

While Marmont was amusing himself with this singular review, Lord Wellington looked on with the calmness of an ordinary spectator. Scarcely a third of the Allied army was within his reach, and 50,000 troops, some of them hitherto unconquered, with 110 pieces of artillery, manœuvring barely out of cannon range. "It was at this moment that a Spanish General, remarkable for his zeal and gallantry, and a great favourite of Wellington's, observed to him—'Why it is enough to put any man in a fever.' 'I have done, according to the very best of my judgment, all that can be done,' said Wellington, 'therefore I care not either for the enemy in front, or for any thing which they may say at home.'"

The military talents of Lord Wellington had been duly appreciated by the French; and his bold stand at Guinaldo, and masterly retreat upon the Coa, elicited their warmest admiration. In the conduct of these critical operations, the Allied General was personally present, and frequently—and as his staff thought, imprudently—exposed himself to fire. On one occasion he narrowly escaped from being taken prisoner, having been deceived by the perplexing similarity of the dresses worn by the Allied and French light cavalry.

The vicinity of the Guadiana, where the cantonments of the Allies were taken up, proved fatally insalubrious, and in a short time 16,000 men were in hospital. Yet this dull season was not passed without occasional excitement. Julian Sanchez carried off the Governor of Rodrigo, and the whole of the cattle intended to supply the garrison; and the French Commissariat afforded thus a welcome supply in the Allied cantonments.

The surprise of Girard, at Arroyo de Molinos, was accomplished by Sir Rowland Hill, on the morning of the 28th of October. This was a very brilliant affair; and Wellington's report bore honourable testimony to the success of his able lieutenant.

"The ultimate consequences," he writes, "of these operations I need not point out to your lordship. Their immediate result is the capture of one general of cavalry (Brun), one colonel of cavalry (the Prince d'Aremberg), one lieutenant colonel (*Chêf D'Etat Major*), one aide-de-camp of General Girard, two lieutenant-colonels, one *commissaire de guerre*, thirty captains and inferior officers, and upwards of 100 men, already sent off under an escort to Portalegre; the whole of the enemy's artillery, baggage, and commissariat stores magazines of corn, which he had collected at Caceres and Merida, and the contribution of money which he had exacted from the former town, besides the total dispersion of General Girard's corps."

The defence of Tarifa, succeeded the surprise at Arroyo de Molinos, and in point of dashing gallantry these affairs might be contrasted. With an open breach, sixty feet wide, the besieged stood the assault. It was repulsed; and Laval, despairing of success, buried part of his siege artillery, abandoned the remainder, and retreated.

The siege of Cuidad Rodrigo immediately followed the gallant defence of Tarifa. On the 8th of January, the Light Division forded the river at La Caridad, and formed the investment; and the engineers' stores were brought across the Agueda by the bridge, and parked 800 yards from the fortress. At eight o'clock the same evening, the redoubt upon the upper Teson was carried by assault. On the 11th, the approaches were advanced, and batteries constructed. On the 14th, the garrison sallied, and damaged the works; and on the 19th, Wellington, finding that Marmont was concentrating to relieve the fortress, made a bold departure from the rules of science, and determined to storm the place without waiting to blow in the counterscarp.

The assault was intrusted to the 3rd and Light Divisions; and, as the Cathedral clock struck "seven," the attempt was made, and, after a fearful trial, it proved successful.

On learning that Rodrigo was besieged, Marmont had hastily concentrated the troops previously in cantonments; but, as the intelligence had only reached him on the 15th at Valladolid, it was the 25th before he was in a condition that would warrant him in disturbing the investment. At Salamanca, the French corps had united on the 25th, forming a grand army of 45,000 men, but they were still four marches from the fortress, which six days before had fallen. The junction of 5000 men, detached from Hill's corps, rendered Lord Wellington strong enough to abide a trial, if Marmont should move forward to the Agueda, on learning that Rodrigo had been carried; but the French Marshal retired again to Valladolid, his troops exhausted by forced marches, and himself unable to comprehend what ulterior objects his dangerous opponent might have in view.

Badajoz was Wellington's next object, and although limited in time and means, he determined to reduce it. Convoys had reached the city; but in shells and powder the fortress was indifferently supplied. Wellington was worse prepared to carry out a scientific siege, than Phillipon to withstand one. He had no mortars—his engineers were few and inexperienced—the weather was unfavourable—the equinox at hand—and the French armies uniting to relieve the place, but still he determined to attempt it.

Lord Wellington's plan of attack was originally confined to the storming of the bastions, and the carrying of the castle by escalade. The breach of La Trinadada was to be assaulted by the fourth division, under Major-General Colville, and that of Santa Maria, by the light, under Lieutenant-Colonel Barnard; while the third division were ordered to assail the Castle. The ravelin of San Rogue was also to be attempted by detachments of covering parties from the trenches; and to distract the attention of the garrison, a false alarm was to be made against the Pardalevas. The breach in the curtain induced Lord Wellington to enlarge his plan of attack, and, on the 6th, a memorandum was addressed to Major-General Colville to allot a portion of the advance of the fourth division, to storm the breach in the curtain between the bastions Santa Maria and La Trinidad. Further, the garrisons being hourly improving their defensive expedients, Lieutenant General Leith was directed to employ a brigade of the fifth division to escalade the bastion of St. Vincente, or the curtain and flank between it and the bridge over the Guadiana, and to be prepared to support this brigade with the remainder of his division.

Of that glorious assault we cannot even pretend to give a summary, but it is a singular circumstance, perhaps without a parallel in the history of sieges, that an army with a powerful artillery, after twenty days open trenches, and having formed three good practicable breaches in the body of a place, should, at the moment of giving the assault, employ two divisions on other points to escalade the defences which were entire, and that each of these escalades should be crowned with complete success, whilst their efforts against the breaches were attended with utter discomfiture.

From the day of the investment, by French returns, of 4742 men. About 1200 were rendered *hors de combat* during the siege, and 3500 were made prisoners. The five French battalions in Badajoz had no eagles; but the colours of the garrison, with those of the regiment of Hesse Darmstadt, were taken, and transmitted by Lord Wellington to the Prince Regent.

The loss of the victors was most severe; for, in the siege and storm, nearly 5000 men were killed and wounded. Lieutenant-Colonel M'Leod, of the 43rd, and Major O'Hare, of the 95th, died sword in hand in the breaches; and five generals, namely, Picton, Colville, Kempt, Walker, and Bowes, were wounded.

That the attacks upon the breaches should fail may be collected from a simple statement. "When the columns arrived before them in the morning, no enemy to oppose, and with daylight to direct their entrance, time was required to remove the numerous obstacles which presented themselves, before a descent into the town was possible. Veiled in darkness, and desperately defended, who could surmount those formidable barriers and live?"

When Lord Wellington resumed his operations, and chose the northern provinces for the scene, his first object was to sever the corps of Soult and Marmont, and interrupt their communications.

Below Arzobispo the bridges of the Tagus had been broken; and the passage of the river was maintained by means of pontoons and boats, thrown across the stream of Almarez by the French Marshals, after its noble bridge had been destroyed. A post of such importance had not been neglected; and on both banks of the river strong works had been erected for its defence. On the left bank, a well constructed tête-dupont was overlooked by Fort Napoleon, a redoubt, having an interior intrenchment, and loop holed tower, and with nine heavy guns, and a garrison of four hundred men.

Sir Rowland Hill crossed the Guadiana on the 12th of May, having misled the French Generals in his vicinity by movements which would infer a very different design to what he was bent on; and, by a most laborious march through mountains hitherto considered impassable for troops, reached Mirabete, and, after storming the forts, and blowing up the magazines—the guns were thrown into the Tagus—the palisades, barriers, stores of timber and of tools, the pontoons and their carriages, were consumed by fire, and the works utterly effaced and destroyed.

BATTLE OF SALAMANCA.

On the 19th of June, Lord Wellington crossed the Agueda, and, on the 16th, bivouacked on the banks of the Tormes, behind which the French had retired. On the 17th he entered Salamanca, and, while the 6th division besieged the forts erected by Marmont to command the city, the remainder of the allied army halted on the heights of San Christoval.

When the forts were severally pressed by the besiegers, Marmont, having reinforced his army, advanced to relieve the invested garrisons, and some skirmishing took place on the 21st and 22d. On the 27th the forts surrendered, and, failing in the object of his expedition, on the same night Marmont retreated

The enthusiastic welcome which Wellington received in Salamanca, did not prevent him from resuming active operations. Marmont was again in the field; and during the 19th and 20th, each army continued in each other's presence, and nothing could be more imposing, as a military spectacle, than the march, in parallel lines, of ninety thousand men, anxious mutually to fall on, and waiting for the first false movement as the signal of attack.

For three days, and on both sides, the manœuvring was perfect. Every hour was expected to witness the collision of the rival armies; both were burning for a battle; but neither would give a chance away. At two in

the afternoon Marmont made an attempt to outflank the allied right by extension of his left. It was a fatal movement, and "Wellington fixed it with the stroke of a thunder bolt."

Did space permit, we would detail at large the progress of a battle on which, as it has been justly remarked, Wellington might have safely rested his claim for immortality. The opening of the fight was interesting—the close was picturesque—and we shall give both.

"No conflict had been so long desired, and none more unexpectedly brought on. The baggage of the Allied army was moving towards the Rodrigo road; the commissariat had already retired; evening was coming fast; and still no note of preparation indicated that the storm of battle was about to burst. Marmont, fearing that his cautious opponent would avoid a contest by retreating, hurried his own dispositions to force a battle, and Bromley's division, with his light cavalry and fifty guns, was put in rapid march. The centre columns were denouching from the forest, and Lord Wellington's corresponding movement was to be Marmont's signal to fall on. Suddenly, the inactive masses, which hitherto had been resting on the English heights, assumed a threatening attitude. Was it a feint? A few minutes removed that doubt—the Allied brigades closed up rapidly on each other—and the third division, in four columns, rushed down the hill, and he who would have been the assailant was assailed."

When the day was irretrievably lost, Marmont's gallantry saved the French army from destruction. His flank was turned, for the third division was moving round his left, while his assailants, with increasing numbers, were pressing him hard in front; and, although the fire of the French artillery was rapid and well directed, it could not arrest the British advance, and the sixth division, with a brigade of the fourth, mounted the hill with fearless intrepidity. Darkness had fallen, but in a stream of fire the movements of the combatants could be traced. "On the side of the British a sheet of flame was seen, sometimes advancing with an even front, sometimes pricking forth in spear heads, now falling back in waving lines, and anon darting upwards in one vast pyramid, the apex of which often approached, yet never gained, the actual summit of the mountain; but the French musketry, rapid as lightning, sparkled along the brow of the height with unvarying fullness, and with what destructive effects the dark gaps and changing shapes of the adverse fire showed too plainly. Yet, when Pakenham had again turned the enemy's left, and Foy's division had glided into the forest, Marmont's task was completed, the effulgent crest of the ridge became black and silent, and the whole French army vanished, as it were, in the darkness."

The escape of the beaten divisions by the ford at Alba de Tormes—the gallant affair at La Serna—the passage of the Guadarama mountains—and the entrance of the Allies into Madrid, followed the victory of Salamanca. So far the success of Lord Wellington was triumphant—but the game of war is most uncertain. The Allied General advanced from the capital besieged Burgos—failed, through want of means to turn field to—and, after a splendid retreat, took his old position on the heights of San Christoval.

Both armies needed repose, and the losses on both sides were enormous. During the brief space of twelve days, 20,000 men were rendered *hors de combat*. By the returns the French had one field marshal and seven general officers, the allies one field marshal and four generals, killed and wounded. Three partial actions and a battle were fought the French marching two hundred miles, and the Allies one hundred and sixty. Of trophies, the French lost many; the Allies none.

BATTLE OF VITTORIA.

After measures had been employed successfully by Lord Wellington to produce a military reform, and render the Allies more efficient than before, in the April of 1813, he found himself in a condition to take the field, and open his last and most brilliant campaign. In a sweeping summary, the mutual operations, which ended in the total defeat of the armies of the south, the centre, and of Portugal, must be dismissed. The execution was in keeping with the design, and a finer military conception was never carried out.

Aware that the defences of the Douro had been strengthened, he determined to avoid the danger and delay which would be required in forcing them; and by a fine combination of the Anglo-Portuguese army with that of Galicia, he gained the northern bank of the river, taking in reverse the line of defensive posts on the Douro, and opening to attack the whole right flank of the French army, whose scattered corps were too loosely cantoned to admit of rapid concentration. Thus seventy thousand Portuguese and British, eight thousand Spaniards from Estremadura, and twelve thousand Galicians—that is to say, ninety thousand fighting men, would be suddenly placed on a new front, and, marching abreast against the surprised and separated masses of the enemy, would drive them refluent to the Pyrenees.

We pass over the skirmish at Aldea Lengua—the passage of the Esla and the Carrion—the affairs at Morales, Baniel, and San Millan, until the retreating armies of the intrusive King took a position in front of Vittoria. The ground was selected by Marshal Jourdan to receive battle on—it was strong generally, but its fault was that it was too extensive.

In numerical strength, the advantage was with Lord Wellington; in military composition, it remained with Joseph Buonaparte. Deducting the sixth division left at Medina del Pombar, the allies had 60,000 Anglo Portuguese, with 20,000 Spanish troops upon the field. Of this force 10,000 were cavalry; and the artillery had 90 pieces of cannon The French were inferior by 10,000; but in cavalry, they were stronger; and in artillery, superior by sixty pieces.

The passage of the Zadorra by its different bridges—the beautiful accuracy with which the movements were simultaneously executed—the sparkling of glittering masses in brilliant sunshine—the roar of cannon—the deafening fusilade—succeeded by the total *devout*—all afforded a *coup d'œil* never to be forgotten.

The results of this splendid victory, were the total disorganization of the united armies of France—the loss of its *materiel*, artillery, and baggage—the whole plunder and effects of camp and court alike—a Marshal's baton, and the colours of the 100th Regiment.

The general results of the operations consequent on the victory of Vittoria, a summary will best describe. In six weeks, and with scarcely 100,000 men, Lord Wellington marched six hundred miles, passed six great rivers, gained one decisive battle, invested two fortresses, and after driving 120,000 veteran troops from Spain, "stood on the summit of the Pyrenees a recognised conqueror."

BATTLES OF THE PYRENEES.—SIEGE OF ST. SEBASTIAN.—THE BIDASSOA.

Following up his success, Lord Wellington invested San Sebastian, and blockaded Pamplona. An attempt to storm the former fortress was repulsed, while the blockade of the latter eventually produced its surrender. Soult, who, after Joseph's defeat at Vittoria, had been sent from Germany to supersede him, now took the command of the French armies, as *Lieutenant de l'Empereur*; and, after addressing the beaten soldiery in singularly bad taste, and in language that proved fatally unprophetic, he hastened to relieve the beleaguered fortresses, and the result was, "the battles of the Pyrenees."

The summary of these splendid actions may be easily given. For nine days the armies had been in each other's presence, and in severe operations and desperate fighting, these days were unexampled. The allied casualties exceeded seven thousand men—and the French, doubling that number by some estimates, and trebling it according to others, might be taken at a mean, and safely set down at fifteen thousand. This was, in a military view, a serious calamity; but, in a moral one, it was still greater. The Spaniards had already gained a reputation for efficiency at Vittoria, and in the combats of the Pyrenees it was gallantly sustained The Portuguese had long since been accounted "worthy to stand side by side with a British regiment," and they vindicated that character most gloriously. With the English, a superiority over every other Continental army was established—for, assaulting or assailed, they had proved themselves unconquerable. Well might Wellington afterwards declare, that, "with the army which had crossed the Pyrenees, he could do anything, or go anywhere."

In return for the *baton* of Marshal Jourdan, that of England had been sent Lord Wellington by the Prince Regent; and immediately after his victories in the Pyrenees, he was appointed to the Colonelcy of the Blues. The fall of St. Sebastian, by assault, occurred on the 31st August; the Castle capitulated on the 10th of September. On the 7th of October the Bidassoa was passed; and on the 31st Pamplona surrendered.

NIVELLE.—ORTHEZ.

The next operation of Lord Wellington was to carry the fortified position of the Nivelle. The severity of the weather delayed the attempt; but on the 10th a beautiful morning opened on a glorious day, and "ninety thousand combatants of all arms and ranks, above seventy four thousand being Anglo-Portuguese, descended to the battle, and with them went ninety five pieces of artillery, which, under the command of Colonel Dickson, were all with inconceivable vigour and activity thrown into action."

Never were Lord Wellington's dispositions more fortunate in conception and effect. Before daybreak, columns were within pistol-shot of the works they were to assault, and the enemy were ignorant that any force was in their front more formidable than the ordinary pickets. The darkness gave place to morning. Three guns pealed from the mountain heights of Achubia; and, before their smoke had cleared away, the columns of attack issued from their concealment, and the battles of the Nivelle commenced. The result ended in the deforcement of the French—the capture of fifty-one pieces of artillery and 1400 prisoners.

On the 13th of December, after a series of affairs which had extended from the 9th, the passage of the Nive was accomplished.

The battles of the Nive, like those of the Pyrenees, were obstinate and sanguinary, and the losses sustained were consequently heavy. The French fought better than when defending their position on the Nivelle; and Soult who was never wanting in ability, never displayed more than on this occasion. The often repeated effort cost him his best troops, and forced upon him the mortifying conviction that, brave as they were and admirably disciplined, they were, nevertheless, inferior to their opponents—for all circumstances here had been in his favour. The points of attack were at his own choice; and, whenever he attacked, he brought into the field a greatly superior force; yet everywhere he had been defeated.

Winter intervened, and the state of the weather and the roads for a time arrested hostilities. During that interval, Soult received large reinforcements, and took a position equally adapted for aggression or defence. His wings were well advanced; but their respective flanks were safely rested, and each upon a fortress; while, in the centre, the command of the Adour and Gave de Pau enabled the French Marshal to concentrate there in force, thus giving him a mass of troops in hand, ready for an offensive movement when any opportunity might occur; while, from his lateral communications, he could repel a flank attack with celerity and effect.

To force this position, affairs from the 14th to the 17th of February occurred, all in favour of the Allies. Soult, on hearing that his left was seriously endangered, marched rapidly on Sauveterre. The Allied posts were in the meantime established on the left of the Gave d'Oleron, from Sauveterre to its junction with the Gave de Pau, and Lord Wellington's bold and brilliant operations followed in quick succession, and the brilliant field of Orthez resulted.

We pass over, for want of space, the entrance of the Adour by the British flotilla, the passage of the river, and the investment of Bayonne.

Orthez was one of the most decisive defeats that Soult had ever yet received; and accident alone prevented its results from being ruinous. Had the cavalry been enabled to get forward with more celerity, a large portion of the French infantry must have been unavoidably cut off. To another circumstance, also, the comparatively low amount of the French casualties may be attributed. A defeat, complete as that of Orthez, would have most probably entailed upon the vanquished army a terrible disaster, had not Lord Wellington been prevented from following up his success, and pressing his advantages by personal direction. At the very moment when the confusion in the enemy's ranks was increasing, a spent shot struck the pommel of his sword, and caused a painful contusion. Lord Wellington with difficulty kept his saddle, and an intersected country, which otherwise he would have crossed at speed, was, therefore, slowly traversed. Had he been allowed to urge it on, the pursuit would have been ardently and successfully continued, but it ceased at Sault de Navailles—and night closed upon the victors and the vanquished.

The losses on both sides were heavy, but that of the French was enormous; with six guns, their casualties, according to different statements, ranged from 5000 to 10,000 men.

BATTLE OF TOULOUSE.

The splendid action of Aire, fought and won by Hill, succeeded. That at Tarbes was equally fortunate. Operations followed rapidly, and the victory of Toulouse crowned the story of this campaign.

This battle requires some notice, as the French have modestly laid claim to it as a victory. When night ended the conflict, how stood the issue of the day? Three sides of the city were shut up, and the place was literally under the guns of the allied divisions—St. Cyprien might be ruined in an hour—and, therefore, while reiterating his entreaties that Suchet should advance, Soult added a belief that he could not hold his positions, and observed, "that it was not improbable but he should be forced to fight a passage from the city." On the night of the 11th, he abandoned Toulouse, and made a forced march of two and-twenty miles to Villefranche—leaving two generals, six teen hundred disabled men, immense magazines, and eight pieces of artillery to the conquerors.

An old school General observed, "Another victory will ruin me!" Soult had the advantage—for a second in his case was unnecessary.

The sortie at Bayonne—an affair infinitely disgraceful to Thouvenot, who commanded—involved a wanton loss of life, when Napoleon had actually abdicated. Soult presently sent in his adherence to the Bourbons; Ferdinand was returned to the Spaniards; the French garrisons evacuated the few fortresses they held; and after a general armistice peace was concluded, and Lord Wellington went Ambassador to Paris.

On the 10th of June, 1814, the Duke of Wellington rejoined the headquarters at Bordeaux; and, in a final order, took leave of the most glorious army that ever Britain embattled on a field—sacred be the memory of—THE OLD PENINSULARS!

RETURN TO ENGLAND.

In England Wellington's reception was enthusiastic, and on the 28th of June, in ducal dignity, he entered the House of Peers:—

"Shortly after three o'clock, the Lord-Chancellor having taken his seat, the Duke of Wellington was introduced, supported by the Dukes of Richmond and Beaufort, in military uniform, and in their ducal robes. Being arrived in the body of the house, the Duke made the usual obeisance to the Lord-Chancellor, and showed his patent and right of summons: these noblemen then approached the table, where his Grace's various patents, as Baron and Viscount, Earl, Marquis, and lastly as Duke, were each read by the clerks. The oaths were then administered, and the Test Rolls were signed by him. He then, accompanied by his noble supporters, took his seat on the duke's bench, and saluted the house in the usual manner, by rising, taking off his hat, and bowing respectfully. On this interesting occasion, the Duchess of Wellington and the Countess of Mornington were present, and the honours conferred upon a conqueror were witnessed by those to whom he was most endeared—a mother and a wife."

CONGRESS OF VIENNA.

After making, in the autumn, a military survey of the Netherlands, and reporting to Lord Bathurst its capabilities of defence, early in the February of 1815, the Duke of Wellington proceeded to Vienna, to replace Lord Castlereagh at the Congress, which had been sitting since the preceding October and, when there, intelligence reached the assembled diplomatists that one of the most unexpected events in history had occurred—Napoleon's escape from Elba. A declaration was instantly signed by the Austrian, Spanish, French, British, Portuguese, Prussian, Russian, and Swedish Plenipotentiaries, declaring the ex-Emperor without the pale of civil and social relations, and Austria, Prussia, and Russia placed their armies at the disposal of the King of France. On the 28th of March, Wellington was named Generalissimo in the Netherlands; and, on the 5th of April, he reached Brussels, and assumed the chief command.

CAMPAIGN IN THE NETHERLANDS.

How formidable the re-appearance of Napoleon was considered, may be collected from the extent of means employed to crush him for the second time. Murat had armed, evidently to co operate with his brother in-law, Napoleon. To hold the Neapolitan army a check a corps of 150,000 Austrian troops was made available. Two hundred thousand Austrian, Bavarian, and Confederated Germans were ordered to collect upon the Upper Rhine—an equal number of Prussian, British, and Hanoverian were to occupy Flanders—the whole to be supported by a grand reserve of 200,000 Russians—and thus more than 700,000 men would promptly be in active operation.

The events of "the Hundred Days" belong to history, and we pass them. Before daylight, on the 12th of June, Napoleon quitted the capital, and, on the 14th, joined the army collected on the frontier. Ere sunrise next morning he was dressed, and at dawn he was on horseback. His *corps d'armée* were already in march—the Prussian outposts driven in—and a last campaign began, which three days virtually concluded.

The opening events are easily condensed. While Napoleon with his right and centre was attacking the front of the Prussian position, Grouchy manœuvred by the Namur road upon its flank, and simultaneously, the 1st and 2nd Corps, with four cavalry divisions, were turned against the British positions. When Blucher, on the evening of the 15th, had been defeated at Charleroi, the advanced corps of the Prince of Orange had also been driven back from Frasnes—but a fresh brigade was promptly moved up—and before the morning of the 16th, the greater portion of the ground had been recovered.

The Fifth (British) Division, after a twenty miles march, reached the scene of action at two o'clock, when the day was all but hopeless. Ney, perceiving the reinforcement, pushed every arm into action, and scarcely permitted the British regiments to deploy from the road. But his efforts were unsuccessful; and, to use Foy's words, applied to the infantry at Waterloo, "the battalions seemed rooted to the ground." The result, a quotation from a popular work, will best describe:—

"The men were falling by hundreds—death was busy everywhere—but not a cheek blanched, and not a foot receded! The courage of these undaunted soldiers needed no incitement; but, on the contrary, the efforts of their officers were constantly required to restrain the burning ardour that would, if unrepressed, have led to ruinous results. Maddened to see their ranks thinned by renewed assaults, which they were merely suffered to repel, they panted for the hour of action. The hot blood of Erin was boiling for revenge; and even the cool endurance of the Scotch began to yield and a murmur was sometimes heard of, 'Why are we not led forward?'

"At this juncture, the division of Guards, under General Maitland, arrived from Enghien, and after a march of fifteen hours, without anything to eat or drink, they gallantly advanced to the charge, and in half an hour completely cleared the wood. Though they became masters of the Bois de Bossu, they found difficulty in emerging from its shelter. As often as they attempted to come out, a tremendous fire of round and grape-shot was opened by the French batteries, followed by a charge of cavalry. When they retired, and the enemy endeavoured to penetrate the wood, they were received in turn with a steady and well directed volley of musketry, which compelled them also to return. These alternate attacks continued for nearly three hours. At one time, the enemy was furiously encountered by a square of Black Brunswickers, while the British, rapidly lining the ditches, kept up a most destructive fire; but the loss was very severe, and the men found great difficulty in forming line again. The undismayed gallantry of the Guards was the more remarkable, as they were composed chiefly of young soldiers, and volunteers from the militia, who had never been in action. Some of these noble fellows were so overcome with fatigue, that when they entered the wood they sank down, and had only sufficient strength to cheer their comrades to the onset. The carnage was dreadful—the conflict obstinately maintained on either side—the French, from their superiority in cavalry and artillery, committing a slaughter, which was well repaid by the terrible fire of the British musketry.

"Evening was now closing in—the attacks of the enemy became fewer and feebler; a brigade of heavy cavalry and horse artillery came up; and, worn out by the sanguinary struggle of six long hours, the assailants ceased their attack, and the 5th Division, with the 3rd, and the Guards took up a position for the night on the ground their unbounded heroism had held through this bloody day.

"Ney fell back upon the road to Frasnes. The moon rose angrily—still a few cannon shot were heard after daylight had departed; but gradually they ceased. The fires were lighted, and such miserable provisions as could be procured, were furnished to the harassed soldiery; and while strong pickets were posted in the front and flanks, the remnant of the British, and their brave allies, piled arms, and stretched themselves on the battle-field."

BATTLE OF WATERLOO.

On the 17th, Wellington ably retreated through Genappe, and on the 18th, morning dawned, after a tempestuous night, on the British divisions and their allies in position upon the slope of *Waterloo*.

At a quarter to eleven, the French second corps advanced in close columns against Hougoumont, and the battle commenced. The efforts were repeated to carry this important post, only to be bloodily repulsed and the resistance of the Guards was heroic. At last, despairing of success, the French artillery opened with shells upon the house—the old tower of Hougomont was quickly in a blaze—the fire reached the chapel, and many of the wounded, both assailants and defenders, there perished miserably. But still, though the flames raged above, shells burst around, and shot ploughed through the shattered walls and windows, the Guards nobly held the place, and Hougomont remained untaken.

The left centre of the position was next furiously assailed, and as gallantly defended. Drouet, after driving off a Belgian brigade, pressed forward with all the assurance of success. But a lion was in the path—for Picton was there. The fifth division delivered a rolling volley, that annihilated the head of the French columns. Their leader thundered "Charge!" a bullet perforated his forehead—he dropped from his horse a dead man; but on went his glorious division with levelled bayonets, and the French columns were pushed down the slope with heavy loss.

A Brigade of Cuirassiers and Lancers advanced against the flank of the British Infantry; but Lord Anglesey was ready to receive it. The Second Heavy Brigade were launched against the enemy, and the Royals, Greys, and Enniskilleners, charged with a vigour and effect that bore down every opposition. In vain mailed Cuirassier and formidable Lancer met these splendid horsemen. They were overwhelmed, and the French Infantry, already broken and disorganised by the 5th division, fell in hundreds beneath the swords of the English Dragoons. The eagles of the 45th and 105th regiments, and upwards of two thousand prisoners, were the trophies of this brilliant exploit.

To carry on a description of the field, would be to detail a continued series of fierce attack, most bloodily repelled. Hougomont alone cost Napoleon 6000 men; and when evening set upon his routed army, the burning ruins were still in possession of its gallant defenders.

One solitary success attended the efforts of the Emperor, and he obtained temporary possession of the farm-house of La Haye Sainte. Its defence had been intrusted to Colonel Baring, with a detachment of the German Legion amounting to about three hundred men, subsequently reinforced by two hundred more. The attack begun at one o'clock, and continued above two hours. Several guns were brought to bear upon the house—but the conflict was chiefly maintained by massy columns of infantry, who advanced with such fury, that they actually grasped at the rifles of the besieged as they projected through the loop holes. Four successive attempts were thus made, and three times the assailants were gallantly beaten off. Twice the enemy succeeded in setting fire to a barn or out-house, contiguous to the main building—but both times it was fortunately extinguished. The numbers of the garrison, at length, began to diminish—many were either killed or wounded—and at the same time their ammunition was failing. It became impossible to supply the one, or reinforce the other, for there was no practicable communication with the rest of the army. The men, reduced to five cartridges each, were enjoined to be not only sparing of their fire, but to aim well. A fourth attack was now made, by two columns, stronger than either of the preceding, and the enemy soon perceived that the garrison could not return a shot. Emboldened by this discovery, they instantly rushed forward, and burst open one of the doors; but a desperate resistance was still made with the sword-bayonet, through the windows and embrasures. They then ascended the walls and roof, whence they securely fired down upon their adversaries. This unequal

WATERLOO.—CHARGE OF THE FRENCH CUIRASSIERS.

conflict could not long continue, and after an heroic defence the post was surrendered.

As evening advanced, on both sides anxiety increased. The constant wasting of his noble battalions alarmed Wellington—for to every human effort a limit must be assigned; while Napoleon began to believe that Soult's estimate of British endurance was correct, and that the squares might be annihilated but not deforced. At last, the welcome sound of distant artillery was heard in the direction of St. Lambert, and a staff officer reported that the head of the Prussian column was already in the Bois de Paris. Advised, therefore, that his gallant ally would presently come into action, the Duke made fresh preparations to repel what he properly anticipated would be the last and the most desperate effort of his opponent.

The Prussians debouched rapidly from the wood of Frichermont. To check them, half Napoleon's right wing was thrown back *en potence*; while a last grand effort was made to dislodge infantry which, as Foy happily remarked, seemed "rooted in the ground."

These attacks were bloodily repelled. Ney's failure had been terribly disputing to the troops employed; and the Prussians had come up in such force as rendered the resistance of the French right wing very questionable. The crisis of the day was come. The terrible repulse of the Imperial Guard had been accompanied by Zethin debouching from the Ohain road, and the word to advance was given.

The infantry in one long and splendid line, moved onward with a thrilling cheer, the horse artillery galloped up, and opened with case shot on the disordered masses, which, but a brief space before, had advanced with such imposing resolution. Instantly the Allied cavalry were let loose; and, charging headlong into the enemy's columns, they turned retreat into rout, and closed the history of one of the bloodiest struggles upon record.

For a short time, our battalions of the Old Guard, comprising the only reserve which Napoleon had left unemployed, formed square, and checked the movements of the cavalry. But, panic-stricken and disorganised, the French resistance was short and feeble. The Prussian cannon thundered in their rear; the British bayonet was flashing in their front; and, unable to stand the terror of the charge, they broke and fled. A dreadful and indiscriminate carnage ensued. The great road was choked with the equipages, and cumbered with the dead and dying; while the fields, as far as the eye could reach, were covered with a host of helpless fugitives. Courage and discipline were forgotten—Napoleon's army of yesterday was now a splendid wreck. His own words best describe it—"It was a total rout!"

In the operations, including those of Quatre Bras, the retreat on the 17th, and "red Waterloo" on the 18th, 2432 were killed, 9528 wounded, and 1875 missing, according to the Allied returns. Of the French casulties no correct estimate can be made. The Imperial Guard lost half its numbers; the cavalry was completely ruined—the artillery abandoned—and, if the number be computed, including those left upon the battle-ground, sabred in the pursuit, captured on the field, or made prisoners by the Prussians, with the still greater portion of fugitives who disbanded on entering France, and returned to their respective homes, the total losses sustained by Napoleon, and consequent on his defeat at Waterloo, cannot in round numbers amount to less than *forty thousand men!*

The *débris* of the French army retired upon Laon, and Grouchy made an able retreat upon Paris. The advance of the Allies towards the capital—the affairs which took place—the abdication of Napoleon on the 22nd of July—and the restoration of the Bourbons on the 7th of August—closed "the strange eventful history" of the Hundred Days, restored peace to Europe, and virtually terminated the military career of the Great Captain of the Age—Arthur, Duke of Wellington.

CIVIL AND POLITICAL CAREER.

We have but slightly sketched the earlier career of Wellesley in the East and shown that in India those germinations first appeared, which afterwards produced a rich and glorious harvest. With him the opening promises of celebrity were amply realised hereafter: the workings of the master mind were readily discerned, and in his first exploits there is a brightness of conception, a boldness in execution, that warrants the fullest comparison in martial daring between the conqueror of Lodi and the victor of Assaye. The future development of this great man's character is so ably delineated by a living author, that we do not hesitate in extracting this admirable summary, which, as an historic sketch, has seldom been surpassed:—

"The brilliancy of his course is well known; an unbroken series of triumphs from Vimiero to Toulouse—the entire expulsion of the French from the Peninsula, the planting of the British standard in the heart of France: the successive defeat of those veteran Marshals who had so long conquered in every country in Europe; the overthrow of Waterloo; the hunting of Napoleon from his throne; and the termination, in one day, of the military empire founded on twenty years of conquest. But these results, great and imperishable as they are, convey no adequate idea either of the difficulties with which Wellington had to contend, or of the merit due to his transcendant exertions. With an army seldom superior, in point of numbers, to a single corps of the French Marshal's; with troops dispirited by recent disaster, and

THE DUKE AT WATERLOO.

wholly unaided by practical experience; without any compulsory law to recruit his ranks, or any strong national passion for war to supply its want, he was called on to combat, successively, vast armies, composed, in great part, of veteran soldiers—perpetually filled by the terrible powers of the conscription—headed by chiefs, who, risen from the ranks, and practically acquainted with the duties of war in all its grades, had fought their way from the grenadier's musket to the Marshal's baton, and were followed by men who, trained in the same school, were animated by the same ambition. Still more, he was the General of a nation in which the chivalrous and mercantile qualities are strongly blended together; which, covetous beyond measure of

THE DUKE IN HIS ROBES AS CHANCELLOR OF THE UNIVERSITY OF OXFORD.

warlike renown, is ominously impatient of pacific preparation; which starves its establishment when danger is over, and yet frets at defeat when its terrors are present; which dreams in a war of Cressy and Agincourt, and ruminates in peace on economic reduction. He combatted at the head of an alliance, formed of heterogeneous States, composed of discordant materials, in which ancient animosities and religious divisions were imperfectly suppressed by recent fervour at present danger; in which corruption often paralysed the arm of patriotism, and jealousy withheld the resources of power. He acted under the direction of a Ministry which, albeit zealous and active, was alike inexperienced in hostility, and unskilled in combinations—in presence of an opposition which, powerful in eloquence—supported by faction—was prejudiced against the war, and indefatigable to arrest it; for the interests of a people who, although ardent in the cause, and enthusiastic in its support, were impatient of disaster and prone to depression, and whose military resources,

APSLEY HOUSE, HYDE-PARK-CORNER.

how great soever, were dissipated in the protection of a Colonial Empire which encircled the earth."

"Capable, when the occasion required, or opportunity was afforded, of the most daring enterprises, he was yet cautious and wary in his general conduct, prodigal of his own labour, regardless of his own person, he was avaricious only of the blood of his soldiers; endowed by nature with an indomitable soul, a constitution of iron, he possessed that tenacity of purpose and indefatigable activity, which is ever necessary to great achievements; prudent in council, sagacious in design, he was yet prompt and decided in action; no general ever resolved the probable danger of an enterprise more anxiously before undertaking it—none possessed in a higher degree the eagle eye, the arm of steel, necessary to carry it into execution. By the steady application of these rare qualities, he was enabled to raise the British military force from an unworthy state of depression to an unparalleled pitch of glory: to educate, in presence of the enemy, not only his soldiers in the field, but his rulers in the Cabinet; to silence, by avoiding disaster, the clamour of his enemies; to strengthen, by progressive success, the ascendancy of his friends; to augment, by the exhibition of its results, the energy of the Government; to rouse, by deeds of glory, the enthusiasm of the people; skilfully seizing the opportunity of victory, he studiously avoided the chances of defeat; aware that a single disaster would at once endanger his prospects, discourage his countrymen, and strengthen his opponents, he was content to forego many opportunities of earning fame, and stifle many desires to grasp at glory; magnanimously checking the aspirations of genius, he trusted for ultimate success rather to perseverance in a wise, than audacity in a daring cause. He thus succeeded, during six successive campaigns, with a comparatively inconsiderable army, in maintaining his ground against the vast and veteran forces of Napoleon, in defeating successively all his Marshals, and baffling successively all his enterprises, and finally rousing such an enthusiastic spirit in the British empire, as enabled its Government to put forth its immense resources on a scale worthy of its present greatness and renown, and terminate a contest of twenty years, by planting the British standard on the walls of Paris."

A few of the leading incidents in the after life of the illustrious subject of this hurried Memoir, may be rapidly detailed. An enthusiastic desire to perpetuate the name of Wellington, and the crowning scene of his triumphant career, pervaded every class of his countrymen. In Ireland, a noble testimonial was erected in the Phœnix Park; and in the British capital, on the second anniversary of his proud victory over "the Master Spirit of the Age," the Bridge of Waterloo was opened in person by the Duke, and the procession was honoured by the presence of the Prince Regent and Duke of York. On the 9th of November, the mansion and estates of Strathfieldsaye, were purchased by Parliamentary Commissioners, and conferred upon the Conqueror of Napoleon.

An unsuccessful attempt on the 13th of February, by a fellow named Cantillon, to assassinate the Duke in the Rue des Champs Elysée, happily failed, and in the latter end of September, 1818, he quitted the French capital, to attend a second Congress at Aix la Chapelle. On its dissolution, Wellington returned to England, and on the 28th of December, was appointed Master General of the Ordnance. On the 24th of May, 1819, his Grace was present in Kensington Palace, when the gracious lady of these realms was born.

At this time the Duke of Wellington may be said to have fairly entered into that civil and parliamentary career which forms a scarcely less important part of his life than the period of his military achievements. The death of George III., the accession of George IV., the public agitation and disturbance which had been going on prior to those events, and the unhappy and unbecoming proceedings against Queen Caroline which followed them, brought the Duke prominently forward, and proved him to be an able, firm, and sagacious statesman. On the 4th of March, 1821, the Duke was appointed Colonel-in-Chief of the Rifle Brigade; and in the same year he officiated as Lord High Constable at the coronation of George IV.

In 1825, when a mania for joint-stock companies seized the public mind, his Grace exerted himself to restrain the infatuation of English capitalists; and, as an acknowledgement of his services, he was invited to a splendid banquet, and presented with a magnificent silver vase, worth £1000. In 1826, there was commercial distress of the severest description. At the Duke's suggestion, small notes were re-issued at the Bank of England; and this measure, joined to the large amount of new coin, at last put an end to the embarrassment.

His Grace was appointed, with Sir Robert Peel and other leading members of Parliament, among the Commissioners for Indian Affairs. The Duke of York dying on the 5th of January, the Duke of Wellington became, on the 24th, his successor as Commander-in-Chief and Colonel of the 1st Grenadier Guards. On the 10th of March his Grace was installed Constable of the Tower; at the same time he was made Custos Rotulorum of the Tower Hamlets. The Premier, Lord Liverpool, having died of apoplexy, on the 17th of February, after holding office since the 9th of June, 1812, the King, on the 10th of April, nominated Mr. Canning his successor. Upon this the Duke of Wellington, and six other of the principal members of the old Cabinet, retired, his Grace resigning the command of the army on the 30th. This secession caused the failure of Canning's Ministry: it was succeeded by that of Lord Goderich, a very short-lived Government; and when that was broken up the Duke of Wellington was instructed to frame a Cabinet. This he accordingly did, resigning his military command on the 15th of February, in favour of Lord Hill. Mr. Huskisson, Lord Dudley, Mr. Charles Grant, and Lord Palmerston, very soon ceased to be of his administration. The Duke of Clarence also acceded as Lord High Admiral.

One of the reforms with which the Duke of Wellington's name is indissolubly connected, is the repeal of the Test and Corporation Acts, which he carried through the session of 1828.

Another measure of similar nature and of more historic note was the Roman Catholic Relief Bill. His Lordship had shown himself, when Chief Secretary for Ireland, leniently disposed towards alleviating the penalties and restrictions that weighed upon the large body of his Majesty's Catholic subjects. The question had been agitated for years; and his Grace's Cabinet, after resisting the popular demands for some time, at length found themselves compelled to yield. Mr. Peel (the late Sir Robert) then sat for the University of Oxford, and the first intimation of the Ministry's determination was his resignation. This step caused a prodigious sensation; and the University marked its displeasure by electing Sir Robert Inglis in the room of Mr. Peel, after a fierce and memorable struggle took place in both Houses; but during the session of 1829, Mr. Peel carried the bill through the Commons by a majority of 180 on the second reading, and 178 on the third; and the Duke himself passed it through the Lords by a majority of 105 on the second reading, and 104 on the third. It received the Royal assent on the 13th of April, 1829.

On the 19th of March, at the same year, the Earl of Winchelsea and Nottingham, a determined opposer of the bill, behaved towards the Duke in a manner which his Grace considered an insult. A new scholastic institution, called King's College, having been opened in the Strand, to counteract the supposed tendencies of that in Gower-street, his Grace had been selected as patron. Lord Winchelsea wrote to Mr. Coleridge, the secretary, in the following terms: —"I was one of those who at first thought the plan might be practicable, and prove an antidote to the principles of the London University. Late political events have convinced me that the whole transaction was intended as a blind to the Protestant and High Church party; and that the noble Duke, who had for some time previous to that period determined upon breaking in upon the Constitution of 1688, might the more effectually, under the cloak of some outward show of zeal for the Protestant religion, carry on his insidious designs for the infringement of our liberties, and the introduction of Popery into every department of the State." The Duke of Wellington demanded a retractation, which his Lordship declined to give, and the preliminaries having been settled by Sir Henry Hardinge on the one hand, and the Earl of Falmouth on the other, the two Peers had a hostile meeting, on Saturday, the 21st of March, in Battersea-fields. His Grace fired without effect, the Earl discharged his pistol into the air, and the parties then left the ground. Lord Winchelsea afterwards published the retractation demanded of him by his Grace.

On the 29th January, 1829, the Duke was appointed Governor of Dover Castle and Lord Warden of the Cinque Ports. He soon afterwards added the whole of the Silchester property to his estate in Hampshire.

In 1830 came the French Revolution and the subsequent fall of the Duke's Government. A cry had been raised for Reform; this the Duke refused, and the result was immense popular excitement. His Grace himself did not escape personal insult; and considerable damage was done to his property. The new King, William IV., intended to be present at the City feast at Guildhall, but the Ministers received certain information, and his Majesty stayed away. On the 15th of the same November, 1830, Ministers were defeated on Sir Henry Parnell's amendment, appointing a select committee to inquire into the Civil List, by a majority of 27; and on the following evening his Grace and Sir Robert Peel announced the resignation of the Cabinet. Lord Grey was named his successor; Lord Hill, however, continuing at the Horse Guards.

On the 24th of June Lord John Russell recommenced the Reform discussion, and the bill passed in the Lower House on the 19th July, by a large majority. On the following day it was taken up to the Lords by upwards of a hundred members, headed by Lords Althorp and Russell, and was delivered to the Lord Chancellor. It was read for the first time *pro formâ*. The 3d of October was fixed for the second reading. The popular excitement was intense. The corporation of London presented an address to the King, praying for Reform; and the mob which accompanied them to the Palace proceeded to St. James's-square, and broke the windows of Lord Bristol's mansion, and then passed on to Apsley House, where they were guilty of a similar act of violence. Lord Grey re-introduced the bill in the following March, when the Opposition being weakened by the desertion of the Bishop of London and other Lords, the bill was read a second time by a majority of nine; upon which, the Duke and seventy-four other Peers entered their protest on the journals. When their Lordships re-assembled, it was proposed to take the question of enfranchisement first: and Lord Grey, being defeated, waited on the King and gave him the alternative of either creating a sufficient number of new Peers or of accepting his resignation. His Majesty accordingly sent for Lord Lyndhurst, and desired him to communicate with the Duke and Sir Robert Peel, but both being intractable on the Reform question the King recalled Lord Grey. So popular was this step that the Opposition gave up the contest, and the bill received the Royal assent by commission on the 7th of June, 1832. Earl Grey was soon afterwards succeeded by Lord Melbourne, but the Reform Ministry did not last long, being broken up by the resignation of Lord Althorp.

On the 15th of November his Grace was directed by the King to form a new Administration, and he at once recommended the appointment of Sir Robert Peel to the Premiership. As Sir Robert was then in Italy, the Duke was at first entrusted with the whole charge of Government, and held the seals of the three Secretaries of State; but when the Cabinet was filled up, he took the direction of the Foreign Affairs. The Lower House, however, having carried the election of the Speaker, defeated the Ministers by passing a clause for appropriating part of the Irish Church property to purposes of education. In consequence of this Ministers resigned in the April of 1834.

On the 26th January, 1834, his Grace had been unanimously elected Chancellor of Oxford, in the room of Lord Grenville, deceased. His popularity now returned, and remained unchanged till the end of his life. At the coronation of the Queen, in 1837, his reception by the crowd was enthusiastic. Marshal Soult, who was present as Ambassador Extraordinary from France, was also received with loud applause. On the 13th of July the Corporation of London gave a grand dinner to the foreign Princes and Ambassadors, at the Guildhall. The healths of the two heroes were drunk together, with tremendous cheering; and, in returning thanks, they complimented each other in the warmest manner.

On the resignation of Lord Melbourne, in 1839, the Queen sent for the Duke, and, at his suggestion, commissioned Sir Robert Peel to form a Ministry; but the Whigs returned to office, her Majesty refusing to dismiss the ladies of her household.

In 1841 Sir R. Peel constituted a Cabinet, which remained in power until the repeal of the Corn-laws, in 1846. On the 15th of August Lord Hill resigned the command of the army, in consequence of the state of his health, and the Duke, who once more returned to that important office, held it to the period of his decease

For the last few years of his life the Duke still continued to be consulted by Ministers, and indeed by her Majesty herself, who is understood to have taken his opinion on most matters of importance. He had always very regularly conformed to domestic observances, and mingled largely with the society to which he belonged. His last appearance in state was on the occasion of the dissolution of Parliament, when it became his duty to be bearer of the Sword of State. The venerable Duke, feeble with age, was accordingly seen in his place, carrying the heavy and ancient weapon. His latest remarkable speech was in the House of Lords, when he emphatically came forward to signify his approbation of Sir Harry Smith's conduct of the Kaffir war.

The Duke had gone to Walmer Castle—his general health was still good. Last Saturday afternoon he rode over on horseback to Dover, and, in his capacity of Lord Warden, inspected the works in progress in the Harbour of Refuge, and other departments. He then seemed in excellent health and spirits.

His end may be said to be sudden. He died after a "succession of fits," at a quarter past three in the afternoon of Tuesday, the 14th of September.

The Duke married, 10th April, 1806, the Hon. Catherine Pakenham, third daughter of Edward Michael, second Lord Longford, and by her (who was born in 1772, and died in 1831) he had issue —

I. ARTHUR, Marquis of Douro, who succeeds as second Duke of Wellington. His Grace is a Colonel in the army. He was born 3d February, 1807, and married, 19th April, 1839, Lady Elizabeth Hay, fourth daughter of the Marquis of Tweeddale, which lady was born 27th September, 1820.

II. LORD CHARLES WELLESLEY, M.P. for Windsor, a Colonel in the army, born 16th January, 1808; married, 9th July, 1844, Augusta Sophia Anne, only child of the Right Hon. Henry Manvers Pierrepont, brother of Earl Manvers, and by her (who was born 30th May, 1820) has had three sons—Arthur, born 6th May, 1845; died 7th July, 1846; Henry, born 8th April, 1846; Arthur Charles, born 15th March, 1849; and two daughters, to the eldest of whom, Victoria Alexandrina, her Majesty stood sponsor in person.

His Grace's NEPHEWS and NIECES were as follow:—

Children of Wm. Wellesley Pole, third Earl of Mornington.
- William, present Earl of Mornington.
- Lady Mary Charlotte Anne Hagart, who died in 1845.
- Lady Emily Harriet, wife of Lord Fitzroy Somerset.
- Lady Priscilla Anne, married to the Earl of Westmorland.

Children of the Hon and Rev. Gerald Valerian Wellesley, D.D.
- Charles Wellesley
- George Grenville Wellesley
- Emily Anne Charlotte, wife of the Hon and Rev. Robert Liddell
- Georgiana Henrietta Louisa, wife of the Rev. George Darby St. Quintin
- Mary Sarah, Viscountess Chelsea
- Cecil Elizabeth, wife of the Hon. George A. F. Liddell

Children of Henry, First Lord Cowley.
- Henry Richard Charles, second and present Lord Cowley
- The Hon. William Wellesley
- The Hon. and Rev. Gerald Wellesley, Rector of Strathfieldsaye
- The Hon. Charlotte Arbuthnot, wife of Lord Robert Grosvenor
- The Hon. Georgiana Charlotte Mary, wife of the Right Hon. Sir Henry Lytton Bulwer, G.C.B.

- Georgiana-Frederica (only daughter of Lady Anne Wellesley, his Grace's sister, by her first husband, the Hon. Henry Fitzroy), married, 25th July, 1814, to Henry, Marquis of Worcester, now Duke of Beaufort.
- Frederick Smith, Esq., son of Lady Anne Wellesley, by her second husband, C. Culling Smith, Esq.
- Emily-Frances, Duchess of Beaufort, daughter of Lady Ann Wellesley, by her second husband, C. Culling Smith, Esq.

THE DUKE OF WELLINGTON IN THE HOUSE OF LORDS

(From a Correspondent.)

THE Great Duke—a sagacious collegaue at a Cabinet Council, the dignified host at a Waterloo banquet, the exact and impartial dispenser of patronage at the Horse Guards, the accomplished musical connoisseur at the Italian Opera; and the kind, hearty, and sympathising old gentleman at the latest marriage ceremony or christening—the Great Duke, we say, never looked more in his element than in the House of Lords.

His Grace was no *dilettanti* legislator. Exactly at five o'clock during the Session he was on his way down Whitehall, either on horseback—for he rode with uncommon ease and grace, notwithstanding his advanced years—or in a carriage of novel construction which he had himself designed, drawn by one horse—a kind of cabriolet on four wheels. In the House of Lords the Duke did not come in for a lounge or a gossip, as is the custom of many noble Lords, but applied himself steadily to the business under discussion. Seated on one of the cross benches just below the Woolsack, or, when the House was not in committee, occupying the chair of the Chairman of Committees at the table, the Duke gave his entire and conscientious attention to every thing that was said on both sides of the House. So strict and unbroken was his determination to hear everything, that people who heard noble Lords make prosy and rambling speeches, in which they repeated arguments which had been a dozen times before repeated in the House of Commons, and who saw the Duke of Wellington still listening with undiminished attention, conceived a theory that the Duke never read the newspapers, and formed his opinion upon public measures only from the evidence, and explanations, and arguments which came before him in his legislative capacity. Such a practice is in the strictest conformity with constitutional theory, although little in accordance, perhaps, with the habits of modern statesmen in the ranks of the Peerage.

The Duke of Wellington always seemed to us the best dressed man in the House of Lords. Other Peers, although we do not remember one, may have appeared in better fitting garments; but there was a happy suitableness in the colour and fashioning of the Duke's clothes which showed that he exercised the nicest supervision over his tailor, and by no means suffered that functionary to appparel him in the newest modes. His favourite costume was a blue frock coat, white waistcoat, white trousers, and white neckcloth—the latter fastened behind with a large silver buckle. Last winter the Duke made his appearance in the House of Lords in a short white cloak or cape, which at first excited much attention, from its singularity. But, upon examination, it was seen to cover the old man's neck and chest in so warm and cosy a manner, and to agree so well with his clear complexion and white hairs, that it seemed one of the most graceful winter garments imaginable.

The Duke's style of oratory was no doubt deficient in the higher flights of rhetoric, which he never affected, but it possessed in an eminent degree the qualities of plainness, perspicuity, and energy. He went straight at his mark, and seldom missed the bull's-eye. His oratory accurately reflected the character of his mind: it was eminently practical. His speeches, always short, were yet always pregnant with matter, and marked by a certain native good-sense and soldier-like bluntness and directness, which became him wonderfully. Latterly there were frequent pauses in his speeches, not arising from want of words or a paucity of ideas, but from a difficulty of articulation and ejaculation. Of late years, the Duke's deafness had so grown upon him that he interchanged very few remarks in the House with his most intimate friends. He became conscious that his interlocutor could not become audible to him without being heard by almost every one in the House, and the Duke did not choose to make a confidant of the Bench of Bishops and the Strangers' Gallery.

But if, upon ordinary occasions, when the Duke graced the House of Lords with his presence, he was the object of attention, there were two days in the year when he was indeed the "cynosure of neighbouring eyes," and when he received gentle and admiring glances sufficient to turn the head of any man whose mind was less evenly balanced. We refer to the ceremonial upon the opening and prorogation of Parliament by the Queen in person. The writer was among the favoured few who witnessed this grand and imposing ceremonial at the opening of the last session of Parliament. The Duke of Wellington had never seemed to look better. His white hairs were combed and brushed with a grace and precision which would have seemed dandyism in any one else. His cheeks seemed to us to be filling out as if Nature had some obesity in store for that spare frame. Never had he looked more venerable. Every one esteemed it a privilege to see the Great Captain of the age—the greatest subject in Christendom. Not a few experienced a presentiment that this might be the last Speech from the Throne on open ing a new Session, that the Duke might be spared to hear. Never, it is certain, was so much attention directed to the illustrious warrior. The proudest Peeress and the greatest beauty felt happy in obtaining a nod, a passing word, a shake of the hand. The Duke could not but be conscious of the admiration of which he was the object, yet he knew how to retire within himself. So far from challenging attention on these occasions, he contrived to make every one feel that it would be highly improper for him to come between the assembly and the Sovereign. We have always admired the exquisite tact with which, in the presence of the Sovereign, the Duke of Wellington has forgotten his own individuality and self-consciousness. When the Queen was present the Duke knew of no one else, and his own pretensions to distinction never came into his head, even if they occurred to any one else.

When the ermined robe of the Duke was thrown over the Field-Marshal's uniform; the Queen was at the door of her Royal Palace, and the Duke prepared to carry the Sword of State in the Royal procession. The Duke's place on this occasion was on the highest step of the throne, on her Majesty's left hand—the corresponding place on the Queen's right being occupied by the Mistress of the Robes. When her Majesty had taken her seat, the Sword of State was held by the Duke in an erect position, and with an air that would have done credit to the smartest corporal in the Guards. Becoming, however, more and more interested in the successive passages of the Royal Speech, his Grace, by degrees, bent his aged head to the level of her Majesty's lips, while the sword in his right hand assumed a rejicidal angle of incidence which the venerable Duke would have been inexpressibly shocked to observe. Happily the sword was sheathed, and no harm was done, for her Majesty and her faithful Lords and Commons were too much occupied with the delivery of the Royal Speech to notice the threatening position of the Sword of State, suspended over the Royal neck, it is true, at that moment, but in the loyalest hands in the world.

The Duke's temperance was carried to the verge of abstemiousness. His ability to endure fatigue was remarkably shown upon the memorable Corn-Law debate in the House of Lords, when the Duke took his seat upon the Ministerial benches at five o'clock, and did not once leave his place till their Lordships divided at five o'clock the next morning. The Duke, upon this occasion, took an affecting leave of their Lordships and of public life; but, ever faithful to the call of duty, he has not unfrequently taken a part in debate since that period.

The Duke's habit of early rising enabled him to be one of the most prompt and punctual of correspondents. Almost all the epistles beginning "F. M. the Duke of Wellington" were written before many younger men had left their beds. We have heard a Colonel in the Guards relate that a short time ago a point of military discipline arose in connexion with the Household troops, which required prompt solution. Application was made to his Grace; but he was at a ball, and did not return to Apsley House until midnight. A statement of the difficulty awaited him upon his return; and before eight o'clock next morning the *militaires*, to their infinite astonishment, received his Grace's answer, which contained an elaborate recital of all the cases and precedents applicable to the point in dispute, set forth in the clearest and most methodical manner.

The greatest ornament of the House of Peers is gone, and his place shall know him no more. His brother Peers have lost the most patient of listeners, and Mr. Barry's beautiful chamber its greatest living attraction. The hoary head of the great warrior and statesman is brought low, but a nation mourns at his tomb. His life now belongs to history, to poetry, and to painting: and so long as the English language endures, the name of WELLINGTON will not be forgotten.

PRECIS

OF THE

COMMISSIONS, SERVICES, OFFICIAL COMMANDS, AND PUBLIC HONOURS

OF

FIELD MARSHAL THE DUKE OF WELLINGTON.

(This very interesting Chronological Record, to the year 1835, is appended to Col. Gurwood's "Despatches of the Duke of Wellington." 12 vols. 8vo.)

Born	1 May, 1769
Ensign	7 Mar. 1787
Lieutenant	25 Dec. 1787
Captain	30 June, 1791
Major	30 April, 1793
Lieutenant-Colonel	30 Sept. 1793
Colonel	3 May, 1796
Major-General	29 April, 1802
Lieutenant-General	29 April, 1808
General, in Spain and Portugal	31 July, 1811
Field Marshal	21 June, 1813
Died	14 Sept. 1852.

1794.

Embarked at Cork in command of the 33d regiment to join the Duke of York's army in the Netherlands, and arrived at Ostend .. .. June
Re-embarked and proceeded by the Scheldt to Antwerp .. .. July

1795.

As senior officer, commanded three battalions on the retreat of the army through Holland .. .. Jan
Early in the spring, on the breaking up of the ice, the army, including the 33d regiment, re-embarked at Bremen for England.
On return to England, embarked in the command of the 33d regiment for the West Indies, on board the fleet commanded by Admiral Christian .. .. Oct

1796.

But owing to the heavy equinoctial gales, after being six weeks at sea, returned to port .. .. 19 Jan
Destination of the 33d regiment changed for India .. .. .. 12 April
Joined the 33d regiment at the Cape of Good Hope .. .. Sept

1797.

Arrived in Bengal .. .. Feb
Formed part of an expedition to Manilla, but recalled on arrival at Penang .. .. Aug
Returned to Calcutta .. .. Nov

1798.

Proceeded on a visit to Madras .. .. Jan
Returned to Calcutta .. .. Mar
The 33d regiment placed on the Madras establishment .. .. Sept

1799.

Appointed to command the subsidiary force of the Nizam, the 33d regiment being attached to it .. .. Feb
Advance of the army on Seringapatam; Colonel Wellesley moving on the right flank, attacked and harassed by the enemy .. .. 10 Mar
Tippoo Sultaun in position at Malavelly; the attack and defeat of his right flank by the division under Colonel Wellesley and the cavalry under Major-General Floyd .. .. 27 Mar
Arrival of the British army before Seringapatam .. .. .. 3 April
The army take up their ground before the west face of that fortress: first attack on the Sultaunpettah Tope, by the 33d regiment and 2d Bengal Native Regiment, under Colonel Wellesley .. .. 5 April
Second attack with an increased force, the Scotch Brigade (94th regiment), two battalions of Sepoys, and four guns .. .. 6 April
Siege of Seringapatam, until .. .. 3 May
Assault and capture: Colonel Wellesley commanding the reserve in the trenches .. .. 4 May
Colonel Wellesley appointed Governor of Seringapatam .. .. 6 May

Called to Calcutta to assist in military deliberations .. ..

STRATHFIELDSAY, HANTS.

STRATHFIELDSAY.

STRATHFIELDSAY is situated about six and a half miles north-west of the Winchfield station, and about the same distance north-east of the station at Basingstoke: it is about three and a half miles east of Silchester. The parish of Strathfieldsay is partly in the county of Berkshire. The park is not of very great extent, the average breadth being about a mile, and the length about a mile and a half; but it is rendered pleasant, especially on the eastern side, by a diversity of hill and dale, and some fine trees; and it is also enlivened by the waters of the river Loddon, which, widening through the grounds, are expanded into various sheets of ornamental water, near which the mansion is situated. The term Strath, or Strat, as it is usually pronounced, seems to have been an old term signifying a "stretch" of level ground with elevations running along the sides. In this sense it is frequently used in Scotland, and in some instances of its employment with this meaning may be found in Wales. The addition of "Say" appears to have been derived from a family of that name, who originally possessed the domain, and from which it passed in marriage to that of the Dabridgecourts, who held it from the time of Richard II. to the year 1636. About that time it was purchased by Sir W. Pitt, an ancestor of the Earl of Chatham, to whom it descended, and who, as well as his equally celebrated son, often resided here.

This fine estate, it will be recollected, was presented to the late Duke of Wellington by the British nation in 1814, under circumstances which it may now be interesting to recapitulate:—

The Duke of Wellington took his seat in the House of Peers on the 28th of June, 1814. He had just returned from Spain, the scene of his splendid career of victories. After the ceremony of introduction, all his patents of nobility were read; and the Lord Chancellor, in delivering to his Grace the unanimous thanks of the House, took occasion to remark, in the course of his speech, that (a circumstance unprecedented in our history) the first day on which the Duke had appeared among the Peers of England, he had produced titles in regular gradation to the whole of the honours of the peerage in the power of the Crown to bestow.

After the battle of Waterloo, the Legislature was called upon to "take such measures as should afford a further proof of the opinion entertained by Parliament of the Duke of Wellington's transcendent services, and of the gratitude and munificence of the British nation." But as there were no honours which the Duke had not already received, Parliament could therefore only repeat their thanks, and increase their former munificent grant for the purchase of an estate, by the addition of a sum by which a palace might be erected on a scale of magnificence worthy the conqueror for whom it was designed. These several grants had now amounted to a considerable sum, and the trustees appointed to carry the intention of Parliament into effect by the application of the funds to the purchase of an estate and the erection of a mansion suitable to the dignity of the Duke's rank, at length purchased the manor of Strathfieldsay.

The first act, granting a sum of money to the Duke of Wellington for the purchase of an estate, was passed December 22, 1812 (53 George III. c. 4). For this purpose, and in gratitude for the services of the Duke, "particularly at the battle of Salamanca," it vests in the hands of certain trustees the sum of £100,000 to be applied as above stated. This act was amended by another (53 George III., c. 133), empowering the trustees to lay out a portion of the money in the erection of buildings. The next grant was made by the 54th George III. c. 161, which gives to the same fund the additional sum of £400,000 (or an annuity of £12,000) to the Duke and his heirs. The sum granted after the battle of Waterloo was £200,000, by the act authorising which (55 George III. c. 186) it is enacted that the estate purchased with the money should be deemed to be holden of the Crown, on condition of sending to the King at Windsor a tri-coloured flag on the 18th June, the anniversary of Waterloo.

The Duke of Wellington, it will be recollected, was honoured with a visit at Strathfieldsay, by her Majesty and Prince Albert in 1846.

WALMER CASTLE.

THIS Castle, which holds a middle place between the ancient and modern fortifications, is coeval with Deal Castle, of the time of Henry VIII.; with Sandown Castle they form a defence for the Kentish coast between Sandwich and Dover. Walmer was the official residence of the late Duke of Wellington, as Lord Warden of the Cinque Ports; and has just acquired a melancholy interest as the place where the illustrious Duke breathed his last. About ten years since, in November, 1842, his Grace was honoured by her Majesty and Prince Albert, with a visit at Walmer. The appointment to the Wardenship, on a vacancy, has hitherto been given to the Prime Minister. The Admiralty jurisdiction of the Cinque Ports, attached to the office of Lord Warden, is expressly reserved in that clause of the Municipal Reform Act which abolishes chartered Admiralty jurisdictions in general.

No. 581.—VOL. XXI.] SATURDAY, SEPTEMBER 25, 1852. [TWO NUMBERS, 1s.

THE DUKE'S FUNERAL.

THROUGHOUT the realm of Britain, all questions and topics of conversation and discussion have temporarily merged into one—when, where, and with what state and ceremonial the great Duke of Wellington shall be buried? When we last addressed our readers, it was not known whether the illustrious deceased himself had not, by express command in his will, forbidden all pageantry and pomp upon the occasion. It was feared that the hero, who slept all his life on a little camp bed, on a hard mattress, and who yielded his last breath in a turret-chamber, plainly, if not meanly, furnished, had carried out this characteristic simplicity of his life, by requesting that no costly paraphernalia and trappings, and no parade of grief, should convey him to the tomb. Had this been the case, it would have been the duty of the nation, as of the representatives and family of the mighty dead, to have yielded their sorrowful obedience to the command. But the national desire to do all possible honour to the deceased has not thus been thwarted. The Duke has left no instructions upon the subject; and it has, therefore, been decided, by the highest authority in the State, and approved of by the family, as well as by the unanimous voice of the people, that the obsequies of Wellington shall be worthy—we will not say of his merits, but of his fame; and that the splendour of the funeral that England shall give her most illustrious son shall, to the greatest extent that is possible, represent to contemporaries and to posterity, to our own nation and to all others, how deeply she loved and honoured him.

The following letter from the Prime Minister to the Home Secretary—eloquent and worthy of the great occasion which has called it forth—conveys to the public all that is yet known upon the subject. It will be seen that, as was from the first anticipated by every one, the funeral will be in St. Paul's Cathedral, and that the remains of the Duke will rest side by side with those of Nelson.

"Balmoral, September 20, 1852.

"Sir,—Her Majesty received with the deepest grief, on Thursday last, the afflicting intelligence of the sudden death of his Grace the late Duke of Wellington.

"Although the Queen could not for a moment doubt but that the voice of the country would be unanimous upon the subject of the honours to be paid to the memory of the greatest man of the age, her Majesty considered it due to the feelings of his Grace's surviving relatives that no step should be taken, even in his honour, without their previous concurrence; and, accordingly, on the same evening, in obedience to her Majesty's commands, I wrote to Lord Charles Wellesley (the present Duke having not then returned to England), to ascertain whether the late Duke had left any directions; or whether his family desired to express any wish upon the subject; and suggesting the course which appeared to her Majesty best calculated to give effect to the expression of those feelings in which the nation, as one man, will sympathise with her Majesty.

"Having this day received letters from the present Duke and his brother, to the effect that the late Duke has left no directions on the subject, and placing themselves wholly in her Majesty's hands, I hasten to relieve the public anxiety, by signifying to you, for general information, the commands which I have received from her Majesty.

"The great space which the name of the Duke of Wellington has filled in the history of the last fifty years; his brilliant achievements in the field; his high mental qualities; his long and faithful services to the Crown; his untiring devotion to the interests of his country, constitute claims upon the gratitude of the nation which a public funeral, though it cannot satisfy, at least may serve to recognise.

"Her Majesty is well aware that, as in the case of Lord Nelson, she might, of her own authority, have given immediate orders for this public mark of veneration for the memory of the illustrious Duke, and has no doubt but that Parliament and the country would cordially have approved the step. But, her Majesty, anxious that this tribute of gratitude and of sorrow should be deprived of nothing which could invest it with a thoroughly national character—anxious that the greatest possible number of her subjects should have an opportunity of joining it, is anxious, above all, that such honours should not appear to emanate from the Crown alone, and that the two Houses of Parliament should have an opportunity, by their previous sanction, of stamping the proposed ceremony with increased solemnity, and of associating themselves with her Majesty in paying honour to the memory of one whom no Englishman can name without pride and sorrow.

"The body of the Duke of Wellington will, therefore, remain, with the concurrence of the family, under proper guardianship, until the Queen shall have received the formal approval of Parliament of the course which it will be the duty of her Majesty's servants to submit to both Houses upon their reassembling.

"As soon as possible after that approval shall have been obtained, it is her Majesty's wish, should no unforeseen impediment arise, that the mortal remains of the late illustrious and venerated Commander-in-Chief should, at the public expense, and with all the solemnity due to the greatness of the occasion, be deposited in the cathedral church of St. Paul's, there to rest by the side of Nelson—the greatest military by the side of the greatest naval chief who ever reflected lustre upon the annals of England.

"I have the honour to be

"Your most obedient humble servant,

"Right Hon. S. H. Walpole, M.P. "DERBY."

The English are said to be a people who do not understand shows and celebrations, or the proper mode of conducting them. It is alleged that they flock to and applaud the rudest attempts of the kind; and that, unlike the French and other nations of the Continent, they have no real taste for ceremonial. There is, doubtless, some truth in the charge. We are a practical people; and the few great ceremonials, whether local or national, still remaining among us, hold their place as relics of the past, not to be lightly interfered with, rather than as celebrations in accordance with, or approved by, the spirit of our age. But in this case, we hope, and venture to predict, that no reproach of want of taste will rest upon the people, or upon the officials who shall be charged

THE RIGHT HON. ANNE, COUNTESS OF MORNINGTON, MOTHER OF THE DUKE OF WELLINGTON.—FROM A PICTURE BY THE COUNTESS OF WESTMORELAND.—(SEE NEXT PAGE.)

with the necessary details of the ceremony. What Englishmen resolve to do, they always do well; and it has been determined by the public, and in the mind of every individual composing it, that this event shall be solemnized as becomes the mightiest nation in the world, mourning for the loss of her mightiest citizen. We may be confident that nothing mean, tawdry, theatrical, inappropriate, or pagan, will be permitted in the obsequies of Wellington; but that the remains of the hero shall be deposited in the most holy ground within the realm, in the presence of the highest officers of the State and of the Legislature; of the survivors of his deeds and of his fame; and of the representatives of all that is great, noble, and distinguished in Britain; that the *cortege* shall be, like the hero, devoid of unmeaning and frivolous accessories, and that it shall be simple, grand, and magnificent in its completeness and in its details. No aid of military pomp must be wanting. He must be borne to his grave like a soldier; and we must realise in our sober capital, for one memorable day, the magnificent description of the funeral of Arvalan by Southey:—

> Hark! 'tis the funeral trumpet's breath—
> 'Tis the dirge of death:
> At once ten thousand drums begin,
> With one long thunder-peal the ear assailing.
> Ten thousand voices now join in;
> And, with one deep and general din,
> Pour their wild wailing:
> The song of praise is drown'd
> Amid the deafening sound.
> You hear no more the trumpet's tone;
> You hear no more the mourner's moan;
> Though the trumpet's breath, and the dirge of death,
> Swell, with commingled force, the funeral knell;
> But, rising over all, in one acclaim,
> Is heard the echoed and re-echoed name

of WELLINGTON! WELLINGTON! At present, and for some days to come, it is probable that nothing is, or will be, decided, as to the exact mode of procedure; but, as the Duke was in his life, so he must be in his death—honoured above all others for the magnitude of his services, and the simple nobleness of his aims and his character.

It has been faintly urged in some quarters—and the reasoning is not without its weight on the minds of many estimable people—that all such pomp is vain and useless; that the fame of the dead needs no such celebration; that the page of history is the fittest and grandest mausoleum of departed greatness and virtue; and that the benefactors of an age are best honoured by the unfeigned regrets of their contemporaries, and the undying respect and admiration of posterity. This may be true; and yet, such a funeral celebration as that which we are now certain will be accorded to the honoured remains of Wellington, may be, nevertheless, necessary. Utilitarinism is not the all in all of our private or public life. The feelings are as much a part of the existence of a nation as its daily business. There is a heart in the mass of the people as well as in each individual man; and there is a sentiment, a sympathy, an enthusiasm, and a poetry in the popular mind, that must soar, at times, beyond the sordid, the common-place, and the ultra-utilitarian, under the penalty of a case-hardening degradation of the national character.

England owes this great funeral, not so much to Wellington, whose fame it cannot enhance, as to itself. The British people would feel dissatisfied and ashamed of themselves if they did not, upon an occasion so touching as this, exert themselves to the utmost to express to all the world how highly they reverenced, and how deeply they deplore, the man they have lost. They would feel that a solemn duty had been left unperformed, and that the living greatness and virtue, whose services may, perchance, be required, as his were, in the cause of national freedom and honour, would lose one incentive to exertion—the appreciation of their countrymen. But on this point it is needless to expatiate The sentiment of he people transcends the reasoning of mere utilitarians, and includes a utility far higher, nobler, and more comprehensive than is dreamed of in such a philosophy. In this particular, the Sovereign, the Executive Government, the Legislature, and the people are unanimously agreed. The Duke's funeral, we cannot doubt, will be worthy of the nation.

PORTRAIT OF THE LATE COUNTESS OF MORNINGTON, MOTHER OF THE DUKE OF WELLINGTON.

WHEN we are deploring the loss of the greatest man of the age, and preparing to do grateful homage to his memory, every circumstance connected with the family hearth in which he was reared becomes invested with deep poetic interest. The page of the future being closed to his active energies, we seek to dive back into the past, and most naturally fall to thinking what were the features of the mother who had given birth to such a son.

We are glad, therefore, in having the opportunity of re-producing an admirable portrait, painted some years ago by a lady, herself a daughter of the illustrious house of Wellesley, of the venerable mother of the warrior and statesman Duke. The Countess of Westmoreland, daughter of the late Lord Maryborough, and, consequently, niece of the hero of Waterloo, has shown clearly in the gifts of nature so lavishly showered upon her family. Not only as a linguist and a musician, but as an artist, is her Ladyship highly accomplished; her merit in the latter capacity being universally known and acknowledged amongst the schools of Italy and Germany. It was subsequently to the death of the venerable Countess, which occurred in 1831, at the age of 90, that the idea struck Lady Westmorland of producing the family group, from which the principal figure is now before us, and which must ever be of enduring interest. The likenesses of the Countess were traced from memory, assisted by a portrait of the original painted during life, some thirty years ago, by Owen.

Some account of the picture itself may here be given, although, in our Engravings, we omit the accessorial details. We may observe, that both in the character of the face and figure, and in all the *entourage*, the treatment is delicate and unostentatious—the intention being that of suggestion rather than dramatic realisation.

In the midst, in the usual dignity of her domestic retirement, sits the mother of the great Duke; she holds in her hand the *London Gazette* extraordinary, which records the stirring events of the Day of Waterloo. On the table is a letter from the warrior himself, with the modest display of mighty triumph, and the adulation of crowned Monarchs, could not forget what was due to a mother's love This document is dated "Waterloo, June 19, 1815;" and signed "your dutiful and affectionate son, Wellington." We have reason to believe that in the original this subscription was inserted in the Duke's own hand; a circumstance which will give an enduring and unique interest to the picture, which, although a print was published from it shortly after it was painted, remains in the family. In various parts of the room are arranged the busts of the Marquis Wellesley, the Duke of Wellington, and Lord Marybrough; also, a small medallion of the late Lord Cowley.

Anne, Countess of Mornington, the Duke's mother, survived, a widow, full fifty years, and lived to witness the multiplied honours and well-earned glory of her children. Of her five sons, four became Peers of the realm. Her Ladyship was born 23rd June, 1742, the eldest daughter of Arthur Hill Trevor, 1st Viscount Dungannon, by Anne, his wife, daughter of Edmund Francis Stafford, Esq. She married Lord Mornington on the 6th February, 1759, and died in September, 1831, in her ninety-first year.

Seldom has mother had four such gifted sons; and well might the title of "the British Matron," which she was the one originally intended for it, have been given to this truly historic picture, and which, we believe, but for a feeling of modesty on the part of the Duke, it would have been in the original engraving.

FOREIGN AND COLONIAL NEWS.

UNITED STATES.

The accounts from New York this week (to the 8th inst) announce the recurrence of one of those frightful accidents on a large scale which have become the approbrium of steam communication, whether by land or water, in the United States. On the 5th inst. the boiler of the steamship *Reindeer* exploded on the Hudson river, causing the immediate death of 30 persons, and severely injuring 16 others.

From Havannah, telegraphic accounts had reached New York to the 2d inst., stating that Americans had been prohibited from landing at Cuba, and that the police had made some further arrests of some of the parties connected with the *Voice of the People*.

The State of New York has been infested for a considerable time past by bands of ruffians, who, under the designation of anti-renters, have endeavoured, by the most gross and cruel outrages, to deter owners of property from demanding rent. A daring instance of their lawless proceedings, which resulted in the death of one of the gang and the wounding of others, is noticed in the present advices. A large body of these desperadoes went at night, disguised as Indians, to the house of Mr. Shaw, whom they had tarred and feathered a few weeks before, in addition to burning his out-buildings; and upon his refusing to come out they threatened to set fire to his house. As a means of self-defence, Mr. Shaw discharged the contents of a revolver among the party, which had the effect of killing one of them, named Whitbeck, and making his companions fly with all speed.

Madame Sontag had been very enthusiastically received at New York.

From New Orleans we learn that a terrible earthquake took place at Santiago de Cuba on the 20th ult. A large number of buildings were totally demolished, and the streets were blocked up with the ruins.

From California the latest intelligence is to the 14th of August. Throughout the diggings Chinese villages were springing up. Pekin, Canton, and Hong-Kong were among the names given to these Celestial settlements, some of which contained upwards of 1500 souls. The immigration of Chinese into California was enormous. Since the month of May the arrivals equalled that from all other quarters of the world, and were nearly three times that of the previous quarter. The immigrants were principally from Canton River and its vicinity. It was estimated, that in the month of August the number of Chinese resident in California was 27,038, and it was expected, before the expiration, to increase to 47,038.

The journals do not contain any mining intelligence.

There were some rumours of an intended movement to make Lower California an independent state.

The mortality on board vessels arriving at the Californian ports was truly awful. A remarkable instance is noticed in detail in another column.

The clipper ship *Staffordshire*, erroneously reported to have been wrecked, had arrived at San Francisco.

From Oregon recent accounts mention that a pitched battle had taken place near Table Rock, between a large party of whites and Indians, at the conclusion of which a treaty of peace was made. The miners on the Klamath, Salmon, and Rogue rivers were doing well, and several rich discoveries had been made. One man is said to have washed out of a sack of dirt upwards of 1017 dollars 50 cents; another took out of Rogue river a piece of gold worth 500 dollars. The San Francisco market was in a flourishing condition, there being a heavy and constant demand for goods.

According to the newspapers, Yucatan was about to apply to the United States Government for protection and annexation.

WEST INDIES, SOUTH AMERICA, &c.

The monthly West India Mail brings intelligence this week to the 20th of August, from Jamaica. The cholera has made its appearance in the island, and has created great alarm. One man who had been attacked by the dreadful malady died in seven hours. The disease was supposed to have been carried there by a passenger on board the American steamer *Ohio*. Small-pox still raged. Several severe shocks of earthquake had been felt in different parts of the island. The public attention had been occupied with some disclosures relative to frauds on the colonial bank committed by a clerk, who had decamped from the island Two English brigs had arrived at Jamaica to take in passengers for Australia.

From the other island and the neighbouring main land there was no news of interest; but sickness was very prevalent, especially in St. Thomas, and yellow fever was somewhat general in Demerara, Barbadoes, and Berbice.

By the arrival we have news from the coast of the Pacific. Great excitement existed in Lima (the capital of Peru) on the subject of the intentions of the American Government respecting the Lobos Islands. A Peruvian Minister was going to the United States Peru was sending 10,000 men to the frontiers of Ecuador. General Flores has gone to Chili.

INDIA AND CHINA.

The advices received in anticipation of the Overland Mail are dated Calcutta, August 7, and contain intelligence to the 31st of July from the cantonments of the troops engaged in the war with the Burmese, at Rangoon. We thus learn that the inactivity which the rainy season has induced has been varied by a short and successful expedition of steamers up the river Irrawaddy against the fortified town of Prome. The steam flotilla consisted of her Majesty's steamer *Medusa* and the H. C. steamers *Proserpine*, *Pilgrothon*, *Pluto*, and *Mahamuddy*. When proceeding up the river, the squadron was engaged with stockades in two or three places, and, on approaching Prome, had to encounter a hevy and commanding fire from batteries on the heights; but this was evaded by proceeding up a creek, thus turning the works and taking them in rear. Little opposition was met with from the Burmese troops at Prome, and the people eagerly offered their assistance in the removal of the guns. The iron cannon were spiked and sunk in the Irrawaddy, and some ten brass guns carried off as trophies on board the steamers. In returning, the flotilla fell in with a large body of Burmese under General Bandoolah, son of the famous General known by that name during the former war. This force was crossing the river, obviously on its way to the relief of Prome, and, being surprised in the passage, the steamers committed great havoc on both troops and boats. One seaman only was killed, two officers wounded, and those severely. Lieut Elliot, of the Royal Marines, received a ball in his foot, not yet extracted, and some of the bones having been fractured, it is feared he will be lame for life. Mr. Fraser, of the *Pluto*, was severely wounded in the arm.

The general impression of the officers engaged in the expedition was, that the steamers might have reached Ava with little difficulty, as the river was found to be navigable during the rainy season for steamers of light draught all the way to the capital; and therefore the dilatory policy of the commander in Burmah gave rise to considerable discontent. It was, however, very generally expected that, early in August, an immediate advance on and occupation of Prome would be ordered, and that reinforcements would at once be sent down from Madras and Bengal. The troops to march from Madras were to consist of two brigades of infantry, viz. two European and two native regiments, and also two troops of horse artillery. Nothing was known as to the number of troops that were to join from Bengal.

The Governor-General (Lord Dalhousie) had returned (on August 6) from Rangoon to Calcutta, and had resumed his office of President in Council, but left that of Deputy Governor of Bengal in the occupation of Sir Frederick Currie. It was alleged with much confidence that his Lordship had been granted a further term of office for another year at least, in order that he might conclude the Burmese war.

The North-Western Frontier has been profoundly quiet of late, and we may almost begin to hope that it will continue so. Brigadier General Roberts was proceeding to assume the command at Peshawur.

From China the latest intelligence is dated Hong Kong, July 23, and from it we learn that the insurrectionary movement of the adherents of the old Chinese dynasty of Ming against the reigning Tartar family is progressing steadily; that it seems to create more alarm every day, and that the banditti have appeared in the northern province of Honan, which is a new feature. Troops were sent early in the month of July to that place from Canton, and it was reported one of the high Imperial Mandarins had been degraded.

AUSTRALIA.—THE GOLD FIELDS.

We have consecutive accounts this week from the Australian colonies, to the middle of June, and a dispatch via India to July 1, which indicate the still increasing and extraordinary productiveness of the gold-fields, and the immigration, especially to Port Philip (Victoria), which was going on from Europe, the United States (including California and New York), and other places. The results of the Port Philip "diggins" were so favourable, that the dispostion of the Sydney population to emigrate thither is stated to have increased. Nevertheless, the results at the New South Wales mines do not appear to have been unsatisfactory. On the Peel river and at the Hanging-rock the yield was very great. An instance is mentioned of one man alone obtaining 72 ounces of gold in one day, and a party of seven obtained several splendid specimens at the Louisa Creek, one nugget alone weighed 167 ounces, and the rest were also very valuable. The Meroo and its tributaries had received a large accession to its population, while large numbers of persons have flocked to the Stony Yards, Tamborcora Creek, Golden Gully, and Bald Hill, being attracted thither by the reports of their extraordinary richness. The water in the Turon was too high to admit of any reasonable prospect of successful operations in the bed or sides of that river, and the diggers had left for other localities. A new field of great promise had been discovered about fifty miles west of Molong. The Braidwood diggings were flooded, and in general rain had, for some time previously, been very abundant, which had greatly impeded the gold diggers, but these were again resuming operations with general success.

The shipments of gold from Sydney up to the 8th June, amounted, at the rate of 65s. per oz, to the sum of £1,464,685.

So much for the New South Wales "diggins."

With respect to the gold fields of Port Philip (now called Victoria) and of which Melbourne is the capital, we find that they still maintain their great superiority over those of New South Wales. Thus, we learn that at Mount Alexander, Bal Harat, and other localities of that district the yield continued on the same gorgeous scale as hitherto, and that fresh discoveries were daily being made. Among the latest were diggings at the Anaki Hills, about twenty miles from Geelong. On May 24th, the escort from Mount Alexander brought into Melbourne no less than 31,478 ounces of gold, the result of a week's digging, which exceeded by 8000 ounces any weekly quantity previously received. The month of June, however, shows a still more startling result—the amounts brought in to be sent by escort to Melbourne, for the weeks ending respectively the 11th, 18th, and 25th of June, being 80,000, 91,000, and 105,000 ounces, making an average of 92,000 ounces per week, or about £370,000 sterling.

The export of gold from Melbourne to the 22d of May was to the extent of 32 tons 4 cwt 2 qrs. 19 lb. 8 oz., which, valued at 65s per ounce, is returned at £2,328,908. The value of the shipments from Sydney and Melbourne together, in the London market, is estimated at £4,500,000. The gold licenses issued to the 31st March last, for Sydney and Melbourne, amounted to 210,250

The anti-transportation movement and the agitation which it has originated have become stronger than ever, and there appears to be but one feeling in the colony on the subject. The Legislative Council of Victoria has reiterated the desire of the colonists that convict importation shall cease. The petition agreed to at a monster meeting held at Melbourne on April 2nd, was couched in the most determined language, going so far as to declare that should the Imperial Government persist in forcing convicts on the new colony through Van Diemen's Land it must inevitably drive them to seek refuge from such heartless tyranny and oppression in national independence. In Sydney, also, the movement is carried on with great energy, public meetings on the subject being of frequent occurrence.

A railway from Mount Alexander to Melbourne was about to be constructed.

The intercourse between Sydney and Melbourne had considerably increased, and several steamers were plying regularly between the two ports.

From Adelaide the accounts represent that colony to be quickly regaining its former prosperity. The amount of gold received overland from the diggings, and yearly increasing. Property, which had been severely depressed, was recovering to something like its former value.

The number of persons who had left the colony for the gold fields amounted to 18,000 souls.

EDITORIAL PERILS IN CALIFORNIA.—The newspaper editor in California requires as much physical daring in the ordinary performance of his avocations as the soldier on the field of battle. Duelling seems as much a matter of course as leader-writing. Accordingly we find in the intelligence received this week, and New York, from San Francisco, that Mr. Gilbert, the senior editor of *Alta California*, has just been killed in one of those barbarous rencontres. The affair is thus noticed in the Sacramento *Daily Union Extra*:—"It becomes our painful duty to announce the deplorable termination of a duel, by which the community has lost a gentlemanly and honourable member, and the editorial profession an able, honest, and worthy brother. This morning, at sunrise a hostile meeting took place at Oak Grove, between Hon. Edward Gilbert, senior editor of the *Alta California*, and General J. W. Denver, State Senator from Trinity county. The immediate cause of this lamentable affair was a card published by General Denver, reflecting upon the personal character of Mr. Gilbert. Of the merits of the controversy this is not the time nor place to speak. Mr. Gilbert challenged the adverse party. The weapons selected were Wesson's rifles, and distance forty paces. After the first interchange of shots, neither of which took effect, the weapons were reloaded, and the word given, when Mr. Gilbert fell almost instantly, having received the shot of General Denver in the left side, just above the hip. The ball pierced the abdomen, and passed entirely through his body, coming out on the right, almost directly opposite the point where it entered. Mr Gilbert survived but four or five minutes after the occurrence, and without a word, or scarcely a groan, his spirit passed from earth. His body was immediately conveyed to the Oak Grove House, where the sad duty of preparing it for its last resting-place was performed. The most intense sensation was produced throughout the city on the receipt of the mournful intelligence, and all seemed to unite in the most sincere sympathy for the unfortunate heirs of the encounter, and in the deep and heartfelt sympathy expressed for the surviving relatives of the deceased.—Another Californian duel, we also learn took place at the Abbey, near Pacheco, on the 22nd of August, between Messrs. W. H. Jones and John S. Nugent, of San Francisco. Weapons, duelling pistols; distance, ten paces. Two shots were fired, the first not taking effect. At the second fire, however, Jones fell mortally wounded on the side. The parties then left the ground. It was rumoured, that, being still dissatisfied, it was their intention to settle the affair by another meeting. A large number of spectators were present and witnessed the affair."

AMERICAN EMIGRANT-SHIPS.—FRIGHTFUL TRAGEDY.—Advices have been received from the Sandwich Islands and New York, to the 18th of July; and from them we learn of the recurrence of one of the most frightful tragedies which the lawlessness of American emigrants to California, and the neglect and carelessness of Captains of emigrant-ships, trading from the other ports of the United States to San Francisco, have so often caused. The barque *Sultana*, with 240 passengers, from Panama for San Francisco, had put into the Sandwich Islands short of provisions. On the 21st of May a fearful tragedy was enacted on board. A young man, named Woolfork, about nineteen years of age, from Kentucky, shot a German, named Johnson, through the heart. The origin of this business was a dispute about a tin cup, of which Woolfork had two and the German none. In the hasty discussion the hands was wrenched off, when Woolfork drew his revolver and shot Johnson dead. A scene of the greatest excitement ensued. The murderer was seized—it is said that he should be hanged, 32 against it, and the remainder neutral. A jurie was appointed; a jury of twelve empannelled; the prisoner found guilty of murder, and sentenced to be hanged on board within one hour. During the interval between the sentence and execution, the dead body of the murdered German was brought on deck, the preparation made, and after allowing the condemned man a quarter of an hour over his sums, he was run up the yard arm, where the soul became extinct. He was then cut adrift, fell upon his face into the sea, and then continued to float until left out of sight by the vessel. On the 23d of May water was discovered in the hold, and the passengers were told that they would be required less than some of their fashion. From the 15th of June to the 23rd of July the passengers had no bread. There were eleven women and two children on board, one of each of whom died before reaching San Blas. Six others died on board besides the murderer and another man.

NEW CONVICT SETTLEMENT.—Her Majesty's Government have resolved to make Freemantle, in Western Australia, a convict settlement, and the first batch, consisting of 250, will be despatched early in the ensuing month of October. They will consist chiefly of persons who have served three years' probation in the Dartmoor and Pentonville convict prisons, and whose conduct there has entitled them to favourable consideration. Each convict will, on landing, receive a ticket of leave, thereby combining him to the colony of Western Australia. A company of enrolled Chelsea pensioners go out as a police force; their wives and children go with them, and they will be located in the vicinity as military colonists.

THE LATE DUKE OF WELLINGTON.

A public funeral, as will be seen by the Earl of Derby's letter, given in another column, is to be accorded, with the concurrent assent of the Crown and Parliament, to the honoured remains of the late Duke of Wellington; and the place of sepulture, which has been selected, is in St. Paul's Cathedral, close to the tomb of England's greatest naval hero, Nelson.

The funeral cannot, therefore, take place before the assembling of the new Parliament, which has generally been understood to be fixed for the 11th of November next. An earlier day, however, may probably be appointed for that purpose, on the return of the Court from Balmoral.

The most important office which had been held by the late illustrious Duke—that of Commander-in-Chief—has been already filled up by the nomination of Lord Hardinge to that responsible appointment—a promotion which is universally approved of.

The Chancellorship of Oxford University, which has also become vacant by the demise of the late Duke, cannot be so readily supplied with an occupant, as the choice depends on the result of an election, which may or may not be the subject of a contest. The names of several distinguished noblemen have been mentioned for the office. Amongst them are the Duke of Newcastle, the Earl of Derby, the Earl of Shaftesbury, the Earl of Devon (High Steward), the Earl of Ellesmere, the Earl of Carlisle, and the Marquis of Blandford; but, from what transpired at a meeting at Oriel College on Friday week, Lord Derby's friends expect that a contest will be avoided. The Duke of Newcastle has, however, many supporters also. The resident members of convocation favourable to Lord Derby have adopted a similar proceeding to that adopted on the decease of Lord Grenville in the year 1834. On that occasion a declaration was issued, numerously signed, headed by the venerable Dr. Routh, President of Magdelen College, in favour of the immediate nomination of the Duke of Wellington, which, no doubt, had the effect of preventing a contest. A declaration which has been issued, headed by the same Divine, it is thought by some may probably have a similar effect in this instance to that obtained on the last. While, on the other hand, it is announced this week that much dissatisfaction has been excited among resident M.A.'s, by the move in favour of Lord Derby; that a protest against that noble lord's nomination is being circulated for signature; and that steps are being taken to ascertain whether the sense of the electors will permit another candidate to be started with a prospect of success. The election will take place early in next Term, which commences on the 10th of October. The present Vice-Chancellor would, in the ordinary course of events, resign his office a few days before Term. Provision, however, is made by the statutes of the University for his continuance in office until a Chancellor is elected—a Chancellor being indispensable for the appointment of a new Vice-Chancellor. The Rev. R. Cotton, D.D., Provost of Worcester, College, is to be the new occupant of the latter post.

At Walmer Castle a guard of honour, consisting of 80 men (an officer's guard) of the Rifle Brigade, has been stationed to watch over the remains of the Duke. The first guard was mounted on Thursday morning last, at ten o'clock. Sentry-boxes have been placed, for the convenience of the guard, at the various approaches to the interior of the Castle, leading to the chamber containing the body of the illustrious deceased.

The present Duke of Wellington arrived at the Castle at noon on Friday week. The news of his father's death having reached him at Baden-Baden, he started off without a moment's delay. At Cologne, the Duchess was so overcome by fatigue, that she was obliged to remain for a day to recruit. Her Grace, a special favourite and constant companion of the illustrious deceased, was deeply affected on receiving the melancholy intelligence. The Duke continued his journey, and, on reaching Ostend, went on board the Belgian mail-steamer *Baby*, and crossed the Channel to Dover, the voyage occupying some four or five hours. On landing, he proceeded to the Ship Hotel, took some refreshment, and slept till ten o'clock in the morning, at which hour he left for Walmer. On reaching the Castle, and meeting his brother, Lord Charles Wellesley, the noble Duke exhibited deep emotion. The Rev. Gerard Wellesley, Chaplain to her Majesty and Rector of Strathfieldsaye, nephew of the illustrious deceased, reached the Castle some hours before the Duke.

On Wednesday the Duchess of Wellington and Lady Charles Wellesley and family quitted Walmer for town.

The Duke and his brother, Lord Charles Wellesley, did not leave until Thursday, in consequence of their desire to see the last preparations for finally enclosing the remains of their illustrious deceased parent in the outer or state coffin.

RESPECT TO THE MEMORY OF THE DUKE IN THE CITY OF LONDON.—At the Common Council of the City on Thursday a meeting was held in accordance with the following notice, which had been previously given:—

To consider what mark of respect shou'd be paid by the Corporation of London to the memory of his Grace the Duke of Wellington.

After some discussion, it was thought the most advisable course to refer the question to a committee appointed by the Board of Common Council, and composed of the Lord Mayor and a member from each ward.

RECORD OF THE DUKE'S DEATH IN THE TOWER HAMLETS.—On Monday as adjourned Quarter Session of the Peace for the Liberty of her Majesty's Tower of London, was held at the Court-house, Wellclose-square, when the following magistrates were present—James Walsh, Esq., chairman; George Offor, Esq., Charles S. Butler, Esq., M.P.; George Cleverly Kirman, Esq., and J. E. Goodhart, Esq. Upon the motion of Mr. Butler, seconded by Mr. Offor, the following entry was ordered to be recorded upon the minutes:—

That, in consequence of the recent lamented decease of the Chief Magistrate of these Liberties, the Lord-Lieutenant of the Tower Hamlets, Field Marshal the Grace the Duke of Wellington, the Court take this, the earliest opportunity, of recording their deep sense of the loss which has been sustained by them, by the nation at large, and by the whole world, from this sudden decease. He was raised to the highest pinnacle of glory by a grateful nation for services, the extent and value of which can never be fully appreciated. Elevated to a position to be seen and admired by the world, he still manifested that urbanity, wisdom, and decision which exalted and increased our veneration for his extraordinary abilities. The Court desires to bow with submission to the decrees of Providence, thankful that his invaluable life was preserved to so advanced an age; yet they cannot he p deploring the stroke which has cut down the greatest of human beings, whose memory as a patriot, senator, and warrior, will be cherished to the latest posterity."

LAST OFFICIAL ACT OF THE LATE DUKE OF WELLINGTON.—His Grace's last official act of any importance, as Commander-in-Chief, at the War-office, was the regulation of the uniform to be worn by the officers of the militia now in course of enrolment. So anxious was the Duke for the early issue of these regulations, that, on the Saturday previous to his lamented death, a special messenger attended at the Government printing-office to convey the proof for his Grace's revision and signature, so that the document might be at once forwarded to the Lords-Lieutenant of counties, and acted on.

THE DUKE'S FIRST PUBLIC ACT.—Mr. Lightbourn, chairman of the Town Commissioners of Trim (close to which is Dangan Castle), in the county of Meath, calls attention to the following note, which has been left of what he conjectures to have been most probably the first public act of the late Duke of Wellington—namely, the part which he took at a contested election for a portrieve of that borough, the chief town of his native county of Meath:—

At an adjournment of assembly, held before John Meekler, Esq., portrieve of said corporation (of Trim), the 10th day of August, 1787, the following persons, among many others, were duly proposed and seconded as burgesses of our corporation.—The Hon. Arthur Wesley, the Hon. Gerald Valerian Wesley, the Hon. Henry Wesley, Thomas Earl of Bective, Lord Viscount Headford, the Hon. Hercules Taylor, Lord Baron Longford, Lord Delvin, the Right Hon. John Fitzgibbon, the Hon. John Pomeroy, the Right Hon. Thomas Connolly, the Right Hon. Dr. Cuff, the Right Hon. W. Burton Conyngham, the Right Hon. Denis Daly, &c.

BOROUGH OF TRIM.

At an assembly held before Adam Carshore, Esq., Portrieve of the Corporation of Trim, the 29th day of June, 1789, being quarterly day:—Polled for Portreve for the ensuing year, commencing the 29th of September next—Right Hon. H. Rowley, Esq., proposed the Rev. William Elliott Clerk as one candidate; and Mr. Ralph Higgins proposed Edward Meekler. The former seconded by George Tyrrell, Esq.; the latter by John Tandy, Esq.

For the Rev. Mr. Elliott ninety names, including that of Arthur Wesley (the late Duke); for Mr. Meekler, thirty names. Majority for the Rev. William Elliott, sixty. ADAM CARSHORE, Portrieve.

At which assembly the Right Hon. William Conyngham, Joseph Brooke, J hn Pratt Winter, Right Hon. Thomas Jones, John Stapleton, Samuel Dan ston, *Arthur Wesley*, Right Hon. the Earl of Bective, Hon. Lord Headford, E. Hamilton, Esq., and Thomas Stapleton, Esq., having been formerly admitted burgesses of the said Corporation, on this day attended, and having taken the usual oaths, and made, repeated, and subscribed the declarations, were sworn burgesses of said corporation accordingly.

ADAM CARSHORE, Portrieve.
H. REYNOLDS, Town Clerk.

HIS MENTAL ACTIVITY.—Another and very recent illustration of his mental activity, similar to that of reading the report of the Oxford University commission, was mentioned last week at Dover. While waiting on the platform for the starting of a train, his Grace beckoned to Mr. Way, the superintendent of the Dover terminus, and, getting into a third-class carriage with that gentleman, commenced putting to him a running fire of questions in reference to the travelling of soldiers in railway carriages; for example, how they were placed, how the tickets were collected, how the men were told off on leaving the train, &c.—in short, on every point connected with their locomotion and comfort. Fifty questions were put to him, the station-master said, in five minutes, all pertinent and to the purpose. The answers, too, were all caught up attentively. Who can doubt it that has ever seen the Duke listening in the House of Lords?

THE DUKE'S OPINION OF THE BATTLE OF WATERLOO.—The following anecdote may not be generally known:—Some of the Duke's guests were discussing the circumstances of the battle in his presence. It was not his habit to take an active part in any conversation referring to his own campaigns. But on this occasion the arrival of Blucher, the absence of Grouchy, and other similar topics, together with the antecedent probabilities as to the issue of the great conflict, being freely talked of, the Duke suddenly said, "If I had had the army which was broken up at Bordeaux, the battle would not have been lost for four hours." As the Duke was not given to boast, and his judgment may be relied on, this forms an important comment upon the engagement, about which so many theories and speculations have been offered.

WAS THE DUKE OF WELLINGTON EVER WOUNDED?—In Rush's "Residence at the Court of London" the following anecdote is recorded:—"Until this occasion, I was under an impression that the Duke of Wellington never was wounded; but Sir George Walker said that, not long after the storming of Badajos, he was struck by a random musket-ball in the side, in an affair with the French outposts on the borders of France. It was merely a slight wound, and was dressed on the spot. The Duke, on receiving it, exclaimed, 'Hit at last!' and seemed much pleased." In reference to this statement, Colonel Sir W. Verner thus writes to the morning newspapers:—

I do not mean to deny what may have happened at the storming of Badajos. I was not there. I merely take upon me to vouch for what did take place at the battle of Orthes, the only time, as I have always understood, that the Duke was wounded.

I was riding at the head of a squadron of the 7th Hussars, which I commanded, when Lord George Lennox rode up to me, and asked if I could tell him where he could find one of the surgeons of the regiment, as he wanted him for the Duke. I replied, that Mr. Moffit, one of the assistant-surgeons, had been riding alongside of me a few moments before, and he would, probably, find him at the rear of the squadron. I heard no more until the day was over, when Mr. Moffit informed me that the Duke had been struck by a spent ball, which, although it did not break the skin, caused much pain.

Whether the Duke may have made the observation he is stated to have done, I do not recollect to have heard, but I consider it by no means unlikely.

I have not had time to communicate with Lord George or Dr. Moffit, but they are both forthcoming, and will, I have no doubt, confirm what I say.—I have the honour to remain your obedient servant,

United Service Club, Pall-Mall, WM. VERNER, Bart., M.P., Lt.-Col.
22d Sept., 1852.

FIELD-MARSHALS.—A correspondent of the *Evening Mail* says:—"The only two Irishmen who appear to have attained the rank of Field-Marshal in the British army were natives of the two Meaths—George Wade, of Westmeath, interred at Westminster Abbey; and the Duke of Wellington, of East Meath. Both were colonels of the same regiment (33d). 'Wade led it into the breach at the attack upon Fort St. Philip, in the Island of Minorca, 1788, at the head of the grenadiers and marines, in the presence of an enemy vastly superior in number, and effected a lodgment within, by which the garrison of French and Spaniards was compelled to capitulate.' He was also victorious in all the battles he fought as Commander-in-Chief of the allied armies in the Netherlands, in 1774. And Wellesley led it (33d) into the breach at Seringapatam, in 1799."

RESPECT TO THE MEMORY OF THE DUKE IN THE PROVINCES.

Throughout the provinces and in the south of England especially, the death of the Duke of Wellington elicited tokens of the most profound regret. All the local journals, immediately on the melancholy news becoming known, were arrayed in symbols of mourning, and subsequently their columns contained abundant particulars of the tokens of regret for his death, and respect for his character which have been manifested in every town and place in the south. In the Channel Islands the mail packet, which arrived there on Thursday morning se'nnight, was watched with intense interest, as it approached with his flag half mast high. Every one knew, from that signal, that some one of lofty rank had departed this life, and the surprise and regret were universal when it was learnt that the great Duke was numbered with the dead.

In SOUTHAMPTON, all the flags in the town and harbour were, during the past week, still hung low; many of the shops had shutters up since, and every shop vending articles of wearing apparel was filled with mourning wares. Even amongst the very poorest classes there was a feeling manifested that a mighty one had fallen, and they talked of the Duke of Wellington with sadness and sorrow. There is no doubt that the whole people of the South of England are, only waiting to be directed to some rational and suitable mode of showing, by a simultaneous manifestation, their regret for the loss and respect for the memory of the great hero who has just passed "from life unto death."

At BRIGHTON, on Monday morning, about one hundred of the principal inhabitants met at the Town Hall, in answer to a circular invitation from the Rev. Henry Michell Wagner (vicar), to consider the best means of testifying their respect for the memory of his Grace the Duke of Wellington. Mr. Wagner took the chair, and among those present were Sir Thomas Blomefield, Bart.; the Rev. T. Cooke, the Rev. Arthur Wagner, the Rev. James Vaughan, the Rev. Mr. Langdon, the Rev. Mr. Oldfield, the Rev J. H. North, Mr. Montague Scott, &c. After a few remarks on the universal desire of Englishmen to do honour to the memory of the departed hero, the rev. chairman (who, we understand, was tutor to the present Duke of Wellington) mentioned the fact that the late Duke received a portion of his education in Brighton at the hands of its then vicar, the Rev. Henry Michell, the chairman's own grandfather; and that during the time he was a worshipper at the old parish church of St. Nicholas, now in a sad state of dilapidation. He then suggested that Brighton should erect a memorial, not in the usual manner, by employing the art of the sculptor, but by erecting a memorial for charity; and this suggestion the rev. chairman afterwards developed into a plan for restoring, enlarging, and beautifying the parish church. In the course of the proceedings, it was stated that, on a former occasion, Mr. Carpenter, the architect, had prepared plans for the restoration of the church at an estimated cost of £4305, offering a guarantee against an excess over the estimate: and, with an understanding that the cost of carrying out the rev. vicar's suggestions would involve a total outlay of £5000, the meeting passed a unanimous resolution of approval of the scheme. The vicar headed the subscription list with the munificent donation of £1000. A numerous committee, with Sir Lawrence Peel, brother of the late Sir Robert, at its head, was appointed to carry the project into execution.

At PLYMOUTH, for several days after the Duke's death became known, the flag at the Guildhall and the colours of the shipping in the harbour continued to be suspended half-mast high, in token of the universal feeling of deep regret at the demise of the venerable victor of Waterloo. Many of the shops were also partially closed.

At HULL, on Monday, a large meeting of the most influential inhabitants, convened by the Mayor, A. Bannister, Esq., was held in the Mansion-house, to devise means for the proper observance there of the day on which the remains of the late Duke shall be interred. The Mayor presided, and resolutions were passed suggesting that business should be entirely suspended on that day, and that the ministers of the several churches of dissenting places of worship should be requested to have services, with appropriate sermons, on the occasion. The feeling at the meeting was perfectly unanimous, though leading persons of all sects and of all shades of politics attended.

In LIVERPOOL it is proposed to raise a subscription for the erection there of a monument to the late Duke. Several of the leading merchants have come forward with handsome donations to the fund.

At BIRMINGHAM the death of the Duke became generally known on Wednesday se'nnight, and was received by the inhabitants with much emotion. The bells of St. Martin's rang muffled peals during the day, and these will continue to give out their dolorous tones from time to time until all that remains of the illustrious departed shall have been inclosed within the narrow precincts of "the house appointed for all living."

At OXFORD the bells of the city and University churches, and most of the parish bells tolled at minute intervals on Wednesday se'nnight, in consequence of the death of this renowned warrior and statesman—the sudden decease of this great character, producing a profound sensation in Oxford, as indeed every where else.

At CARDIFF the news of his Grace's death was received with feelings of unaffected sorrow. The large bell of St. John's church was tolled (muffled) for several hours on Wednesday se'nnight, and the shipping in the dock had their colours half-mast high.

FRENCH TITLES OF THE DUKE OF WELLINGTON.

(To the Editor of the ILLUSTRATED LONDON NEWS.*)*

On reading your graphic description of the late Duke of Wellington in your Number for Saturday last, containing a list of *all* the titles and honours belonging to the illustrated deceased, I find an omission of *three*, and as they may be justly looked upon as among his most flattering marks of distinction, I have thought it a piece of information which may be found acceptable to your readers if I supplied this omission, and the more especially so from the fact of your speciality (if I may so speak) as regards family honours, genealogy, &c., and for which matters the ILLUSTRATED LONDON NEWS now passes for a respectable authority.

The three distinctions in question were bestowed upon his Grace by the French nation in the person of his Majesty Louis XVIII., in consideration of the services rendered by the Duke to the elder branch of the House of Bourbon; for although at Waterloo we were contending against Frenchmen, still strictly speaking, it was not against France, as our aim and resolve were simply to re-establish Legitimacy in that country: wherefore, on the entry of the Allied forces into the French metropolis, we were quietly greeted by some part of that light-hearted and witty people by "*Vivencies amis ennemis!*" Now the distinctions in question were these: the Duke was created a Marshal of France, a Knight of the Holy Ghost, and Duke de Brunoy—as you will find recorded on referring to any old Peerage work, whether English or French—no mean distinction for a British subject, and I think unparalleled in history.

It is a strange and remarkable coincidence that the English student of Angers and pupil of Pigneron should finish his active military career by obtaining the highest military honour of the country where he was educated as a soldier, which that country could bestow.

It is, perhaps, hardly necessary for me to remark upon the importance of the order of the Saint Esprit, as it is well known to be one of the most illustrious in Europe, ranking with the Garter and the Toison d'Or, but abolished in 1830, when the Bourbon dynasty left their country.

But as to the Dukedom I would fain say a few words. It is strange indeed, but perfectly true, that it is known to comparatively few persons in England, that our illustrious Duke is Duke de Brunoy in France; and perhaps, still more strange that it is little known in France either, even at Brunoy; for I believe that I myself was the first person who communicated that piece of intelligence to the inhabitants of that place some few years ago, and who, at first, would not believe it, till I demonstrated it to some of them by the production of a Lodge's Peerage List, and with new, of course, as perfect, and as true as the fact, and as unsuspecta the Duke, are better informed than the vast majority of his own countrymen.

Brunoy is a delightful village, situate in the beautiful valley of Yerres, on the Lyons road, about 20 kilometres from Paris. It was formerly a Royal residence, with a magnificent *château*, and a display of waterworks which might have rivalled St. Cloud or Versailles. Charles X. used to visit Brunoy as a *rendezvous de chasse*, and it was a favourite residence at the time of the great Revolution, and the remaining portions have since been converted into villas or country residences.

This letter may be the means of procuring the satisfaction to many of our cosmopolitan countrymen, when on their Continental peregrinations, of paying a visit to this place, in memory of their departed hero, and the other associations attached thereto.

Your obedient servant,
Sept. 21, 1852. AN ENGLISH ABONNÉ.

*** The Portrait upon the Front Page of the WELLINGTON SUPPLEMENT, published with the present Number of the ILLUSTRATED LONDON NEWS, is from a FINE BUST, recently modelled by Mr. Matthew Noble, of Bruton-street, acknowledged to be one of the best likenesses of the late Duke.

FUNERAL OF THE LATE MR. PUGIN.—The funeral of the lamented Mr. Pugin took place at St. Augustine's, Ramsgate, on Tuesday morning. The requiem mass was sung by the Right Rev. Dr. Grant, the Bishop of the diocese. The Very Rev. Dr. Doyle, Provost of St. George's Cathedral Church, Southwark, was present as assistant Priest; with the Rev. Mr. Walsh and Mr White, of St. Mary's, Moorfields, as deacon and subdeacon of the mass. The Right Rev. Dr. Wareing, for many years a personal friend of the deceased, was also present, with several others of the clergy and laity, who came from different parts of England to pay their last tribute of respect to the memory of the deceased. On Monday afternoon, the clergy and the choir, consisting chiefly of those gentlemen who had been employed in Mr. Pugin's studio as draughtsmen, repaired to the church to sing the vespers of the office of the dead. At a later hour, the body was carried in procession, with lights, to the church, where the coffin remained covered with a purple pall, and surrounded with lights. At half-past seven, the clergy and choir assembled in the chancel, to sing the Matins and Lauds from the office of the dead; J. Lambert and J. Hardmann, Esqs., respectively of Salsbury and Birmingham, and for many years intimate personal friends of the deceased, acting as canon. The Requiem mass in the morning was sung in choir with much feeling. After the mass Dr. Grant delivered a touching funeral discourse, at the conclusion of which the "Libera me Domine" was sung, after which the procession formed, chanting the beautiful anthem, "In Paradisum deducant te Angelæ," and the corpse was carried to the vault in the transept. The "Benedictus" was then chanted, and after the remaining prayers had been said, the Bishop and clergy returned to the sacristy, reciting the "De Profundis" for the repose of the soul of the deceased.

THE CHOLERA.—Accounts from Posen (Polish Prussia) of the 15th inst., are still highly unfavourable. In the town of Posen there were on the 14th 53 new cases and 22 deaths. On the next day there were 69 attacks and 32 deaths; on the 4th there were 46 new cases and 17 deaths. Much alarm has been created at Posen by the disease having extended to the houses of higher classes. Among it's most recent victims is Madame de Puttkammer, wife of the Chief President (civil governor) of the province, a lady of great merit, and universally esteemed. From the rural districts of Posen the accounts are very various, but where cholera is absent fever is very prevalent. In Brunnsberg, from the 3d to the 9th inst., there were 196 cases, of which 114 were fatal. Since the appearance of the cholera there have been in the town 800 cases and 163 deaths. At the end of August a young man came from Posen to Tarnapol and died of cholera, since which event there have been 50 cases and 30 deaths. In Buda, a town of 2700 inhabitants, between 50 and 100 persons were carried off in eight days. At a house in Worzuk every person died except three children, who were left orphans. In Marienburg the epidemic is still severe. In Dirschau the population has been decimated. In West Gruesen, the disease was brought on the 8th by a battalion of infantry and some dragoons on the march. Six of the troops died, and 20 were left sick in the Hospital. At Gollenburg, in Sweden, the Government reported three cases of sporadic cholera on the 21st.

LETTERS FOR THE WEST COAST OF AFRICA.—GENERAL POST-OFFICE, SEPT., 1852.—Her Majesty's Government having entered into a contract for the conveyance of mails by steam-vessels, once in every month, to the West Coast of Africa, the new service will commence from the first departure on the 24th instant, on which day the first packet will be despatched from Plymouth. This packet, as well as that to be despatched on the 24th October next, will proceed only to Madeira, Teneriffe, Gorée, Bathurst (Gambia), and Sierra Leone, and then return to England, calling at the same places; but the time will hereafter be extended to Fernando Po, when a further instruction will be issued. The following are the rates of postage to be taken upon letters and newspapers addressed to the several places at which the packets will touch:—Letters not exceeding half ounce: Madeira, 1s. 10d.; Teneriffe, 1s. 10d.; Gorée, 1s.; Bathurst, 1s.; Sierra Leone, 1s. Newspapers will be carried to Madeira, Teneriffe, and Gorée for 2d. each, and to Bathurst and Sierra Leone free.

BALLOON ASCENT AT GREAT YARMOUTH.—On Friday week, at the Vauxhall Gardens, Mr. S. Chambers, R.N., made a beautiful ascent in his balloon, and after a pleasant trip of five miles alighted on Manby Marshes. Mr. Chambers's descent was one of the best he ever made; and in the course of an hour or two he returned to the Vauxhall Gardens, where he was received with great enthusiasm by the company. Mr. Chambers intended to have ascended on the previous day after the poultry show in the gardens, but was prevented by the unfavourable weather.

BURNING OF THE SHIP "THE THOMAS THOMPSON," ON HER VOYAGE FROM BOMBAY TO LIVERPOOL.—THE CREW RESCUED BY THE "BARRACKPORE."

BURNING OF THE SHIP "THOMAS THOMPSON."

THIS conflagration, by which the fine vessel was entirely destroyed, is thus described in the journal of Captain E. Underwood, of the ship *Barrackpore*:—

"Monday, July 5th, *Barrackpore*, from China to London.

"At nine A.M., with light winds from the S.S.W., and steering N.N.W. with all sail set, descried a ship ahead, which was standing across our bows, and with a signal of distress flying; at 11.10 spoke her, and proved her to be the *Thomas Thompson*, belonging to Liverpool, from Bombay, bound to that port, with a cargo of cotton and wool. Having perceived smoke issuing from the stern, I immediately inquired if I could render any assistance, and was answered by Captain Twiss, asking me to come on board and bring my carpenter with me. The sail had been previously reduced, and the boat lowered; when, on approaching nearer the burning ship, I found several holes burnt through her sides, which the carpenter at once covered with planks to stop all draught, until the crew could be rescued, which was done with all their clothes, after several trips with the boats, by four P.M. Previously to leaving the ship the carpenter scuttled her. At five P.M. the mainmast and foremast fell over the sides enveloped in flames. We remained by her until six, when she was one blaze of fire. We then made sail for St. Helena, and landed the greater portion of the crew, amounting to 22 souls."

Captain Twiss, his son, and four others, proceeded to London in the *Barrackpore*, and Captain Twiss has since addressed a letter of thanks to the owner of the *Barrackpore*, W. S. Lindsay, Esq., Austin Friars, and to Captain Underwood, for the great kindness and attention in rescuing himself (the master) and crew from the burning wreck.

TESTIMONIALS PRESENTED TO GEN. SIR CHARLES J. NAPIER, K.C.B.

TWO very splendid Testimonials have lately been presented to General Sir Charles J. Napier by the Beelooch Sirdars of Scinde.

First, is a superb centre-piece of table plate. The groups at the angles of the pedestal personify the military, civil, and industrial population of Scinde. The military power is expressed by the group of a British infantryman (the 22d Regiment), a Sepoy, and a camel. The civil, by the landed proprietor, or Zemindar, listening to the decrees read by the Moonshie, or native lawyer; the industrial, by the group of female water-carriers and fruit merchant. Between are the arms and cypher of Sir Charles; while beneath an elaborately-decorated Indian arch, is a group consisting of an elephant, with Beeloochee and Scindian attendants richly clad, after the manner of the Ameers. The ornament is carried upwards to support a basket for flowers.

The inscription is as follows:—

Presented to General Sir Charles James Napier, K.C.B., Colonel of the 22d Regiment of Foot, &c., by the Belooch Sirdars of Scinde, in token of the attachment and gratitude which his honourable and generous treatment of them after victory, and during a long administration of the Scinde Government, has secured for him in the breasts of his former foes. Hydrabad, 9th January, 1851.

PLATE PRESENTED TO SIR CHARLES J. NAPIER, BY THE BELOOCH SIRDARS OF SCINDE.

The second testimonial is a magnificent sword, designed by Mr. Alfred Brown.

The hilt, which is in gold, is divided into four compartments, containing figures, representing Fortitude, Truth, Justice, and Victory. Above are the arms of Sir C. Napier. At the extremities of the guard are the heads of the Camel and the Elephant, and on either side are figures of Industry and Commerce.

The scabbard, which is in oxydized and gilt silver, bears an allegorical representation of the influence of civilisation under Britannia, who is supported by figures of Peace, Literature, Arts, and Science; Victory bears an unfurled banner, inscribed with the name of Napier, and induces the Scindian and Beloochee tribes to cast aside the implements of war. Below are, a figure of Anarchy, bound in chains; and the mythological subject of Hercules' Conquest of the Hydra.

On the reverse side is represented India supported by Law and Justice; and Peace, descending with the signed Treaty, is hailed by the military, industrial, and commercial population of Scinde. Beneath is a figure of Rebellion overthrown, and Apollo's Conquest of the Python.

The decorative designs are taken from the best examples of Indian ornament.

The Blade is elaborately engraved in the same style, and inscribed, in English and Hindostan, as follows:—

Presented to General Sir Charles James Napier, K.C.B., Colonel of the 22d Regiment of Foot, &c., by the Belooch Sirdars of Scinde, in token of the attachment and gratitude which his honourable and generous treatment of them after victory, and during a long administration of the Scinde Government, has secured for him in the breasts of his former foes.
Hydrabad, Jan. 9, 1851.

Both the table ornament and sword have been ably executed by Messrs. Hunt and Roskell, and are very fine examples of working in metal.

OPENING OF A NEW BASIN IN THE ARSENAL OF NAPLES.

THE recent inauguration of the first dry dock ever built in the kingdom of Naples was the occasion of great rejoicing and a grand festival by the King himself. For some time previous, extensive preparations had been made for the accommodation of visitors; and invitations were issued to upwards of 20,000 persons to witness the ceremony. The King and Queen came from Gaëta purposely for the occasion; and the Prince of Syracuse, the Count d'Aquila, and all the younger members of the Royal family were present in a splendid tribune erected for them, near the Basin. Tribunes and seats were likewise erected for the Ambassadors and their ladies, the Ministers of War and Marine, the Secretary of State, and other distinguished personages included in the invitations. A ship of war out of commission, the *Vesuvio*, had been floated into the basin some days previous; and on her deck a temporary chapel was erected for the per-

SWORD PRESENTED TO SIR CHARLES J. NAPIER, BY THE BELOOCH SIRDARS OF SCIND

OPENING OF A NEW BASIN IN THE ARSENAL AT NAPLES.

formance of the religious ceremonial. On the arrival of the King and Royal family, the bands of the Swiss and other regiments played several airs. Mass having been celebrated, the Bishop proceeded to give his blessing to the work, and invoke the favour of God upon it. A procession was then formed of the clergy and others, salutes were fired at intervals by the ships in the harbour, and at the arrival and departure of the King and Queen. Five hundred galley slaves, who had worked at the formation of the Basin, received pardon from the King, and testified their freedom by throwing their yellow jackets and caps into the sea.

The French squadron, consisting of six line-of-battle ships and three steamers, under Vice-Admiral De La Susse, anchored in the Bay on the Friday previous having come from Tripoli to be present at the ceremony. Their display of colours, salutes, &c., added much to the gaiety of the scene. Refreshments were served to the numerous guests, and the whole proceedings passed off with great *éclat*.

HARVEST AT THE PHILANTHROPIC SOCIETY'S FARM, RED HILL.

It is an encouraging sign of the healthfulness of our national mind, that, however novel and difficult any social experiment may seem, if it be but based on sound working principles, and have a due correspondence with the requirements of society, it works its way surely, though it may be slowly, and becomes at last a recognised and established fact.

The steady progress and enlargement of the Philanthropic Society's Farm-School for the Reformation of Juvenile Offenders, at Red Hill—the first opening of which, by his Royal Highness Prince Albert, we noticed about three years since, is a proof of this success. Many even of those who wished well to the undertaking, and sympathised in the society's efforts for the rescue of the criminal and outcast boys whom it received, were opposed to the removal of its schools from London, where they had been so many years established, doubting if it were possible to control and keep together a number of lads of such a class, in an open, unwalled school, under a discipline studiously free and persuasive, and with field labour as their employment, which necessarily offers many facilities for desertion and escape. Some said the boys would never be induced to stay; others, that they never could be made to work; others, that if they staid, and if they worked, they must of necessity be a nuisance to the neighbourhood.

Happily, the promoters of the school had faith in their principles, and were prepared not to be sparing of toil or thought in carrying them out; and three years' successful development has justified their confidence, and rewarded their exertions. At the annual gathering on the 8th inst., in celebration of the harvest (which our Artist has commemorated), we found nearly 120 boys in the school (the number three years ago was scarcely forty); a new house fitted to accommodate eighty boys, just finished; a carpenter's and a blacksmith's workshop, in full action; tailoring, shoemaking, gardening, and farming in daily practice; and we saw with pleasure a number of the neighbours assembled to witness the giving of sundry little prizes and rewards of industry which the farm-manager had certified to be deserved; and testifying by their presence their satisfaction with the general order and regulation of the school and the conduct of its inmates.

We ascertained that 336 lads (of all ages between eleven and eighteen) had been received under the society's care since the opening of the school, in 1849; and that 218 had been discharged: 130 as emigrants to the colonies; 44 as apprentices or servants in this country, their friends having found situations for them. Judging from the reports of their employers, and their own letters, the boys who have emigrated appear to be doing honestly and well. A friend to the Society who has undertaken the guardianship of those sent to one of the colonies, and who has had a large number under his eye, lately wrote to the chaplain, "I am glad to hear that there is a prospect of the arrival of some more lads from your society. I have applications for at least a dozen. You will be glad to hear that all the lads are

HARVEST-HOME AT THE PHILANTHROPIC SOCIETY'S FARM, RED-HILL.

conducting themselves remarkably well." Two rewards of £5 each given yearly by Prince Albert, as gratuities to the two steadiest and best-conducted of the emigrants of the year, have greatly contributed to this result.

The experience of the society, so far, seems to show that on the average four out of five of those admitted are improved and turned from crime; and three out of five substantially reformed and changed in character, and established in courses of honesty and social usefulness. We were glad to find that the inspection of the public is not only allowed, but solicited; and that the farm and schools are daily open to visitors, at all reasonable hours. The more thoroughly that this and every other public work are watched, examined, and scrutinized, the better security will there be for the good working and right administration of their system; and ultimately, for their enlargement and extension.

CALENDAR FOR THE WEEK.

SUNDAY, September 26.—Sixteenth Sunday after Trinity.
MONDAY, 27.—Battle of Busaco, 1810.
TUESDAY, 28.—Commencement of the Mosaic Year.
WEDNESDAY, 29.—St. Michael. Michaelmas Day.
THURSDAY, 30.—St. Jerome.
FRIDAY, October 1.—Remigius. Pheasant shooting begins.
SATURDAY, 2.—London University opened, 1828.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, SEPTEMBER 25, 1852.

IT seems to be generally credited in France, that this time the President means in right earnest to proclaim himself, or to cause himself to be proclaimed, Emperor. "His Highness"—for such is the title that at present seems the most satisfactory for him to receive from the adulatory multitudes who swarm around his path—is making a triumphal tour to receive the homage of his "subjects." Everywhere there are the same ovations, the same fulsome addresses, and the same slavish requests that he will make himself Emperor, in name as well as in fact. It is declared, even in departments which are, or were, the very hotbeds of Socialism and Red Republicanism, that "his Highness" is the saviour of the country; but that the great work is only in part accomplished as long as he remains merely a ten years President. Nay, the life Emperorship does not satisfy the clamorous demands of his eager friends and admirers. He must not only be Emperor, but hereditary Emperor; and then, and then only, will the salvation of France be a verity, and not a mockery. Some of his favourites go so far as to assert that the illustrious Wellington himself acknowledged and proclaimed, shortly after the *coup d'état* of December, that Louis Napoleon had not only, by that deed, been "the saviour of French society, but of European order." This enthusiasm of the people is, perhaps, got up to order by obsequious prefects; or perhaps it is the expression of that idolatrous reverence which the peasantry and the mass of the ignorant provincials of France entertain for the title of Emperor—the name of Napoleon—and the dream of false and sanguinary glory with which they are associated. In either case, it is probable that it will answer the purposes of the President; and that not many weeks, or even days, will elapse, before he reaches the goal of his ambition, and formally signs himself Napoleon II. *Et puis?* as the French say. That is a difficult question to answer. His pre-Imperial career has been stormy and difficult. His post-Imperial conduct will try to a far greater extent the powers of his genius: for genius he undoubtedly has—the genius of coolness, calculation, daring, and patience. As long as he is not Emperor, he enlists the sympathy of his friends and the curiosity of the masses of the people, who desire to see what will be the end, and in what manner it will be accomplished. They watch his movements, they speculate on his progress, and regard him and his deeds with all the interest that people usually bestow upon any exciting drama. But as soon as the *dénouement* is known, the interest of friends and spectators will abate, and, like other mightier and better men, he will be judged more calmly. It is then that his real difficulties will begin.

THE Isthmus of Suez and the Isthmus of Darien, or Panama, are at present the two great obstacles to the commerce of the globe. The one impedes that rapid communication with India which is, in some degree, necessary for all Europe, but more especially necessary for Great Britain; and the other prevents the natural expansion of the trade of the whole civilized world with the rich, but almost unexplored, regions of the Pacific sea-board of Southern and Northern America. Sooner or later they will both be cut through, either by railroads or by ship canals—or, what would be better still, by both. The energies that have been brought to bear upon the question of canal or railroad as regards the Isthmus of Suez, and the paramount interests involved in its speedy solution are such as to leave no room for doubt that the Overland route to India will soon become more expeditious and less costly than it is at present, to the advantage of Great Britain and India, as well as of Egypt. The bisection of the isthmus of Darien or Panama is not of equal importance to this country; but when its necessity to the Government of the United States of America is taken into consideration, there can be no doubt that the work, notwithstanding all the political and natural difficulties in the way of its completion, will not long remain a matter of mere talk. Already a company for the formation of a railway across the Isthmus has been established; and we now learn that the Government of New Granada has granted the privilege—subject to the consent of the railway company—to open a ship canal across the isthmus, between the Bay of Caledonia on the Atlantic and the Gulf of San Miguel on the Pacific, with liberty to select any other point on the Atlantic between Punta de Mosquito and the west mouth of the Atrato River. "The date of privilege," says the *Panama Star* of the 27th of July last, from which we borrow these particulars, "of the 1st June, 1852, given at Bogota; and the canal is to be completed within ten years, with a prorogation of four years longer, if required, should one-third of the work be then finished. The company receives with the grant 100,000 fanegadas of land, to be selected in any part of the Republic. The harbours both on the Pacific and Atlantic, are to remain free and neutral. The New Granadian Government is to receive 3 per cent. of the profits for eighty years, and 5 per cent. for the remaining nineteen years. The company are to make a deposit of £24,000 guarantee within twelve months from date of the grant. The names of the parties receiving this grant are Dr. Edward Cullen, Sir Charles Fox, John Henderson, and Thomas Brassey, Esqrs., names sufficiently well known to secure the speedy completion of the work. By the 8th clause of the Bulwer and Clayton treaty, it appears that both the Governments of Great Britain and the United States stipulate to extend their joint protection to any company undertaking the construction of this canal; and we learn that it is the intention of the present company in London to carry out the work as an united British and American enterprise."

This is far better work for two such great nations than the miserable misunderstandings about the cod-fish of the Bay of Fundy, or the guano of the Lobos Islands, which have lately occupied to so large an extent the attention of their statesmen.

OFFICIAL APPOINTMENTS CONSEQUENT ON THE DEATH OF THE DUKE OF WELLINGTON.—The following appointments have been mentioned as having taken place:—Lord Hardinge to be General Commanding-in-Chief. Colonel Airey to be Military Secretary. Lord Fitzroy Somerset to be Master-General of the Ordnance (with a Peerage), Lord Combermere to be Constable of the Tower. Duke of Northumberland and Marquis of Londonderry to be Knights of the Garter. Lord Derby, Lord Warden of the Cinque Ports. Prince Albert, the Colonelcy of the Grenadier Guards.

THE COURT.

BALMORAL.

The Queen and the Prince Consort have remained in comparative retirement at Balmoral since the receipt of the intelligence of the demise of his Grace the Duke of Wellington, which reached her Majesty and his Royal Highness while on an expedition to the Dhu Loch, west of Loch Muick, whither they had proceeded from Aut na Gauthseach.

Orders were at once given for countermanding all invitations to the Castle.

On Sunday her Majesty and his Royal Highness Prince Albert attended Divine service in the parish church of Crathie. The service was performed by the Rev. Dr. Paul, one of her Majesty's chaplains in Scotland.

A heavy fall of snow, followed by rain, which continued all day, prevented her Majesty from leaving the Castle on Monday morning. In the afternoon her Majesty and his Royal Highness Prince Albert walked towards Castletown. Her Royal Highness the Duchess of Kent, her Serene Highness Princess Hohenlohe Langenbourg, and her Serene Highness Princess Adelaide of Hohenlohe Langenbourg, dined with her Majesty on Monday.

The Earl of Derby left Balmoral for the south on Tuesday.

The Earl of Aberdeen arrived on a visit to her Majesty and the Prince Consort, on Wednesday.

The Countess of Desart has left Balmoral, and been succeeded in her duties, as Lady in Waiting to her Majesty, by the Viscountess Jocelyn.

In consequence of the lamented death of the Duke of Wellington, her Majesty and the Royal household have gone into mourning for a week, commencing with Wednesday last.

His Royal Highness the Duke of Cambridge has arrived at his residence in St. James's Palace from the Continent.

His Excellency the French Ambassador and the Countess Walewska have arrived at the French Embassy, in Grosvenor-square, from a visiting tour in the north

His Excellency the American Minister, Mrs. Abbott Lawrence, Colonel Lawrence, and Miss Lawrence, left town on Monday on a visit to the Earl of Carlisle, at Castle Howard.

The Duke of Sutherland and the Marquis and Marchioness of Stafford, are cruising on the coast of Scotland, in his Grace's yacht. The Duchess of Sutherland is at Dunrobin, where a brilliant circle of company are assembled.

The Earl of Derby arrived at Knowsley Park, Lancashire, on Wednesday, from Perth.

The Earl and Countess of Tankerville have arrived in town from a brief visit to the Continent.

The Earl and Countess of Desart have arrived at Cawdor Castle from Balmoral.

Lord and Lady John Russell, with their youthful family, are still staying at Gart House, North Britain.

COUNTRY NEWS.

SUDDEN DEATH OF NAPOLEON'S MEDICAL ATTENDANT.—Dr. John Stokoe, who recently resided at Durham, died suddenly, a few days ago, at the refreshment rooms at the York station of the railway, soon after his arrival there from Harrogate, where he had been staying a short time for the benefit of his health. He was one of the surgeons of the British fleet at the memorable battle of Trafalgar, when Nelson fell; and subsequently he was appointed by the English Government to attend upon Napoleon Bonaparte, as one of his medical advisers, during his captivity at St. Helena. Mr. Stokoe was in possession of many souvenirs of the Emperor—presents which he had from time to time received from him in his various exigencies.

REPRESENTATION OF BURY ST. EDMUNDS.—A vacancy has been created in the representation of this borough by Mr. Stuart's acceptance of the Vice-Chancellorship; and Mr. E. H. Bunbury, the late member, having declined to contest the borough, an invitation has been sent to, and accepted by, Mr. Hardcastle, the late member for Colchester, who will contest the borough on Free trade principles with Mr. J. H. P. Oakes, the Derbyite candidate. Mr. Oakes is the son of a banker at Bury.

SCARCITY OF LABOURERS.—A farmer living at a farm near Braughing, in Hertfordshire, was compelled to apply to the union at Bishop's Stortford for men to enable him to get in his harvest, there being no labourers out of employment in the parish, and he was obliged to take seven men, whose ages averaged 73 years each, and he employed them three weeks.

DISCOVERY OF ANCIENT COFFINS.—A discovery, which will, no doubt, prove interesting to the Archæological Society at their approaching meeting, has just been made in the city of Bath. As the workmen were excavating the road at the top of Russell-street, last week, for the purpose of enlarging the sewer, they discovered several stone coffins, with the heads lying to the north-east. Some of them, having been opened, were found to contain human skeletons of different sizes and sexes. In the neighbourhood of the coffins were discovered some fragments of an earthen vessel, a coin of Constantine, several pieces of glass, a beautifully perfect vase, various bones of carnivorous animals, a small urn of dark pottery, and some interesting fragments of Roman pottery.

DISCOVERY OF THE REMAINS OF WARRIORS.—As some workmen in the employ of Mr. Naylor, builder, were engaged, last week, in excavating a cellar at the house now in course of erection on Star-hill, Rochester, they suddenly came upon eight skeletons, which appeared to have been buried with great care, though perhaps hurriedly, as the remains of their coats of mail were clearly discernible, proving they fell in battle. One of the individuals was a person of gigantic stature, the skeleton measuring over seven feet. In his hand was found a large spear, the metal of which is still perfect.

LORD JOHN RUSSELL AT STIRLING.—Lord John Russell, who had been residing during the summer at Garth, near Stirling, was presented, on Tuesday, at the Court-house, by Provost Sawers, in the name of the magistrates, town-council, and inhabitants of Stirling, with the freedom of that ancient Royal borough. The noble Lord returned thanks for the honour thus conferred upon him. In the course of his speech, his Lordship alluded to the great loss the country had sustained in the death of the Duke of Wellington, and paid an eloquent tribute to the merits of the deceased hero.

RATING OF DAY SCHOOLS IN MANCHESTER.—A meeting was held on Monday evening in St. James Sunday Schools, Major-street, Manchester, to consider the steps necessary to be taken consequent upon the determination of the overseers to extend the poor-rate to the day schools held within the buildings used as Sunday Schools; the Rev. J. Hollest presided. The Rev. J. L. Figgis said he understood that if the children paid any pence, no matter where or the master derived his profits from, the school was liable to be rated. At St. Clement's evening school a penny per night was charged for materials and instruction, and this would render the school liable to be taxed. The levying of this rate would have the effect of closing many such establishments. After some discussion a resolution was agreed to, on the request of Mr. Figgis to procure the attendance of the masters, conductors, and teachers of schools on Monday next.

Lord John Manners, as First Commissioner of Woods and Forests, with the concurrence of the Board of Works, having determined on removing the unsightly buildings on the Royal dairy-farm at Frogmore for the preparation of new buildings on the same site—the works having been already commenced by the contractors for completing the new Houses of Parliament. The new plans comprise an extensive range of agricultural buildings, with apartments for farm labourers with their families, but no farm-house.

The Pope has conferred the degree of Doctor of Divinity on Sheriff Sadl's chaplain, the Very Rev. Thomas O'Connor, parish priest of Loughglynn, in Ireland.

POSTSCRIPT.

MOURNING FOR THE ARMY.—GENERAL ORDERS.

HORSE GUARDS, Sept. 22, 1852.

The Adjutant-General has received her Majesty's most gracious commands to issue the following general orders to the army:—

1. The Queen feels assured that the army will participate in the deep grief with which her Majesty has received the intelligence of the irreparable loss sustained by herself and by the country, in the sudden death of Field Marshal the Duke of Wellington.

In him her Majesty has to deplore a firm supporter of her throne, a faithful, wise, and devoted counsellor, and a valued and honoured friend.

In him the army will lament the loss of a Commander-in-Chief unequalled for the brilliancy, the magnitude, and the success of his military achievements; but hardly less distinguished for the indefatigable and earnest zeal with which, in time of peace, he laboured to maintain the efficiency and promote the interests of that army which he had often led to victory.

The discipline which he exacted from others, as the main foundation of the military character, he sternly imposed upon himself; and the Queen desires to impress upon the army, that the greatest commander whom England ever saw has left an example for the imitation of every soldier, in taking, as his guiding principle in every relation of life, an energetic and unhesitating obedience to the call of duty.

It is her Majesty's command that this general order shall be inserted in the order books, and read at the head of every regiment in her Majesty's service.

2. The Queen does not require that the officers of the army should wear any other mourning with their uniforms, on the present melancholy occasion, than black crape over the ornamental part of the cap or hat, the sword-knot, and on the left arm, with the following exceptions, viz.:—

Officers on duty are to wear black gloves, black crape over the ornamental part of the cap or hat, the sword knot, and on the left arm, the sash covered with black crape, and a black crape scarf over the right shoulder.

The drums of regiments are to be covered with black, and black crape is to be hung from the pike of the colour staff of infantry, and from the standard staff and trumpets of cavalry.

3. The Queen has been most graciously pleased, under the present afflicting circumstances, to direct that Lieutenant-General Viscount Hardinge, G.C.B., shall be placed on the staff of her Majesty's army, and that all matters respecting her Majesty's military service, which have heretofore been transacted by his Grace the late Commander-in-Chief, shall henceforth be performed by Lieutenant-General Viscount Hardinge, G.C.B.—By her Majesty's command,

G. BROWN, Adjutant-General.

THE NEW COMMANDER-IN-CHIEF.—GENERAL ORDER.

HORSE GUARDS, Sept. 23, 1852.

In obedience to her Majesty's most gracious commands, Lieutenant-General Viscount Hardinge assumes the command of her Majesty's Army, and all matters relating to her Majesty's Military Service which have heretofore been performed by his Grace the late Commander-in-Chief, will henceforth be transacted by him.

He confidently hopes, that, in the performance of the duties entrusted to him by her Majesty's favour, he will receive the assistance and support of the general and other officers of the army, and be enabled to maintain its discipline and high character by a continuance of those services which have identified the British army with the honour, power, and prosperity of their country.

The Queen having, in the general order of the army of yesterday's date, expressed her Majesty's sentiments on the irreparable loss sustained by her Majesty, the country, and the army, in the sudden death of Field Marshal the Duke of Wellington, Viscount Hardinge presumes only on this occasion to give utterance to his devoted attachment to the memory of "the greatest Commander whom England ever saw," and whose whole life has afforded the brightest example by which a British army can be guided in the performance of its duties.

By command of the Right Honourable

LIEUT.-GENERAL VISCOUNT HARDINGE, Commanding-in-Chief,
G. BROWN, Adjutant-General.

GENERAL SOCIETY FOR IMPROVING THE DWELLINGS OF THE POOR.—The committee of the above society, having purchased an extensive plot of ground between New-street, Shoemaker-row, Husband-street, and Cock-court, adjoining Broad-street, Golden-square, St. James's, at present covered with dilapidated buildings, have commenced operations for their entire removal, for the purpose of erecting model dwellings for the working-classes and their families.

INQUIRY INTO THE CONDUCT OF THE REV. G. R. PRYNNE, OF PLYMOUTH.—On Wednesday the Bishop of Exeter visited Plymouth, for the purpose of investigating charges preferred against the Rev. George Rundle Prynne, incumbent of St. Peter's at Efford, by the Rev. John Hatchard, the vicar of St. Andrew's, Plymouth, and the Rev. Thomas Cave Childs, the incumbent of St. Mary's, Devonport; and also a charge made by the Rev. W. H. Nantes, of St. George's Chapel, Stonehouse. The charges related to the opinions and conduct of Mr. Prynne on confession and absolution. The investigation having lasted five hours, the Bishop closed it by saying he should appoint the conference at St. Peter's that day four weeks. An investigation had taken place into Mr. Prynne's conduct on all the cases brought before him, leaving him without blame, and he should be ashamed of himself, as a man, as a Bishop, and above all as a Christian, if he committed the act of injustice of not holding the confirmation in his church. He then thanked the audience for their behaviour, and broke up the meeting.

REMARKABLE COINCIDENCE.—It is a singular circumstance that an old Waterloo man, of the name of Henry Judd, about eighty years of age, who resided at Sherborne, died on the same day and nearly at the same moment that his Grace the Duke of Wellington expired.

THE SPANISH PRESS ON THE DEATH OF THE DUKE OF WELLINGTON.—The *Madrid Gazette* of the 19 h, in allusion to the death of the Duke of Wellington, says, "Spain must participate in the mourning of England. The English army has lost its purest and most legitimate glory, and the Spanish army a General."

LATEST FOREIGN NEWS.

FRANCE.

The accounts of yesterday (Friday) from Paris state, that the Government continues to re-ive telegraphic despatches respecting the Prince President's tour, from which it would appear that his progress is a succession of triumphs. On Tuesday he entered Grenoble amidst cheering, and cries of "*Vive l'Empereur!*" similar to those heard at Orleans, Bourges, Nevers, Dijon, Moulins, and Lyons. At Lyons, however, it is stated that a consp racy, the object of which has not yet been made public, had been discovered, and that several arrests had taken place. A strong feeling of opposition to Louis Napoleon is said to prevail, to a certain extent also, at Valence, Nismes, Montpellier, and Toulon; but no serious disturbance, it is thought, will arise out of it.

The *Moniteur*, referring to the question of the Empire, argues that the instincts of the people ought to be taken into account as they accord with their own interests

The damage caused by the inundations at Strasbourgh, Mulhausen, and several other places, has been most serious. Happily the latest accounts inform us that the waters were subsiding.

The lovers of Mozart's memory (says a letter from Berlin) are now gratified with an engraving, by Bruckop and Harte, from the original portrait of the illustrious *maestro*, by Henry Isenbiehn, done when Mozart resided at Mannheim, in 1778. The original portrait came by accident into the possession of M. André, the music-seller, at Frankfort, and was said by two or three friends of Mozart, still living in 1830, to be a perfect likeness.

The last two or three Peninsular mail packets have been laden with silk, and sundries of cotton, woollens, and silk goods of French and English manufacture, bound for Portugal, in consequence of the change in the commercial policy of that country. Shipments of tea for Portugal have also been made on board those packets. Hitherto tea could only be imported into Portugal from Macao in Portuguese bottoms.

About three tons of snuff were seized a few days ago by the landing surveyor of the Customs, on board the *Baron Cay* steamer, soon after her arrival at Nicholson's Wharf, from Antwerp. The contraband article was discovered in 42 tin cases, which were completely filled with oil. On close examination it was discovered that there was a tube connected with the mouth of the tin cases, which alone contained the oil, the remaining portion of them being filled with snuff of good quality.

EMIGRATION BY LOTTERY.—A society formed under the name of the "British Exodus Company," and which proposed giving to the shareholders free passages to Australia, according as they were drawn by lot, was to have its "first grand ballot" on Thursday, at the Western Institution in Leicester-square; but the proceedings were put a stop to in consequence of the receipt of the following official communication:—"Solicitor's Office, Treasury, Sept. 21,—Sir: The attention of her Majesty's Government having been drawn to a scheme entitled 'The British Ex dus, or National Emigration Fund of the Hunter river Gold Mining Company,' having for one of its objects the selection of 4000 free passage orders to Australia, by ballot, I am directed to inform you that the proposed 'ballot' is illegal, and subjects the parties concerned in it to prosecution under the acts of Parliament made for the suppression of lotteries. And I hereby give you notice that proceedings will be taken against the parties concerned in the scheme in question if the intended ballot be permitted to take place.—I have, &c., H. REYNOLDS.—To D. M'Laughlan, Esq., 35, Throgmorton-street.

LAW AND POLICE INTELLIGENCE.

EMIGRATION AGENTS.—At the Mansion-house police-office, on Saturday, Lionel H. Thompson, of No. 1, Riches-court, Lime-street, agent to the ship *South Sea*, was ordered by the Lord Mayor to return to Frederick Parker the sum of £14, being the amount of the passage-money paid by the latter on the faith of the vessel in question sailing on the 15th of September, and a further sum of £7 10s. for expenses and costs to which the complainant was subject by reason of the breach of contract on the part of the agent.

PERSONATING LORD JOHN RUSSELL.—A man who bears a strong resemblance to the ex-Premier, had, by inducing the proprietor of a livery stable in Pimlico to believe he was that noble personage, recently obtained the lure of a vehicle to proceed, as he stated, to Hounslow barracks, to visit his regiment of the 8th Dragoons; and, as he was passing through Kensington, he favoured several of the tradespeople with his custom, obtaining goods and cash. At Hounslow he left the livery and servant, and taking a post-chaise at the George Hotel, went on to Windsor on important business. Here he found him sent short of cash, the driver gave him the contents of his pocket, £1 14s., with which he went off, and no more was seen of him. The police are in active pursuit of the fellow.

CLAIMANTS FOR BROUGHAM-HALL.—The persons named Bird, who, about some eight or nine years ago made a forcible entry on Brougham-Hall, under an impression that they were the rightful owners, and that Lord Brougham had no title to the estate, are again threatening to make a stir. They have been down to Penrith two or three times, and on their last visit were accompanied by a solicitor, who vaunted largely respecting the claims of his clients, they in the meantime offering to lay wagers at heavy odds that they would be in possession of the hall and estate before Christmas.

ENTERING APPEARANCES.—By the new Common Law Act, entering "appearance," according to the statutes of the 12th of Geo. I, cap. 29, and 2d of William IV., cap. 39, is abolished.

In the Insolvent Court on Tuesday, John Mobbs who described himself as a "betting-man," was discharged from custody after having suffered 18 months' imprisonment

FRAUDULENT EMIGRATION AGENTS.—In the Central Criminal Court on Monday and Tuesday, Cornelius Julius Trige, described as an agent, and Henry Sabine Montagne as a mineralogist, were tried upon an indictment which, in effect, charged them with having conspired together to obtain the money of poor persons (intended emigrants), by representing themselves as agents of a company established for the promotion of emigration. Among the members of the company were the names of a noble Lord and several highly respectable gentlemen and merchants. They had taken an office in London, and had put forth to the public that they had chartered a vessel to proceed to Port Phillip with emigrants to the gold regions. It was alleged that by this means the defendants had obtained possession of a considerable sum of money from poor people who had fallen into the trap prepared for them. In a former report in our paper we gave the particulars of the case, when it was first investigated before a police magistrate. The trial occupied the attention of the court during two days, the evidence against the prisoners being very voluminous. The jury after [illegible] hour's absence returned a verdict of guilty against both the defendants. There were other indictments against the same parties when they were also proceeded with. The prisoners were sentenced by the Recorder yesterday (Friday) to be transported for seven years.

THE BETTING HOUSES.—At the Middlesex Sessions, on Monday, Thomas Scott pleaded "Guilty" to stealing a quantity of plate, value £300 and upwards, the property of Mr. Matthew Forster, M.P., his master, carrying at Belton House, Hampstead. At the Police Court the prisoner made the following statement:—"I pawned all the plate myself, not with the intention of not redeeming it. I fell into wicked ways, and if I had had a few days I should have redeemed it. Horseracing brought me to it. Sometimes I had £5,000 in hand, and at other times I have been without a penny." Mr. Forster said, that he wished to recommend the prisoner to the indulgence of the Court on account of his lengthened service in his family, but more particularly because he believed that he had stolen this property in consequence of becoming concerned with betting-house men; and, until these systems of crime and gain of vice were put down, he hardly thought that they would be justified in acting harshly to their unfortunate victims. The prisoner was sentenced to twelve months' imprisonment with hard labour.

FURTHER PRIZES OF THE BETTING-OFFICE SYSTEM.—At the Lambeth police-office on Tuesday, Samuel George Church, a well-dressed young man, whose connexions are highly respectable, was charged before Mr Elliot, with embezzling various sums of money, amounting on the whole to about £60, he being in the employ of Mr. Richard Spencer, a solicitor, of Grey's-inn. The prisoner, crying bitterly, replied that it was all true what had been stated against him, and it was a foolish habit of betting that had induced him to rob his master and end up his career, and if I had had a few days I would not worship known his sufferings since he had absconded, he was sure that he would take pity on him. His run was all caused by those cursed betting-offices. He was committed to Newgate for trial.

ROBBERY AT MR. HUDSON'S, M.P.—At the Middlesex Sessions, before Mr. Turner, on Monday, Thomas Brown, aged thirty, was indicted for having stolen four printed books and a great amount of property (the enumeration of which occupied the clerk of the court nearly ten minutes), the property of John Reynard. The prosecutor was valet in the service of Mr. George Hudson, M.P., of Albert-gate, Knightsbridge, and the property in question was also a property in the service of Mr. Hudson, as it were, in the absence of the Hudsons, Lowndes-square, where it had been deposited. Prisoner had been employed at the stables at the time, and slept in a room adjoining the one from which the property was stolen. The robbery was effected while the prosecutor was on a visit attendance upon his master, at the Isle of Wight, during the last week of August. Part of the property having been found in the possession of the prisoner, he was found guilty, and sentenced to imprisonment, with hard labour, for 12 months.

AN INVETERATE YOUNG PICK-POCKET.—At the Guildhall Police-office, on Monday, John Neilsons, 10 years of age, who had a number of *aliases* to mark his identity, was committed by the magistrate, Mr. Alderman Challis, to Newgate, to take his trial for picking a gentleman's pocket of his handkerchief. The pocket of the prisoner had been three times so-visited and four times flogged. The prisoner, on hearing this respectable character given of him, indignantly denied the statement; and on being requested to give his own account of himself, modestly said that he had been only six times convicted and three times flogged! This prisoner, it was stated, steadily pursued his criminal career from the period when he was a mere child.

SACRILEGE.—In the Central Criminal Court, on Wednesday, George Freeman, 21, was found guilty upon an indictment which charged him with feloniously breaking into the parish church of Hammersmith, and stealing a surplice, a cassock, and other articles, the property of the Rev. James Luffingham Gilborne. The prisoner was sentenced to be transported for seven years.

THE "TICKET-OF-LEAVE SYSTEM."—From Western Australia, which is some two thousand miles distant from the more fortunate gold districts, we find in the local journals, published in Perth and Freemantle, the latest files of which come down to June 18, numerous notices of depredations committed by the exiles, or "the ticket-of-leave" convicts are called; every issue of the newspapers contains instances of robbery, with and without violence, assaults, and drunkenness, very significant of the moral tone these "tickets-of-leave" have given to the colony. Many of the convicts have escaped, and the Government had offered a reward of £5 for each apprehension—a sum far too small to induce settlers to risk their lives—so that Western Australia promises to have a set of harangues more intolerable than those whose depredations caused so much terror and real mischief in the sister colonies of New South Wales and Van Diemen's Land. A question has been raised which has given rise to much ill-feeling between the colonists and the exiles. Some of the latter had applied to be admitted as members of the newly-formed mechanics' institution, and met with a decided refusal. This first throwing down of the gauntlet, in the face of the exiles the cause of their banishment, awakened in the latter a feeling not far removed from open resentment. The malignant exiles have addressed a letter to the Governor in which they express a wish that the executive will allow them to form an association for the improvement of their minds. No answer had been returned to the application at the latest date (above given).

ARRIVAL OF SCOTCH CONVICTS.—On Tuesday 22 male convicts, under sentence of transportation for various terms, arrived at the Bay, Robbin's Island, in the *Royal Victorus* steam-ship, from Leith, in the custody of Mr. Thomas Kempster, the governor of Edinburgh gaol, and his assistants. The convicts, who were all heavily ironed, were transferred to the Millbank Penitentiary, where they will be imprisoned for some time previous to their being sent to a penal colony. They are chiefly young men.

BRAZILIAN KIDNAPPING.—A correspondent writes from Rio.—"A short time ago a great number of Germans arrived here for this port, and have now been landed for some time—short, indeed, but sufficient for them to have received the most scandalous treatment. They are principally kept in a small fort in the centre of the harbour, known by the name of 'Vilganhon,' to which they are made to break stones, are sent to the beach to collect shells for lime, badly fed, and their pay detained for fear of their desertion. No letters are allowed to be written by them to their friends, and they would be unheard under letter off in any of our convict hulks. Two little fellows the other day, seeing an English nava. officer in Mr. —'s store, ran up to him and related, with tears in their eyes, the treatment they had been subjected to, which, indeed, was such as I had it impossible to put in writing. These two little boys begged this officer to take them on board the English admiral's ship (the elder was not twelve). He could not, however, interfere, for they were summoned down to their boat, where they were kicked and knocked about in a manner that makes an Englishman's blood boil to think of. This I have been a witness frequently to. Fellow-countrymen, I beg and pray of you, no matter what the extremity may be you are driven to, keep your children from the hands of the Brasilians."

METROPOLITAN NEWS.

CHRIST'S HOSPITAL.—The annual orations of this valuable public school took place on Tuesday, St. Matthew's Day. The Lord Mayor and the Lady Mayoress, several of the aldermen, the sheriffs, and under-sheriffs, attended in state. A large number of the governors, and a very distinguished company of ladies, were present, the spacious and handsome hall being quite filled. The orations were remarkably well given, particularly those of Lloyd, Doran, and Watts. An allusion in the English oration to the death of the Duke of Wellington, and certain passages in the poem on "The British Empire in the East Indies," which referred to the illustrious deceased, were received with loud cheers. At the conclusion, the Lord Mayor complimented the Rev. Dr. Hale, the head master, upon the proficiency displayed by the senior scholars in their several orations.

THE NEW CRYSTAL PALACE.—Information up to the 9th instant has been received from Owen Jones, and Mr. Wyatt, who have been appointed by the directors of the New Crystal Palace to collect illustrations of the art of the continent. The travellers had reached Rome. The results of their journey appear likewise to be highly successful. At Paris, upon what had been obtained to mould several of the finest works in the Louvre; amongst others, the Great Nimrood from Egypt, several of the best Venuses, and colossal statues of Jean Goujon, in all about 400 pieces, 30 of which will be above life size; casts of the Ghiberti gates have also been secured, as well as of the principal of Michael Angelo's figures in the Medici Chapel at Florence; an important collection of *cinque-cento* ornaments, and fine works of Luca della Robbia, Donatello, &c. From the museums of Naples a most valuable collection has been obtained, and arrangements have been made to enable the Pompeian Court to be carried out so as to present a faithful transcript of that peculiar mode of construction. To this end the services of the first painter official y attached to the excavations have been secured, who will bring to this country at the close of this year the result of his studies made on the spot during the last twenty years. Every ornament with thus be painted from tracings made on the walls of Pompeii. From Lucca and Pisa several fine works of the Pisanos have been secured, and some interesting casts of the *cinque-cento* specimens. The works published by the Foreign-office have naturally been of great assistance in smoothing the way for the acquisition of these treasures.

THE NEW HOUSES OF PARLIAMENT.—The permanent doors, of solid carved oak, are all completed and fixed at the Victoria Tower, the Royal Gallery, and the Prince's Chamber. The decorating of the ceiling of the Royal Gallery is rapid y progressing, and is to be finished before the opening of the new Parliament. The statues are to be fixed in the House of Lords. There are nearly completed the statues of the Archbishop of Dublin and Baron Fitzwalter, and the wh e are expected to be finished by the 11th of November. A great improvement has taken place in the lighting of both House of Commons during the vacation. The residences for the several officers of both houses are in a state of great forwardness, and are expected to be completed early in the year. Mr. Dyce, the artist, is daily engaged in finishing another fresco for her Majesty's robing-room, and every effort is being made to complete this chamber by the opening of Parliament.

THE BRITISH MUSEUM.—The bronze railings in front of the British Museum, which have been several months in the course of erection, are at length completed. A few days ago the last of the last rail was finished, and the moveable shed in which the workmen were placed while executing their work was removed. On the extensive area between the railing and the building a number of labourers are employed in the formation of a square, either side of which is protected by a stone wall, which is stated to be for a shrubbery. Some alterations have taken place among the galleries. The slabs from Assyria, which were in an inner-ground room, are being assorted in galleries adjoining the Lycean gallery, called the "central sixties Nimrond," the "north-west sixties Nimrod," and the "south-west sixties Nimrond." The statues and other relics in the gallery in the left room from the grand entrance are being removed.

NORTH AND SOUTH-WESTERN JUNCTION RAILWAY COMPANY.—On Monday a special general meeting of shareholders in this undertaking was held at the company's offices, 15, Parliament street, for the purpose of consideration of the expediency of forming a branch line to Hammersmith, and determining upon raising the capital necessary for that purpose. Mr. Henry Tootal presided. The report of the directors in favour of the proposed line having been read, a number of resolutions were proposed and agreed to, that the directors be authorised to apply to Parliament for power to make the branch, and to raise £15,000; and that such capital be raised in 1500 shares of £10 each, the same to be offered to the proprietors in the main line in the proportion of one new share for every four in the original undertaking.

EARLY CLOSING MOVEMENT.—A public meeting of the friends of the EARLY CLOSING MOVEMENT was held on Tuesday night at LAWSON'S ROOMS, Clement's-inn, Strand, for the purpose of a series of meetings during the winter campaign of "The Early Closing Association." The meeting was numerously attended, and resolutions favourable to the society's objects were readily adopted.

SMITHFIELD-MARKET AND COPENHAGEN-FIELDS.—On Monday evening a public meeting of "leaseholders, householders, owners of property, and others in the vicinity of Copenhagen fields," was held at the Brecknock Arms Tavern, Camden-road-villas, "to consider the eligibility of the proposing of Copenhagen-fields for the metropolitan cattle-market having been proposed and seconded, an animated discussion took place, which resulted in the following amendment being carried by an overwhelming majority—namely, the meeting, disapproving altogether of the removal of Smithfield to the midst of the villas surrounding Copenhagen-fields, cordially concurred with the operations of the committee already appointed to support the interests of the inhabitants, and pledge itself to give them its best support."

COMPOSITORS' EMIGRATION SOCIETY.—A meeting of the compositors of London was held last Saturday evening, at the Red Lion inn, Red Lion-court, when a society was organised for the promotion of emigration. The object of this society is the of attending sums of money, without any charge for interest, to compositors desirous of emigrating. The minimum charge of membership was by the meeting fixed at 3d per week, which it was calculated would establish a fund sufficient y large to enable the committee to carry into effect the laudable purposes of the society.

NOTICE TO THE PUBLIC.—GENERAL POST-OFFICE, Sept. 1852.—In consequence of a reduction in the transit-rate payable to Denmark, the rate of postage to be hereafter taken upon letters addressed to Sweden will be 1s 2d the half-ounce, and so on, according to the scale in operation for charging inland letters. This rate comprises both the British and foreign postage on letters for Sweden to the place of their destination, and it may be either paid in advance, or the letters may be forwarded unpaid, as the option of the sender, except however, as regards registered letters, the postage upon which, as well as the register, fee, must be paid in advance.

LETTERS FOR SYRIA.—GENERAL POST-OFFICE, SEPT., 1852.—The British contract mail packets between Alexandria and Beyrout, having been withdrawn, letters for Syria will in future be forwarded by the French mail packets, and Marseilles, and will be chargeable as follows:—Weighing under ½ ounce: British, 5d.; Foreign, 10d.; total, 1s. 3d. Weighing ½ ounce and not exceeding ½ ounce: British, 5d.; Foreign, 1s. 8d.; total, 2s. 1d. Exceeding ½ ounce and under ¾ ounce: British, 10d.; Foreign, 2s. 6d.; total, 3s. 4d. Weighing ¾ ounce and not exceeding 1 ounce: British, 10d.; Foreign, 3s. 4d.; total, 4s. 2d. Exceeding 1 ounce and under 1½ ounce: British, 1s. 8d.; Foreign, 4s. 2d.; total, 5s. 10d.

INTERNATIONAL POSTAGE ASSOCIATION.—A letter having been addressed by the Society of Arts, 18, John-street, Adelphi, to the Right Hon. Sir Edward Phillips, a Canton house waterman, had absconded with £105 in silver, money belonging to Captain Antra Je Gros, of the *Two Sisters*, lying off the Custom-house; and that John Hoskins had absconded, stealing £197 10s. 8d. from Messrs. Gibbs, Milton-street, city.

BIRTHS AND DEATHS.—The births registered in the metropolis for the week ending last Saturday, were—boys, 718; girls, 720: total, 1438. The deaths registered during the same period were 912, being a further decrease in the mortality of London. As regards the causes by which the deaths are referred, the results of last week, when compared with those of the preceding, show a decline under the following heads: tubercular diseases, diseases of the nervous system, those of the heart; while a small increase is apparent in the zymotic class, arising principally from diarrhœa and scarlatina. Five deaths from cholera were registered in the previous week, eight in the last. Only two deaths are recorded as having been from small-pox. The small-pox number be not more than 12, and all, except one, occurred to children; a gardener aged 32 years, who had lately come from Weybridge, and had not been vaccinated, having died of the disease at Queen-street, Camden town.

METEOROLOGICAL OBSERVATIONS.—At the Royal Observatory, Greenwich, the mean height of the barometer in the week was 29.612 in. The mean temperature was 54 3 deg.; in the preceding week it was 60·7 deg. The mean daily temperature was below the average of the same days in ten years on every day of the week. The decrease was greatest on Wednesday, Thursday, and Friday, when the temperature was more than 5 deg. below the average.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—The following preferments and appointments have recent y taken place:—*Honorary Canonries*: The Rev. F. E. Tuson to, in the Cathedral Church of Bristol; the Rev. T. James to be, in the Cathedral of Peterborough. *Archdeaconry*: The Rev E. Ommaney, to Bath. *Rectories*: The Rev. W. Fisher, to Harthy, Kent; the Rev. J. E. Davis, to Llanwrst, Denbighshire and Carnarvonshire. *Vicarages*: The Rev. S. Davis, to Burrington, Devon; the Hon. and Rev. A. S. Rice, to Netherbury with Ash Chapel, in the county of Dorset; the Rev. N. F. Kemble, to Seberghan, Cumberland.

TESTIMONIALS. — The following clergymen have lately received testimonials of esteem and regard: The Rev. A. B. Hill, late vicar of Morebath, Devonrus, on his departure; the Rev. J. F. Simpson, from the congregation of Holy Trinity Church, Whitehaven, on his leaving the curacy; the Rev. Samuel Flood, from the parishioners of Beaminster, on his promotion.

ST. PAUL'S, BERMONDSEY.—Friday se'nnight, in obedience to the wish of the minister of St. Paul's, Barmondsey, the Rev. Mr. Armstrong, was observed by the parishioners as a day of fast, prayer, and humiliation, to implore the Almighty to stay the scourge of cholera from visiting this country. The shops were very generally closed, and the church services well attended.

CHESTER CATHEDRAL.—This venerable Cathedral has lately received two beautiful stained glass windows, being the gift of the very Rev. the Dean, Dr. Anson. In one window are delineated the Commission of Christ to St. Peter, "Feed my lambs;" the Communication of the Holy Spirit by the Apostles, "Receive ye the Holy Ghost;" the ministration of St. Matthias by lot to the Apostleship; and the Ordination of the Elders by the hands of Barnabas and Saul. The other window represents the Good Samaritan; the Return of the Prodigal Son; Dividing Manna to the Apostles for the Multitude; and the Parable of the Labourers in the Vineyard. The subjects are well-chosen, and most admirably portrayed.

GENERAL ORDINATIONS.—The Bishops of Lincoln, Chester, and Ely, severally held ordinations in the Cathedrals of their respective dioceses on Sunday.

PROTESTANTISM IN GERMANY.—The fifth session of the German Evangelical Congress was opened at Bremen on the 15th. About 600 members attended. Speeches in favour of Protestantism were delivered, and a discussion took place on the advisability of Protestants adopting oral confession.

THE FINE ARTS IN PRUSSIA.—The Berlin exhibition of pictures of modern artists, opened on the 1st instant, has been enriched by the addition of some remarkable paintings. Among them is a portrait of his Royal Highness Prince Charles, by Krüger, admirable as a likeness, and no less remarkable for ease of past on, and for harmony as well as depth of colouring. Then comes a standing sun upon the Nile, by Hildebrand, the Pyramids in the distance, marvellously brilliant and full of natural effect. The gorgeous light of the sun upon the waters and distant Pyramids, merged, as it were, in an atmosphere of gold and sapphire, is admirably tempered by the repose of the foreground and it carry gauze which this eminent artist has thrown over his perspective. This picture is alone sufficient to place Hildebrand upon the highest steps of artistic excellence. Two or three splendid landscapes hang in the neighbourhood. One, a setting sun on the lakes of the four cantons, is a masterpiece.

SUBMARINE TELEGRAPH BETWEEN HOLYHEAD AND DUBLIN.—An actual negotiation between the Electric Tele raph Company and the Irish Submarine Telegraph Company, recently incorporated by Royal Charter, is being carried out for effecting this object. The principle upon which the cable now manufacturing at Millwal-works, where the wire ropes for the Admiralty are made, is somewhat different from that hitherto adopted, and consists in insulating the interior wires by means of india-rubber as well as gutta-percha. These, after being laid up or twisted into a rope, are passed through anhydrous solution, and then covered with spunyarn, and formed into an hempen rope, which is again passed through another, but different, anhydrous solution. The whole is then passed through a wire rope machine, worked by steam, which encases the interior c re in a metallic wire rope, formed of 12 separate strands of 6 wires each, or 72 wires, in al, forming a solid 3-inch cable. These plans, or close convolutions of wire, are thought preferable to the signal spiral wire, as calculated to give greater flexibility and durability, and to prevent any portion of the cable from becoming untwisted. As it is manufactured it is payed off the the machine and formed into a Fleming coil. The cable is 70 miles long, allowing 10 miles for contingencies, the distance from shore to shore being only 60 miles. There are to be four wires, making a total of 280 miles of copper wire, and of this 180 are completed.

WESTWOOD PARK.

THIS picturesque Elizabethan pile, in its decorated gables, pierced parapets, and "windpipes of hospitality" (as chimneys have been expressively termed), presents a fine specimen of an English ancestral home, and is situated about a mile and a half from the railway station at DROITWICH, six miles and a half N.N.E. from Worcester.

Westwood was anciently the site of a house of Benedictine Nuns, subordinate to the monastery of Fontevraud. After the dissolution of religious homes, Westwood, with its lands, was granted (30 Henry VIII.) to Sir John Pakington, Knight. The Pakingtons resided first in the mansion at HAMPTON LOVET, which being much damaged in the Civil Wars, they greatly added to the house at Westwood, originally built in the reign of Queen Elizabeth, as a lodge or banqueting-house; and being thus enlarged to a mansion, it was made by the family their place of abode. It consists of a square building, from each corner of which projects a wing in the form of a parallelogram, turreted in the manner of the Chateau de Madrid, near Paris; and Holland House, at Kensington. Like the latter mansion, Westwood is nobly situated upon rising ground; the estate is encircled with a park of about 3 miles in circuit; and a lake, designed to cover 100 acres, and now extending over 60, is a great ornament to the eastern side of the Park.

The following characteristic anecdote is related of Sir John Pakington, who, after he had finished his stately structure at Westwood, invited the Earl of Northampton, Lord-President, and his Countess, to a house warming; and as his lordship was a loyal companion, a train of above 100 knights and gentlemen accompanied him, who stayed there some time, and at their departure, acknowledged that they had met with so kind a reception, *that they did not know whether they had possessed the place, or he place them.* The delightful situation of his mansion was what they had never before seen; the house standing in the middle of a wood, cut into twelve large ridings, and at a good distance, one riding through all of them, the whole surrounded by a park of six or seven miles.

The present seat has, at various times, afforded an asylum to learning. Dr. Hammond, Bishops Morley, Fell, Gunning, and others, always met here with hospitable entertainment; and in concert with some of these, the good Lady Pakington (Dorothy, wife of Sir John Pakington, the second Baronet) is supposed to have written "The Whole Duty of Man," which has been translated into Latin, French, and Welsh. The authorship is also attributed to five other persons, whose respective claims are investigated in the editor's preface to "The Whole Duty of Man," published by Pickering, 1842.

At the Revolution, several learned men, who scrupled to take the oaths to King William, found an hospitable reception at Westwood. Dean Hickes, who wrote here the greater part of his "Linguarum Septentrionalium Thesaurus," gives, in the Preface to his "Grammatica Anglo Saxonica," this eulogistic description of the beautiful residence of the Pakingtons:—"Ibi porticus, atria, propylæa, horti, ambulacra cænas and subdialia, recta et sinuosa, omnia, studio commoda: ibi lucl, lares, mensæ, prata, salina, piscinæ, pascua, et nihil non, quod animum pene a littoris abhorrentem ad legendum audiendumque, et quovis modo discendum, componere et conciliare potest."

Mr. Burke, in his recently published "Visitation of the Seats and Arms of the Noblemen and Gentlemen of Great Britain," says, that—Sir John Pakington, who lived to see his children's children, ended his days at his favourite seat at Westwood, in the 77th year of his age, in January, 1625. At his death his estates devolved on his grandson, Sir John Pakington the Younger, who fixed his chief residence at Westwood, and became living when the great Civil War broke out. Ranging himself under the Royal banner, he fought gallantly for King Charles, and suffered much in consequence. Allesbury, his seat in Buckinghamshire, one of the best houses in the county, was levelled with the ground, and he himself was committed to the Tower. Subsequently, he joined Charles II. with a troop of horse at the battle of Worcester, and was taken prisoner. So great, however, was the popularity he enjoyed, that when he was afterwards tried for his life, not one witness could be procured to swear against him. The great-grandson of this stanch cavalier was Sir Herbert Perrott Pakington, Bart, of Westwood, M.P. for Worcestershire, who is said to have been the prototype of 'Sir Roger de Coverley' He married, in 1721, Elizabeth, daughter of Sir John Conyers, Esq., of Walthamstow, and was father of Sir Herbert Perrot Pakington, Bart., whose only son, Sir John Pakington, the last Baronet, died *s. p.* in 1830, leaving his nephew, John Somerset Russell (the son of his eldest sister) his heir and representative. That gent eman, who has been created Baron, and now holds the seals of office as one of her Majesty's principal Secretaries of State, resides at the old mansion-house of Westwood, and is the present Right Hon. Sir John Somerset Pakington, Bart, M.P.," a Memoir and Portrait of whom appeared in the ILLUSTRATED LONDON NEWS, No. 533.

On Monday last Sir John Pakington left Westwood-park for Balmoral, there to be in attendance upon her Majesty as Secretary of State.

WESTWOOD, NEAR DROITWICH, THE SEAT OF THE RIGHT HON. SIR JOHN SOMERSET PAKINGTON, M.P.—(SEE PRECEDING PAGE.)

"PATRON AND PATRONESS'S VISIT TO THE VILLAGE SCHOOL." BY T. FAED.

This little picture, which was exhibited at the Royal Academy, is a work of more than average merit, in a line of art, which is daily acquiring additional admirers. The worthy old squire of the village and his lady have come to pay a visit to the village school, and the pedagogue, who has assembled before them a picked class, is earnestly set upon displaying their talents to the best advantage. His attention is divided between his scholars and his patrons, whilst that of the latter, though not so intense in character as his, is entirely absorbed in the important examination which is taking place before them. Whilst the centre group is one of serious and real purpose, those on either side are of a very different kind; here the temporary removal of the master's eye is the signal for every variety of disorderly conduct; fighting, "larking," apple-eating, &c.; ebullitions which the terrors of the foolscap, which have already been inflicted on one of their fellows, are not sufficient to restrain. The artist indulges in a clever conceit in the arrangement of a little group on the right, where we have a boy threatening another, who, although out of the picture, shows, as indicated by the shadow on the wall, that the aggressive act is not without provocation. The incident of sketching the profile of the negro page on the school black-board is not new, but is cleverly introduced. The boy who threatens this unconscious worthy from behind is a touch of humour of a more genuine sort. The expression of the various faces is highly spirited, the execution throughout delicate, and the colouring brilliant and transparent. If we were to find any fault with the picture as a whole, it would be on the score that the composition is a little too scattered.

"PATRON AND PATRONESS'S VISIT TO THE VILLAGE SCHOOL." BY T. FAED.

THE FRENCH PRESIDENT'S DEPARTURE FROM PARIS FOR THE SOUTH.

FRANCE.—THE PRESIDENT'S TOUR TO THE SOUTH.

We noticed last week the departure from Paris of the Prince President, on his extensive tour to the southern and eastern provinces, with the scarcely-concealed purpose of testing by personal experience and examination, the state of public feeling in those important districts, so that the success of the final stroke of policy which is to raise him to the throne of the Empire, may not be in anywise marred by an unexpected popular counter-demonstration, which personal fore-knowledge of the state of the country on his part could have prevented. Louis Napoleon, in effect, acts on the principle, in his cautious progress to the Imperial throne, that "knowledge is power." He has accordingly gone, as already intimated, on an extended tour of inspection through those provinces of France which have hitherto shown the most marked spirit of hostility to Monarchial institutions, and especially to the arbitrary concentration of sovereign power in his own hands, whether as President or as Emperor.

The day of his departure from Paris was on Tuesday se'nnight. (See Illustration.) At one o'clock he arrived at the terminus of the Orleans Railway, in an open carriage drawn by four horses, accompanied by Marshal Jerome, his uncle; General St. Arnaud, Minister of War; and General Goyon, his aide-de-camp. The President's carriage was preceded and followed by bodies of officers of Carabiniers, Cuirassiers, Dragoons, and Lancers, who had come from Versailles and St. Cloud early in the morning to request the favour of being allowed to accom-

THE VILLAGE OF BOUCHARGE INUNDATED BY THE RHONE.—(SEE NEXT PAGE.)

pany him to the railway. General Magnan, Commander-in-Chief of the army of Paris; all the Ministers (with the exception of Messrs. Ducos and Maigne, who are absent on leave), the metropolitan authorities, and all the Generals present in the capital, awaited the arrival of the President, to take leave of him. As he alighted from his carriage he was received by MM. Persigny, De Maupas, and the Prefect of Police. The people, who had assembled in considerable numbers at the terminus, saluted him with cries of "*Vive l'Empereur!*" At a quarter-past one o'clock he took his seat in the State-carriage, with the three Ministers of War, General Police, and Public Instruction, and the different dignitaries of his household, and shortly afterwards, the signal having been given, the train moved off at full speed.

At Bourges the first halt was made, and there the President passed Tuesday night. On the route from Paris to Bourges the President did not pass through Orleans, but passed at one side of the town, by means of an old line belonging to the railway company, and used for the conveyance of materials. Throughout the whole of the Sologne not an inhabitant was seen, except in passing by the property of Lamotte-Beuvron, which the President has purchased in that part of the country, where there was a crowd assembled, and a display of flags, with an immense eagle on the *fagade*. After Vierzon had been passed, the peasants were seen in great numbers, the prefects having done everything in their power to urge the authorities to induce the inhabitants to flock to meet the President. Cheap means of conveyance were placed everywhere at the disposal of the authorities, and in some places the inhabitants travelled without paying anything. In consequence of this facility of transport, Bourges was crowded to excess on the arrival of the President in the evening. His reception was of the usual gorgeously festive character which the French are so skilled in displaying. Illuminations, balls, reviews, banquets, and adulatory speeches, being, as usual, the prominent features of the occasion. The clergy, headed by their Cardinal Archbishop, took a prominent part in the honours paid to Louis Napoleon; and, having received him with all due pomp at the cathedral door, conducted him to the high altar, where, amidst the pealing of the organ, they invoked a blessing on his tour These studied and well-planned rejoicings at Bourges may be taken as a specimen of the general character of the receptions accorded to Louis Napoleon in the various towns which he has since visited.

During the President's progress, telegraphic bulletins are daily transmitted to Paris by the prefects of departments, or other functionaries, giving most glowing accounts of the enthusiastic receptions which Louis Napoleon everywhere meets with from the thronged masses of the population, who crowd to the different towns on his route to witness the pageants and rejoicings got up to his honour.

The most important occasion, however, which the tour has yet presented has been his visit to the second city of France—Lyons, where he arrived on Sunday last, the 19th, and on the following day (Monday) presided at the inauguration of an equestrian statue to the Emperor Napoleon, when he delivered the following address, in which the change from the Republic to the Empire—which all parties expect in December next—is very plainly adverted to:—

Lyonese.—Your town has ever been associated with remarkable incidents in the different phases of the life of the Emperor. You selected him Consul on his way to cross the mountains to collect fresh laurels; you selected him Emperor, all powerful; and when Europe confined him to an island, you were again the first, in 1815, to salute him Emperor. In the same way, your town is the first to-day to raise him an equestrian statue. The fact possesses signification. Statues are only raised to Sovereigns who have reigned; thus the Governments which preceded me have always denied this homage to a power whose legitimacy they would not admit. And yet who was most legitimate, the Emperor three times elected by the people, crowned by the chief of religion, recognised by all the constitutional powers of Europe, united to him both by ties of policy and ties of blood? The Emperor was the mediator between two hostile ages. He killed the old *régime*, while he maintained all that had belonged to it of good; he destroyed the revolutionary spirit, by causing the triumph, everywhere, of the benefits of the revolution. In this is explained why those who overthrew him had soon to deplore their triumph; and as for those who defended him, I recall how much they sought his fall? Thus as soon as the people found itself free to choose, it cast its eyes upon the heir of Napoleon, and for the same reason, from Paris to Lyons, on all parts of my journey, was raised the unanimous cry of "*Vive l'Empereur!*" In this cry is far more in my eyes a souvenir which touches my heart, than a hope that touches my pride. Faithful servant of the country, I will never have but one h m—that of reconstituting in it, by good sense, shaken by so many commotions and Utopias, a peace based on conciliation amongst men, upon the inflexibility of the principle of authority, of morality, of love for the laborious and suffering classes, and of national dignity. The herd of citizens which, in the midst of crisis in which the notions of evil and good being confounded the best mind becomes perverted. Prudence and patriotism require that in such moments the nation take counsel before all things; and it is still, for me, a duty and a desire to know under what name I can render the greatest services. If the modest title of President could facilitate the mission that was confided to me, and from which I have not shrunk, I would not assume another name. I have no desire to change this title for that of Emperor. Let us, then, offer on this stone our homage to a great man. In doing so we stand to honour to the glory of France and the generous gratitude of the people—we thus record the fidelity of the Lyonese to immortal recollections.

This speech (the official accounts say) was received with the most enthusiastic applause, and cries a thousand times repeated of "*Vive l'Empereur!*"

Throughout the whole progress money is scattered with a lavish hand. The *Journal de la Nievre* states that the Prince President has given 1000f. for the relief of the families of the persons at Clamecy condemned to transportation; and presented to the Bishop of Nevers 2000f. for the charitable institutions founded by that prelate. The Prince gave 2000f. also, while in that department, to General Count de Rayal, for the relief of poor and infirm old soldiers. At Moulins 10,000f. was given away. Amongst other marks of his bounty, he ordered 300f. to be given to an old sold er of the empire named Berger, aged 93, who had fought at Wagram. To other old soldiers, who had come from a distance, he him-elf distributed a handful of gold pieces.

Louis Napoleon entered the department of the Isère on the 21st, on his way to Grenoble. In all directions he is met by the unceasing cry of "*Vive l'Empereur!*"

A lamentable accident occurred in a firework manufactory, at Marseilles, on the 20th inst., by an explosion of some of the combustibles, which blew the house almost to pieces, and seriously injured several persons.

The publisher of the *Courrier de Nantes* has been condemned to 1000f. fine, for publishing false reports of law proceedings, and using insulting expressions towards the persons who gave their evidence. The Court also ordered that the sentence should be published at the defendant's expense in all the journals of the town.

The negotiation with Belgium not having led to satisfactory result, the *Moniteur* publishes a decree, fixing the duty on coals imported by land in the zone comprised between Hellium and Longwy, at 30 centimes per 100 kilogrammes. The duty on rough iron ca tings, "fontes brutes," imported by land from Blancmisseron to Longwy, is fixed at 5f. per 100 kilogrammes. In reference to this subject the *Constitutionnel* rejoices that instead of the duty being reduced on English coal, in compliance with the petitions from the manufacturers of Rouen, it is maintained, while it has been raised on that of Belgium. English coal pays 30 centimes, while that of Belgium will have to pay 30 centimes only.

The *Galway Packet* says that Mr. Morgan W. Crofton, who held the Professorship of Natural Philosophy in Queen's College, Galway, and who became a convert to the Catholic Church about a year ago, has resigned his professorship, and joined the Society of the Jesuits. He is at present serving in the noviciate of that society in France.

The advices from India and China this week announce the loss of the *Ocseola*, of Liverpool, bound from San Francisco to Hong-Kong, on the Babuyan Island, on the 6th of July. The Captain and crew succeeded in reaching land. The chief mate and five men were despatched in the long boat for assistance, and were picked up by the H. C. steamer *Semiramis*, which steamer had gone to the relief of the captain and remainder of the crew. The ca se of the *Lady Sale* in the Torres Straits on the 7th of June is also reported.

The *Official Gazette of Savoy*, of the 19th, states that a letter has been received at Genoa from a friend of Garibaldi, who relates that the latter, having made several voyages between Caliso (Peru) and Canton, has realised a sufficient sum from the sale of guano to purchase the vessel under his command; that he has hoisted the Sardinian flag, and intends visiting the Mediterranean.

The deliveries of tea in London last week were to nearly the same extent as in the previous week, being 707,372 lb.

In Demerara a machine for making paper from the plantain fibre had been introduced, and was found to answer extremely well. This and some other tropical plants yield valuable fibres, capable of being made into ropes, far more durable and stronger even than those made of hemp.

On Tuesday morning a fire broke out in a cottage in the village of North Newington, occupied by a farm labourer named Grant, which, unhappily, occasioned the loss of two lives, namely, Richard and Eree Grant, of the respective ages of three years and twelvemonths, who were suffocated in bed.

INUNDATIONS IN FRANCE.

In our Journal of the 21st ult., we recorded the rising of the Rhone, and its tributary, the Isère, from the late heavy rains in the south of France. Letters from Lyons of the 22nd also announced the apprehension of disastrous consequences from these overflowings of the rivers; and, unfortunately, these forebodings were realised on the 25th. On that day, the village of Boucharge (Isère) experienced one of the most calamitous inundations ever yet recorded. The waters of the Rhone then rose to such a height as to engulph the several dwellings, even to the roofs, to which the terrified villagers fled for safety; and, in this position, rich and poor presented the most affecting pictures of groups of victims to hunger and despair. On the 26th, the whole village, comprising 200 houses, was thus inundated; and the river presented a sea, with the isolated house-tops, to which clung the poor sufferers—a scene of misery which our Artist has attempted to depict in the a. companying Sketch.

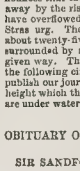
The Rhone, the largest river in France, is noted for these calamitous overflows, when the natural rapidity of its current spreads devastation in every direction; its white muddy waters contrasting with the black flood of the Isère, its chief tributary.

An inundation of the Rhine has caused great damage at various places on its banks, from Strasburg in the direction of Switzerland. The river, however, at the latest accounts, had begun to fall. Disasters had also been occasioned at Geneva and in many parts of Switzerland. In connexion with these inundations, an accident has occurred in Switzerland to the Duchess of Orleans. While travelling in her carriage with her two sons, the vehicle was upset in a ditch full of water, owing to the imprudence of the coachman. The Duchess had her collar-bone fractured, but her children escaped without injury. No serious results are expected to arise out of this unfortunate occurrence.

A telegraphic despatch, received by the French Government, announces that the bridge of Huningen, on the Rhine, has been carried away by the rising of that river. Other despatches state the river to have overflowed its banks at Schemm, Rhinau, and Plobsheim, above Stres urg. The country is completely under water to the extent of about twenty-five miles; six villages are inundated, and a seventh is surrounded by a vast lake. The dyke at Robersau, at Strasburg, has given way. The *Elbe Gazette*, which did not appear on the 18th, issued the following circular to its subscribers:—"We find it impossible to publish our journal to-day. The waters of the Rhine have reached a height which they have not attained since 1817. Our printing-offices are under water."

OBITUARY OF EMINENT PERSONS RECENTLY DECEASED.

SIR SANDFORD GRAHAM, BART., F.S.A., OF KIRKSTALL, COUNTY CORK.



Sir Sandford died on the 18th inst., at his town residence in Portland-place. He was born 16th March, 1788, the son and heir of the late Sir James Graham, M.P., the first Baronet of Kirkstall, by Anne, his wife, sister and heir of Major Moore of that place. He married, 2nd April, 1818, Caroline, third daughter of the late John Langston, Esq., of Sarsden House, Oxon; and by her, who died 25th June, 1850, leaves, with other issue, a son, now Sir Sandford Graham, third Baronet, whose wife, first Lady Eleonora Caroline Paget, eldest daughter of the late Earl of Uxbridge, died in 1848.

The Grahams of Edmond Castle, Cumberland, the stock of which the Kirkstall branch is an offshoot, spring from the famous border family of Graham, of Netherby and Esk.

LIEUT.-GENERAL WILLIAM FREDERICK BENTINCK LOFTUS,

This gallant officer, Colonel of the 50th Regiment, died at Chacombe Priory, Northamptonshire, on the 13th inst., aged 68. He was son and heir of the late General William Loftus, Lieutenant of the Tower of London, successively M.P. for Bannow, Great Yarmouth, and Tamworth; who became, on the decease of Edward Loftus, Esq., of Annevile, in 1824, the male representative of the Loftus family, of Swineshead, county of York, and of the kingdom of Ireland. The General's grandsire was Archbishop of Dublin, and his great grandsire, Dudley Loftus, died in the high office of Lord Chancellor of Ireland. From his Grace's eldest daughter, it may be mentioned, is descended, in peasant, the Duke of Wellington (lineally descended).

Lieutenant-General Loftus, whose death we record, acted as one of the Esquires to his kinsman, the Marquis of Ely, at the installation of the Knights of St. Patrick, in 1810. He entered the army as an Ensign, in 1793, and rose through much hard service during the Peninsular War. He had the Peninsular Medal. He had been at the memorable affairs of Busaco, Torres Vedras, Badajos, and Salamanca.

General Loftus married, 9th October, 1819, Margaret Harriet, daughter of Archdeacon Langrishe, second son of the Right Hon. Sir Hercules Langrishe, Bart., and leaves two sons and two daughters.

LIEUTENANT-COLONEL KEIGHLEY.

The death of this distinguished officer occurred at his residence, Acahul-hall, near Wrexham, in Denbighshire, on the 9th inst., in his 75th year. His term of service included many eventful periods. In 1795, he was appointed an Ensign in the 87th Regiment, and, accompanying the army of Sir Ralph Abercromby to the West Indies, was at the taking of St. Lucia and Grenada, where he was wounded. In 1809, he served in the Walcheren Expedition; and was subsequently Brigade-Major to Lord Gage, as well as other general officers. From all of them, as from H.R.H. the Duke of York, he received high commendation. At Waterloo, he was Major of the 14th, and obtained the rank of Lieutenant-Colonel on that memorable field, being appointed immediately after to the 23d. Colonel Keighley commanded the 11th Regiment for several years in Portugal and the Mediterranean, where he was made resident Governor of St. Maura by Sir Frederick Adam; and of Zante by Sir Alexander Woodford. In June, 1836, he retired from the army, when in command of the 35th.

COUNT POMPEO LITTA.

The votaries of Italian literature have to deplore the death, at an advanced age, on the 17th ult., of the celebrated author of the "Famiglie Italiane Celebri," Count Pompeo Litta. He derived from the illustrious house of Visconti of Milan that. A branch of that family, the Conti di Brebbia, became extinct in the male line on the death, in 1750, of Giulo Visconti, whose daughters and co-heirs married into the ancient Tuscan family of Litta—the elder daughter wedding the Marchese Antonio Litta, and the younger, Elisabetha, wedding the Marchese Pompeo Litta.

The Chamberlain of Napoleon's Italian kingdom, Antonio Duc di Litta, sprung from the former alliance, and is remembered for his bold answer to the Emperor on one occasion. He had ventured to pension his brother, the patriotic and amiable Cardinal Laurent di Litta, an opponent of the new Imperial monarchy. Napoleon angrily exclaimed against the act Litta replied, "I was the brother of the Cardinal before I became your Majesty's Chamberlain."

The Count Pompeo Litta, the subject of this notice, was issue of the marriage of Giulo Visconti's second daughter. In his early days he saw some considerable service in the Italian campaigns of Napoleon; but his name will go to posterity with more peaceful associations. It will join company with the illustrious names of Camden and Dugdale, owing to his elaborate and authent c genealogical accounts of the most celebrated and historical Italian families both extant and no longer existing. This magnificent work was published in parts, to the extent of about five large folios. It was copiously illustrated and verified by spirited sketches of the principal tombs and monumental effigies in Italy, belonging to such families as Sforza, Castiglioni, Visconti, Medici, Gnasciardini, and Piccolomini. It contained, also, medals and highly-finished outline engravings, carefully coloured by the hand, from portraits in the principal galleries. The author thus rendered an inestimable boon to art, even for purposes of identification, against the process of spoliation and removal going on in Italian galleries—the result of the gradual decay and increasing poverty of a nobility that refuses to recruit itself from the resources of commercial enterprise and alliance.

PROFESSOR MACGILLIVRAY.

William Macgillivray, A.M., LL.D., Professor of Natural History in Marischa. College, Aberdeen, one of the greatest ornithologists of his time or any other time, died at his residence in Aberdeen, on the 4th instant, after an illness of some duration. Dr. Macgillivray was the author of many works in the department of natural science relating to birds, and also of biographies of men who had successfully cultivated it. He was member of the Natural History Societies of Edinburgh and Philadelphia, and Conservator of the Museum of the College of Surgeons, Edinburgh. He was an ardent and enthusiastic student of nature, as well as of books. The work upon which will chiefly rest his future fame is his "History of British Birds, Indigenous and Migratory;" the first volume of which appeared in 1840, and at once arrested public attention. All acknowleged the book to be a valuable addition to ornithology. The knowledge of birds had hitherto been little certain and definite; naturalists, struck with the outward form of birds, appeared to have proceeded in the inspection of them no further than the plumage, beaks, legs, or claws. Thus Linnæus grounded his system on the shape of the feet and bill; Viellot, his upon the legs. Mr. Macgillivray was the first who applied internal investigation to the study of birds in its fullest extent.

The publication of the fifth and last volume of his admirable work, is contemporaneous with its author's demise. It is now thirteen years ago since the first three volumes and the greater part of the sequel were given to the world. The author himself had almost abandoned the idea of completing his task, but it was urged upon him; and the work which had been commenced in health was finished in sickness. The preface to the fourth volume is dated from Torquay—a change of residence which tells its own tale. Dr. Macgillivray himself explains the circumstances of his simple and affecting allusion:—"As the wounded bird seeks some quiet retreat, where, freed from the persecution of the pitiless fowler, it may pass the time of its anguish in forgetfulness of the outer world, so have I, assailed by disease, betaken myself to a milder region, where, unannoyed by the piercing blasts of the north, I had been led to hope that my life might be protracted beyond the most dangerous season of the year." However melancholy his death, it is a matter of satisfactory reflection, that this distinguished naturalist, enabled to take the extent of his acquirements and the depth of his piety, was permitted to finish his valuable labours before the hand of death fell upon him.

MISS LAURA ADDISON.

This esteemed and favour.te actress had talents of no common order. In depicting the gentler heroines of Shakspeare, such as *Juliet*, *Imogen*, and *Desdemona*, her graceful bearing and exquisite pathos brought her into comparison with what Miss O'Neil had been. The *Pauline* of Bulwer's famous "Lady of Lyons" was perhaps never more effectively impersonated than by this actress. Miss Laura Addison first appeared on the London boards at Sadler's Wells in 1847, and remained for some years a popular member of the excellent burlesque company there; and it is to be regretted, as in the case of her able successor, Miss Glyn, that she ever left that theatre. She subsequently performed with success at the Haymarket and at Drury-Lane. She then went to America, where her end was most melancholy. She died there suddenly on the 2d inst., on board the steam-boat *Oregon*, on her passage from Albany to New York. She had been to Niagara Falls for the benefit of her health. An unpleasant investigation took place in consequence of the too speedy interment of her remains; but this has since been explained, and it would appear that she had experienced every proper care and attention prior to her lamented demise.

The Water of Paris, &c.—M. Chatin has presented to the Academy of Medicine a paper giving an account of his experiments on the water of Paris, of London, and of Turin. Of the water with which Paris is supplied, he proves that of the Seine as being lighter and more saturated than those of the Marne, and that of the canal de l'Ourcq, &c., but at the same time he expresses his surprise that means are not adopted to take the water from a more distant point, such as Clacerelon, and bring it to the locality of the Jardin des Plantes for distribution from thence to the whole of Paris, instead of taking it from a part where it has receiv d contamination from the filth that has drained into it. As regards the water of London, M. Chatin speaks favourab y of that of the New River as being almost equal to that of the Seine, but proceeds to say that of the Thames, which, he says, resembles that of the Canal de l'Ourcq, which contains four times less lodgure than the water of the Seine. The water of Turin, even that which issues from the artesian spring of Valentin, is, says M. Chatin, very inferor to the Seine water; it is no better than that which is found in the springs of Belleville and Suresne, and which is largely impregnated with gypsum.

Indigestion.—Novel Remedy.—Among the papers read at the last sitting of the Academy of Sciences at Paris, was one by M. Corvisart, the great nephew of the celebrated man of that name, on the improvement of the d gestion of persons of weak stomachs by the use of the gastric juice taken from the animal. M. Corvisart has been engaged on this subject; but as yet we have very few, if any, proofs of the efficacy of the means as a general plan of treatment, although there may have been cases in which the gastric juice taken from the bodies of dead animals may have been used by man with temporary advantage. Nor does M. Corvisart furnish any practical proofs of the correctness of his theory. He contents himself with discussion; but appears to have no doubt in his own mind that digestion in the human stomach arises entirely from the want of a sufficient quantity of gastric juice, and that if a deficiency were supplied from the sources of which he speaks, the digestion would be perfect. As this gastric juice, in its natural state, is of a taste and appearance which would be repulsive to most patients, M. Corvisart has proposed that it shall be reduced to the state of powder, paste, &c., and mixed with the aliments.

Immigration to California.—A series of statistics lately published in California show that 5,000 people have arrived at San Francisco since the 1st of January last. It is fair to estimate the arrivals by sea during the remainder of 1852 at 35,000, making 80,000 persons from that source between the first and the succeeding year. From present indications, the overland immigration cannot be less than 40,000, which will swell the number of people who will visit California during the season to 120,000. Allowing for the number who will leave the state, it will still be within bounds to estimate the increase of population for the present year at about 100 000. At this rate California will soon be one of the most populous states in the Union; and the people are speculating on the probability that, after the census of 1860, they will very likely have sufficient political influence to turn the scale in a Presidential election in favour of which party they choose. From a recent estimate, believed to be correct, it appears that there are 4330 houses in San Francisco, which are presumed to contain seven persons each—making the population of this city about 30,000. Five years ago the little town of San Francisco contained a few houses built of sun-dried bricks, and had a population of about 800. Five years ago the population was still less than 1000. The bare mention of these facts is the most appropriate commentary on the unparalleled progress of the city—a city whose commerce is this throughout of a magnitude not less than 75,000,000 dollars per annum. According to a provision in the constitution, a new census will be taken of California this year. Agents have been appointed for each county in the state, who are to see per onally their labours. The census will be completed before the bulk of the overland immigration reaches the country, and must fall at least 50 000 short of giving the actual number of inhabitants. The population of California will probably reach 400,000 before the 1st of January next. The number of French people in California is estimated at 29,000. In San Francisco they are numerous enough to sustain a tri-weekly newspaper of fair proportions in the French language.

Female Conspirators in Havannah.—Among the prisoners brought from Puerto Principe is a Senorita Guovra. She is but eighteen, and described as very beautiful. She is sister to a young man who was shot last year for being concerned in the attempted insurrection in that part of the island, which ended so fatally to the persons who were engaged in it. Miss Guovra's crime, it is stated, is that she embroidered the lone star-flag of Cuban independence, and was in correspondence with some of her separated relatives in New York. Nine women in all have been arrested concerned in this alleged conspiracy.

Sudden Death.—Extraordinary Case.—Thomas Bruce, aged twenty-two, son of the former parish clerk of Islington, having died suddenly on Sunday last, while undergoing a sentence of six months imprisonment in the Clerkenwell House of Correction, for stealing wearing apparel, a *post-mortem* examination was made of his body, when it was discovered that one of his kidneys had been destroyed and the other was twice its natural size. In the brain was a ruptured abscess, which emitted an intolerable smell. It was stated at the inquest that deceased's father, grandfather, and great grandfather had insanity, and that one of them committed suicide. Deceased also betrayed symptoms of insanity. Verdict, "Natural Death."

The Late Accident on the Sheffield Railway.—The coroner's jury—empannelled to investigate the cause of the fatal accident to a Great Northern passenger-train on the Manchester, Sheffield, and Lincolnshire Railway, four miles east of Sheffield, about a fortnight ago, when the 9 10 p.m. train from Sheffield to Retford ran off the line at a high embankment—were discharged without having ascertained how it came to pass that the train was so thrown off. The matter has been taken up by the Government, however, and is now undergoing investigation

EPITOME OF NEWS.—FOREIGN AND DOMESTIC.

A gentleman at Moate, in county Westmeath, Ireland, has exhibited a sample of wheat grown upon his farm, a single grain of which produced 78 full grown stems, containing 2862 grains. In addition to the above there were 13 stems which had not come to maturity.

A hundred framework-knitters, employed by a firm in Nottingham, are at present out on strike.

The Earl of Wilton has sent his schooner yacht the *Xarifa* from Cowes to Southampton, having disposed of her to a firm connected with Australia, to which she is about to sail. The noble commodore will have a new clipper built by next season.

An aged man, named Overthrow, an inmate of St. Mary Magdalen Hospital, at Wotton, near Gloucester, celebrated his 103d birthday on the 15th inst., surrounded by some of his children. On completing his 100th year, the jolly old gent-man offered to wager that he would walk a couple of miles within the hour, but his friends declined to accept the challenge.

During the months of June and July piracy was prevalent in the neighbourhood of Hong Kong and other parts of the Chinese coast; and it is supposed to be owing to the number of intended Chinese emigrants to California being thrown adrift, arising from the late acts of legislation passed there.

A most disastrous conflagration occurred on some extensive farming property, in the occupation of Mr. James Wickham, at Sutton Scotney, near Winchester, a few days ago. Numerous barns, stacks, outbuildings, and a vast quantity of corn and wool fell a sacrifice. There is some reason to believe that the fire was caused by a boy who was playing with lucifer-matches.

On the 15th inst., David Northrup, aged only ten years, in the employment of Mrs. Watson, at Harston, Cambridgesh re, was tending the swine in a field, and was so severely bitten in the abdomen by one of the boars that his bowels protruded. He expired soon afterwards.

On Monday morning the largest known mail to India *vid* Southampton, Greece, the Ionian Islands, &c., from the General Post office, was dispatched from the Waterloo terminus of the south-Western Railway. It consisted of 173 boxes of letters, four portmanteaus, and sixteen bags of newspapers.

The *Galway Mercury* says:—"No season ever witnessed such an influx of tourists to our western highlands as the present. The hotels are also crowded throughout Connemara, and even many private houses are filled with the admirers of 'nature in her wildest dress.'"

A line of screw steamers is about to commence running between Southampton and Bordeaux.

A tanner, recently deceased, at Manchester, is said to have left a fortune of £250,000, which he had accumulated in that trade.

The official journal of Copenhagen publishes a Royal decree, by which an English company is authorised to form a railway from Rendsburg, in Holstein, to Husum, in Schleswig, and from Husum to Tonning. The works are to be concluded in two years. The concession is made for 100 years, but is to be confirmed in every new reign.

On Monday night a large amount of property was destroyed on the premises of Messrs J. and F. Gould, lace-dealers, 89, Watling-street, near St. Paul's Churchyard, in consequence of a fire which broke out there about nine o'clock.

Notice was issued on Tuesday at the National Gallery, Trafalgar-square, that it was closed for the annual vacation until the 25th of October, when it will be re-opened to the public. The Vernon Collection at Marlborough House, Pall-mall, is closed for the same time.

On Tuesday a new line of pipe was being laid down along the Strand to connect the General Post-office with the Admiralty, Houses of Parliament, and the Telegraph station at Charing-cross.

Last week the infant son of Mr. Claverly, architect, Grove-street, was accidentally smothered by having been put to sleep upon a down pillow, the child having turned round upon i s face.

The Chancellor of the Exchequer acknowledges the receipt of half of a Bank-note for £500, in further payment of a debt long due to the nation.

A Malmö (Sweden) journal states that Madame Lind-Goldschmidt (Jenny Lind) has deposited a sum of 400,000 rix thalers in the hands of Provost Thunmyer and Dr. Wieselgren, of the cathedral, for the foundation of girls' schools in her native country

An association has been formed at Metz for causing Sundays and holydays to be duly re-pected in France. The members engage themselves to refrain from business on those days, and to make their workmen and servants do the same.

Such is the *furore* for emigration from the Highlands to Australia that a clergyman near Fort William signed, within ten days, upwards of 1000 certificates for parties desirous of leaving the district.

It is rumoured that the new work of fiction, entitled "Fanny Denison," is the first literary production of Mrs. Crawford, the daughter of Mr. Sharman Crawford, so well known in the political world.

Ship-building is now going on with the greatest activity at the different yards of La Rochelle (France). A ship of 350 tons, named the *Franklin*, was launched a few days since from that of M. Turpain, jun.

The *Jean Bart* and the *Austerlitz*, French ships of the line, which have just been launched at Lorient and Cherbourg, will immediately take on board screws and steam-engines of 500-horse power, which have been constructed for them at Indret.

The Dutch Chambers closed their session on Saturday last, but assembled again on Wednesday for a new session Before separating on Saturday they voted a credit for the sum claimed by Russia in the affair of the Russo-Dutch Loan, but the First Chamber voted the credit with a reservation almost amounting to a protest.

A laboratory for the production of explosive cotton has been opened by the artisan Government in a suburb of Vienna. Experiments have been made with a view to improving and simplifying the process, and the best results are anticipated.

The grand parade, which takes place every year at Naples in honour of the Virgin of Piedigrotta, was held on the 8th inst., with great pomp. The King reviewed 38 battalions, 40 squadrons, and 9 batteries of artillery on this occasion.

A letter from Cordova states that a large quantity of pearl oyster-shells, some of them containing as many as twelve large pearls, had been recently discovered on the right bank of the Guadalquivir, and that a company had been formed in that city in order to examine the river throughout its whole extent

The *Prussian Moniteur* publishes an order condemning a clerk in the Post-office to a fine for endeavouring to discover the contents of a letter by looking at it into the envelope. The order states that the first and most important of the duties of the Post office is to scrupulously respect the secrecy of letters

Mr. Hampton's balloon, called Erin-go-bragh, which was to have ascended on Monday from the Pavilion Gardens, over against Woolwich, broke from its retaining cordage, ascended without a pilot, and when at a great height burst with a loud re, ort

On Wednesday morning a portion of the Victoria Tunnel, which runs under Bristol, Liverpool, gave way, and fell in to the extent of about three feet. No accident occurred.

The Commissioners of Inland Revenue acknowledge the receipt of £23 6s. 8d., conscience money, from "A. B.," for arrears of income-tax

On Tuesday thirty female paupers from the Limerick Union, and thirty from the Nenagh Union, left the Shannon by the *Europa*, screw-steamer, for Plymouth, en route to Australia.

Two or three smart intelligent sub-constables of the constabulary force in Belfast, have sent forth their resignation, preparatory to their emigrating to Australia, to try their hands at the "diggings."

Mr. Holloway, whilst attending a meeting on Monday evening at Oldham, which was called for the purpose of promoting the return of Mr. W. J. Fox, as representative for the borough, suddenly expired from a fit of apoplexy. The fatal occurrence took place a few minutes after he had delivered a speech to the audience.

A great blast of gunpowder took place in the Granite Quarry, at Furness, near Inverary, last week. The shaft was 60 feet in depth, and as four tons of gunpowder was used, the explosion was the most tremendous that had ever taken place in Scotland.

The Chief Secretary for Ireland has communicated to the committee for the Great Industrial Exhibition to be held in Dublin next year, his intention to submit to Parliament, early in the ensuing session, a bill to extend the provisions of the Designs Act of 1840, and to give protection from piracy to persons exhibiting new inventions.

On Wednesday evening as Mr. Stevens, of 18, Bayham-street, Camden Town, was rowing in his boat upon the Serpentine, it was capsized in passing under the bridge, and before assistance could reach him the unfortunate gentleman was drowned.

As Mr. Christopher Rainforth, of Rainton, was leaving Ripon market a few days ago a female delivered to him a small parcel, directed for himself. On reaching home he opened it, and found it to contain half-a-sovereign and the following note:—"This is for a rill which I took from your garden hedgeseven and twenty years since.—Conscience."

CHESS.

TO CORRESPONDENTS.

G F S, of London.—Your "novelty" is no other than the mate called "Philidor's Legacy" the most hackneyed and best-known position extant

ANGUS.—It is not altogether want of industry or skill on the part of our Chess readers, but the annual difficulty of our problems of late, which occasions the diminution of the list of the "correct" solutions

SOPHIA, Leamington.—It shall receive immediate attention

ELEANOR.—We purposely withhold the solution of our last problem until next week

DAVID.—The position referred to is perfectly correct, and usually considered one of the easiest three-move problems Try it once more

KAISER. The "Chess-Player's Handbook" published by Bohn

SOLUTIONS of PROBLEM No. 451, by Jack of Shrewsbury, Judy, Ernest, Philo-Chess, are correct

SOLUTIONS OF ENIGMAS by Vica, Dorcas, Ernest, are correct. All others wrong

SOLUTION OF PROBLEM No. 450.

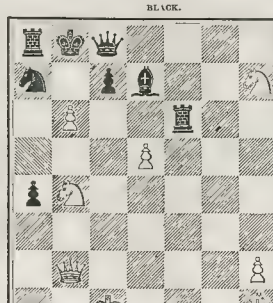
WHITE	BLACK.	WHITE.	BLACK.
1 R to Q 8th (ch)	K takes R or B	3. B to K 5th	B moves
2. Kt to K 3 1 (ch)	K to Q B 4th	4. P to Q 4th— Mate.	

WHITE.	BLACK.	WHITE.	BLACK.
*1.	B takes B	3 B to K 8th (ch)	K to Q 4th
2. P to Q 4th (ch)	K to Q 3d	4. Kt to Q B 3d (ch)—Mate.	

PROBLEM No. 452

By E. A. M. M., of India.

BLACK.



WHITE.

Whites to play, and mate in eight moves.

CHESS IN SCOTLAND.

Instructive Game played between Mr. STAUNTON and the Rev. T. GORDON ("Gamma"); Mr. S. giving the odds of the Pawn and two moves.

(Remove Black's King's Bishop's Pawn off the board.)

WHITE ("GAMMA.")	BLACK (Mr. S.)	WHITE ("Gamma")	BLACK (Mr. S.)
1. P to K 4th		21. B takes Kt	Q takes B
2. P to Q 4th	P to K 3d	22. R to Q Kt sq	Q to Q K 4th
3. B to Q 3d	Q to K 2d	23. Kt takes B	Q R takes Kt
4. P to Q B 4'h	P to Q 3d	24. Q R takes Q Kt P	R to K B 3d
5. Kt to Q B 3d	P to Q B 3d	25. R to Q Kt 3d	B to Q R 4th (e)
6. P to K B 4th	P to K Kt 3d	26. B to Q Kt sq (f)	B to Q Kt 3d
7. Kt to K B 3d	B to K Kt 2d	27. P to K Kt 3d	R to Q B 5th (g)
8. Castles	Kt to K B 3d	28. K to K sq	Q R takes Q P
9. P to K 5th	P to Q 4th	29. Q to K 2d	R to Q 7th
10. P takes P	Q B P takes P	30. Q to K B 3d	K R to Q 3d
11. Kt to Q Kt 5th	Kt to K B 2d	31. P to K Kt 4th	R to Q 8th
12. P to Q Kt 3d (a)	Kt to Q B 3d	32. P to K Kt 5th	K R to Q B 6th
13. B to Q R 3d	Q to Q sq	33. Q R to Q Kt 7th (ch)	K to B sq
14. Kt to K Kt 5th	K B to his sq		
15. K takes Kt (b)	K takes Kt	34. Q to K Kt 4th	Q to R 3d
16. Kt to Q 6th (ch)	K to Kt 2d	35. Q R to Q Kt 8th (ch)	K to B 2d (h)
17. B to Q B 2d	B to K 2d		
18. Q to Q 3d	R to K B sq	36. R to K sq	R to K B 7th
19. K to K B sq	Q to Q R 4th (c)	37. P to K B 5th (i)	K to K B 8th (ch)
20. P to Q Kt 4th (d)	Kt takes Q R P	38. K to Kt 2d	R takes R

And Black wins

(a) Well played. Whites, by this move, prevents his adversary from Castling, and gets a fine attack

(b) Unknown afterward, remarked he should rather have taken the Bishop here, pursuing the attack thus:—

WHITE	BLACK.	WHITE	BLACK.
15. B takes B	R takes B	17. Kt to Q 5th (ch)	K to Kt 3d
16. Kt takes Kt	K takes Kt	18. Q to K Kt 4th	

Threatening to advance the K B Pawn &c.

(c) A difficult move to parry successfully.

(d) The only way to avoid positive loss.

(e) By this unexpected move Black brings his Bishop into effective action, and secures the ultimate gain of a valuable Pawn

(f) If he had taken the Bishop, the game would probably have been pursued thus:—

WHITE.	BLACK.	WHITE.	BLACK.
26 P takes B	Q takes P (ch)	29 Q takes Q	R takes Q
27. R to K B 3d	R takes K R P	30. K takes R	R takes R (ch)
28 Q to K 4th	Q takes R (ch)	31. K moves	R takes Q R P

And Black should win.

*27 K to R sq	Q takes B	29 P to Q B 3d	R takes K B P, &c.
28. Q takes Q	R takes Q		

(g) This secures the gain of the Queen's Pawn.

(h) In playing this game over the following interesting variation occurred:—

35.	K to K 2d	36 R to Q sq	R takes R

The proper move here is R to K B 7th, which leaves White some redress.

37 Q takes R	Q to Q 8 5th	46. R takes K R P	R to K 7th (ch)
38. K to K 2d	K to K 8th	41. K to B 3d	Q to Q 8 6th (ch)
39. K to K 7th	K to Q sq	42. B to Q 3d	

If he take the Rook, he is obviously mated in two moves.

43.	R to K 8 (ch)	46. R to R 3d	R takes Q R P
43. Q takes Q	Q takes R (ch)	46. P to K 5th	R to Q R 8 (ch)
44. Q takes Q	It takes Q	47. K to Kt 4th	B to K B 7th
45. B to Q 6th	R to Q 7th	48. P to K 6th	R to K 8th (ch)
46. K takes P	R to Q 2d	49. K to K 5th	R to K R 8th (ch)
47. P to K 4th	R to K R 7th (ch)	And draws by perpetual check.	

(i) If he had played Q to K R 4th, Black would have mated him in three moves.

Smart skirmish between Mr. STAUNTON and an Amateur.

(Sicilian opening.)

BLACK (Mr. S.)	WHITE (Amateur.)	BLACK (Mr. S.)	WHITE (Amateur.)
1. P to K 4th	P to Q B 4th	14. Castles	Kt to K B 4th
2. P to Q 4th	P takes P	15. P to Q B 3d	Kt takes B
3. Kt to K B 3d	P to K 3d	16 P takes Kt	B takes Kt

CHESS ENIGMAS.

No. 766.—By W. BIGLAND, Esq., Leamington Chess Club.

White. K at Q B 3d, Q at K 6th, Bs at K B 7th and Q Kt 8th, Kt at Q Kt 4th, P at Q B 4th.

Black. K at Q B sq, R at Q sq, B at K sq, Kt at Q 2d, Ps at Q B 3d and Q Kt 3d.

White, playing first, to mate in three moves.

No. 767.—By Mr. W. H MAYO, of Yeovil.

White: K at K B 6th, Q at Q R 7th, R at K 7th, Kt at K 3d; Ps at K 2d, Q 2d, and Q 3d.

Black: K at Q 5th, Q at K Kt 6th, R at Q B 8th, B at K B 5th, Kt at Q B 4th, P at K 3d.

White to play, and mate in six moves.

NAVAL AND MILITARY INTELLIGENCE.

The Trinity Board has issued printed circulars to their sub-commissioners at the outports, by which it is believed the revision of the tariffs of pilotage will be general at all ports subject to the control of that corporation.

The officers of the 7th Fusiliers, recently quartered in Portsmouth garrison, have presented to their late Paymaster, T. Gilley, Esq., a splendid sword, on the appointment to be aide-de-camp to Lord Frederick Fitzclarence, accompanied by an elaborately chased tea and coffee service and salver to Mrs. Gilley. The 96th Regiment, a short time since, presented this gentleman with a massive tankard in gold, being the second honourable testimonial in the short space of twelve months of the esteem and regard in which Mr. Gilley is held by his brother officers.

The body of the late Second-Lieutenant Walter Scott Reeves, drowned in the Solent on crossing from Portsmouth to the Isle of Wight last Thursday week, was picked up off Cowes on Friday afternight, where an inquest has since been had upon it, and a verdict of found drowned returned. The body was forwarded to Portsmouth in a shell sent from the Marine Barracks on Saturday, and was interred with military honours.

THE KAFFIR WAR.—A great number of soldiers, wounded in the recent operations against the Kaffir tribes, are at the invalid *depôt*, Chatham, some of the cases exhibiting great peculiarity of character. One young man received a wound at the fo e part of the foot, the ball passing through in the back of the ankle, without injuring, in any material degree, the vessels or arteries, and causing only slight lameness.

LAUNCH OF A FRENCH SCREW LINE-OF-BATTLE SHIP.—At half-past eight o'clock in the morning of the 15th, the ship of the line Austerlitz, of 100 guns, was launched at Cherbourg, in the presence of the Minister of Marine and an immense number of spectators.

A STERN EXAMPLE.—A young seaman, scarcely nineteen years of age, belonging to the French frigate *La Forte*, who was sentenced to death by court-martial for striking his captain with a sabre, was executed at Brest, on the 6th inst.

DEATH OF A VETERAN.—An old soldier, named James O'Neil, died at Salford, Manchester, on the 16th inst, who was born on the 2d of March, 1765. He entered the army in 1774, at the age of twenty-nine, served thirty-eight years, and was discharged in 1812. He had been forty years a pensioner, and had consequently attained, at his death, the great age of 107.

ROYAL NAVAL SCHOOL.—The council have accepted a tender for the erection of a chapel capable of accommodating 400 pupils (the number for which the building was originally designed), and the requisite number of officers and servants of the establishment. The chapel will be erected on the south-west side of the infirmary, and will be approached by a covered way from the main building, forming an ornamental and appropriate feature as seen from the playing field. The building is to cost £4000.

"THE BENTINCK," Captain Kellock, Admiralty agent, Lieutenant Keenan, left Southampton on Monday for Alexandria, with the East India mail. She took out the largest quantity of specie ever conveyed by an Alexandrian steamer. The specie was contained in 1321 boxes and packages, and was conveyed from London to Southampton on Saturday by special train consisting of seven carriages. Amongst her passengers, who numbered nearly 130, was Captain Buchanan, of the United States navy, and who is going out to take command of the United States fleet in the Eastern Seas.

GENERAL COURT-MARTIAL.—Second Lieutenant Charles Ducane Williams has been tried by Court-Martial at Portsmouth, and found guilty of manifestation and disorderly conduct, of breach of proper discipline, and of conduct unbecoming the character of an officer and a gentleman. He is sentenced to be cashiered.

MILITIA OFFICERS' UNIFORM.—The following orders have been issued from the War-Office:—"1 The uniform of the officers of the militia is to be that of the existing pattern, in strict conformity with the Queen's regulations for the army, silver lace being substituted for gold lace. 2. Militia officers will appear at levees and drawing-rooms in regimentally equipped, and clothed in full dress; and in the uniform of their respective corps, upon all occasions when the commanding officer may deem it necessary, and when attending, as spectators, the review or inspection of troops by the Commander-in-Chief or by a general officer. 3. During the training and exercise, the officers of militia will only be required, unless otherwise specially ordered by the commanding officers, to appear in the following undress uniform:—Coat—Plain blue frock—to be worn buttoned up with silk buttons, precisely as worn by officers of the regiments of the line. The other particulars as in the line."

CITY OF LONDON MILITIA.—On Wednesday, the aldermen, deputies, and common councilmen of the City assembled within their respective wards, for the purpose of providing the required number of men for the City of London Royal Regiment of Militia, in compliance with the orders issued by the Court of Lieutenancy, and also to make a return of those volunteers who have been duly sworn and attested. The recruiting for this service proceeds very slowly; and it is a singular fact that up to the present time not one freeman has enlisted, and comparatively few persons who reside in the City have joined the corps. It is doubtful when the required (600) will be made up.

HAMPSHIRE.—The county police, it is stated, have received strict orders to destroy and suppress all placards and bills published by the Peace Society and other parties, of a tendency to prevent men from volunteering for the two regiments of militia to be raised in this county.

THE MILITIA IN WALES.—General meetings of the Lieutenants of the various Welsh counties have been held, and the necessary steps taken, for the enrolment of the various quotas of men for each county. In Carmarthenshire no great difficulty is expected in procuring a sufficient number of men as volunteers. In Flintshire, however, great dissatisfaction has been manifested against volunteering a fact that may be traced to the harvest operations having given full work to the labourers. No fewer than 670 men are required for the county of Glamorgan, for the raising of which number the ballot will be necessary, as the iron trade and its adjunct, the coal trade, are in full activity, and labourers are not over-abundant.

THE NEW POLICE FOR AUSTRALIA.—On Saturday last orders were received by the superintendents of the various divisions of the metropolitan police, from the commissioners, to inform the men that six would be selected from those in each division who wished to become candidates for the service in Australia. There are seventeen divisions, and the number three formed will consist of picked men, not above five years in the police, and presumed to be well acquainted with their duties. Each man will undertake to remain five years, or incur the penalty of £30; pay, 7s. 6d. per day: passage and all expenses paid.

FRENCH FISHERMEN.—Great complaints prevail this season amongst the English fishermen who have been engaged fishing in the Northumbrian coast, against the French fishermen; the latter being now prevented, by the presence of their war-steamers, from purchasing fish of our native fishermen, have in many instances plundered the nets of the English of their fish, and made off with the booty. One poor, industrious man, he onging to Bamhell, in Northumberland, lost in this way nets and tackling, with fish, to the value of upwards of £20.

CENSUS OF FOREIGNERS IN THE CHANNEL ISLANDS.—The Lieutenant-Governor of Jersey has issued circulars to the island constables to furnish a census of foreigners and refugees in the island. This census must contain the names, residences, professions, and social *status* of such persons, whether they are married or single; whether they hold passports, and if so, the date of them, and whether they are from their own countries; whether the foreigners are in the employ of any family, and whether such families are British subjects; and as to whether the foreigners or refugees are in lodgings or occupy houses. These circulars have caused a great sensation and disapprobation, both in Jersey and Guernsey. The Vice-Consuls for France in the Islands, who have always been natives or Englishmen, have been turned out, and Frenchmen have been appointed to succeed them. The constables of Jersey have been urged not to furnish to the Lieutenant-Governor a census of the refugees of the island, as they have been ordered to do, and the refugees have been urged by the newspapers of the island not to submit to inquisitorial proceedings, as they are a violation of the island rights and privileges. The Lieutenant-Governor, however, is not considered blameable in the matter, as it is believed he is only acting in accordance with instructions from the British Government.

ACCIDENT ON THE SOUTH WALES RAILWAY.—On the night of Friday se'nnight, as the last of the excursion-trains was returning from Carmarthen to Swansea, Mr. Williams, proprietor of the Cambrian, who was a passenger, was precip itated out upon the line in consequence of the door of the carriage against which he was leaning suddenly opening. The carriage wheels passed over both feet, literally cut off his toes. He was, thereupon, removed to Carmarthen Hospital, where it was found necessary to amputate portions of both his feet. It is feared he will lose the use of both legs.

TORQUAY.—On Monday afternoon a serious accident occurred to J. Belfield, Esq. In his capacity as magistrate, he had been attending the petty sessions, and whilst on his return home to Primley, the horse became unmanageable, and threw his rider violently to the ground. Before the unfortunate gentleman could be got up, the wheel of a carriage passed over his neck. He was conveyed home in a fly, and now lies in a very precarious state.

DEPOT FOR STOLEN GOODS.—The police of Manchester having discovered on Saturday last a *depôt* for stolen property in a cellar in Dale-street, seized a large quantity of manufactured goods of various kinds which had been there secreted. They also apprehended seven men whom they found on the spot.

ACCIDENT AT THE BRIGHTON RAILWAY STATION.—As the down train, which left London at seven P. M. on Tuesday, was slowly approaching the platform at the terminus, an elder y lady, not taking the precaution to wait until it had stopped, stepped from her carriage, and, missing her footing, slipped under the wheel. The moving train passed over her legs, completely cutting off one foot, and injuring the other very severely. She now lies in a precarious condition.

MR. PANCHARD'S PARTRIDGE-COLOUR COCHIN-CHINA. MR. GILBERT'S, OF KENSINGTON, LIGHT COCHIN-CHINA.

PRIZE POULTRY EXHIBITED AT GREAT YARMOUTH.

EXHIBITION OF POULTRY AT GREAT YARMOUTH.

EXHIBITIONS of poultry are now becoming general; and the increasing attention which is drawn to the improvement of the various breeds cannot fail to be attended with good results to this branch of rural economy. Birmingham, a few years since, set the example; and now in various parts of England associations are formed, or in course of formation, which may probably equal, and perhaps even excel, the Birmingham Society. Amongst these, the Yarmouth and Eastern Counties Association promises to take a conspicuous position. In the midst of a district celebrated for its poultry, and under the patronage of the Duke of Rutland, Lord Wm. Poulett, M.P., and several noblemen and gentlemen of distinction, the society cannot fail to prosper, if carried out under the same judicious management which attended its commencement.

The first show was held at Yarmouth on the 16th inst., in the Vauxhall Gardens, when upwards of 600 birds were exhibited, including very choice specimens of almost every existing breed of fowls. We present to our readers Portraits from several of the pens. Considerable attention was drawn to the pens of white Cochin-China fowls, exhibited by Mr. G. C. Adkins, Mr. Peters, and Mr. Holmes, of Birmingham; and Mr. E. H. L. Preston and Mr. W. C. Reynolds, of Yarmouth. Also to the black variety of the same breed, exhibited by Mr. Fairlie, of Cheveley Park. And we cannot speak too highly of the pens of Dorkings and black Spanish fowls, exhibited by the Hon. Mrs. Astley. The first prizes in Cochin-China fowls were awarded by the judges (Dr. Horner, of Hull; G. J. Andrews, Esq., of Dorchester, and Mr. Baily, of Mount-street, Grosvenor-square; to Mr. Punchard, of Haverhill; Mr. Adkins and Mr. Peters, of Birmingham; Dr. Gilbert, of Kensington; Miss E. Watts, of Hampstead; Capt. Squire, of Mildenhall; and Mr. Fairlie, of Cheveley Park.

The attendance was very numerous, owing, in some measure, to the number of visitors in the town at this season of the year.

The fowl show was decidedly the best of any of the provincial exhibitions, there being upwards of 600 birds on the ground, and 174 separate pens.

Of Pigeons there was a fine show, which attracted the attention of several connoisseurs who were present. The principal exhibitor was Mr. G. C. Adkin, of Birmingham.

TEIGNMOUTH MADE AN INDEPENDENT PORT.

TEIGNMOUTH is distant sixteen miles from Exeter, and the two places are in nowise connected. The Exe flows into the sea at least five miles to the east of the mouth of the River Teign; and the nature of the trade of these two ports is as dissimilar as possible. The River Teign has its own government, under its own special act; revenues for improvement are collected and expended; and it has about fifteen thousand tons of shipping of its own. Yet, with all these advantages of its own, Teignmouth was hitherto, for Custom-house purposes, in the port of Exeter, which was long felt to be so detrimental to its interests, that, some seven or eight years ago, the Government were memorialised to make Teignmouth an independent port. This measure has, however, from various causes, been delayed until the present year, when the Government acquiesced, and the announcement of the independence was hailed with much satisfaction by the people of the town. No sooner had the document been received, which gave them their Custom-house rights, than a public meeting was called, and it was determined to celebrate the event by a holiday: in this the inhabitants of other towns, depending on the imports of Teignmouth, co-operated; and Tuesday week, the 14th instant, was set apart for general rejoicing. For this purpose the shops of Teignmouth were closed, and the streets and houses decorated with a profusion of flowers and evergreens, triumphal arches, flags and banners; the words, "We are independent," floating from the main points of the town.

At twelve o'clock the committee met, a Royal salute was fired from the Den, and a procession was formed, headed by a herald on a white horse, supported by flag-bearers; then followed sailors, the crews of various vessels; fishermen, gardeners, bands of music, magistrates, harbour and river masters, and commissioners, and other official persons; deputations of rope and sail-makers; smiths at work with anvil and forge, in a car; coach-builders, preceded by a chariot on a car; then

BLACK COCHIN CHINA, JOHN FAIRLIE, ESQ., CHEVELEY PARK. HON. MRS. ASTLEY'S SPANISH FOWLS.

HON. MRS ASTLEY'S SEABRIGHT BANTAMS.

PRIZE POULTRY EXHIBITED AT GREAT YARMOUTH.

OPENING OF THE SOUTH WALES RAILWAY.—THE CARMARTHEN STATION.

came maltsters, with barley; plasterers, with models of villas; builders and sawyers at work, on cars; cars of wine and spirit casks; a cider-merchant and barrel; a model printing-press, and men printing the *Independent Port Journal*; model railway and engine; companies of workmen, members of clubs, &c. Prominent in the characteristic *cortège* were a full-rigged brig, *Minna*, on a car, drawn by two horses, manned by crew, armed, "direct for Geelong, with emigrants;" Captain Bartlett, captain of the Life-boat, with model of a full-rigged ship and telescope; shipbuilders, each man carrying a tool or symbol of his department; with models of ships, boats, and vessels in various stages of building; model yacht, manned with crew—quarter-deck officers in full uniform; model steamer; model patent slip, carried by four boys, with four supporters carrying flags; Captain Stooke, carrying an Indian ship, and various curiosities.

The procession, upwards of a mile in length, marched round the Den, and through the main streets of the town; and was the most gorgeous display witnessed in South Devon since the passing of the Reform Bill. On the procession reaching the Den, the rain fell heavily, and the rural sports and boat-racing which had been announced did not take place.

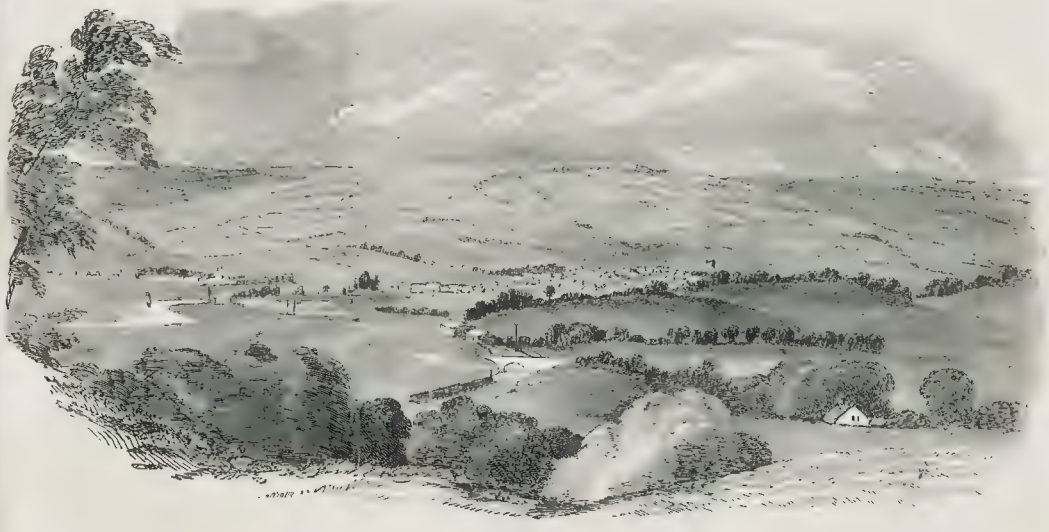
In the afternoon, about 300 gentlemen dined at the Assembly Rooms, G. S. Curtis, Esq., presided; C. Kelson, Esq., acting as vice. The most distinguished residents in the neighbourhood were present. Plymouth, Newton, Dawlish, Ashburton, Kingsteignton, Kingskerswell, Chudleigh, and Bovey Tracey, were each duly represented. A variety of appropriate toasts were drunk, and the chairman, in returning thanks for his health, thus illustrated the importance of the independence of Teignmouth as a port:—

In the first place, Teignmouth has hitherto been within the Custom-house regulations of the city of Exeter. This compelled all who brought cargoes to this port to go to Exeter, in order to pass their goods, and to get a free pass from the Custom-house, at considerable expense to themselves and expense to their owners; now, if we have a Custom-house here, they will be able to transact all their business without going to Exeter—(Cheers)—and not only will they be able to do this, but Torquay and Dawlish will come here, instead of the former going to Dartmouth and the latter to Exeter. (Renewed cheering.) When I tell you that Teignmouth is the principal port in the Newton Abbot Union, over which I have the honour to preside, and which covers 200 square miles, is composed of 39 parishes, and contains 32,000 inhabitants, you will well understand how important it is to them that they should come here instead of being compelled to go the distance they have been obliged hitherto. (Hear, hear.) The imports chiefly consist of deals, &c., &c., besides about forty thousand tons of coal and culm annually. The exports amount, from one firm alone, that of Messrs. Whiteway, Watts, and Co., to upwards of 30,000 tons of clay annually. The exports are chiefly clay, manganese, lead, iron, and granite: the exports, together, amount to upwards of 60,000 tons annually. (Hear, hear.) The vessels that come into the Exe do so because we have no Custom-house here, and no bonded cellars. When they have discharged in the Exe, they come round here to take in freight. This causes them a double pilotage, extra delay, and many other inconveniences, and you will well conceive that the merchants were very anxious that this should be made an independent port. (Hear).

The health of Mr Hennett, who has commenced building extensive bonded warehouses at Teignmouth, was drunk with nine times nine and a volley; it being a stipulation that unless bonded warehouses were built, the independence would be withheld.

Meanwhile, a grand display of fireworks took place on the Den. The showers of rockets threw a brilliant light over the town, and were reflected on the water with beautiful effect. The whole holiday passed off well; the arrangements in every respect being most complete.

OPENING OF THE SOUTH WALES RAILWAY
BETWEEN CARMARTHEN AND LLANELLY.



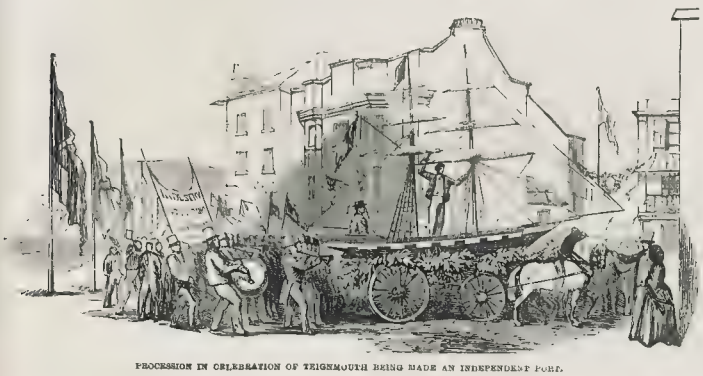
OPENING OF THE SOUTH WALES RAILWAY.

THE opening of that portion of the South Wales Railway between Swansea and Carmarthen, was celebrated with great *eclat*, on the 17th. as an event of great importance to the principality. "The illimitable mineral wealth that lies entombed in its mountains; its rich and fertile valleys; its ports, some of them the finest and best in the world, needed the 'mighty power of steam' to raise this country, so richly endowed, to that eminence nature has evidently fitted it to occupy."—*Carmarthen Journal*.

It will be recollected that the South Wales Line of Railway was completed to Swansea in 1850, and its opening duly Illustrated in our Journal. (See No. 433.)

The line from Swansea to Carmarthen is almost the whole of the way along the sea-coast. The trunk line of the railway does not pass through Swansea, but is about a mile and a half from it. The branch to Swansea is made from the Llandore station. The length of the line between Swansea and Carmarthen is thirty miles. After passing over about a mile and three quarters of the line, is traversed the Swansea tunnel, excavated at an average depth of one hundred feet from the surface. From the tunnel the line descends to the Loughor river, which is crossed by a bridge with eighteen openings. The east opening is constructed so as to admit the passage of vessels, there being a clear water way for that purpose of thirty feet. At about two or three miles from this bridge respectively, the Llandilo and Llangennech Railways are crossed. This portion of the line is reasonably easy until the crossing of Llanelly sands is commenced, at about eleven miles from Swansea. They are nearly three miles long, and the line sweeps boldly along them at a distance of a quarter of a mile from the shore. It is defended from the assaults of the waves by a substantial sea wall. The distance from the western extremity of this sea wall to the crossing of the Gwendraethfawr, is about four miles and a half; and the works on it are very light. The Gwendreathfawr is crossed by a light viaduct of thirteen openings: the centre one being made to lift up for the purpose of admitting vessels bound to Kidwelly. From this on, the works are light, until the Ferry rocks are reached. It then crosses the Ferry sands, where there is another sea-wall similar to that at Llanelly, and then follows the course of the Towy to Carmarthen.

The districts through which the line passes are important. There is, on the whole, little diversity of scenery, but now and then the traveller will catch glimpses of some exquisite scenes. In the neighbourhood of Loughor there are several large and valuable works: we might mention the copper works of Messrs. Elkington and Co.; the Cameron Steam-coal Works; and some extensive chemical works. Llanelly is the most important place between Carmarthen and Swansea. So lately as 1813 it was thinly peopled, and was difficult of approach from the sea, its river being little better than an estuary, scarcely large enough for vessels of 100 tons burden; now it has a population of more than 12,000, with a corresponding increase of business; and the river has been so much improved, that vessels of 600 or 700 tons can ride on it in safety. This is one of the most improving towns in this part of Wales, and the Railway will give a fresh impulse to its trade and commerce. At Pembrey, excellent views of Gower, Carmarthen Bay, and the British Channel might be obtained; and the scenery up the vale of the Gwendraethfawr looks very pretty. Bury Port is a convenient outlet to the Channel from



PROCESSION IN CELEBRATION OF TEIGNMOUTH BEING MADE AN INDEPENDENT PORT.

the Gwendraeth valley, where there are extensive iron and coal works Kidwelly is an ancient town, and will prove the most attractive place on the line for tourists. The church is a fine cruciform ed fice, and the castle is one of the most interesting in Wales. Its beauty has been greatly preserved by the Earl of Cawdor, who is the owner of it; and the scenery is picture-que, varied, and extensive. The Ferry Side is a small village, and commands a good view of Llanstephen Castle and village. It is the frequent resort of pleasure-seekers from Carmarthen There is nothing very striking in the aspect of the country from this place to the station at Myrtle-hill.

Only one line of rail is completed, and the stations are not yet finished.

The celebration of the opening was designed by William Morris, Esq., the worthy Mayor of Carmarthen, who has most generously borne the whole of the extra expenses from his private resources. The weather was delightful. The streets through which the procession was to pass were decorated with triumphal arches. At twelve o'clock the procession was formed It consisted of the Carmarthen town council and the Mayor; Valentine Davis, Esq., T. C. Morris, Esq., E. H. Stacey, Esq., G. Davis, Esq., wore robes as ex-Mayors. The mayors of other towns, together with a large number of gentlemen, followed; after which there was the Brownwd band. The procession was headed by about thirty sailors, bearing union-jacks, &c., a band of musicians, a portrait of General Picton, and a very prettily-designed banner by Mr. John Davis, cabinet-maker. The procession walked all the way to Myrtle-hill through a dense crowd of people. Arrived at the station an imposing spectacle presented itself, the banks for half a mile being densely crowded.

Soon after twelve o'clock a *monstre* train left Swansea for Landore, where the directors' train—in which Mr. Talbot, M.P., and the directors, as well as the band of the 43th Regiment were seated was waiting.

At Landore the inhabitants mustered strongly. There were four engines puffing and shrieking over the lines, whilst the military band played a Welsh air. After a delay of about ten minutes, during which the engines took up their respective stations—the train being propelled by three powerful engines, the Ganymede, the Pearl, and the Caliban, which were gaily dressed—away we started for Loughor.

At this ancient borough hundreds of persons, in their holiday attire, greeted the train; and an address was formally presented to the directors by Mr. Williams.

Having passed over Loughor Bridge, Llanelly was approached in a few minutes. The inhabitants turned out *en masse* to welcome the train. The shipping were decked with their gayest bunting—the cannon roared, whilst triumphal arches, interspersed with floral devices and "Welcome" inscriptions, crossed the new iron road in various places. When the train stopped, the Directors' carriage was detached, and a congratulatory address was presented to the chairman and directors.

This having been replied to by Mr. Talbot, the party then left, amidst the most deafening shouts, for Pembrey, where the directors received a cordial reception. At Kidwelly the mayor and corporation, headed by the deputy-recorder, Mr. Jeffries, received the directory at the station. Mr. Jeffries then read an address, which being acknowledged, Mr. Talbot and the directors partook of luncheon, and then returned to their carriage, and left amidst the roar of cannon and the cheers of the hundreds of the inhabitants. The Ferry Side was the next station reached. The preparations made here were very extensive, and a vast deal of powder was exhausted, and the inhabitants were most enthusiastic in greeting the directors. Having taken in a goodly party for the breakfast, the train was again on the move, and after a pleasant excursion along the Towy, the train arrived at its place of destination, Carmarthen, where a procession was formed direct to a large shed fitted up for the occasion in the Market-place.

The chairman, W. Morris, Esq., the directors, and several other gentlemen, sat on a platform at one end. Over the presidential chair were the letters V. R., and a star of coloured dahlias. Here an elegant repast was served to upwards of 800 guests. The chairman was supported on his right by C. R. M. Talbot, Esq., M.P.; Rice Rice, Esq., M.P.; and Colonel Bernard; and on the left by Captain C. H. Williams, Captain Butler, Lord Villiers, and J. H. Philippe, Esq., M.P. A variety of appropriate toasts were drunk; and the festivities of the day closed with a brilliant display of fireworks, and a grand ball in a spacious marquee erected for the occasion, in the garden of the Ivy Bush.

THE THEATRES, &c.

PRINCESS'.

This theatre re-opened for the season on Saturday. A new *petite* comedy in two acts, by Mr. Bourcicault, was produced. It is entitled the "Prima Donna." The piece is probably derived from the French; but the subject is treated with such skill, and the dialogue written with so much elegance, that we are, nevertheless, disposed to esteem it as an original production. The story is exceedingly delicate in its conception, and required to be nicely treated. The interest lies in one sister resigning her lover for the sake of another, and thereby preserving the life of the latter. This act of heroic sacrifice is performed by the *prima donna, Stella*, in favour of *Margaret*, daughter of *Dr. Holbein*, a physician. *Margaret* had been snatched from the flames by *Count Eric* son of *Mansfield*, and had consequently indulged for him a secret passion, which preyed upon her health. It is her father's painful duty to watch the progress of consumption, the advances of which he could only too certainly calculate. *Stella* arrives at her parent's house, in time to hear the tale, become aware that the object of *Margaret's* attachment is her own lover, and, in order to give the poor girl a chance for life, induces *Count Eric* to feign a love for the apparently-dying girl. *Margaret* recovers; *Eric's* feigned love grows into a reality; *Stella's* agony is great, but it is conquered; she resigns *Eric*, and is fain, by way of compensation, to accept the hand of an eccentric admirer, one *Rouble*, a banker, who is very characteristically impersonated by Mr. Walter Lacy. This gentleman has been engaged for the season by Mrs. Keeley, and we predict that the performance of Mr. Wigan, and will be found a most efficient substitute. The part of *Stella* was performed by a *débutante* new to the stage—Miss Heath. As might have been expected, her execution was unequal; but she is evidently painstaking and intelligent—tall, and of a good figure. She must be allowed time for promise to mature into performance; and, particularly, she must consult some good elocutionist, and "beget a smoothness" both in her delivery and action. The *Margaret* of Miss Robertson was exquisite. Never was character better suited to an actress. The feebleness and languor of the perishing enthusiast was beautifully contrasted with the livelin.ss of the restored and beloved girl, full of hope, with her heart rendered buoyant by the certainty of returned affection. There were *bits* in her acting which were lovely—natural suggestions, untaught graces, perfectly charming. Thus acted, notwithstanding the crudeness with which the leading part was qualified, this little drama will have the success which it so eminently merits. The purely moral nature of the interest suits exactly the more polished taste of modern manners. The house has been re-gilded and re-touched, and in part re-decorated.

OLYMPIC.

Mr. Fitzball has be-n employed to dramatise "Uncle Tom's Cabin" for this theatre, where his version was presented to her Majesty's liege on Monday. The adapter has contrived a happy ending to his story, not carrying on the subject to Legree's plantation, but concentrating all the villany in the person of the "merciful" slave trader, and causing *Mr. Shelby* to re-purchase both Tom and the boy, and then to manumit all the slaves on his estate. The unenviable character of *Haley*, "the man of humanity," was performed with great unction by Mr. Hoskins, who showed himself quite an adept in Yankee peculiarities. Mrs. Lucy, too, as the quadroon mother, acted with much force and feeling; and Mr. W. Farren, jun., as her husband, *George*, uttered the heroic sentiments confided to him with a manly energy that was decidedly electric. The applause produced by the performance was most enthusiastic.

MR. ALBERT SMITH.—On Wednesday last a rumour, which had its origin in the *Constitutionnel*, was circulated in the metropolis, that Mr Albert Smith and his brother, while on their way to Chamouni, were drowned in the Rhone. We are extremely happy to state that the only foundation for the report was the finding of Mr. Smith's pocket-book in the swollen river; since which letters have been received in London from Mr. Smith and his brother, stating both to be in good health.

THE SURREY ZOOLOGICAL GARDENS.—The season closed on Thursday night of this popular and deservedly popular—establishment. The entertainments were of the usual varied character, and the arrangements generous were highly satisfactory to the audience. A magnificent display of fireworks closed the night's entertainment, the vocalists singing the National Anthem, "God save the Queen," which was loudly encored.

PENNINGTON CHARITY SCHOOLS, near Lymington, opened on the 13th inst., erected at the sole expense of Mrs. Elizabeth Evelyn Pulteny, the widow of John Pulteny, Esq., of Northwood Lyndhurst, for the education of poor children in the neighbourhood. The school-house, which is within a few hundred yards of the church, is of red brick, faced with Portland stone, and has a very good effect. It cost the benevolent founder upwards of £2000.

MUSIC.

THE NORWICH MUSICAL FESTIVAL.

(From our own Correspondent.)

NORWICH, Friday.

The amateurs of this ancient city have always been honourably distinguished for their spirited encouragement of musical talent, whether native or foreign, by the production of novelties at their triennial gatherings. Norwich, in this respect, has successfully competed with Birmingham, and has most assuredly, outstripped London in affording composers the opportunity of hearing their sacred works, executed with large resources. The provinces beat the metropolis quite out of the field in art patronage, as regards oratorios. Liverpool was the first to produce Mendelssohn's "Paul;" Birmingham took the lead in bringing forward "Elijah" and "Christus;" and Norwich, by giving "Calvary," the "Last Judgment," and the "Fall of Babylon," took the initiative in making the name of Spohr familiar in this country. Whilst the Liverpool Philharmonic Society has recently patronised, with generous feeling, the early efforts of Mr. Charles Horsley in "David" and "Joseph," London remains supine, living on the past, and caring apparently nothing about the future of art-progress.

The tenth Norfolk and Norwich Musical Festival, in aid of the funds of the principal charities in the county and city, which commenced on Tuesday and which will terminate this morning with Handel's "Messiah," must be recorded as having exhibited a large amount of activity and enthusiasm in the cause of art. The presentation of three new works by native composers, is unprecedented in musical annals, and the event is of such importance that, before the historical portion of the meeting be detailed, it is right that the three productions should be primarily noticed. It was on Wednesday that Mr. Henry Leslie's festival anthem, "Let God arise;" and Dr. Bexfield's cantata, "Israel Restored;" and it was on Thursday that Mr. Pierson's oratorio, "Jerusalem," were performed. Let us, firstly, mention the antecedent of the three composers.

Mr. Henry Leslie is well known as an amateur in the metropolitan musical circles. He is the hon. secretary of the Musical Amateur Society, and is a performer on the violoncello. His studies have been confined to this country, and Mr. Lucas of the Royal Academy of Music has been his principal instructor. Mr. Leslie has composed some very clever chamber pieces, and has also written a symphony and oratorio, which have been executed in public. His present anthem was tried in February, 1850, at Mr. Hullah's Monthly Concerts, and made some impression, although the means of execution were limited. Dr. Bexfield is a native of Norwich, and was a pupil of Mr. Bach, the organist of the Cathedral, in which Bexfield was once a choir boy. He was for a short time organist at Boston, Lincolnshire, and now has the organ of St. Helen's, in the city. Dr. Bexfield is young, and has been chiefly his own master since he left Norwich. He has published a volume of anthems, the style of which is based on that of the English cathedral writers. His musical degree was won at Oxford, after a severe test by Dr. Crotch. Henry Hugh Pierson, Esq., is the son of the late Dean of Salisbury, and underjoyed a careful training in his musical training far beyond those of Mr. Leslie and Dr. Bexfield. His earliest masters were, Attwood, of St. Paul's; Corfe, of Salisbury; Greatorex, of London; and Dr. Walmsley, of Cambridge. He then went to Germany, and was in communion with Mendelssohn; but the frank advice of that eminent composer was so disrelished by Mr. Pierson, that he followed his studies under Carl Banck, of Dresden; and Tomeschek, of Prague. Mr. Pierson's abilities were of the highest order, and he easily obtained the chair of Professor of Music at Edinburgh, with the testimonials he held from Reissiger, Johann Schneider, Meyerbeer, Mendelssohn, &c. He soon, however, resigned the Professorship, and returned to Germany, where he published songs under the assumed name of Heinrich Pierson, and his compositions rose to considerable controversy. He also produced an opera, "Leila," at Hamburg; but a paper warfare took place as to its pretensions, which caused the composer to withdraw it. He endeavoured, through the intervention of Herr Formes, to introduce the Royal Italian Opera management to accept an opera, but without success.

To the above details it must be added, that selections from Mr. Pierson's oratorio, "Jerusalem," were performed at the Assembly Rooms, in this city, on the 15th of April last, before the Festival committee, and in the presence of the Bishop and Dean, and many leading amateurs; and that Dr. Bexfield's "Israel Restored" was played entire in October, 1851, with full band, chorus, and principals. At the two works of Messrs. Leslie, Bexfield, and Pierson, we shall hope, and have been closely followed and examined by the connoisseurs, at the rehearsal and performances, there cannot be the slightest difficulty in arriving at a judgment on their respective pretensions.

The words of the "Festival Anthem" (Mr. Leslie's) are selected from the 68th Psalm. The music is for a double chorus, with soprano and tenor soli, subdivided into eight movements, it opens with a chorus, "Alla cappella," in A, in the Handelian form, and large in its proportions, containing clever fugue. The tenor solo and chorus, "So let the ungodly perish," is followed by an elegant and devout air for the soprano, in E, beautifully sung by Miss Louisa Pyne, who took the concluding passages an octave higher, and terminated with a powerful shake on the high G. After the double chorus, "O God! when thou wentest forth," came a highly dramatic inspiration, an *allegro con fuoco*, in A minor.—"The earth shook"—as massive as granite: the shaking of the time for the two bars of adagio on the words "presence of God" had a thrilling effect. The graceful tenor solo in E, in six-eight time, so nicely rendered by Lockey—"Thou, O God!"—with the violoncello obligato, is, however, too thoroughly Mendelssohnian in idea to give the composer any more credit than that of having happily treated the subject. In the double chorus in G—"the Lord gave the word"—Mr. Leslie merits the highest praise for having so successfully avoided any imitation of Handel's mode of noting the same words. Mr. Leslie has been both original and impressive. In the duo for soprano and tenor, sung by Miss L. Pyne and Mr. Lockey, in two-four time, "Give thanks," the notation is too far apart for the complete blending of the voices. The concluding Double Chorus, No. 8, "Sing unto God," in A, contains an elaborate fugue, and is somewhat noisily but ably treated. On the whole the anthem is unequal, and is not sufficiently individual in style; but there are masterly notions and broad contrasts; the working out of the movements is coherent and full of purpose. The orchestration sins on the score of too much brass, and is also wanting in variety. There is every reasonable hope of a future for Mr. Leslie, and his present attempt will fully justify his trying his hand at an oratorio; but he must write often, revise carefully, and follow the example of all the great masters, of never neglecting the opportunity of change or correction.

DR. BEXFIELD'S ORATORIO.

The text, "I will take you among the heathen, and gather you out of all countries, and will bring you into your own land," suggests the book of "Israel Restored." It contains no dramatic action, and is destitute of individual delineation. There are interpreters who deliver texts, as an Israelitish Woman (Viardot), a Prophetess (Miss Alleyne), a Shepherdess (Miss Dolby), an Angel (Miss Louisa Pyne), a Prophet (Mr. Sims Reeves), a second Angel (Signor Gardoni), a Priest (Herr Formes), and an Israelite (Signor Belletti). Then a quartet of Israelites is formed by Miss Louisa Pyne, Miss Dolby, Lockey, and Weiss. The libretto has not been well compiled or connected, and the words have been, in some instances, injudiciously selected. There is neither beginning nor end in the oratorio; the opening might just as well be made in the middle of the book by chance. The want of design and unity has evidently operated to the ruin of the composer. It is more a series of isolated movements than a connected *ensemble*. The past, present, and future of the Israelite race are scarcely suggested throughout the work. Each piece seems to be dependent on itself for interest, and the consequent effect of this lack of poetic and musical arrangement is, that the attention is not fixed, nor is the ear arrested consecutively. There would be no break in the link if the last part were first and the first part last. But the oratorio is not without highly creditable effort for a young musician, essaying the highest order of composition, for the first time. He starts off well, in the dignified larghetto in C minor of the overture; but the fugued allegretto is so palpably Mendelssohnian in conception, that the composer would do well either to re-write it, or connect the larghetto with the andante, in which there is some elegant scoring. Space will not allow of following the three parts in detail: a brief reference must be made to a few items. The tenor solo, "O Jerusalem!" well sung by Gardoni, is elegantly instrumented, and is a pathetic lament, but is surpassed in interest by the recitative, "How doth the city sit solitary?" and the touching air, "O, Lord, behold my affliction," so superbly rendered by Viardot.

The composer's ideas in this fine air are devotional and characteristic. He has been particularly felicitous in the passage, "I weep, mine eye runneth down with water." The eight-part prayer, "O Lord be gracious," sadly the first part worthily. Like Auber in the "Enfant Prodigue," Dr. Bexfield seeks to be descriptive in the bass solo, sung by Belletti, "Many oxen are come about me." It is impossible, both in words and music to avoid the ludicrous in such attempted imitation. The Beethovenish Pastoral Chorus is also a mistake. A contralto song for Miss Dolby, admirably delivered by her, "O be favourable," is remarkable for the accompaniments being obligati for flute, clarionet, bassoon, horn, viola, violoncello, and double-bass. Learning is not wanting in the chorus, "Lift thine eyes," and there is no want of imagination in the chorus, "The waves of the sea are mighty." The interlude, "A Calm," succeeding the animated storm movement, is harmless. The soprano song, "Thy way, O God, is holy," is clever, and found an eloquent interpreter in Viardot. The quintet, with the organ obligato, works harshly. In the last chorus, "Marvellous are thy works," is *rec. art.*, regular in form and rhythm cal in phraseology. There is much of meritorious music thrown away on the uninteresting libretto. Dr. Bexfield attains the devotional, and can reach, at times, the picturesque; but fails in the lofty and sublime. He has an artistic mind, but not a poetic temperament. He has studied the cathedral composers thoroughly, and has modernized their forms and ideas. There is nothing ugly and uncouth in his writing, his ambition has not led him into wild experimente, and as an anthem and cantata, and religious service writer, he may earn greater distinction, then he can now enjoy. At the conclusion of the oratorio, he was heartily applauded, both by *artistes* and auditory. He conducted his own works, and if he will correct a somewhat spasmodic manner of beating the time, he bids fair to be a good orchestral director. He won the esteem of band chorus, by his good sense and forbearance at the rehearsal.

TRIBUTE TO THE LATE DUKE OF WELLINGTON.

At the conclusion of the "Israel Restored," a most affecting solemnity took place. Madame Viardot sang the pathetic air from "Samson," "Ye Sons of Israel now lament," an which she created such a sensation at the Birmingham Festival, but which was vastly increased on this occasion, by the air being sung as a tribute of respect to the memory of the "Duke." In the words—

> Your glory's fled:
> Among the dead
> Great Samson lies;
> For ever closed his eyes.

Madame Viardot substituted for "great Samson," "Your Hero lies." The impressive Dead March, and the apropriate chorus, "Glorious Hero," closed the solemnities in honour of the Duke. The entire auditory stood up when the Bishop of Norwich rose, as Viardot began the air. There was not a dry eye scarcely in the hall at her wondrous depth of feeling; and her expression in the last line was truly heartrending. After the morning performance, the Bishop of Norwich sent a message to Madame Viardot, expressing the thanks of the patrons for her singing of the air from "Samson;" and adding, that but for the solemn occasion, it would have been the unanimous desire to call upon her to repeat the air. I must add that at the Cathedral, on Sunday last, a funeral anthem, "I heard a voice from Heaven," composed by Mr. Bach, the organist, was performed; as also the dead march in "Saul," and the dead march in "Samson," both in the morning and afternoon services.

At the third and last concert on Thursday night, after the Symphony of Mozart, Mr. Sims Reeves sang an air, composed by Mr. G. A. Macfarren, as a tribute of respect to the memory of the late Duke, entitled "The Death of Wellington"—"Gloomy and dim the eventful morning broke."

MR. PIERSON'S ORATORIO.

This work has had the support of a strong and influential party. Its pretensions have been sustained by a pamphlet industriously circulated in the town, entitled "A Descriptive Analysis of Jerusalem," addressed "to the President, patrons, and the public by "Amicus Patriæ," and the muster of amateurs to hear its performance was infinitely greater than that at Dr. Bexfield's oratorio, and Mr. Leslie's anthem; but with every possible advantage of position, musical acquirements, and experience, the judgment of impartial hearers will be imperative and decisive, that "Jerusalem" is a failure. A more elaborate and ambitious work was never written, but a more confused and tiresome production was never heard. Mr. Pierson is the impersonation of the young German school, which has grown from the operatic productions of Meyerbeer, and whose actual exponents are Dr. Schumann, the husband of Clara Wieck, the pianist; and Richard Wagner, the une of Mdlle. Wagner, the vocalist. The readers of the ILLUSTRATED LONDON NEWS will, perhaps, believe the declaration of the writer of this article that he is not a finabty-man in art-progress. "Fresh symbols" and new forms of speech," are as desirable in music as in poetry, we must protest against positive ugliness and wild eccentricity in musical conceptions. One of the essential conditions of opera and oratorio that the music shall be vocal, that the exponents thereof should be able to deliver the text with ease, precision, and, above all, with intelligibility. Mr. Pierson's advocate says, "difficulty is always conquered with a German thumb-nail;" the reason that Mr. Pierson sees and feels everything regarding music in a strong light, and never allows a supposition of inadequacy as to means to cross his mind; a free use of chromatic intervals, unexpected modulations, and wide reaching distances from the simple plain text;—the music is unvocal, the themes are untuneable, and the ear is constantly on the stretch to catch a key.

The libretto is by the late W. S. Holmes, Esq., and the division of the oratorio is into three parts thus classified:—

PART I.—Christ foretels the destruction of Jerusalem; the Crucifixion. Prophecy of Moses concerning the invasion and conquest of Judæa by the Romans.—Prophetic warnings and denunciations, chiefly from Isaiah and Jeremiah. The fall of Jerusalem described.

PART II.—The desolation lamented; the restoration promised

PART III.—Prophecies concerning the recal of the Jews from all the countries where they are dispersed to their own land. The great battle of Armageddon (in "the Valley of Decision"), which will end in the total defeat of the armies attacking Jerusalem.—The New Jerusalem: the Last Judgment: the Salvation of the Righteous. Doxology.

The words, on the whole, are well adapted for the composer's purpose. Even with the absence of special characters, there is quite sufficient scope for the fancy and imagination of the inspired musician. There is not any substantial ground of objection to be found to Mr. Pierson's innovations, such as the abandonment of the old form of recitative, and the substitution of a more sustained arioso in the declamatory portions, and also for avoiding the useless repetitions of the old masters. On the contrary, the evidence of the original mind is to be found in such departures from prescribed rules. But Mr. Pierson's theories have led him astray, and he has made the old-Wagner Wagner in carrying out his novel plans. To enter at any length into details of the singularities into which he has been betrayed, would be impossible. The opening movement of the overture in E flat minor promises well; but the subsequent movements in the same, an andante, and the allegro, do not sustain expectation. The air of the tenor, "For a small moment have I forsaken thee," sweetly sung by Gardoni, who pronounces the English right well; the air given by Viardot, "Oh! Israel, thou hast destroyed thyself;" the air sung by Miss L. Pyne, "Ho! ho! come forth;" the air and chorus, "Proclaim ye this;" the air for the basso (Formès), "And I saw a great white throne," may be quoted as the most favourable specimens of the composer's style. The last piece—"Then shall the Lord go forth and fight against these nations"—is the finest sample of Mr. Pierson's choral writing, wonderfully executed by chorus and band. The attack of the Norwich trebles in this piece was worthy of their high reputation. The "Allelujah" chorus has some novel points, but is not well carried out. Mr. Pierson has well treated the words "Blessed are the dead!" which Spohr has also noted in the "Last Judgment:" it was sung by Viardot, Miss Dolby, Sims Reeves, and Formès. A terzetto, sung by Misses Pyne, Alleyne, and Dolby, is hardly worthy. The trio, for soprano, contralto, and tenor—"Enter into the rock"—is fragmentary. Mr. Benedict conducted the oratorio with the greatest care and zeal. It is impossible for any conductor to have taken more pains with a work; and the attention of the principals and bands and chorus was equally marked and praiseworthy.
